"You had your fling yesterday and I'm determined that you are not going to get ahead of me every morning in helping to stoke up Granny MacGrath's smiles. You are selfish wanting to keep all the fun to yourself," the man retorted, heaving a mighty shovel of coal into the black scuttle and swinging it up the stairs.

BENNY proceeded to fill Virginia's coal hod from her own bin, and Virginia, strangely humiliated, followed the man's lead to the second floor. As he set the coal scuttle down at the door of Granny MacGrath's apartment, he turned challenging eyes upon Virginia.

"My name is Alan MacFarlane and I'll race you to Granny MacGrath's coal scuttle to-morrow morning," he exclaimed under his breath.

Virginia's flashing eyes accepted the challenge, but she answered not in words. Then the door of Granny MacGrath's kitchen creaked and as it opened the white-capped head and smiling face was thrust through the opening.

"Why, and it's you—both of you. I heard a thud and thinks I, that's Benny bringin' my coal——" she began, surprise lighting her faded blue eyes.

"You see Bennie—er—Bennie was rather overworked this morning and as I was coming up this way I brought your coal along. Can't I lift it inside the kitchen for you? No, don't mention it. Glad to do any little thing, you know. I'm rather partial to geraniums. My Grandmother down East used to grow 'em—scarlet ones like yours," Alan MacFarlane stammered in confusion.

Pink roses flushed Granny MacGrath's cheeks as she stood aside for the man of the First Floor to pass into the kitchen with her filled coal scuttle. She flashed a smile at Virginia, which, interpreted, said, "Didn't I tell you that I knew human nature?" And Virginia's checks crimsoned, for the Man from the First Floor had got ahead of her that morning.

"So you like my geraniums?" the old voice asked tremulously. "Some folks thought I was crazy fetchin' 'em from the country, but I calc'late I've more than paid for the trouble. And laddie, won't you drop in some night and get a closer look at my blossoms. Drop in to-night and have tea. Miss Jinny, here, is coming down to help me make some oatmeal cakes and we'll lay an extra place on the little walnut table——"

"You bet I'll come, Granny. Nothing under the sun will keep me away," the Man from the First Floor Flat broke in, his eyes searching the girl's face for a welcome. But with an absurd little shrug of her shoulders, Virginia fled up the stairs to her own flat.

AT twilight Alan MacFarlane dropped into Granny MacGrath's flat for the promised cup of tea, assuring himself that the girl of the Second Floor Flat would not disappoint the old lady in the baking of the little oatmeal cakes. And thus he came upon them together, spreading the snowy cloth over the little walnut table, within the shadows of the flickering firelight, merry with laughter. And the man of the First Floor Flat throwing himself into the game of merriment with all the zest of youth, won the heart of Granny MacGrath. And Virginia Croft's spirit of resentment vanished under the spell of the hour.

"I couldn't stand boarding, so I took a flat and engaged a housekeeper, but there's something lacking. I don't know what you call it, but it seems to be here with Granny and all her old-fashioned things," explained Alan MacFarlane in perplexity.

"It is the real home-like feeling you are missing," the girl responded, her eyes sparkling with mystical lights.

Granny MacGrath's head nodded and the man leaned nearer the girl,

(CONTINUED ON PAGE 67.)

Do the Week's Wash Without Fatigue

The time that is spent over the wash tub every week is worse than wasted. The time is a dead loss, but much more serious is the waste of precious human energy.

You can take all the hard work out of the weekly wash, by using the "1900" Cataract Electric Washer. Simply connect it with any lamp socket, turn the switch and go about your other duties. Your clothes will be washed spotlessly clean in a surprisingly short time without any injury to the most delicate fabric.

The Cataract Washer is not only built to wash, but it is built to last. The frame is all metal, and the tank is of pure sheet copper, plated on the inside, to prevent verdigris. It is equipped with a power wringer, having five-year-grade pure white rubber rollers.

Our liberal trial offer enables you to test the Cataract Machine before you actually buy it. Write us for details, or drop in and see the Cataract at our store.

Our line also includes an excellent water power washer, hand-operated washers, the Simplex ironer, lawn clothes reels, wash tub ejectors, etc.

The Herbaceous Border and The Vegetable Garden

(CONTINUED FROM PAGE 15.)

Two kinds of celery—Paris Golden and Rose-ribbed Paris.

One kind of beet—Early Flat Egyptian.

Two kinds of lettuce—Nonpareil and Grand Rapids.

Two kinds of cabbage—Henderson's Summer and Glory.

One kind of cauliflower—Snowball.

One kind of parsley—Curled Variety.

One kind of cucumber—White Spine.

It will assist greatly to transplant the following two or three times in the cold frame before putting in the open—onions, tomatoes and cabbage. The others will do all right by just thinning out and stirring the soil around them.

Outside of the extra work attached to making one's own hot bed, the advantages are vastly superior to relying upon the florists and corner groceries for what they have left over. There are also a number of flowers which require to be raised early, such as salvia, coboeas, marigolds, phlox, stocks, asters, zinnias salpiglossis petunias, etc. If you include satisfaction with cost, the hot bed wins out easily.

STARTING VEGETABLES AND FLOWERS INDOORS.

Sow Seeds in Boxes, Pans or Berry Baskets.

IN this article we intend to show how to raise seedlings in the house if it is inconvenient to make a hot bed. By all means do one or the other, and have the satisfaction of saying, "I raised those plants myself." In picture No. 1 you will notice the different tools, etc., necessary to success.

First of all is the sieve, for sifting the soil, which should not be rich. Second, the different kinds of receptacles that can be used—either the large finnan haddie box (note the holes for drainage) or large and small-sized pans (note the broken pieces of pot for drainage purposes) Don't forget to have some wooden labels ready, also a trowel, rake and pounder. Keep your seeds in a tin box, as shown in the picture.

Now that you have everything in preparation, start off by sifting some soil, and right here is usually where trouble comes in, owing to the garden being frozen solid. Try the floor of the woodshed, if you are lucky enough to have one, for just the ight kind of soil will be found there—light chip-dirt full of rotted bark chips and sawdust—otherwise it means take the crowbar and pickaxe and break up a few lumps in the garden. If this is inconvenient, the only thing to do is to go to the nearest florist and get a bushel of prepared soil. Fill up your boxes or pans level to the top, then take the little pounder and press the soil down evenly to half an inch from top of box or pans, as shown in picture No. 2. Looking at the large box, you will notice the small rows for the seeds evenly across the box, which is done by having a piece of wood, quarter of an inch square, and pressing it into the soil edgeways. You will see the stick referred to in the last row of big box. Scatter your seeds thinly in these rows, and fill in by drawing a thin covering of earth with the same stick, and press the whole down again with the small pounder.

WITH the pans I recommend sowing the seeds broadcast by making a spout of the seed envelope and shaking it gently over the surface, then sift about an eighth of an inch of soil on top and press it down. Mark your labels and put in place. Next thing to do is to dampen the soil, which must be done very carefully or the seeds will be washed out of their place. Use a very fine spray on your water-can, or lay a piece of cheesecloth over the surface while watering. After this is done, cover your boxes or pans over with a piece of glass as shown in picture, leaving the glass on until the seedlings appear. Be sure the boxes are kept damp, but not sodden, and then place the boxes and pans in a sunny bay window.

There is no magic about a greenhouse or hot bed. If you can provide the same conditions of temperature, moisture and light that you find in a hot bed, you can start your plants just as well without it as with it. You can grow your own plants cheaper, and, more important still, you can grow better plants.

There are very few houses, indeed, where there is not some room with a sunny window or two, and in which a night temperature of 45 or 50 degrees can easily be kept. Place two or three yards of self-covered building paper to protect the floor and rugs, and place two gem jars full of water on the floor, under boxes, for moisture. Keep coal gas and illuminating gas fumes away from seed pans if possible.

At The Sign of the Coal Scuttle

(CONTINUED FROM PAGE 66.)

whispering his challenge, "Remember I'll race you to Granny's coal scuttle in the morning."

"You won't always get ahead of me," retorted the girl, the spirit of defiance flaming in her eyes as she accepted the challenge.

And thus through the mornings of the dilatory Spring the race between the girl of the Third Floor Flat and the Man of the First Floor Flat waxed strong. If the man succeeded in heaping Granny MacGrath's coal scuttle from the spoils of his own bin one morning, the girl won out the following day. And though the coal in both bins was disappearing alarmingly, neither the man nor the girl alluded to the fact. Then one morning just as the first warm breath of sunny Spring melted the chill in the air, the man and the girl laid hands upon the coal scuttle in the same moment.

"Have you heard the latest—the awful, dreadful news about Granny MacGrath?" questioned the girl in a hoarse whisper.

Alan MacFarlane shook his head. "What—what is it?"

"She hasn't paid her rent for a whole blessed month. The landlord's been talking to me. He likes her and her geranium window, but as he says, renting flats is business. And—and I know Granny MacGrath can't pay her rent ever again for I saw her bank book last night. There is just one solitary dollar to her credit in the bank and she does not realize it. The landlord wants me to break the news to her," the girl ended huskily.

"JERUSALEM!" gasped the Man from the First Floor Flat.

"And I've got to think up some way to keep a home for Granny MacGrath," the girl muttered, her voice breaking.

A flame of determination shot into the man's brown eyes and seizing the coal scuttle he strode toward the stairway, then turning, he flung back, challengingly,

"You will have to go some to get ahead of me this time."

It was at an unusually early hour that afternoon that Virginia Croft came hurrying home from the bank, her step buoyant, her eyes starlike with the wonder thrilling her soul. The solution of Granny MacGrath's problem had sent the blood tingling through her veins and she was all eagerness to pour out her appeal into the wrinkled ears of Granny MacGrath. But as she sped up the street, her eyes scanning the geranium-blossomed window, her heart suddenly fluttered with fear. Granny's smiling face was missing from that window. What could it mean?

Breathless, she fled up the stairs to the second floor, and knocking threw open Granny MacGrath's door. There, before the Franklin grate Granny crouched in her little, old-time rocker, her head pathetically drooped, her eyes robbed of their smiles—staring dazedly down at the bank book clasped in her hand.

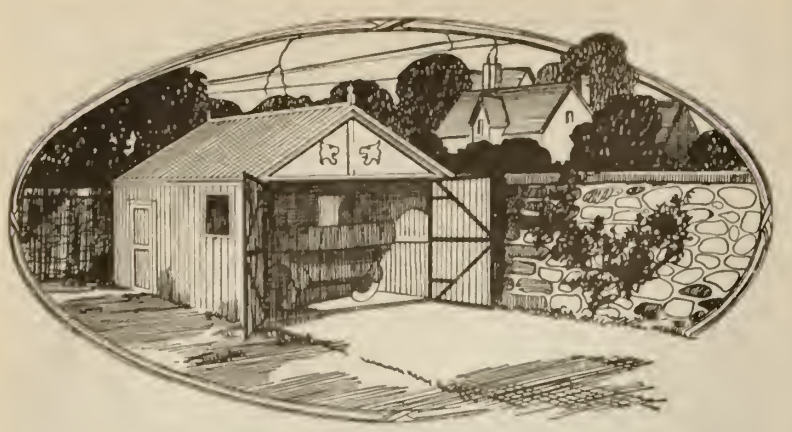
"Granny, Granny MacGrath, what is it?" Virginia entreated, dropping down on her knees by the side of the chair and taking the cold, withered hands in her own.

"Dearie, I am glad you've come. I

(CONTINUED ON PAGE 70.)

In color it is like spring sunshine—a clear, radiant yellow that makes you happy just to look at it. The delicious shreds of fruit are suspended in a clear, tender jelly, not a ropy syrup. The flavor is a wonderful blend of citrous fruits, Messina with sweet oranges, sweet oranges with grapefruit, sweet oranges with tangerines, lemon, orange and grapefruit—a half dozen combinations, any one of them delicious. Whichever recipe she uses, the well-informed housewife makes her Marmalade with

Lantic Sugar



The Seal of Purity.

because the "FINE" granulation of LANTIC and its absolute purity give the Marmalade that fresh, bright quality which makes it so satisfactory. LANTIC "FINE" granulated dissolves instantly in the preserving kettle, avoiding the long cooking *after the sugar is added*, which darkens Marmalade and makes it stringy and sticky.

Buy LANTIC SUGAR for your Marmalade in 2 and 5-lb. cartons, 10, 20 or 100-lb. bags, according to the quantity you will make. Send to-day for our three little booklets "LANTIC SWEETS" with recipes for Marmalade and other preserves. Also desserts and candies. You will also be interested in "GRANDMOTHER'S RECIPES," which tells you how to use LANTIC Old Fashioned Brown Sugars for baking, preserving and confectionery. Send 5c in money or stamps and we will mail you these four Recipe Books.

The Trail of the Blonde Beast

(CONTINUED FROM PAGE 64.)

because my people and my country are lost to me. I told you that I would be loyal to America if war came. It has come—and—I am ready."

Silently Bob took her in his arms and clasped her to his breast. Only a few moments could he spare with Helene before rushing back to his duties. He went with high hopes, exulting in the power of love and vowing that he would make up to his wife all that she was sacrificing.

ONE morning his chief called Bob into his office and after carefully locking the door handed him a sheaf of papers. With some of the material the young diplomat was already familar; but as he waded deeper into the mass of figures he was amazed at the completeness of the data. There was an itemized list of exports to the neutral dating back ten years. That naturally had been an easy matter to procure. In another section appeared a statement of exports from the neutral to Germany covering the same period. No guess work, but cold, hard facts dug out painstakingly and in the face of danger by the Secret Service.

"Thurston," said the chief in his slow, impressive manner, "there's the whole story. We know exactly where we stand with those fellows. It is an easy matter to stop the traffic—the embargo will do it. But it won't be an easy matter to stop the traffic and keep their friendship."

"You're right," said Bob quickly, "they're touchy—and this restriction is going to hit them hard. As a nation they have faith in Germany's might. I can readily see that they will be tempted to antagonize us rather than her."

"That is just the point." said the chief, bringing his fist down on the table with a crash. "The traffic shall cease! The embargo has been decided upon irrevocably. That is our part here. Your job is to smooth it over and avoid hostilities. How about it, Thurston?" There was an anxious, almost a beseeching tone in the chief's voice as he ended.

"Chief, I'll do it!" Bob cried. "I know their characteristics; I know their language. Also I have reason to believe that I am popular with their officials with whom I came in contact. Oh, Chief, I'll be glad to do this for my country! It makes life worth while."

"FINE," he cried. "That's the spirit. I like your enthusiasm." He turned to a small wall-safe and twirled the combination. "You will have full powers, Thurston. Here are your credentials as ambassador extraordinary and plenipotentiary. And here is the statement that you are authorized to make. We recognize that our friends are imbued with a sense of the invincibility of the Central Powers and that they are still under the impression that the United States is bluffing. We believe that nothing but the utmost frankness will avoid trouble, and, therefore, we are giving them a plain, unvarnished account of important items of our war programme. If you, Thurston, will convince them that our statement is honest and accurate—that the Kaiser hasn't the ghost of a chance—they will see reason. It is unnecessary to say that you will guard these papers with your life and your honor. Good-by, Thurston."

Bob broke all speed laws in racing home. He dashed up the front steps, burst through the door and met Helene as she was coming down the stairs to go out.

"I've got my chance, Helen, dear." he exulted. "A chance to do something big for Uncle Sam. We're going traveling, dear. Back to the old Court and the old friends. How proud I shall be of you."

"Oh, Robert, I am so glad." she cried. "I am sure you will acquit yourself well so that I can be proud in my turn." She grew thoughtful; then with her arm around his neck she said: "Are you sure you want me with you?"

"Absolutely, positively sure." laughed Bob.

"And—and—when do we go?" asked Helene breathlessly.

"New York to-morrow. The rest is on the knees of the gods."

The next few hours were too full of activity to allow time for worry. It was not until he was safely on his way to New York that Bob began to feel the weight of his responsibilities. The wallet in his inner breast pocket oppressed him; he could think of nothing else.

"It's beginning to get me, dear," he said with a nervous laugh. "The chief said to guard these papers with my life and my honor. The fate of nations hangs on them. Of course, they're safe—but I can't help worrying."

"Sit down by me," said Helene gently. "Poor boy; don't torture yourself. No one in the whole world knows of the existence of these documents except the chief and you—and I."

Bob sat down beside her with a sigh. "I know I'm foolish, but———"

"You forget that you have a wife." Helene drew his head down on her shoulder and rumpled his hair with her strong white hand. "What is she good for if not to help you?"

"You have helped, dear," said Bob laughing. "I feel better already."

"Let me really help. If spies should have an inkling of the documents you carry it would be you whom they would attack. Let us make assurance doubly sure. Let me carry the papers. There would be no danger for me and your mission would be safe. I want to help, Robert—you—and my country." Helene leaned toward him eagerly.

BOB bowed his head and considered gravely.

"No," he said finally. "I can't see that there would be any danger for you. And if they should get me—why it wouldn't matter." he turned to her suddenly. "Helen, you wonder." he cried. "What a gift of God a true wife is."

(CONTINUED ON PAGE 69.)

Who Goes There

(CONTINUED FROM PAGE 62.)

my very lively sense of obligation to the Courlands. And don't let them ask me if it inconveniences them. I can go to Luxembourg just as well and see you there if you can run over.

Did you get my luggage? I am wearing my last clean shirt. But my clothes are the limit.

If I am to stop for a day or two at the Courlands please telegraph to Luxembourg for my luggage as soon as you receive this.

Yours as usual,

GUILD.

P. S.

Do Uhlans ever annoy the Courlands? I imagine that Lesse is too far from the railway and too unimportant from a military standpoint to figure at all in any operations along the edge of the Grand Duchy. And also any of the Ardennes is unfit as a highway between Rhenish Prussia and France. Am I correct?

The Trail of The Blonde Beast

(CONTINUED FROM PAGE 68.)

He slowly unbuttoned his coat, drew out the wallet and handed it to her.

"See, dear; I place my honor, which is more than life, in your hands," he said.

Helene took the precious package and raised it to her lips. Her face was very grave. She thrust the wallet into her handbag and buckled about her wrist the strap which ran through the handle.

"There," she cried gaily. "We are now proof against theft and also against absent-mindedness." She patted Bob's shoulder with her free hand and kissed him lightly. He leaned back on the cushions with a deep sigh of relief and gave over his worries. Freed from its anxieties his mind became busy with the work that he was to take up abroad.

Arriving in New York Bob and Helene drove directly to their hotel. Bob was due at a conference with the consul-general of the nation of his mission. He hesitated about leaving Helene but she laughed away his fears.

"I am not afraid," she declared. "Besides, I shall lock my door and stay right here until you come back." There was, however, a shade of anxiety in her tone as she asked: "How long shall you be, Robert?"

"Not more than an hour and a half or two hours."

"Very well, then. Run along and get back as soon as you can," she smiled across at him reassuringly as he went through the door.

As soon as she heard the elevator door clang to behind him down the corridor she sprang to her feet. All tenderness had left her face; her eyes were hard and steel blue. With a quick, alert step she moved about the room. She hurried to a writing desk between the windows. Sitting down before it she placed some sheets of the hotel paper on the blotting-pad. She drew her hand hastily across her eyes, then squared her broad shoulders and began to write.

When her letter was finished she rose quickly, put on her hat and jacket, again buckled the strap of the little handbag about her wrist, and with a swift glance around the room walked out of the door.

BOB'S conference detained him longer than he had thought it would, and it was late in the afternoon when he returned to the hotel. He walked down the corridor whistling gaily; all had gone well with him and his arrangements were made for sailing within the week. He reached the door of his suite and knocked gently. There was no response. He knitted his brows and tried the knob. It turned and the door opened at the pressure.

"Helen!" he called sharply, a chill of fear clutching his heart.

He dashed through the empty parlor and burst open the door of the bedroom.

"Helen!" he called again in angulshed tones.

A hasty glance into the dressing-room sufficed to show him that the suite was deserted. He cursed himself for leaving Helene alone. A vision flashed before his eyes of a terrible drama enacted during his absence. He pictured Helene in durance somewhere, helpless—awaiting rescue. Coming back to the parlor he passed the writing-desk. On the blotting-pad lay an envelope addressed to him in Helene's queer foreign writing. With a glad cry he tore it open and read:

ROBERT:

Of course you will hate me, but that cannot be helped. I am simply doing my duty by the Fatherland. The whole blame lies at the door of America. Why had she to aid in the attack on poor, stricken Germany?

You will never see me again; my work is done. With my country at war I can have but one motto: *Deutschland uber alles.*

HELENE.

Bob brushed his hand across his eyes and glanced about the room with a dazed, bewildered expression. His eyes held the look of one who has received a mortal hurt.

"Helen," he murmured. "A traitress! Good God!"

He sank into a chair, holding the letter before him and staring at it as though caught by a dread fascination.

April "Canadian Home Journal" will be the largest and most beautiful issue yet published. You will like it.

"The Mysterious German Onions"

On nights when the German air raiders were out, they sent up strange luminous balls behind their lines and anchored them above the clouds—globes of fire which could be seen for forty miles or more. What these "onions" were, or how they were kept in stationary position above the clouds, is still a profound mystery. The Allies never learned anything about them, but the Allied night bombing crews steered their course to the Rhineland by the luminous buoys thus provided.

What is known about the onions is told by Lieut. J. Vernon McKenzie in the course of an article, "Raiding the Rhineland," in MARCH MACLEAN'S. It is an intensely interesting article, telling all about the great reprisal campaign which implanted the fear of war in the German civilian heart.

"No Hope for the Wets"

"Already the temperance forces are lined up to stop any possible break in the prohibition dam," writes J. K. Munro, in discussing what is going to happen at the coming session at Ottawa. He predicts that Union Government will hold together, but that the habit it has contracted of promising everything asked is going to make a lively session. He expects:

Dry legislation at the earliest possible moment.
The moral reform forces in control.
No change in the Divorce Law.
Tariff concessions made to the West.

The March number, in fact, is full of live, up-to-the-minute features.

The famous Canadian Ace, Lieut.-Colonel W. A. Bishop, is on the cover.

Some of the outstanding articles and stories are:

The Transformation (a new serial)—By Frederic S. Isham.
A Canadian King-maker (the story of Lord Beaverbrook in Britain)—By Maurice Woods.
Fitting In the Returned Soldier—By George Pearson.
The Strange Adventure of the Nile-Green Roadster—By Arthur Stringer.
The Three Sapphires—By W. A. Fraser.
Fakers—and Others—By E. Ward Smith.
Lend Me Your Title—By Onoto Watanna.
A Shady Deal—By Archie P. McKishnie.
The City of Lost Laughter—By Mary Josephine Benson.

The Trail of the Blonde Beast

(CONTINUED FROM PAGE 69.)

THERE came a sharp knock at the door. Bob ignored it. The door swung open and in walked Burke Malone, one of the cleverest men in the Secret Service. Bob looked up inquiringly at the round, good-natured face of the officer.

"I suppose you have come to arrest me, Malone?" he said dully.

"Not a bit of it, Mr. Thurston," disclaimed Malone heartily. He cast a look of compassion at the stricken man. "Just thought you'd like to hear the news."

Bob stirred uneasily.

"We trailed your—er—the woman," continued Malone, "when she left the hotel. We'd been a bit suspicious of her for some time. Nothing definite, you understand, but just enough to keep us wide awake. Blamed fortunate thing, too. Well, we trailed her to an office on Broadway that we've had our eyes on lately.

"I had no idea that she'd gotten away with anything as yet—just wanted to see where she was going. Gaspard and I arrived at the psychological moment, all right. We got her and a go-between with the goods. They're both in custody, and Gaspard's on his way to Washington with the papers."

"Thank God," breathed Bob.

"She came through clean when she saw that it was all up," resumed Malone. "She said that her usefulness was over anyway. It seems that von Dahl made her promise to get hold of anything of importance that was entrusted to you. He kept reminding her of her promise from time to time by means of a beautiful little code that we worried out of her this afternoon."

Malone stopped and glanced hurriedly at his watch. "I must run along now," he said, with a kindly glance at the young man. "Is there anything that I can do for you, Mr. Thurston? No? Well, I'd report to Washington as soon as possible if I were you. Good-by." He held out his hand, but Bob was too engrossed with his misery to see it.

As soon as the door closed behind his visitor Bob sprang up and ran to the telephone. In a few moments he had a connection with Washington and the chief's heavy voice reached him.

"Chief!" cried Bob; "you've heard?"

"Yes, Thurston. I'm sorry!"

"I resign," said Bob despairingly—"although it breaks my heart."

"I'm sorry," said the chief again slowly. "I am not blaming you, Thurston. You have been vilely treated by Fate. But a diplomat with a mission in wartime must not fail his country. For the good of the service I accept your resignation."

Bob gasped. It was all over.

"I am going to enlist, Chief," he said brokenly.

"I thought you would do that. I'll get you a commission."

"Thanks, no. I don't want one. I prefer to get at them with a rifle in my hands."

There was a long silence, broken at last by the chief.

"I'm sorry, Thurston. Sorry." A pause; then: "Good-by."

Bob hung up the receiver and turned away. He stood swaying in the centre of the room for a moment, then flung himself down on the couch, his face buried in his arms. The trail of the blonde beast had crossed his path and left him broken.

THE END.

At the Sign of the Coal Scuttle

(CONTINUED FROM PAGE 67.)

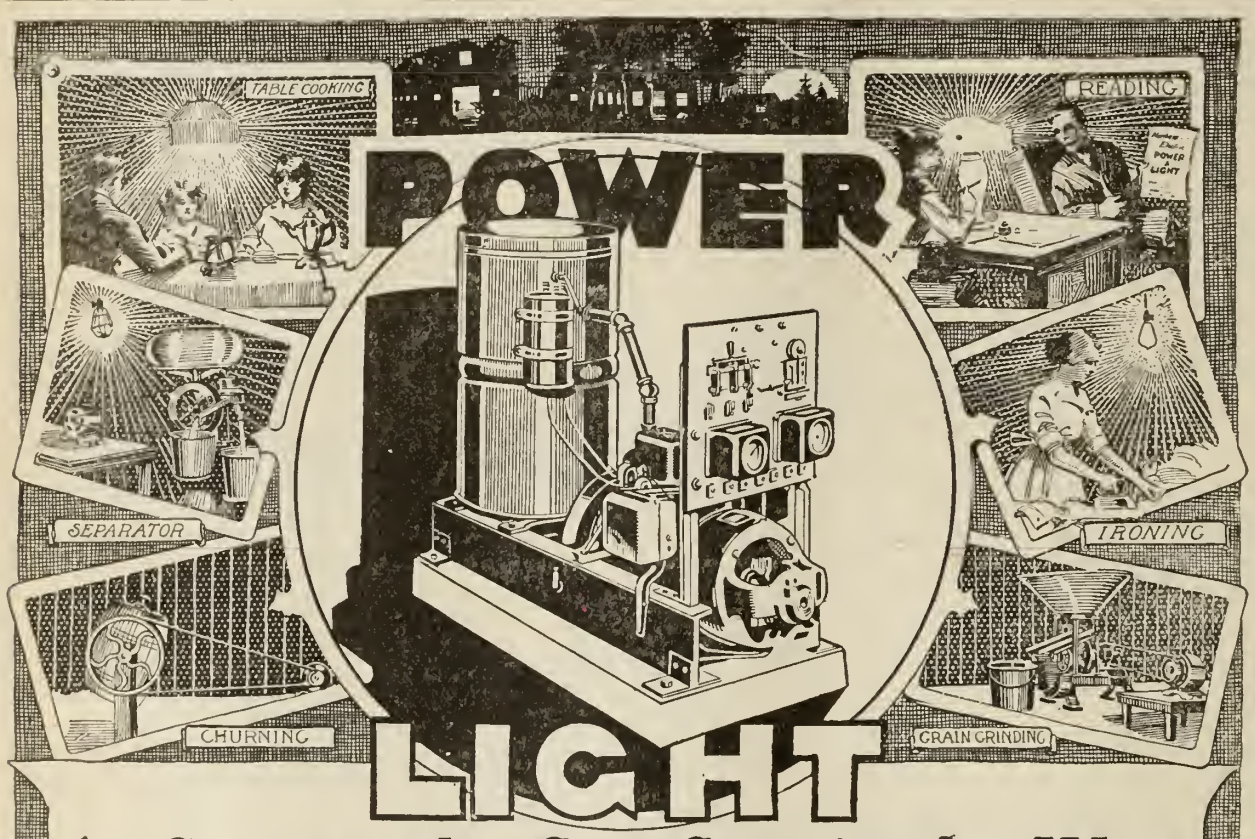
was just aching to talk to someone," she began in a weary, tremulous voice. "I started in to houseclean today and I always start with the business first, because it's sure to bother my head the most. I've been studying my bank book and I haven't got but one solitary dollar left in the bank and—and—dearie, I don't know what's goin' to become of me."

"Granny, listen. I am alone—oh, so alone in my little flat. I planned to chum up with some other bachelor girl, but, Granny MacGrath, I'd rather chum with you than any other girl in the city. And, Granny, I want to adopt you—you and your wonderful old-fashioned things—just carry you and your dear smiles and the geraniums up to my flat. Oh, Granny MacGrath, it will be Heaven with you and your geranium blossoms at my window."

A BRISK knock at the door, which was flung open unceremoniously, and the man from the First Floor Flat strode across the room with authority. The fire of purpose burned with strange intensity in the brown eyes fixed on Granny MacGrath.

"Granny MacGrath, I'm going straight to the point. I want to carry you bodily—you and your smiles and the geraniums down to my flat to live forever more. Granny, I want to adopt you," Alan MacFarlane blurted out, his big hand covering Granny MacGrath's withered, crooked fingers.

"But—but, laddie," flustered Granny MacGrath. Then a queer, little cracked laugh broke through the blue lips and a glint of sunshine sparkled in the faded blue eyes. "Laddie, Miss Jinny's done got ahead of you Miss Jinny's adopted me."



The man glanced quizzically down into the girlish face — appealingly sweet with the spirit of sacrifice dominating her soul. Then swiftly there dawned in the eyes of the man, a strange new light of tenderness, and stooping, he encircled the girl-beautiful with the flush of youth—and the old, old lady—wondrously dear with the fragrance of old-time memories—with his strong man's arms.

"Granny, Granny MacGrath, I am going to adopt you because I am going to adopt Miss Jinny also. Virginia, sweetheart, you know I love you. And you with all your thousand dearnesses will bring Granny and come to me?" he entreated, pressing his lips against the sun-tinted wisps of hair.

"Oh, Alan, I just can't get ahead of you any more and—and I don't want to," whispered the girl, her eyes luminous with the love, throbbing in her woman's heart.

"Granny—Granny MacGrath, you are adopted forever and ever—you and Miss Jinny and—and the coal scuttle," the man laughed mysteriously, boyishly.

THE END.

As Sure as the Sun Sets in the West
so Sure will you Need Electricity on the Farm

APART from altering international boundary lines, the war has shown farmers how to concentrate; how to devote their time and energy to big and important things. But what about the little jobs? Somebody has to do them; to turn the cream separator, churn, grindstone, grain grinder, saw wood, pump water, etc. These are the chores that the

Northern Electric
POWER and LIGHT

will do for you. Jobs that take muscle and time from the big end of farm work. Then, too, there is the domestic side of farming. Electricity in the home means wholesome freedom from many daily drudgeries. It will run the washing machine, iron, vacuum cleaner, sewing machine, operate the toaster and many other electric household utensils. It will flood your house and outbuildings with a safe, bright, clean and economical light. No oil lamps or lanterns to bother with.

Think what a help and convenience Electric Power and Light will be to you on the farm if you make it the Northern Electric way.

The system is entirely automatic; not even a button to press. No complicated parts or unnecessary frills to get out of order. Built for real hard work and long service with economy of upkeep. As simple and easy to look after as the Northern Electric Telephone you know so well.

NORTHERN ELECTRIC POWER and LIGHT is guaranteed absolutely reliable. Plenty of power; plenty of light. Progressive farmers all over Canada are buying the Northern Electric system because of its honest dollar-for-dollar value.

There is a Northern Electric system for every requirement. All types, all sizes, either direct connected or belt driven, operating from 15 to 1000 lights or their equivalent in power for farm work.

May we send you some interesting illustrated leaflets? You are not obligated in any way. Fill in and return coupon today.

The Need is Still Great

DO not forget that even if the war has ceased—that the need for nurses is great. Those serving at home will be in great demand. Avail yourself of an opportunity to earn $15 to $30 per week by learning nursing right at home.

Full particulars on request. Dept. 39

Royal College of Science, 709A Spadina Ave., Toronto

"Now, how could this dainty blouse possibly stand ordinary washing? It simply couldn't—"

"My dear—when I bought it I was just swept off my feet. It had my very own colors. It was too dainty for words."

"Then, when it came home—I thought about the washing of it. My dear, I could have cried. I was borrowing trouble, of course. But I knew that cleaners and wash-ladies would wreck it the first time."

"Then—someone said, 'try Lux.' Some one else said, 'Lux will clean it.' Another person said, 'don't worry, use Lux.' Everybody seemed to be sure that Lux was wonderful for silk blouses."

"When cleaning time came I bought a package of Lux. I read the directions. They're so simple. All you do is drop a little of the Lux flakes into warm water. You stir them about and instantly get the richest, creamiest lather you ever saw. You immerse the garment and move it about, gently, you don't wrench or rub it. Then you rinse in clear tepid water and, while damp, a little ironing and there you are—a new blouse."

This has been the delightful experience of thousands of ladies. The whole secret lies in the matchless purity and harmlessness of the little satiny Lux flakes. They harm nothing that pure water may touch. Delicate silks—woollens—underwear—stockings—anything dainty that one wears or keeps about the house, can be washed beautifully with Lux.

Thousands of ladies really "do their own washing"—it becomes a pleasure—thanks to LUX. If you haven't tried it there is a real womanly treat in store for you.

Get a package to-day, your grocer sells it.

A handy little recipe booklet entitled "The Care of Dainty Clothes," will be gladly sent free on request.

Whipped Cream Cocoanut Cake

4 oz. butter; rind of one-half orange (grated); 3 eggs; 1 small cup milk; 1 large cup flour; 1/2 cup cornstarch; 3 level teaspoons Magic Baking Powder; flavorings (vanilla and rose); 3/4 pint cream; 1 small fresh cocoanut (grated.).

Cream butter, adding grated rind of orange; then the sugar, working well in; then the well beaten yolks of eggs, and milk. Sift together the flour, baking powder and cornstarch and stir in gradually, then the well beaten whites of eggs, and lastly one teaspoon each of vanilla and rose flavorings. Bake in well buttered jelly tins in quick oven. When baked turn out and allow to cool.

Whip cream stiff, adding three tablespoons confectioners sugar and one-half teaspoon each vanilla and rose flavoring.

Cover top and side of each layer with the whipped cream and sprinkle over the grated cocoanut. If unable to obtain fresh cocoanut use Baker's canned cocoanut.

Copyright, April, 1919, in Canada, by The Canadian Women's Magazine Publishing Company, Limited, Toronto.

This Will Interest You in the May Number

"DO WE LIVE AFTER DEATH?"

Answered by A. Conan Doyle in his "New Revelation," an emotional, concise and marvelously strong article, in the May Number of CANADIAN HOME JOURNAL.

Spiritualism—What is it? This is the question being asked on every side. All are curious to know more about this great subject of psychical research, merely the beginnings of which we have grasped.

As stated before in the columns of the CANADIAN HOME JOURNAL, we neither endorse nor condemn the statements made in the articles of this series. This, like the others, is published purely as an educational feature, and must be considered as such by our readers. They are not asked to accept Sir A. Conan Doyle's views, but to read what he has written and then judge for themselves. Not ignorance of these important questions but "knowledge is power" to either combat or further their influence.

"HAND IN HAND WITH THE CENTURIES, AND STRICTLY BRITISH."

By Ethel Cody Stoddard. Illustrated by photographs.

From the title you could not guess the text of this article, to appear in the May Number, but, coming from the pen of a very loyal Vancouver writer, one might well surmise that it would have to do with some phase of Western life.

The article is a history of the Hudson's Bay Company in Canada from June, 1668, when the two vessels the "Nonsuch" and the "Eaglet" sailed from Gravesend with the two adventurers, Radisson and Chouart, to the present day. The history of the Hudson's Bay Company is practically a history of young Canada; Canadian laws, Government and National life having been largely shaped in the early days by these hardy pioneers.

Watch for this historical article, fully illustrated with excellent photographs.

Another story by William Hugo Pabke, author of "The Trail of the Blonde Beast," will appear in the May Number.

"CURE FOR BURNED FINGERS."

A joke which ended in romance. Illustrated by Norman Price.

The first story by Madge Macbeth to appear in this magazine will be published next month.

"SHARING DAD WITH JUDY."

Illustrated by Mary Essex.

The old-new problem of the stepmother, but from a slightly different angle. You will want to make the acquaintance of the modern, twentieth century stepmother, for she, too, has altered with the times and is quite a different individual from the one we used to read about.

"THE RANEE'S BRACELET."

A story of India, by E. A. Taylor.

Illustrated by E. J. Dinsmore.

The travel stories by this writer appearing from time to time in this magazine have been so popular we are again publishing another in the May Number. Rather more dramatic and with a more involved plot, this will doubtless be found the most fascinating of any yet published.

"THE BRIDE OF CHILKOOT LANDING."

The May Number would not be complete without a good Western tale, and this we have in the above-named story, by Ethel Kirk Grayson.

In the Women's Institute Section Judge Murphy, the new President of the Federated Societies, will have a message for all Women's Institute members.

The May Number will contain the usual goodly supply of the latest fashions.

There will be articles on: Music, the new books, housekeeping suggestions and cookery. The titles for the latter are:

"How to Use the Grateful and Pleasant Lemon."
"Eat Good Green Things for That Tired Feeling of Spring."

Spring Shoes are Smarter—and Better—with Neōlin Soles

Spring Sunday mornings, with Spring sunshine and budding tulips—and Spring clothes.

Of course, Spring shoes *must* harmonize with *chic* Spring costumes. And milady will find the newest style touch combined with comfort and wear, in shoes with Neōlin Soles.

Neōlin Soles are so essentially modern. Modern in appearance and modern in all their virtues.

For Spring showers, Neōlin Soles are waterproof; largely doing away with the necessity for unsightly rubbers. And the menace of damp feet disappears.

New Spring shoes can be comfortable shoes too. You'll find Neōlin Soles flexible, easy to walk on.

And when Spring is over, your Neōlin-soled shoes will still be giving you service, for Neōlin Soles wear evenly and very slowly.

Your shoe merchant has new models of shoes with Neōlin Soles for the whole family. Ask to see them.

Shoe repairers will nail or sew Neōlin Soles on your present shoes.

But be sure you see the name "Neōlin" on the bottom of the sole.

Neōlin Soles

Out of The Butterfly Class

By Tina Forrester Best

ILLUSTRATED BY MARY ESSEX

How Pauline found happiness by running away from it; or what she once believed it to be.

"COOK!" exclaimed the girl. "Don't you think you are rather antiquated. You belong to the middle ages, Mr. Maurice." Pauline's voice was scornful. She resented dictation.

"Well, isn't my indictment true?" returned the young man with a smile. "How many of these young ladies can cook?"

They were standing together under a vine-covered trellis, slightly apart from the gaily-dressed crowd that thronged the spacious lawn of Whiteside's most exclusive home. Pauline looked at him doubtfully. Was he in earnest, or merely tantalizing her?

"You wouldn't expect them to work in a kitchen, surely. That is work for the illiterate."

The smile vanished from his face, and he answered gravely, his steady eyes fixed upon her in their disconcerting way, "Work cannot be graded, Miss Fitzgerald. It is the spirit we bring to it that gives it dignity or meniality. The most truly intellectual woman I ever knew could do anything in her own home." He paused for a moment, thoughtfully scanning the merry assemblage, then added. "This butterfly life can never produce good home-makers."

"You consider that of paramount importance?" she asked drily.

"I do."

"And to be a good cook is the one requisite," she laughed scornfully. "Then we of the butterfly class must be condemned to celibacy. It is the one thing I could never do. It would be too drearily uninteresting."

JUST then a white-flanneled youth approached to claim her for a waltz on the temporarily erected pavilion, and their argument was ended. But, as she moved gracefully away with him, she flung back over her shoulder with a little sarcastic laugh: "I wish you success in meeting your scullery maid, Mr. Maurice."

She had not seen him again that evening. Business had called him to his office, her hostess informed her. "Editors are such busy men, my dear," she sighed. "It really is too bad Mr. Maurice had to go. Such a clever man, and so attractive. He has a wonderful personality, don't you think? And they say he is quite wealthy. But, do you know, I don't believe he cares much for society."

"No? Probably not," answered Pauline carelessly. She turned away, strangely depressed. At any other time she would have smiled; for her hostess had a marriageable niece and was notorious for match-making. Perhaps it was because she knew her comments were correct that she felt at variance with everything. She almost wished she had not spoken to Maurice as she did.

It was not until the following day that she realized how tired of it she had grown. Leaning idly back in the gaily-fringed hammock swung under giant elms, she ran over the programme of the days: tennis in the morning, teas in the afternoon, and a garden party, or perchance, a dance in the evening. The seasons lent some variation; but it was all pleasure, pleasure. And to think that for three years she had endured such monotony! Even the afternoon teas eternally the same: a nibble of cake, and tea served from the tiniest of cups—always the cups were tiny. If they had dared to serve it from thick-lipped stoneware it would have been some diversion, Pauline reflected.

THE color suddenly flared into her smooth cheeks. What would Ivan Maurice think if he could read her thoughts? She wished now she had not made that last remark. It must have hurt him. Not that she had any reason to believe that she, more than any other woman, had it in her power to affect his equanimity. He had placed her in the butterfly class, and, of course, she was utterly apart from his life. Still, she was sorry she had been guilty of such rudeness.

He was so sincere, so kind in spite of his criticism, that her face burned as she contemplated his opinion of her. Yes, she was sorry she had given him such a false impression; though not yet ready to accede to all his ideas concerning home-makers. She was merely affected with a touch of ennui.

Oh! it was so much like the old days when he was a struggling reporter and she not even a society bud.

But to go into the kitchen and cook! Pauline seldom took the trouble even to enter the kitchen. Roxy, her efficient maid-of-all-work, managed quite well in the rose and grey apartments without supervision, which left the youthful mistress freedom to pursue the daily round of gaiety. Good health, a generous share of beauty, and sufficient income to enable her to live without working, Pauline was bright and entertaining, she was in constant demand.

"I suppose he would have us get down and scrub the floors," she soliloquized. "Men are so unreasonable in their ideas. What would he think if he knew that poor benighted me can't even make a cup of tea? All I can do is play tennis, and drum a little on the piano, and sing in——"

French-heeled pumps came down on the green turf with defiant suddenness. It had been borne in on her that this was the day she had promised to sing at Mrs. Hendrie's reception.

"I won't go, that's all," she said aloud. "I'm sick to death of receptions. It will be the same old tiresome thing—ice cream and cake, and a lot of silly talk about nothing. I can't endure it."

SHE sat for a moment, pondering. If she did not go, Mrs. Hendrie would be offended; and if she remained in Whiteside, she must continue to offend, should she refuse invitations. Obviously, there was only one thing to do: either keep on in the same dull round or go away entirely. It would be easy to go, for she was alone in the world and independent financially. But where to go, was the question. All her friends in other towns spent their time in the very manner she wished to escape, and she had no acquaintance in the country.

Suddenly across her unsettled mind there flashed a vision of a rose-bowered cottage with quaint dormer windows and cool green shutters. Scarlet geraniums bordered the gravel walk leading to the wide doorway, and all around it, as if guarding it from marauding wayfarers stood tall elm and larch trees. It was a very haven of seclusion. She had noticed it only the week before when motoring through the country. Her quick eye had spied the card, "For Rent," fastened to the little wicker gate; and even then, she had thought what an ideal spot to live in. Nine miles from Whiteside, and in a district of which the townspeople knew almost nothing—what better place could she find to hide from pink teas and bridge parties?

With Pauline, impulse meant action. She seldom waited to analyze any idea that presented itself. Within an hour, her lounging negligee was changed for a motoring costume, and she was speeding in her small electric car toward the rose-wreathed cottage.

THE placard was still on the wicker gate; which fact she hailed with joyful satisfaction. Under the words, "For Rent," she read, "Apply within."

The front door of the house stood open, but no person was visible. How silent it was! Even the faint twittering of birds in the flower-laden shrubbery accentuated the stillness. For the first time, doubts assailed her. Perhaps it was idiotic to think of living in this isolated spot with no companion but Roxy. The loneliness might prove as irksome as the satiating society of Whiteside.

As she stood hesitating, an elderly gentleman crossed the trimly cut lawn to her.

"Good-morning," he said pleasantly. "Were you thinking of renting this place? I am the one in charge."

"I had thought of it," answered Pauline. "The surroundings are lovely. But isn't it rather lonely?"

"I haven't found it so. Let me show you through the house. If business did not take me away, I would not think of leaving before my lease expired."

Pauline was delighted with the interior of the cottage. The rooms were attractively furnished, and had a cheery, homelike air. At one end of the long dining-room was a glass cupboard filled with her favorite Blue Willow China, and in the old-fashioned brick fireplace, which almost filled the tiny living-room, she saw visions of cosy, crackling fires on cool evenings.

The Singer as I found her in her New York home.

Kathleen Howard serves Afternoon Tea.

Kathleen Howard

ONE IN A MILLION

By W. G. Rook

A Grand Opera Singer may also master the intricacies of the Culinary Art.

"NINE-TENTHS of me," declared Kathleen Howard of her girlhood, "were the normal rational characteristics of a well-brought up bright girl. But the last tenth was an unknown quantity, a great big powerful something which I vaguely felt, even then, to be the master of all the other tenths, a force which was capable of having its own way with the rest of me if I should ever give it a chance."

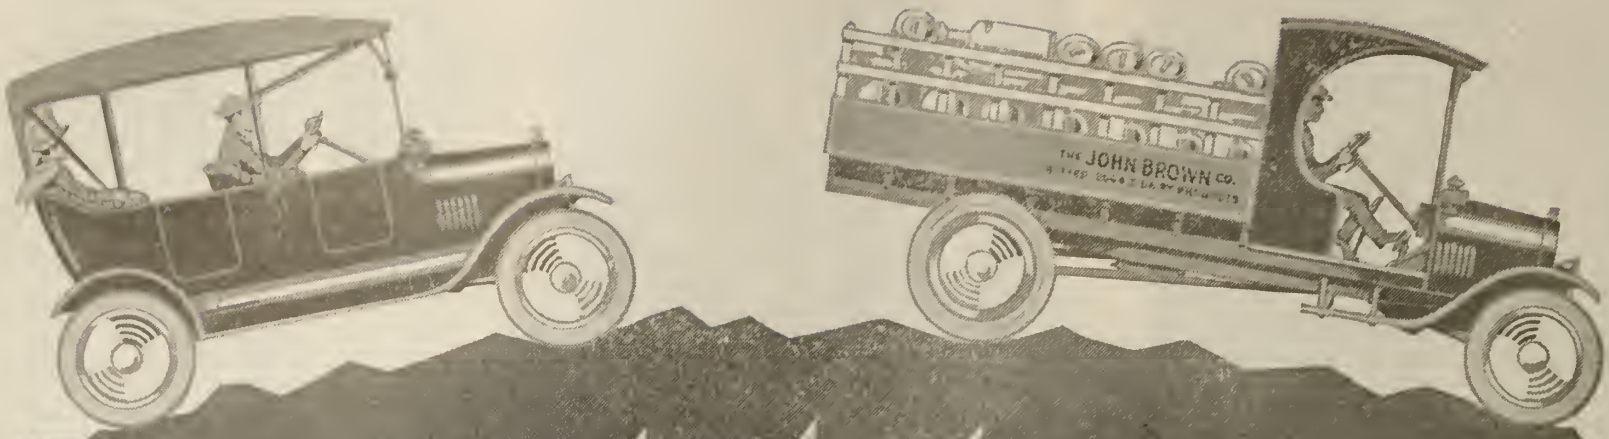
When still quite a girl, Kathleen, or Kate as she was better known to her friends, promised to marry a young man of the town in which she lived, and the family had carefully saved five hundred dollars for her trousseau. But pondering over the matter, the thought which persistently goaded her was what she could do for her voice with that five hundred dollars, and eventually she decided that being married in old clothes would be preferable to having an untrained voice, so she forthwith packed her trunk and started for New York.

Her experiences while there, and later in Paris, Germany, London and back again to the Metropolitan Opera Company of New York are all described in Madame Howard's book "The Confessions of an Opera Singer," recently published. One might imagine from the title that there would be many dreadful disclosures, but such is not the case, for the singer announces very frankly that she has "never been in any great danger morally on the stage," but that her courage and nerve have been severely threatened, and that she was at times saved only by her dogged determination to succeed.

THE early life of this Metropolitan Opera singer had happily been directed by a very wise and very clever father, whose greatest joy in life was music. In the evenings the family played imaginative musical games together, and the children read notes before they were able to read letters. When four years old Kathleen began to read music, and when six she with her sister, Marjorie, sang in the church choir. Remembering her childhood Kathleen Howard says "Father used to give us a note, and we then had to run round our rather large house humming it. It was the deepest disgrace we ever knew if we had sharped or flatted when we got back to the starting point. He taught us musical terms by making us dance to different rhythms he played, and would call out 'Allegro,' 'Vivace,' 'Adagio,' 'Molto allegro,' 'Legato,' and so forth, to which we had to change instantly. Whenever any one came to the house, we played and sang for them, and though it might have been rather awful for the visitors, it was very good for us to get used to an audience."

From soloist in a small church to a Metropolitan Star is a far reach, and Kathleen Howard has won out where thousands of girls would have failed. She, however, strongly recommends aspiring young singers to try for choir positions in large city churches, where they will be forced to compete with other singers before contemplating study abroad.

When I met Madame Howard in New York some time ago, it was with mixed feelings that I approached the interview. Great opera stars are supposed to be individuals very difficult to approach. My experience with moving picture stars led me to believe that some of the people most in the public eye are somewhat inclined to be eccentric and different from ordinary individuals. However, Kathleen Howard set my mind at rest inside of two minutes by suggesting that we have a cup of tea and some toasted scones while she proceeded to tell me some of the most outstanding events of her life. It was then that I learned that Madame Howard had published the book above referred to.



Kathleen Howard as "Carmen."

DURING the interview Kathleen Howard confessed that she was exceedingly tired, and in answer to my question as to the reason, she said that she had been busy all morning at the Pathe studios singing for records. I could not understand why this should be such strenuous work, my impression being that all that was necessary was to stand up before a large horn and wait for the signal from the conductor and then sing in the best possible manner. Madame Howard soon disillusioned me, however, by telling me there was considerably more to record making than this. First, she said, a singer has to feel her best. The accompanist, musicians and orchestra have to be placed in proper location and crowded together in a manner quite different from usual, and as a result they do not always feel in the best of humor. Frequently mistakes are made in their parts, although the singing may be perfect. Then again, possibly the instrumental part may be quite satisfactory, but the singer may make two or three errors. The song may have to be repeated half a dozen times before a perfect record is made.

An inferior record is never allowed to reach the public from any of the large phonograph companies, and for that reason one can readily imagine that singing under such unusual conditions must be a trying ordeal.

Kathleen Howard is deeply interested in the work of the Society of American Singers of which she is a member. The aim of this organization is to bring about a greater appreciation of artists on this Continent although Madame Howard is of the opinion that America is not as yet in a position to train singers. She says "There is much talk about it not being necessary to go abroad to prepare oneself for an operatic career, but the time has not yet come in America when the student can find the same opportunity to practice, or work out on the stage her beginner's faults. In Europe you can do this in blissful semi-obscurity. I hope and believe the time will come

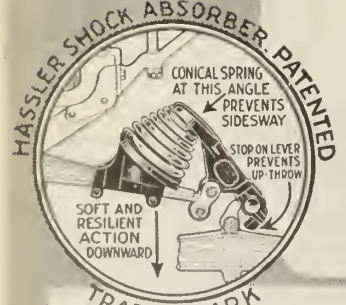
Like the teeth of a buzz saw!

YOU'VE stood in awe before a buzz saw and watched it literally tear its way through a piece of material. Being driven at such a terrific speed, it produces results that are almost startling. But if you were to run the buzz saw at a much slower speed, and take some of the keenness off of the teeth, then you would have an action very similar to that of road bumps, ruts and rough places as they rack, strain and wear out your Ford Car or Ford One Ton Truck.

The thousands of sudden, heavy impacts, while not sufficient to cause instant breakage, yet cause great and unnecessary wear on all parts, particularly the power unit and the tires.

It has been proved by nearly a million Ford owners that by properly cushioning their machines against road shocks and vibrations with Hassler Shock Absorbers, that you save at least 30% of the ordinary tire and repair expense, and that your Ford's depreciation is decreased a like amount. You also obtain considerable increase in gasoline mileage, due to the smoother running. Hasslers prevent squeaks, rattles and deterioration, for the spiral, conical springs of chrome-vanadium steel compress on either upward or downward movements.



In addition to all of these savings you have such greatly increased comfort that your Ford Car or Truck rides and drives as well as the highest priced heavy models. It steers easily, holds the road, travels safely at high speed, and the general and good satisfaction you derive from its use is increased astonishingly by Hassler Shock Absorbers.

Hassler Shock Absorbers can be put on in a very few minutes, either by you or your garageman. There are two types, one for all Ford Passenger Cars, the other "Double or Twins" for the rear of the Ford One Ton Truck.

10-DAY TRIAL OFFER

Don't ride without Hasslers because some one tries to discourage you. They are a quality product—worth their price. The Hassler dealer in your vicinity will put them on for 10 days' trial. Your money refunded if you say so. Write for name of dealer and Trial Blank.

ROBERT H. HASSLER, Ltd. 40 Sherman Avenue, North
HAMILTON, ONTARIO, CANADA

HASSLERS *for all* Ford Passenger Cars

HASSLER
TRADE MARK REGISTERED
Shock Absorber
PATENTED
MADE IN CANADA

The conical springs set at the angle shown prevent sidesway and allow for the most resilient downward action. The springs compress on either upward or downward movements—do not stretch out of shape—do not allow up-throw. Hasslers last as long as the Ford and make it last.

HASSLERS "DOUBLE or TWINS" *for the* Ford One Ton Truck

BARTERERS

By Louise Breitenbach Clancy

Illustrated by FRANK DOWNEY

She seemed to palpitate in harmony with the music.

ISRAEL GRABOWSKY strode up to the teacher's desk with nervous haste. For all his twenty-two years, he stood fumbling his worn cap like a shamefaced school-boy. Miss Meyer, volunteer teacher in the night school of the "Rebecca Rothschild Institute," raised pleasant eyes from her book. She was always receiving the shy confidences of these grown-up students of the primer. For a full moment he confronted her, his face pitiful with anxiety. Then he unburdened his heart.

"Sure, Missis Teacher, I only hope I don't make you no trouble. I hurry by my work this night. I say by myself the whole day through I must someone ask for to help. I must my good lady teacher ask sooner is the class here. I—I—."

Miss Meyer waited in sympathetic silence.

"Sure, Missis Teacher, I wish—I only wish I know where Yetta Solomon is by nights. She don't here come for to learn. She don't here come dance-nights. Where is Yetta? Ain't it somet'ing fierce—a pretty-in-the-face girl like Yetta is every night out?"

"I've been worried about Yetta," confessed Miss Meyer, genuine concern in her face and voice, "I can't imagine why she doesn't oome any more. She used to be my star-pupil, and how she did love the dancing lessons! Why, she never used to miss a night."

"I make money here," Israel went on with Abrahamic gravity. "I get me lots customers and old shoes, too—she won't with me marry. I go by her some evenin's—she ain't to home no more. Maybe, it's only some foolishness, but I'm much with Yetta lovin'."

THE young shoemaker was not to be laughed at; there was real intensity to his suffering. Miss Meyer made haste to assure him she would begin her search for the missing girl that very evening. At nine o'clock her class of dark-eyed, pallid-faced men and women filed past the desk, each with a vivid smile and a shy, faltering, "Goodnight, t'anks, Missis Teacher." Miss Meyer laid a detaining hand on coquettish, over-dressed Becky, Yetta's young sister, and the apple of her eye.

"Where's Yetta?" began Miss Meyer in her gentle way. "Tell me, is she—?"

"There ain't nothin' to tell," Becky's voice had an edge of impatience as she tried to slip away from the teacher's fingers. Her eyes were on the young shoemaker who had been stopped in the hall-way by a class-mate.

Miss Meyer must have been engrossed in her desire to learn Yetta's whereabouts, for she did not take her hand from the girl's shoulder and she continued to question her in a leisurely manner. "Does Yetta still love to sell those pretty blouses at Rothschild's?"

"Yetta, she's workin' now in the Globe Tobacco factory," Becky admitted somewhat sullenly, "I—I—, sure, Missis Teacher, I must go now. Israel Grabowsky, he's startin' now, see. he'll take me home. Sure, you wouldn't want me to go all that way alone."

"Of course not, Becky," Miss Meyer smiled into the pretty pleading face. Full well she knew Becky's interest in the young shoemaker. "But it'll be many blocks out of Israel's way to take you home, and the poor fellow's tired. I'll walk along with you. I want to know more about Yetta."

"Sure, Missis Teacher," insisted Becky, "it ain't so far for Israel, and he never minded it when Yetta—"

There was that in Miss Meyer's eyes that cut the girl short. With an angry toss of her head she followed the teacher into the now empty hall.

"I SUPPOSE you're still at the ribbon-counter," said Miss Meyer, her hand on the outside door.

"I—I—ain't at Rothschild's no more, neither," Becky confessed reluctantly, her eyes riveted on the jangling bracelets on her wrist. "I work with Yetta—." Involuntarily she wrinkled her pretty nose. "Ugh, how I hate the smell, and the dirt and everythin'."

"What does Yetta do with herself now in the evenings?" Miss Meyer led the way out into the night.

"Search me," Becky retorted flippantly, "sooner we get home and make our eatin's, Yetta's went. I don't ask her nothin'. She don't tell me nothin', but," with a sarcastic laugh, "I just pretty near guess I know."

After the girl had closed her house door behind her, Miss Meyer lost herself in the perplexing problem. For the past few weeks Yetta's defection had always been in the under-current of her mind. Now the image of the young girl, with the rare, colorful beauty and grace of form, sprang out of the shadows and filled completely heart and eyes.

"Youth and love of pleasure—cheap pleasure it must be for the very poor—love of adornment—vice," so Miss Meyer's thoughts ran. "To-morrow morning—early, early, I must see Yetta in the factory."

Darkness had already closed in the next evening when Miss Meyer dragged herself homewards. She had failed to see Yetta; the whole day had been spent in the Institute Creche. She had just toiled up the front steps of her own home when some one dashed up behind her, almost throwing her off her feet. The vestibule light fell full on the young shoemaker, hatless, disheveled, almost too spent with excitement to express himself coherently.

"I FIND her," he all but shouted, "I find her—now—in a alley." Then he dropped back against a pillar of the porch, with his nostrils dilating, and his face nervously tense. As though he were a little child, he suffered Miss Meyer to lead him by the hand into her library.

"I say by myself all the day," he broke out again. "I must—I must find Yetta. To-night I make my shop close soon—I care for eatin's nothin'. I will Yetta find. I walk and I walk the streets up and down and I t'inks and I t'inks till I'm 'most crazy like. I don't look where I go. I bump me in the head with a girl. I 'scuse myself. Good Gott, it's Yetta.

" 'Yetta,' I scream. She runs in down a alley. I run her after. She makes a door open so—a little—and quick slams it me in the face. I will in go, Missis Teacher. But no, a policeman runs himself up. 'What you want? You can't in go. It's a t'eater—the door for wimmins,' he screams me in the face. So I run here so fast like I only can, Missis Teacher."

An hour later, Miss Meyer, under the wing of a woman-reporter, a friend who had often done her good stead, had been admitted behind the scenes of a questionable vaudeville theatre, known as the "Star." Preparations for the first act were going on.

Her heart throbbing with sympathy, she watched a sextet of untidy, half-dressed young girls as they came rushing up a flight of rickety steps from what looked like a damp, noisome cellar. They were pulling on their clothes, adjusting wigs or arranging quantities of false hair, chattering or calling for help as they ran toward the wings.

PRESENTLY Miss Meyer caught sight of Yetta racing up the stairs from her dressing room. The cheeks of the older woman flamed with an intensity of emotion. The girl, always exquisite from the richness of her coloring and the luminous beauty of her dark eyes, had grown positively ethereal. Her body so slim and full of graceful lines seemed to have taken on added height, but the small face beneath the mask of paint and crude penciling had fallen into delicate hollows. Her pretty head held high, she ran to her place in the wings, buttoning a tawdry, soiled gown of lace and tinsel.

"Isn't she a beauty," came as an involuntary tribute from the lips of Miss Brown, the newspaper woman. The teacher was saved the necessity of a reply, for just then the manager hurried toward them. After a moment of bantering and an off-hand introduction of her companion, Miss Brown darted toward a young stage-hand. Her trained intellect had scented a story in that old-man face.

Miss Meyer started, finding the eyes of the manager fixed upon her intently—eyes of vulpine cunning. The man was of meagre build, past middle age. A cold, hard sneer sat upon his thin lips. "You ain't ever been back here before, have you?" he barked hoarsely.

"This is a new experience for me," the young woman responded pleasantly, with an instinctive realization that she was being shown unusual courtesy. Conciliation she knew would be the cue for the present. Yetta must be saved—if it were not too late. "That young girl has a rather striking appearance, don't you think?" she added, indicating her protegee who still waited in the wings.

"Um—," grunted Goldman, non committally.

"WHAT is her act?" pursued Miss Meyer, barely successful in disguising her interest.

"Dance," was the laconic answer. "It's time for her turn now."

Not another word was spoken, for just then Yetta bounded before the footlights. Miss Meyer felt without seeing that the manager's eyes never

My Bob

The Story of a Dog which went to France Told by himself.

By Vincent G. Perry.

ILLUSTRATED BY E. J. DINSMORE.

"Somebody leaned down and yelled: 'Here's the little beggar down in this shell hole'."

WELL, I'm returned. I came back on the big steamer, all the way from England and here I am safe home In Canada—though I didn't want to come and I cried and whined and acted like a silly little pup In the show-ring for the first time—until the steward took me down in the butcher's room and there I had to remain. I would have cried a lot more, but what was the use? I just remained in a corner, thinking of Bob and how he must miss me. I would be ashamed to meet the Little Mother—what would she think of me letting them send me home without Bob? Her heart would be broken, too, and Bob would think I had deserted him.

I wouldn't eat nor anything and I think I would have died if Marjorie hadn't been on the boat, but she heard me crying, kind of to myself, one night when the steward had chained me to the deck to get some fresh air, and came over to me and made friends. She was grand all the way over and cried 'cause I couldn't eat, so to please her I ate and found I was really hungry and could eat a lot, 'specially when she handed it to me. She looked kind of lonely, too, and used to cuddle me and whisper things about the big soldier boy she had left in the hospital in England. I wished I could have told her about Bob but I couldn't. I could only wag my tail, lick her hands and look sorry, but I know she understood.

You see my trip to England was rather unexpected. Bob hadn't intended taking me. I had always been his pal right from the first when I was a little puppy. He bought me from the man that owned my father, the best Boston Terrier in America, a champion of champions, with a pedigree as long as the English Channel, at least that is what Bob told them on the boat going over. I'd do anything for Bob, even stand for a long time in the show-ring when the judge was deciding between King Regeagle and me. Of course, it was some fun beating out Regeagle and getting points for my championship but even that isn't as good as knowing you are pleasing the best master in the world. I knew Bob was going to enlist even before the Little Mother. It was when I was sitting beside him in his car, he put his arm around me and said.

"Buddy Boy, I'm not going to be a slacker, I'm going to Enlist."

I didn't know what enlistment meant then but I knew it must be something good or Bob wouldn't do it, so I licked his hand and cuddled up closer. He talked a long time to the Little Mother that night and she cried a lot but said she wouldn't stand in his light. (That's what the man told Bob he was doing because he wouldn't have my ears cut—he was standing in my light to get a championship.)

All that night I heard the Little Mother crying to herself and I was afraid Bob would wake up and hear her, but he didn't, and if he had I was going to bark and make such a noise he couldn't have heard her—because I knew the Little Mother didn't want him to hear her cry, and next to Bob, I love the Little Mother.

THE next day the Little Mother seemed quite restless and when it came time for Bob to come home she went to the window and then to the door many times. Of course, I followed her and tried to look out of the window but I'm not big enough to look out, so it wasn't much use. We had about given up when I heard his step on the walk and gave a little yelp to let the Little Mother know and ran to be there to welcome him. I was so excited and jumped around him so much I didn't notice any change about him until he knelt down to hug me like he always does and then I saw he was in khaki—enlisting meant joining the soldiers that live in the park and march down the street with a lot of mongrel dogs following them. I kind of felt it meant Bob was going to leave us and then I knew.

I was taken so kind of sick I crawled under the sofa so Bob wouldn't see me. I could just see the Little Mother in Bob's arms and hear her whispering, "My brave, brave Bobby," like she did when he and I saved the little girl's life—but that's another story.

Enlisting wasn't as bad as I thought it was going to be, 'cause Bob, although he lived at the park with the other soldiers, came home in the evening and took the Little Mother and me out in the car like he used to. The nights were the worst for me. It seemed awful to be sleeping at the foot of a bed that Bob wasn't in, and the first night I couldn't sleep for thinking of him and the good times we had had together. Then after Bob got his commission (which is a whole lot better than a championship) and was given command of a company, he was able to sleep home on Saturdays and Sundays and it seemed like old times.

ONE night he said, "Buddy Boy, I'm going overseas next week. What are you going to do without me?"

He looked so sad that I knew it was something terrible and cried and asked him as best I could not to go, but he patted me and rolled me over to get me in good sorts and laughed at me because I pouted.

It didn't take long for the next week to come and my dreading it didn't make it any slower. The Little Mother was baking up things and Bob's sisters—who didn't have any use for dogs—were helping. They were baking all things that Bob liked and I liked, too, but they didn't give me any; I didn't care because I knew that Bob would, anyway. When the things were all done they piled them in a box which they called "Bob's box." I pricked up my ears when I heard them say that and I sat down under the table to guard it, and I didn't move till Bob came home. I knew he was going away and it must be "overseas." We all left for the train and I sat beside Bob in the big touring car, licking his hand and trying to say, "Take me, Bob, take Buddy Boy." He kept stroking my head and saying, "Good old Buddy Boy, good old pal."

There was a dreadful crowd at the train, far more than at the New York A.K.C. Show. The train was full of soldiers and there was a special car for officers like Bob. The Little Mother clung to Bob's arm and cried a lot and there were tears in Bob's eyes and the sisters hung on to one another and I cuddled down between Bob's shoes and licked his puttees.

The train whistled and scared some mongrel dogs that had never travelled and they ran away. Bob had to get into the train and when he found a seat the Little Mother and the sisters went over, and when he leaned out the window they hung on to him. I wiggled and cried and one of the sisters noticed me and for the first time in her life picked me up and held me up to Bob. The train whistled and started slowly and I made a jump and landed right in Bob's arms. He was so surprised that he just hung on to me for fear I'd fall out and get hurt and then the train got a good start and he just had time to call good-bye and something about expressing Buddy back.

I nestled in his arms and he called me a bad boy, but I didn't care. I knew he was pleased, so nestled as close as I could. The other officers liked my looks and Bob told them about all the prizes I had taken and that I would be a champion if he had my ears trimmed, but he wouldn't be so cruel. He told them that he was going to ship me back at the next stop but I looked up in his face and pleaded so for him to take me that he said, "Gee, I wish I could take the little cuss with me!"

"And why not?" asked the big man they called Colonel—the same as the big dog that was benched next to me at the Boston Specialty Show.—"this battalion hasn't a mascot and this little fellow is so small you can smuggle him onto the boat under your coat."

"I believe I'll try it," said Bob, and I nearly fell out of the window for joy.

IF I didn't have a lot of bones to bury in the back-yard and the cat next door to watch, I'd tell you all about the trip over in the big boat; I'd tell you all about the fight that I had with an English dog that got into Bob's tent, but that wouldn't be telling you about why I am returned. You see, we were finally sent to France where the Germans were waiting to fight Bob and hundreds of other men. Bob and I and the other men of the battalion stayed in a village where we could hear the fierce noise they were making, which was a million times worse than the noise at any dog-show I've ever been at. Then Bob left me in the care of a deaf old lady in the village, after telling me he would be back in three weeks and tying my name and address on my collar. I thought he would beat the Germans before three weeks but he didn't and I was mighty lonesome when he was gone. I began to think he might have got hurt, but sure enough in three weeks he came back. He looked thin and pale and needed a shave but I was so glad to see him I didn't mind the feel of his whiskers against my nose like I used to. He stayed a week and then bade me good-bye again and left.

I knew it wasn't a gentlemanly thing to do but I waited 'til he was almost out of sight and then I started after him. He marched at the head of a lot of men and I kept out of sight 'til we were too far away for him to send me back and then I ran up to him. He was taken by surprise to see me but I guess he must have been thinking about me, for he took me up in his arms and kissed the end of my nose, and tried to scold me, but he couldn't because there were tears in his eyes and I guess there were in mine, too, and I wasn't a bit ashamed of them.

It didn't take us many hours to get to the trenches, things like sewers with little houses

(CONTINUED ON PAGE 60.)

WHO GOES THERE?

BY

ROBERT W. CHAMBERS

ILLUSTRATED BY DAN SAYRE GROESBECK

CHAPTER XVI. (*Continued*)

HE had sealed and directed the letter, and was gazing meditatively out of the diamond-leaded windows at the splashing fountain in the court, when a slight sound attracted his attention and he turned, then rose and stepped forward.

Karen gave him her hand, smiling. In the other hand she held the last of her orchids.

"Are you rested?" he asked.

"Yes. Are you?"

"Perfectly, thank you. Really it is beautiful outside the house."

"There is no word from General von Reiter?" she asked, absently caressing her cheek with the fragant blossom in her hand.

"Not yet," he said.

"If none comes, what are you going to do?"

"I am free, anyhow, to leave now."

"Free?"

"Free of my engagement with Baron von Reiter."

"Free from your obligations to—*me?*" she asked in a low voice.

He turned to her seriously: "My allegiance to you needs no renewal, Karen, because it has never been broken. You have my friendship if you wish for it. It is yours always as long as you care for it."

"I do. . . . Are you going to leave—Quelienheim?"

"Yes."

"When?"

"When a messenger brings me an answer to a letter which I shall send this morning."

She stood caressing her lips with his flower and gazing dreamily into the forest.

"So you really are going," she said.

"I cannot help it."

"I thought"—she forced a smile—"that you intended to rob me first."

He did not answer.

"Had you forgotten?" she asked, still with the forced smile.

"No."

"Do you still mean to do it?"

"I told you that I had to have the papers."

"Yes, and I told you that I should make it as difficult as I could for you. And I'm going to. Because I don't want you to go." She laughed, then sighed very frankly. "Of course," she added, "I don't suppose I could keep them very long if you have made up your mind to take them."

"Is that your idea of me?" he asked, laughing.

She nodded, thoughtfully: "You take what you want, sooner or later. There is no hope in opposing you. You are that kind of man. I have learned that."

She touched the orchid to her chin meditatively. "It surprised me," she added. "I have not been accustomed to authority like yours. I am my own mistress, and I supposed I was accountable to myself alone. But—" she lifted her eyes, "it appears that I am accountable to you. And the realization does not seem to anger me very deeply."

HE looked away: "I do not try to control you, Karen," he said in a low voice.

"You have done so whether or not you have tried. I don't know what has happened to me. Do you?"

"No," he said, forcing a laugh. "Except you are learning that the greatest pleasure of friendship is the confidence in it which nothing can disturb."

"Confidence in friendship—yes. But confidence in *you!*—that ended in our stateroom. Without confidence I thought friendship impossible . . . . And here I am asking you not to go away—because I—shall miss you. Will you tell me what is the matter with a girl who has no confidence in a man and who desires his companionship as I do yours?" Her cheeks flushed, but her eyes were steady, bright, and intelligent: "Am I going to fall in love with you, Kervyn?"

He laughed mirthlessly: "No, not if you can reason with yourself about it," he said. "It merely means that you are the finest, most honest, most fearless woman I ever knew, capable of the most splendid friendship, not afraid to show it. That is all it means, Karen. And I am deeply, humbly grateful. . . . And very miserable. . . . Because——"

The entrance of Frau Bergner with the breakfast tray checked him. They both turned toward the long oak table.

Fortunately the culinary school where the housekeeper had acquired her proficiency was not German. She had learned her art in Alsace.

So the coffee was fragrant and the omelette a dream; and there were grapes from the kitchen arbour and ham from a larder never lacking the succulent by-products of the *sanglier* of the Ardennes.

Frau Bergner took his letters and telegram, promising that Fritzl should find somebody with a bicycle at Trois Fontaines to carry the other note to Lesse Forest.

She hovered over them while they ate. The breakfast was a silent one.

Afterward Karen wrote a number of notes addressed to her modiste in Berlin and to various people who might, in her present emergency, supply her with something resembling a wardrobe.

Guild had taken his pipe out to the fountain, where she could see him through the window, seated on the coping of the pool, smoking and tracing circles in the gravel with a broken twig.

She hurried her notes, called the housekeeper to take them, then, without taking her hat or gloves, she went out into the sunshine. The habit, so easily acquired, of being with Guild was becoming a necessity, and neither to herself nor to him had it yet occurred to her to pretend anything different.

There was, in her, an inherent candour, which unqualified, perhaps unsoftened by coquetry, surprises more than it attracts a man.

But its very honesty is its undoing; it fails to hold the complex masculine mind; its attractiveness is not permanent. For the average man requires the subtlety of charm to stir him to sentiment; and charm means uncertainty; and uncertainty, effort.

NO effortless conquest means more to a man than friendship. And friendship is nothing new to a man.

But it was new to Karen; she had opened her mind to it; she was opening her heart to it, curious concerning it, interested as she had never before been, sincere about it—sincere with herself.

Never before had the girl cared for a man more than she had cared about any woman. The women she had known had not been inferior in intelligence to the men she knew. And a normal and wholesome mind and heart harbour little sentiment when the mind is busy and the body sound.

But since she had known this man she knew also that he had appealed to something more than her intelligence.

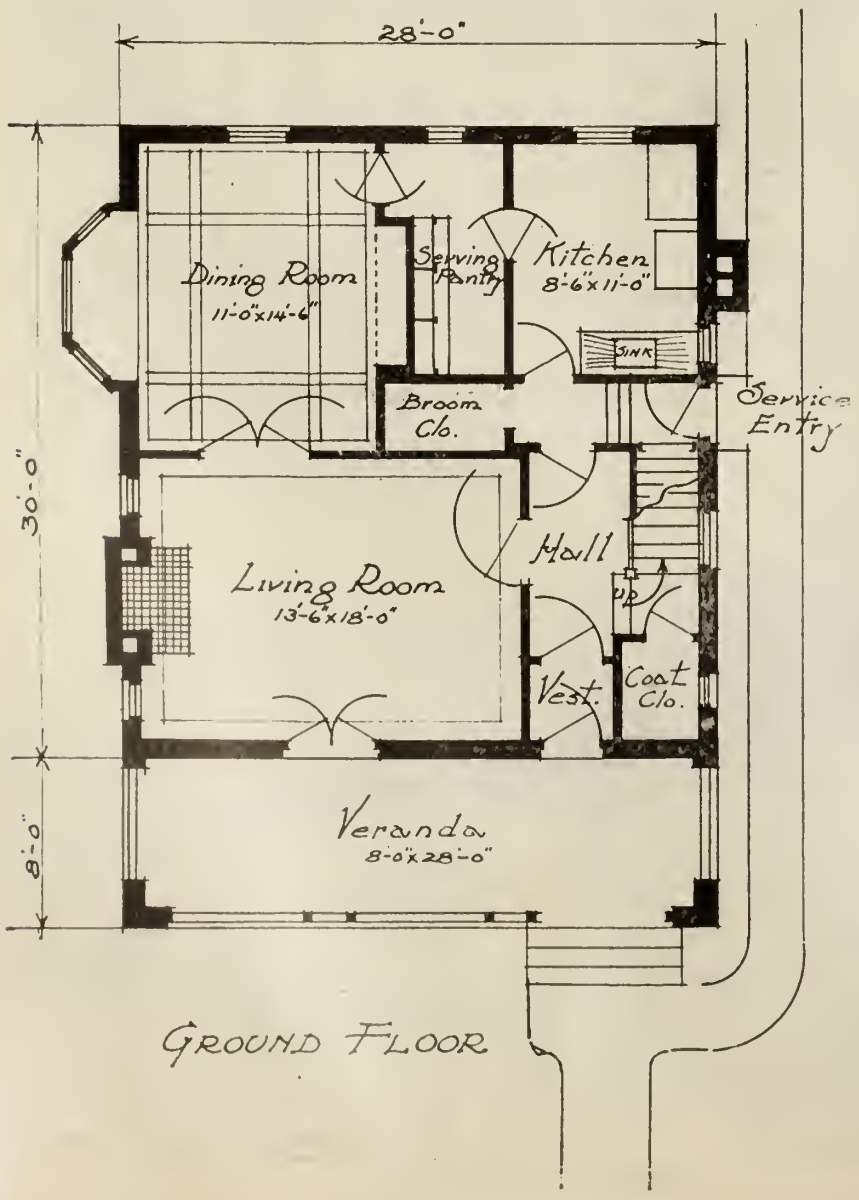
He stood up when she appeared, knocked out his pipe and advanced to meet her. He had been doing a lot of thinking. And he had concluded to talk very frankly to her about her friendship with him—frankly, kindly, discouraging gaily any mistaken notion she might harbour that there could be any room, any reason, any fitness for a deeper sentiment in this friendship—anything more significant than the delightful and frank affection now existing between them.

"Shall we walk in the forest, Karen?" he said.

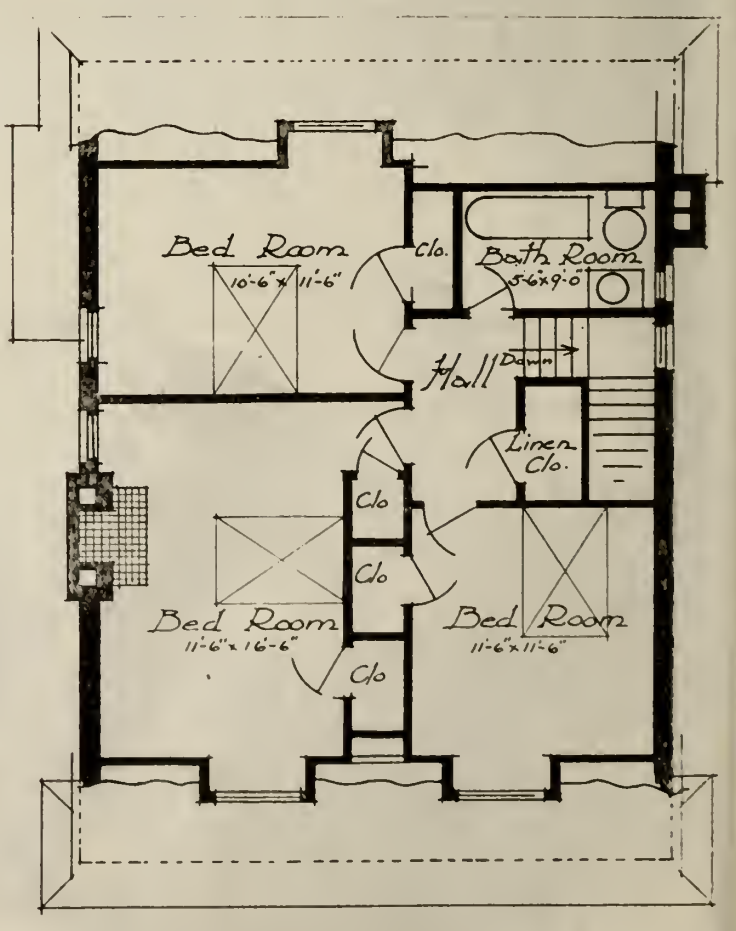
(CONTINUED ON PAGE 34.)

As she sat there looking at this man and at the brown-eyed girl beside him, suddenly she experienced a subtle sense of fear.

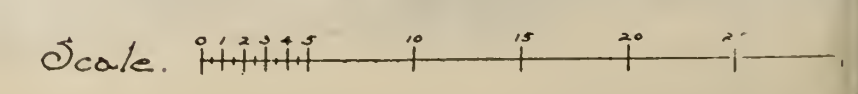
EVEN THE SMALL HOUSE MAY BE DISTINCTIVE



DESIGNED BY CLARENCE THETFORD, ARCHITECT



LET the public buildings, parks and natural location of a town be ever so beautiful, if the streets are lined with rows of similarly constructed and badly proportioned houses, any individuality and charm which might characterize the town is entirely lost in its monotony. One might adapt a familiar maxim to express the thought: "a town can be no more beautiful than its houses."



And even the small, inexpensive house may not of necessity be the plain uninteresting building one so often sees. It can be well proportioned and of pleasing and varied design, thereby adding its share to the general attractiveness of the town or community.

The house illustrated is 28 by 30 feet, and could be successfully built on a lot of from 35 to 50 feet frontage. It is so designed that several

(CONTINUED ON PAGE 63)

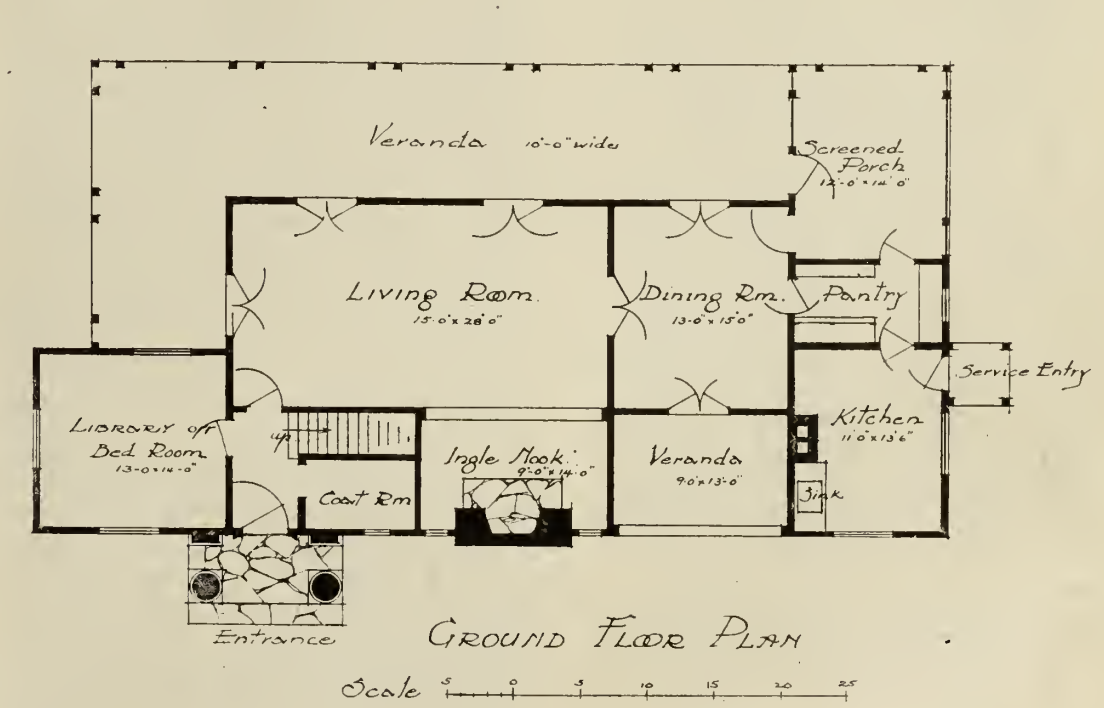
A SUMMER COTTAGE PLANNED FOR COMFORT

DESIGNED BY CLARENCE THETFORD, ARCHITECT

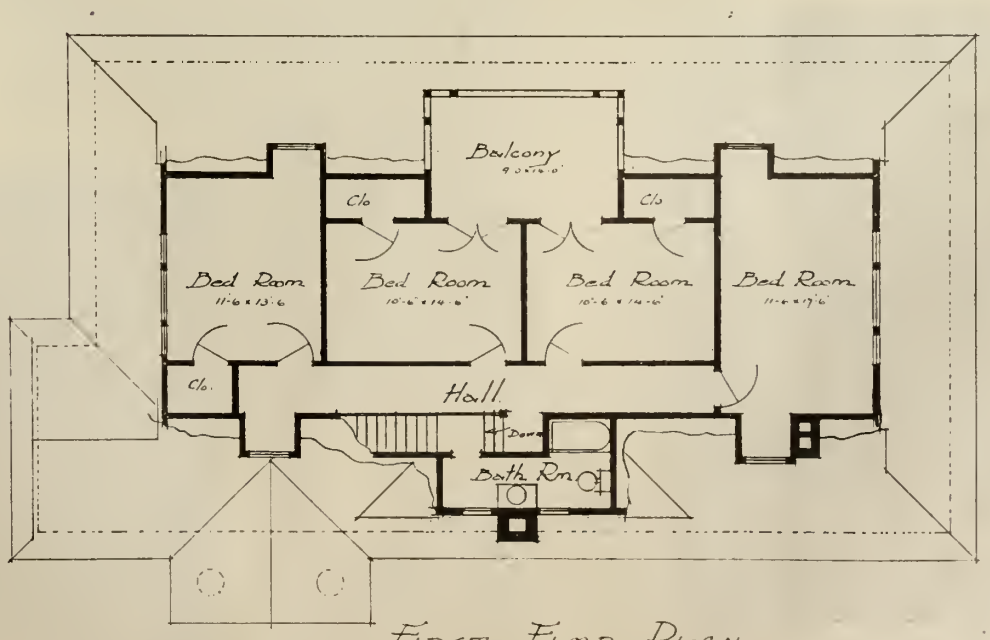
WHEN contemplating the building of a summer home it is well to plan to use as much material obtainable on the spot as possible. The frame cottage illustrated in this section, to this end, is built upon stone piers, has stone chimneys, stone fire-place and porch floor—stone being procurable in almost any rural section of Canada.

Rough sawn boards placed vertically with battens over the joists cover the exterior walls, which if stained a suitable shade to harmonize with the color of the shingles should give a very pleasing effect. One may safely depart from the conventional in the matter of colors to be used in a summer cottage, and the manner of treatment may be quite unique. Dark reddish brown walls with roof shingles colored yellow is suggested for a summer bungalow. If surrounded by flower gardens and partially lost in the foliage of trees this should give a splendid note of color and make an attractive spot against hill or sky.

Not only has the living room in this specially designed house spacious proportions, but an ingle nook and huge stone fire-place add to its comfortable appearance. The joists and studding at the ceiling, if left uncovered and stamped, give a distinctive feature to the house, but if this is done the entire furnishing must be kept in accordance. Only coarsely woven fabrics, no polished furniture, no delicate coloring should be introduced, or the harmony will be destroyed. If carefully carried out this is decidedly the most artistic and appropriate mode of treatment for this kind of house. French windows open to a verandah ten feet wide.



Both an indoor and verandah dining-room are provided, the latter screened, and each of easy access from the kitchen and serving pantry. A French window at each end of the inside dining-room opening on a verandah makes this room pleasant under any conditions, even during the inevitable cold, rainy weather which persistently intrudes upon summer joys.



The library, or bedroom if desired, it will be noticed is quite removed from the main part of the house, and is therefore an excellent room for study, reading or rest.

Four bedrooms, a balcony, bathroom, clothes closets and hall complete the upper floor. The bedrooms are all large and airy with cross draughts.

A feature of this bungalow is the attractive entrance porch—too often omitted in the house designed for summer use. The floor is stone matching the chimneys in design. Colored asbestos shingles, which are fireproof and at the same time quite attractive in appearance, are manufactured by several firms, and will be found a decided safeguard for cottages isolated from proper fire protection.

While the house illustrated is primarily designed for a summer cottage, the plan will serve equally well for an all-year-round house if built of suitable material, and provision made for a heating system.

Beautify the Flower Garden This Season and Increase the Yield of Fruit

By George R. Baldwin, F.R.H.S.

THE beautiful illustration at the top centre of this page is one of the many varieties of Cinerarias that can be easily grown in the house. During the growing season well-grown Cinerarias are very popular for sun-room, home and conservatory decoration, and as this cultivation is the easiest, and very little heat is required, they are essentially subjects for amateurs to grow.

There is no doubt that the most satisfactory results are obtained by treating Cinerarias as annuals, plants which have flowered being thrown out, and a fresh supply raised every year. Seed of the Cinerarias may be sown in June and July, two sowings at least are desirable, as a long season of bloom is required. Plants raised from June sown seeds should flower the following March or April. Soil composed of 4 parts loam, 4 parts leaf soil, and one part sand passed through a fine sieve, and the seed very thinly sown, just covered with fine soil, the surface of which should be lightly firmed down.

Cinerarias do not like high temperature, and from 50 degrees to 55 degrees is quite sufficient to cause the seed to germinate. A piece of glass should be placed over the seed pan until the seedlings make their appearance, when both light and air are essential. They should be transplanted once, and then placed in 5-inch pots, and when the pots are well filled with roots give weak liquid manure twice a week, until the plants come into flower. The use of stimulants must then cease.

THE pots may be plunged in the garden during summer in a cool place, and brought into a frame or sun-room when frost arrives. It is very desirable that Cineraria plants should be as strong and robust as possible if the best results are to be obtained, for if at all weak, they are likely to become the prey of various pests, green-fly and the leaf mining maggot in particular. Fumigating and dipping the plants in Quassia and soft soap solution, and dusting with tobacco powder, or applying other insecticides by means of a distributor are satisfactory remedies for green-fly, whilst the best method of dealing with the leaf mining maggots, the presence of which is indicated by the appearance of white marks on the leaves, is to crush the insects by pressing the thumb and finger along the white lines, the same as we have to do for the rose maggot. Poison enough to kill them would injure the foliage and plant. Too much cannot be said of the Cineraria, the beautiful primrose, Ferns, Primula, Calceolaria, and Coleus for house plants, and more will be said about them in next edition.

ROSES—Every gardener agrees that it is the best policy to prune a rose bush hard, to cut its growth almost to the ground in the month of April following planting. I believe, too, that most amateurs know this as well as the professional, but they have not the courage to put the precept into practice. At any rate, they have been told times enough. Anyone with a knowledge of the likes and dislikes of roses has doubtless had the pleasure of advising a friend as to the method of pruning his roses the first spring after planting. You find he has cut the bushes back in the orthodox way; but the climbers, those with nice long growths that seem to say "Ah, just leave me alone, and I promise that you shall not be disappointed"—with those it is different. He has listened to the siren's voice, he has started on that seductive short cut to Elysium. Naturally you expostulated with him, you argued, and finally threatened his Roses with all the evils to which Roses are heir. But no, he has heard the entrancing call, he is enraptured by the charm of the dreams he has dreamed, and all entreaty is in vain. Since he will do so he must tread the path, which, alas: so many have trodden—I am not ashamed to confess that I was found amongst that number, years ago—that leads without delay to disillusion.

Standard "Caroline Testout" Rose.

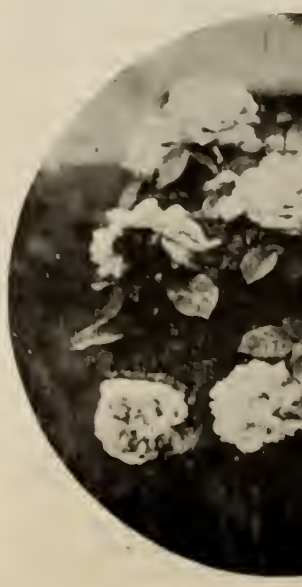
But let me to the point, and say that every growth of every Rose you plant between October and April should be cut to within three buds of its base about the first week of April. As a preliminary, the growths may be half cut away as soon as they are planted, excepting perhaps the Wichuriana class which may be more leniently dealt with, although personally, I treat them all alike except Juliet, the Austrian Briar.

When to do it? Happy idea: The best time to prune is the first week of April for all H.P. and H.T.'s, but the more tender T.'s should be pruned the second week of April. Those most commonly grown in bush form are the H.P., H.T., and T.'s. It is among these classes that the amateur will find the best Roses for garden display and for cutting.

APART from the knowledge of the characteristics of each variety, which I cannot here attempt to convey, the pruner should acquaint himself with the habit and manner of growth of each sort. Some grow more strongly than others; some grow erect, others are inclined to spread and so on; however, cut out all growths that are soft and bend easily to the touch; these are quite useless. Then all thin and weak shoots that obviously can never bear a decent bloom are to be cut out, and those that have grown towards the centre of the plant are either cut out or shortened to a bud that points in an outward direction.

Then comes the great question of, How long shall we leave each growth? It is much more easily asked than it is satisfactorily answered, as it depends on the aims of the grower. If you like to have a tidy rose garden with each shoot more or less in its place, and to have blooms of good quality rather than many blooms of fair quality, then all growths of, say, the thickness of your little finger, are cut to within three buds of the base. If quantity rather than quality is the end in view, then such growths may be left to six buds long. The pruning of T.'s is so simple as to scarcely need doing at all. They are generally so well pruned by the winter, that the pruning knife is only required to cut off dead parts, strong shoots to four buds, and weak shoots to two buds. I would strongly advise the amateur who values the expressed admiration of her friends, and really wishes to see her roses at their best, to prune hard rather than leave the shoots too long.

THE perennial Larkspur or Delphinium is one of the most stately and handsome plants for the hardy border. Many fine varieties have been raised in recent years, with the result that Larkspurs of very varied and pleasing shades of color are now available for garden decoration. They can be had in shades from the palest sky-blue to the deepest indigo, while in some cases they possess a distinctly pink tinge, there are even varieties with white flowers. Delphiniums are at their best during July and August and when a bright display of blossom is required at that time, they should be planted largely. They look well in beds by themselves, or may be planted in shrubbery borders, but to my mind they are probably seen to the best advantage when placed in bold groups in the herbaceous border. If the tops are cut down after flowering, a second crop of bloom is forthcoming, which carries the display of blossom well into the autumn, but such treatment has a weakening effect upon the constitution of some of the varieties.



The stock of choice varieties can be increased by taking cuttings of young growths in the spring; they should be inserted in pots of sandy soil, and placed in a cold frame to root. Large roots may also be divided at the time of transplanting. But if you want to be a real amateur raise some seedlings of your own. The illustration will give you some idea of the pleasures to be realized. A small trial bed is shown in which hundreds of seeds were sown, some came up and went away, others remained in a dwarf stage, some turned out fairly well, whereas four were extra good and have been kept, the balance thrown away.

Notice the second one from the left in the first photo. It is shown again after two years in the second picture, and certainly is a fine sight, standing as it does eight feet high, the blooms thirty-six inches long. It is a beautiful shade of peacock blue, with a clear creamy eye, admired particularly for the even disposition of the flowers on the stem, the whole forming a splendid Hyacinth shaped truss.

AMONG the hardy border flowers which have engrossed the careful attention of several of our leading amateurs during the past few years, the Aquilegia or "Water-catcher," more commonly known as Columbine, takes a prominent place, and is deservedly becoming popular. For many years it will reign as one of the queens of the border. Those unacquainted with the vast progress made by the hybridisers during recent years in converting the old fashioned Columbine, with its compact flowers of sombre color and little variety, into gorgeous varieties known as the Long-spurred Aquilegia, would be amazed at some of the blossoms—regal in form and color.

Plants raised from seed, will supply the commoner need, besides adding interest to the grower, who may be fortunate enough to raise a finer variety than yet exists. At any rate the various and delicately-tinted flowers amply repay the necessary care required in raising them. Truly does the long-spurred Aquilegia vie with the Snapdragon in growing popularity, and should be more generally planted on account of its usefulness in the rockery as well as the herbaceous border, and also for the fact that the flowers, when cut, will last in water several days.

GET down to business, avoid the spring rush, and have a better garden. Last month you paid special attention to looking through the entire journal and reading certain articles. This month do the same thing, as all the practical articles are just what you want again at this time. You are beginning to get impatient now and wish to plant outdoors, but do not begin to

Standard Rose, "Rev. Allan Cheales".

plant in the open until the ground is in right condition. This means that the soil must be nice and mellow and light. If it is heavy and wet wait until the sunshine dries it out.

Now if you do not raise your own seedlings arrange for the following Annuals to fill up the vacant spaces in the perennial border, or if desired in beds by themselves. Asters, Antirrhinum (which we will class as an annual, as they do not winter with us), Celosia, Coreopsis, Cosmos, Salpiglossis, Scabiosa, Stocks, Petunias (single and double), Orange-Daisy, Love-in-a-mist, and Sweet Peas—the latter to be grown by themselves on brush or trellis.

Trial Bed of Delphinium.

ALL flowers may be divided into two classes: garden plants, and those to beautify the home or sick-room, when cut. These should be chosen for the following characteristics — fragrance — long stems — harmonious colors—shape and form. Blend the colors carefully so as to give the desired effect; for instance, the lustrous golden orange daisy will blend with nothing but white, and I feel I may safely assert that, all things considered, the amateur is likely to get more real satisfaction out of the collection of twelve above recommended than any other twelve easily grown annuals for cut flowers.

Asters deservedly head the list by reason of their merit, especially those of the branching habit, if you have not room for the other varieties. But remember the Comet varieties are the most graceful and free-flowering. The Snapdragon must not be forgotten as it is an excellent bloomer, with an array of colors, and very hardy.

Next comes the Coreopsis, which deserves special mention for two reasons, free blooming, and charming combinations of yellow and brown. They also last long when cut and put in water. The Cosmos are strongly recommended on account of their beautiful shades and long stems, and they fill the space in the latter part of the season when the frost begins to get its work in.

Salpiglossis which belongs to the family of Petunia, has beautiful, velvety colored flowers, borne on long stems in clusters. Scabiosa is the most appreciated of any of the annuals grown, for its array of colors, long stems, and abundance of bloom, put it in a class by itself, especially for decorative purposes. Stocks cannot be denied a foremost place in the garden, or vase, for their fragrance, color and abundance of bloom.

Who would be without the majestic Celosia, with its massive array of flowers, which create a great effect, especially those of the Ostrich plume type?—a few displayed in bouquets prove very brilliant. Love-in-a-mist for its color alone can be classed as one of the best annuals, and it is easy to grow, and strong. Its fine cut foliage adds to its many good qualities. Last, but not least, Is the Sweet Pea. It is very desirable for its many colors and shades, profusion of bloom if well grown, with but one fault, blooms deteriorate quickly during very hot summer months.

TOO much attention cannot be given to the sowing of seeds outside, and the handling of seedlings in the hotbed, or indoors. The latter are so apt to dampen off if not given sufficient air and light, and should be transplanted at least twice before permanent planting in the open, taking great care not to damage any of the little rootlets in the operation. Keep in mind that the more roots you can get on flowers, and vegetables which grow above the ground, the better the results Keep the soil stirred with a sharp-pointed stick in between the rows of seedlings in hot-bed or pans, and water only when necessary.

There are two very grave dangers which we must avoid in transplanting, the first is in transferring the seedling from box, pan, or bed. Take for instance the small box of plants you buy from your seedsman, or corner grocery,—there is very little soil in the boxes, and the rootlets are all tangled up together, so that unless you immerse the box in a pail of water for half an hour, there is as stated above, the danger of breaking the rootlets. Secondly, we do not dibble the hole large enough to receive the plant and put it into comfortable quarters; the roots must be in a downward position, and not crowded into a small space. The earth must be firmed in around the rootlets, and a good supply of water given to encourage the roots to expand and make new growth quickly. A week after transplanting the hoe must be kept going for aeration and the elimination of weeds.

AS to the sowing of seeds in the open, as soon as the soil is in condition get your seed basket, a rake, a one-inch board ten inches wide to stand on between rows, and a piece of stick about ten feet long, and in thickness one and a half inches square, which press into the ground edgewise about half an inch deep, to form a V-shaped drill to receive the seeds. After sowing take the back of your rake, draw the fine soil into the drill, and press it down firmly. This applies to all small seeds, but with Peas and Beans the best method of sowing, is to put your line across the garden, then take the hoe with a six-inch face and make a drill the full width, and two inches deep. Stagger the seeds in six inches apart each way, draw the fine soil over the top and press it down very firmly. The seeds of Corn, Cucumber, Squash, Marrow, and Pumpkin need to be one inch deep.

BE sure to keep the Celery and Onion seedlings growing in the frame or boxes until May 24th. Transplant the Onions from 4 to 6 inches apart, and the Celery at least 8 inches in rows in the trench that is prepared beforehand, using the ridges for Radish and Lettuce, making provision for succession, but not sowing too many seeds at the one time. Don't forget distance and depth in planting Potatoes, rows 30 inches and tubers every 10 inches, 5 inches deep in light soil, and 4 inches in heavy soil. Do not use last year's left-over seed of Parsnip.

At a time when we are scrutinizing very carefully our home supplies, it may be of value to include in this survey the average garden, and to see where and how we may best increase its usefulness in the production of fruit. It is, I think, quite possible to augment very materially our fruit supply from this source alone, and my remarks will be to those who wish to grow fruit for their own consumption. In the average garden which we are considering, the fact that first strikes a fruit enthusiast is the absence of any considered plan to extend the season of fruit as long as possible. The Perennial border has had long hours of careful thought devoted to it, so that it may present an ordered succession of bloom throughout a long season, and in most gardens undergoes an increasing revision. In the fruit garden it is seldom that much trouble is expended on this matter.

Let us adopt the Espalier system of training our fruit trees, on the fence, on the wall, or dividing the flower from the kitchen garden. In any case plant so the training will be east and west, and facing south, so that if in the garden the shade will only be the width of the foliage on the tree, and if trained in properly should not be more than ten inches. A few hours' study of a nurseryman's catalogue will suggest what varieties are best suited to give us the same continuity as with flowers. Get a few canes of the Autumnal Raspberries known as "Alexandra" and "Hailsham." All old country stocks carry them, and they will extend the Raspberry season through September.

ALPINE Strawberries are invaluable in filling the gaps between the other varieties. Thinning fruit is too little practiced, resulting in a prolific crop of small sized fruit one year and practically none the next year. Trees which bear only in alternate years can often be brought back to an annual crop by careful thinning.

Soot is the *bete noire* of many a person's existence, from our civic fathers, who wish to banish it from the atmosphere, to the housewife who dusts the rooms daily, yet it is one of the best insecticides or preventives for use against attacks from all kinds of pests; it is a great deterrent to slugs and cutworms. Expose the soot to the air for a week or two before applying it to foliage as it disfigures the tissues, and keep in mind, soot is an important by-product, and when mixed with slaked lime and powdered sulphur, works wonders. May number will be devoted partly to insecticides, fungicides, and methods of application.

In the matter of fertilizing it must be conceded that the man or woman who does not fertilize the garden in some shape or form is practically a failure. Barnyard manure is pretty hard to beat if prepared properly and dug or plowed into the ground at the proper time, and any good garden soil if given a goodly supply of this, and rotating the crops, would scarcely need any commercial fertilizer. On the other hand poor soils need assistance and if manure cannot be had then by all means get fertilizer, and the following varieties and quantities will answer the purpose of a garden an eighth of an acre in size.

25 lbs. Sulphate of Potash.
50 lbs. Acid Phosphate.
15 lbs. Nitrate of Soda.

Mix these three ingredients together well, and scatter on broadcast, and by harrowing or raking it into the ground well before planting, it will give you 75% better crop, than if no fertilizer had been used. Fertilizing pays, and pays handsomely. The foregoing applies to vegetable growing, for the flower garden barn-yard manure is the best. I have found by practical experience that the usual commercial fertilizers do not increase the size and quantity of bloom of most flowers to any appreciable extent, and only gross feeders such as Roses, Pæonies, and Phlox require a weak solution of Nitrate of Soda in liquid form (a tablespoonful to 2½ gallons of water) besides what manure can be forked in around the roots in the spring, and the usual application of the mulch in the Fall.

"Back to the land is the cry to-day, back to the
dear old farm.
To the fields and the brook and the winding lane,
back to their sylvan charm.
Back to the little attic room, which in girlhood
days you knew,
When the raindrops pattered on the roof, and
sometimes battered through."

An Onion Bed in Good Condition.

Quebec:

Its Romance and Literary Tradition

By

Katherine Hale

"This place where Canada began."

QUEBEC, the oldest of our cities, the beginning of us, so to speak, has been told, sung, painted, scores of times. Generally, it has been done in the summer time, or now, in the beautiful beginning of spring, when the St. Lawrence runs deep blue, the Laurentians glow in purple, and through the little streets of the Lower Town and the stony ways that sweep up to the Citadel already there are tourists—willing victims ready to be caught by the eager eyes of the French-Canadian drivers of the characteristic *calèches*.

But to come to Quebec in mid-winter, and to stay for a little—not to tour, that is another story. It is a story so beautiful that it is very difficult to find words in which to tell it.

When Alfred Noyes, the English poet, was in Quebec shortly before the war, someone asked him the stock question: "Will this place, which inspires so many writers, evoke a poem from you?"

His reply was: "Quebec is impossibly difficult

"Little Champlain, which bears the marks of the turbulent centuries."

to express; the hardest place in the world, because the most beautiful, and manifold in its aspects."

Horatio Walker, the artist, says the same thing. Hemmed in by snow on the winter-deserted Island of Orleans, he declares: "I live in the midst of difficulties, but I cannot leave the wonder of Quebec in winter."

Snow in Ontario means a dead white blanket in the country, and a grey ugliness in cities and towns. But to leave Ontario and arrive in less than twenty-four hours in a world apparently set high in air, crystal clear and full of sunshine, that is very much like the achievement of another plane of being.

The way from Montreal led through what seemed to be a glittering barbaric jungle of enormous silver ferns, sometimes changing to an avenue of innumerable arches of diamonds, crossing and recrossing in the sparkling air. These were young larches, bent into fantastic curves by the weight of snow, and then frozen.

We came upon Quebec at an hour when the sun was just beginning to direct its level rays on Point Levis, which glowed in the strangest pink light. As we swept up the narrow streets leading to the Chateau Frontenac, driven with the characteristic rapidity of the French-Canadian *cocher*, the shadows in the city deepened so that one was hardly prepared for the bewildering beauty of color to be seen from the heights of the Terrace, for the pink light on the city of Levis had dyed itself into purple, and sometimes into deep green shadows, and there was the blossoming of electric stars in buildings so far away across the river as to give a faintly magical suggestion. There was, also, the deep after-glow on the Laurentians themselves. It was the sudden finding of an impalpable fairy city in this familiar, everywhere-known Quebec—a city made of divine colors, deep shadows, strange illusions woven of the witchery that lies in light, or rather, perhaps, an effect mirage-like, conceived out of the manifold qualities of that cardinal color—white.

We had come, indeed, in this mid-winter moment, to a city mediaeval in its every aspect, beautiful beyond everything that exists in America; cut off, as it were, in the time of its supreme loveliness from the great world of shipping, the seaport life of the rest of the year; a city that during the ice-bound season lives a life wholly its own—a life unique, of which the world in general knows nothing.

FROM the Chateau Frontenac, set in that great open space below the Citadel and commanding the St. Lawrence, Levis, and the Laurentians beyond, even from the windows of the hotel, one is beckoned by glimpses of a life altogether Canadian in the far early sense. The low French sleighs, piled with fur rugs; the driver in his thick coon coat, belted with a gay woollen scarf, standing erect as he drives; nuns in their black robes; friars in dull brown, with careful galoches over what we know are sandalled feet; children—rosy children—many of them in the gay blanket tobogganing suits that passed out of existence in other provinces decades since, children sailing down and climbing up the slides like animated fairies; all these figures appear in very actuality as you stand by your window and watch the ice blocks pass on the wintry river, silently, steadily, inevitably as Fate.

Below, in the city, a strange unknown life is progressing. Here the great Ursuline Convent stretches out long stone walls. Just below is Laval, more like a mediaeval palace than a modern university, with its stately drawing-rooms vast library, its picture galleries containing invaluable European treasures, its mysterious inner court, its innumerable lecture halls and class-rooms for students. Suddenly a sun ray strikes the dome of the Basilica; within are the endless whispers of prayers.

If I could paint my Quebec in sound it would be to the ringing of bells, the laughter of French children and the almost inaudible incessant whisper of prayers.

THE romance of Quebec is like charm in an individual. It is God-given. Nothing built it up, or educated or made it. From out some hidden spring of being, and by long conspiracy of the ages, this place where Canada began is beautiful with a beauty that is in itself the most wonderful heritage that any country can possess.

Three centuries ago the city was founded by Champlain. But nearly a century before that Jacques Cartier saw and loved Stadacona—the Indian village over which ruled Donnacona, "the Lord of Canada"—which lay at the meeting of the St. Lawrence and the St. Charles, a stone's throw from the present city.

The love of Cartier for his vision of the Canada to be, a love which counted death as nothing, is to me an even more thrilling memory than the mature affection of Champlain, who succeeded where Cartier had failed to place France in the New World. It bases our tradition on the corner stone of being, pure love. As one historian has said: "When Alexander built Alexandria he could draw with the might of a master upon the resources of three continents. When Constantine built Constantinople he brought to it the treasures of the ancient world—the marbles of Corinth, the serpent of Delphi, and the horses of Lysippus. But from no such origin does the life of Canada proceed. Champlain, in rearing his simple Abitation at Quebec, had no other financial support than could be drawn from the fur trade. His hungry handful of followers subsisted largely upon salt pork and smoked eels. Everything that was won from the wilderness cost heroism, self-sacrifice and faith."

The characteristic caleche.

TO-DAY one may read the romance of Quebec on a dozen different pages. The streets alone are a keynote to her whole history from Little Champlain, which bears the marks of the turbulent centuries, to the Grande Allee where modern millionaires abide. The churches and convents make another story in themselves and the monuments, to Champlain, Montcalm Wolfe, Lavallee, Mercier, and a long line of heroes, picture to the mind more potently than any words the grandeur and exceeding romance of the past.

Necessarily, however, the literary traditions of Quebec are precious and unique.

It is to the French-Canadians that we must go for the beginnings of our national literature, and we must remember that as early as the seventeenth century there was learning in the city of Quebec and a sincere love of art. There in the wilderness, surrounded by unbroken forests and ambushed Indians, those French-Canadians were laying the founda-

Monuments to Montcalm, Laval and Champlain that picture to the mind the romance of the past.

Honour To Whom Honour

By

Cameron Nelles Wilson

Author of "When Beggars Ride" "The Turning of the Lane" etc.

CONSTANCE MALLORY tossed her silver-fox furs upon a convenient chair, pressed an electric bell, and with a sigh expressive of supreme content dropped into the depths of a chintz-covered Chesterfield.

"Now, isn't this much nicer than the Brown Betty? You'll find cigarettes in that sandal-wood box—matches in the silver one. Tea will be served any time between now and six." She slowly removed her gloves. "Bella is an uncertain quantity since becoming engaged."

Kirkwood lighted his cigarette as he gazed absently at the flaring logs. The matinee had been rather a failure and the quiet cheeriness of the tasteful room appealed to his masculine sense of comfort. The early winter evening had already closed in, and drawn curtains added to the general cosiness. Contrary to expectations the love-lorn Bella appeared almost immediately, trundling the tea-wagon with the air of a prim nurse-maid. The firelight glowed on the Queen Anne service, silver muffin dish, and quaint rose-bud china. Without a glance at either Bella limped from the room.

"Poor Bella! She wouldn't look at her Leander until he had returned minus an ear. Now she is treading on air. Rather a good idea for she has bunions." With light touch she poured his tea. "These returned soldiers are irresistible."

"I wish I were," laughed Kirkwood as he awkwardly took his cup in his left hand. His right hung helpless at his side. He looked wonderfully attractive in the half light—his close-fitting uniform, his smooth hair of browny-gold, clean-cut face, and frank blue eyes as open as the sky itself.

"Dear old fellow—you are! Always!" Thoughtfully she moved a carved tabouret to his side and placed a bit of muffin on a plate within easy reach. He smiled his appreciation as he took in the slim, boyish figure in faultless gown, the perfect curve of her olive cheek, the firm yet delicate chin.

"YOU'RE wonderful, Constance. I wish I could fall in love with you." He looked at her with an open admiration that caused the olive to deepen richly.

"Why can't you? Others have managed it very thoroughly." Absently she dropped a fourth lump of sugar into her cup.

"Countless times! Because I can't I have come to the conclusion that I'm abnormally abnormal. You're the best and finest comrade in the world—you'd make a wonderful mate for a man, and yet—" He paused as she laid one firm, well-shaped hand on his knee.

"And yet—?" Her voice was low, vibrant.

"Could you care for a fellow, Connie, who had come back from over there crippled—more or less dependent upon somebody at every turn—disfigured—repulsive—"

"Not that, Hugh—not that," she interrupted. "Your poor dear arm could never be repulsive. It is the badge of your glory. You've won the Cross—your name stands for all that is fine and splendid—the Kaiser placed a special bounty on your head because you brought down too many of his machines—why, any girl would be proud to take your name and all that goes with it."

She leaned towards him with a tenderness absolutely devoid of coquetry. Her naturalness was one of her chief charms and in their perfect comradeship Hugh Kirkwood felt a peculiar sense of completeness. Together they had tramped the hills and by-ways; together had they played and sung. Always was she the perfect companion, and this relationship was one of the sweet compensations granted him for what he had relinquished in his country's service. He admired her tremendously, adored her as one of the sweetest of women, but he was unstirred by any deeper emotion. Had Constance stooped to feminine wiles she might easily have persuaded him that he was in love with her, but their relations were apparently as impersonal to her as to him.

"I sometimes wish that I had never known Aileen Ross. Things might have happened differently then." He placed his cup on the small table.

"Hugh Kirkwood—I really believe you are trying to apologize for not falling in love with me. Quite unnecessary, my dear boy. You simply know me too well. The others don't. I never encourage them—you know that. They simply fall in love and out again almost as quickly." She nibbled a piece of pink icing, and her grey eyes regarded him frankly. "I thought that affair with Aileen was over long ago." Her voice was even, interested to a degree.

"Over? It will never be over, worse luck." He threw one leg loosely across the other and blew rings of fragrant smoke into the air. "A fellow cares like that but once in a lifetime."

"Have you tried her again since your return? This is not idle curiosity, dear boy. Your welfare is very dear to me and I want to see you happy." Her slender fingers encircled his own as she tossed his cigarette into the fire.

"Yes—I asked her yesterday if she would marry me." He smiled, rather wanly.

"Well, what sane reason can she have for refusing you? Surely she cares enough." Incredulity marked her clear tones.

"Yes—for the other fellow. She hasn't a thought in her head for anyone but Leonard Irwin. She idolizes his memory and says she could never marry anyone since her heart is buried in his grave—Somewhere in France. One can't blame her, exactly, Leonard was a fine, manly chap." Constance withdrew her hand quickly from his warm clasp and rang the bell.

"Bella, you may remove the tea things. Major Kirkwood will be here for dinner—you'll stay won't you, Hugh?"

"Awfully sorry, Connie, but I promised to dine at the Club to-night. Lester's home on short leave. Sorry."

AS the door closed upon the limping Bella she resumed her place at his side.

"Hugh—I want you to make me a promise. A week from now—if not sooner—I want you to ask Aileen again. Will you do this for me—for the sake of our dear friendship?" Her appeal was strong. A faint aroma of violets enveloped him and her nearness thrilled him in a vague, tantalizing way that he cared not to analyze. He laughed softly.

"How often on an average do you think a fellow likes to be thrown down—once a week? She vows she'll never marry anyone. Her life is dedicated to a memory as sacred to her as the sacrament itself. She lives for Leonard—he is the embodiment of everything heroic and wonderful. The rest of us fall so far short that we are but figureheads in her cosmic scheme. He was splendid—he was a hero. No doubt of that. But he's dead and Aileen is too fine a girl to sacrifice herself like an Indian widow." He paused and looked into his companion's serious face.

"He's been dead three years now but her sense of loss is as strong as ever."

"Yes—it is all very beautiful. One can't but admire her loyalty—her devotion to a lost cause. She's in love with his memory more than with the man, but she doesn't know it. If you will promise to ask her once more, Hugh, I think I can safely say that she will accept you. Do you agree?" There was a certain wistfulness in her tone that made Kirkwood look at her questioningly.

"Are you a witch that you can play such tricks with Fate? You seem so sure of yourself, Circe my dear, that I am half-inclined to take you up. When, fair enchantress, must I ask her again?"

"Any time after to-morrow. In the meantime I must brew my charm and make my incantations. You promise?"

"I promise, good little witch, and I must be going. It is after six. When shall I see you again? Yes, Sunday for sure. Good-bye."

When the door had closed and the sound of his steps had died away, Constance dropped onto the bear-skin rug before the fire and looked with wide, unseeing eyes at the glowing logs. Her face was very white, her teeth hard set.

"Hugh—boy! How can I give you up! I love you so—my dear—my dear!"

For a long time she crouched there, very still, a dark spot against the whiteness of the Polar rug. Then rising as with the clumsiness of age she went upstairs to dress for dinner.

"GOOD morning, Aileen. What an industrious person you are! Always knitting. I'm sure you have provided socks for half the British army." Constance brought into the sunny morning-room a freshness from the crisp February day. Her cheeks were crimson, her eyes aglow with health and friendliness. She threw herself into a chaise-longue and regarded Aileen critically. "You are looking wonderfully well this morning. My dear—it's ages since I've seen you."

"Yes—Constance, it is a long time. I rarely go anywhere now and so I don't see much of my friends." She gave a little sigh and picked some wool from her black serge skirt.

"You really should go about more, Aileen. It is wrong for you to shut yourself up like this at your age. You have your whole life before you." Constance's face had grown less rosy and she spoke rapidly, feverishly, as if nerving herself to a difficult task.

"Constance—you can't understand. My life is all behind me now, I am only twenty-three but I feel a hundred. Since Leonard passed out of my life I haven't taken hold again. I simply can't." Tears were in her eyes and Constance crushed the words of sympathy that rose to her lips.

"My dear girl," she replied in very matter of fact tones, "You are in the hey-day of youth. The whole of life lies before you and you are a fool not to take what the gods provide. Why don't you marry Hugh Kirkwood? He's crazy about you."

"How could you—how could you, Constance! I never dreamed you could be so cruel." Aileen's eyes were wide with horror. A desecration of the Image itself could not have produced a look of more unutterable dismay.

CONSTANCE drew closer and took one of the cold hands in both her own.

"Now, look here, Aileen. This is no time for mincing words. You'll think I am a brute. I want you to listen to me for a few minutes." Her own hands trembled, her breath came very fast. "You are in love with a memory, dear girl. Leonard filled your life and it is his place that you miss. You would laugh at me if I told you that you are really in love with Hugh Kirkwood." Aileen withdrew her hands and turned from her friend with a gesture of protest.

"No—it is true. I know it. If I were to tell you that Leonard had done some beastly, rotten act you wouldn't give him a second thought. You have pledged your life to mere hero-worship. You think he was brave and wonderful—that he gave up his life in a supreme sacrifice for his country. You think of his lonely grave somewhere over there and you won't let yourself even think of another man lest you break some mystic pledge that existed between you."

"Stop—stop, Constance. I can't stand it." Her voice was appealing in its agony but her inquisitor was relentless.

"You have enshrined Leonard in your heart as a hero—as something sacred beyond words. He was neither." Aileen sprang to her feet and Constance faced her with cool, level glance.

"Oh—I could kill you. Go home at once or I shall ring for the servants to put you out."

"No, you won't, Aileen—not until I've finished. Listen—I want you to take in just what I am telling you. Leonard Irwin was shot as a spy just two months after he went over." She paused for a moment that the full significance of her words might sink in. Aileen reeled and would have fallen had not strong arms encircled her and helped her to a chair.

"You poor girl! I know it sounds cruel beyond words but I want you to hear me out before passing judgment." She stroked the fair hair and anguished face with infinite tenderness.

"You see, dear, I can't bear to see you sacrificing your happiness and Hugh's too. You have been so beautifully loyal that I hate to wreck your dream or spoil your Vision Glorious. I may seem like an iconoclast but it is all for your own good. Can you believe me?"

"Not yet—not yet," sobbed Aileen. She felt as if her world had been swept from beneath her, that she was spinning through space. "How dare you tell me all this?" she cried brokenly.

"As you know, Aileen, although the War Office is a machine, it is a merciful one. It is no Juggernaut crushing out human lives. When a man has been found guilty of spying he is shot. In the casualty lists his name appears under the heading Accidentally Killed or Dead. The relatives never know the truth. He is listed in the bulletins as among those killed by accident. You see the mercy of it all."

"Then how do you know it?" she demanded. For a moment Constance did not answer. Her own eyes were moist, her lips trembling.

"My brother, Meredith, was one of the firing-squad. He told me. Not another soul knows of this so far as I am aware. I shall tell it to no one but you. It is your right and only for you would I have broken my promise to him. Hugh loves you as it is given few women to be loved. You love him too. I know it and you will in a few days. You are not conscious of it just at this moment but deep down in your heart you know it is true. Forgive me—won't you?"

AILEEN was crying softly and from the depths of Constance's furs she murmured brokenly. "Yes—I suppose so."

"Well, that is all I want to know now. I must meet Mother at Herrods'. Ring me up sometime soon and—tell me all your news. Will you?"

"I'll try," she said with a pitiful attempt at a smile.

"Good-bye, dear and—good luck always." Without waiting for an answer Constance opened a door into the hall and in a few minutes was standing at the curb beside a throbbing car.

"To Herrods, Simpson," she ordered and as the car swept down the street a smile as inscrutable as that of Mona Lisa herself curled the lips of a girl who stood watching it from her window.

Constitution and By-laws for the Women's Institutes and Similar Organizations Throughout Canada

THE FEDERATION OF WOMEN'S INSTITUTES OF CANADA

AT the Dry-Farming Congress held in Lethbridge, Alta., in 1912, the question of the National Federation of Canadian Women's Institutes and similar organizations was considered, with a special committee, with Mr. G. A. Putnam, Toronto, as convenor, and Mrs. A. T. Watt, then of Victoria, B.C., and now chief organizer for the Women's Institutes of England, as secretary. The late Dr. C. C. James, Commissioner of Agriculture for the Dominion, expressed a desire to co-operate in forming the Federation during the winter of 1914-15. The outbreak of war resulted in abandoning the plans then under consideration, since the women of the Institutes —in common with all other women's organizations throughout the Dominion—turned their attention to patriotic effort. At the call of Miss MacIsaac, Superintendent of Women's Institutes for Alberta, representatives from seven of the nine provinces met in Winnipeg on February 13, 14, 15 and 17 and organized a federation. The deliberations resulted in drafting a constitution and by-laws as indicated below:

CONSTITUTION AND BY-LAWS FOR THE WOMEN'S INSTITUTES AND SIMILAR ORGANIZATIONS IN CANADA.

Article 1.

NAME.

1. This Federation shall be called "The Federated Women's Institutes of Canada."

2. This Federation shall include the Women's Institutes of Canada, the Home-Makers' Clubs of Saskatchewan, the Home Economics Societies of Manitoba, and the Home-Makers' Clubs and the Cercles de Fermières of Quebec.

Article 2.

The organization shall be strictly non-partisan and non-sectarian.

Article 3.

MOTTO.

The motto of this Federation shall be: "For Home and Country."

Article 4.

OBJECTS.

The objects of this Federation shall be:

1. To bring into communication and co-ordination the various provincial Women's Institutes and like organizations throughout the Dominion, with the object of promoting educational, moral, social and civic measures.

2. To be a clearing house for institute activities and information, and to outline and encourage nation-wide campaigns in the interests of the whole people, including home-making, child welfare, education and other community efforts.

Article 5.

QUALIFICATIONS FOR MEMBERSHIP.

All members in good standing in the provincial Women's Institutes or similar organizations shall be eligible for membership.

Article 6.

BOARD OF DIRECTORS

1. Each province shall be entitled to three directors. Two of these shall be elected at the annual provincial convention; the third shall be the superintendent of the provincial Women's Institutes, or a woman appointed by the said superintendent or other recognized authority, who shall be ex-officio a director without a vote, except where he or she carry a proxy from his or her own province.

2. Convenors of standing committees shall be appointed by the Board of Directors, and shall be members of the Board of Directors without a vote.

3. The corresponding secretary shall be appointed by the Board of Directors, and shall be paid a salary, the amount to be fixed by the Board of Directors. She shall conduct the correspondence and shall be ex-officio a member of the Board of Directors, with all the privileges of the same but without a vote.

Article 7.

EXECUTIVE.

The directors shall elect from among themselves an executive which shall consist of a president, a first vice-president, a second vice-president, a treasurer, and three directors and one additional director for each province which hereafter enters federation, each province being represented on said executive.

Article 8.

MEETINGS.

1. There shall be a Federal Convention held at least every two years, the place and date of meeting to be decided upon by the Board of Directors.

2. The Board of Directors shall hold at least one meeting within a year from the time of election, and the executive shall have power to call meetings of the whole board at such time and place as they may determine.

3. The Superintendents of Institutes, or representatives appointed by them, shall be invited to attend all executive meetings, but without voting power, unless carrying a proxy.

4. Convenors of Standing Committees shall be invited to attend all executive meetings, but without voting power.

5. The executive shall meet at such time and place as the president or any three members of the executive may determine.

Article 9.

CHANGE IN CONSTITUTION AND BY-LAWS.

This Constitution may be altered or amended at any regular or special meeting of the Board of Directors, provided that notice of such change has been mailed to each member of the Board of Directors at least three months before such meeting is to be held. The by-laws may be altered or amended at any meeting of the Board of Directors by a two-thirds vote of those present, provided notice of amendment has been mailed to all directors at least two months before date set for meeting.

By-laws.

1. Duties of Officers. (See Bourinot's "Rules of Order.")

2. Official communication from the Board of Directors or the Executive to the Provincial Organization shall be through the Provincial Superintendent.

3. Nomination and election of officers.

(See Bourinot's "Rules of Order" for majority votes, etc.)

4. Tenure of office.

(a) No member shall hold more than one office at a time. No officer shall be eligible for office for more than two consecutive terms, except that the president and first vice-president shall be eligible for these offices regardless of the length of time of service in other offices. Officers shall hold office until the adjournment of the biennial convention following that of their election.

(b) The presidency shall alternate between Eastern and Western Canada.

(c) Elected directors shall not be eligible for the office of director for more than two consecutive terms. Directors shall assume office at the close of each biennial convention, irrespective of the length of time that has elapsed between the time of their election by their province and the following biennial convention.

5. Vacancies:

(a) In case of a vacancy on the Executive, the Board of Directors shall elect at the first board meeting thereafter a member to serve until the next biennial convention.

(b) Vacancies among the directors may be filled by the province as the province may provide, the election to be ratified by the Board of Directors.

6. Quorum. The following members shall form a quorum: Seven for the voting members of the Board of Directors, three for an Executive of seven, four for an Executive of eight, and five for an Executive of nine.

7. Federation fees and dues. Left to the Board of Directors.

8. Standing Committees may be appointed by the Board of Directors as conditions necessitate.

DELEGATES TO THE DOMINION CONFERENCE OF REPRESENTATIVES FROM THE WOMEN'S INSTITUTES, HOME ECONOMICS SOCIETIES, ETC., AT WHICH THE FEDERATED WOMEN'S INSTITUTES OF CANADA WAS FORMED.

Reading from left to right: Standing—Miss Hazel McCain, Fredericton, N.B.; Mrs. D. Watt, Birtle, Man.; Miss Mary MacIsaac, Edmonton, Alta.; Mr. Geo. A. Putnam, Toronto; Miss J. H. Macdougall, Winnipeg, Man.; Miss A. E. Hill, Macdonald College, Quebec; Mrs. W. F. Cameron, Davidson, Sask. Sitting—Mrs. Jas. Patterson, Gadshill, Ont.; Mrs. H. W. Dayton, Virden, Man.; Mrs. Wm. Todd, Orillia, Ont.; Judge (Mrs. Arthur) Murphy, Edmonton, Alta.; Mrs. Blackwood-Wileman, Duncan, B.C.; Miss Isabelle Noble, Daysland, Alta.; Miss Abbie DeLuiy, Saskatoon, Sask.

Easter Entertaining

By Louise Gunton Royston

Suggestions Which Will Make Entertaining a Delight

THERE are delightful decorative possibilities for Easter suggested by the dainty Spring blossoms in all their freshness and beauty. For a centrepiece for the table have a large bouquet of Easter lilies, and fill their waxen cups with tiny bunches of blue forget-me-nots, bluets, or violets. Have a single lily at each plate, and also have the cups of these filled with the small blue flowers. Place cards may be in the shape of a lily, painted with a few forget-me-nots. These may be made out of celluloid. Violets are appropriate for Easter decorations. A pretty idea is to tie bunches at intervals along purple or green ribbon. The bunches should be four or six inches apart. Fasten four of these garlands to the chandelier over the table and bring down in undulating lines upon the table, extending them to the four corners, where the ends of the ribbons can be tied to small silvered baskets containing violets. The favors can be little receptacles made with empty eggshells, silvered and set in little rustic stands made out of twigs. These should be fastened together with tiny tacks or a little glue, and the eggshells can also be held in place with the glue. Fill these with violets. Violet sachets also make nice favors.

A novel centrepiece for the table, is constructed upon a base of fern leaves or other greenery, such as asparagus plumosa, to look well against the white of the table linen. Upon this is placed a quantity of finely-cut white or light-colored tissue-paper, so arranged as to make a cozy nest for eggs and for tiny chicks placed in the centre and tumbling over the edges in true chick fashion. The whole eggs may be made of golden-yellow cake covered with white icing. The broken shells and some of the chicks may be candy affairs that will answer for bonbons later, with an artificial fuzzy chick venturing just beyond the nest. Simple paper cases may be converted into Easter baskets for sweet-meats by attaching at opposite sides for handles two posies of any desired color. Yellow ducklings with Easter bonnets tied under their chins look very cunning, and small vases with a real Spring blossom in each, add to the charm of a table.

Easter Cakes.

EMPTY an egg through a good-sized hole in one end of the shell, rinse, dry, and oil. Use any soft cake batter, filling the shell two-thirds full. Stand upright in a small tin and bake. Let cool for five minutes and then chip off the shell. Dip in fondant or tinted icing.

The children will be delighted with rabbit cookies for Easter, so be sure to provide yourself with a rabbit cooky cutter. The rest is simple. Ice the little cakes with hard white icing and give them chocolate eyes and tails. They are quite irresistible.

Pretty place cards can be made by cutting slits in pale blue cards and putting through them the stem of a yellow or white pansy. Write in gilt lettering: "There's pansies, that's for thoughts." Crocuses, daffodils, tulips, primoses, and hyacinths are other appropriate Easter flowers.

If you wish an attractive and easily made Easter favor, paste a tiny Easter picture on a card, letter it in gilt, or write on it an Easter verse, which may be read aloud at the table. Varied picture subjects appropriate for the occasion may be bought at a small cost.

Easter Egg Surprises.

BOIL some eggs for eight minutes. Lift one at a time from the boiling water, peel, and shape while hot. To shape like an apple, press gently but firmly between the thumb and first finger. Hold the egg in this position until the sides are well rounded and the ends indented one-quarter of an inch. To shape a pear, place the egg on end in the palm of the left hand. Press the greater part of the egg downward, shaping with the finger tips. To shape a plum, flatten the ends of the egg and roll between the palms of the hand until sufficiently round. Tint the fruit with a brush in the natural colors with color paste purchased from any up-to-date grocer. Tint apples golden yellow, and over this apply fruit red. Tint pears golden yellow and over this apply leaf green. Tint plums fruit red; over this apply violet. Use real apple stems for apples and pears, and cloves as flower buds. Eggs fixed in this novel manner may be served on lettuce leaves with mayonnaise dressing, or used to garnish meats.

A simple dye for Easter eggs may be made by boiling the eggs with onion skins. Put the eggs on to boil in cold water, with enough onion skins to cover them, and boil until the eggs are hard. They will come out in pretty shades of brown, red, or yellow, according to the color of the peelings and the amount put in. If the onions are dark red in color, and many of them are used, they will make the eggs an almost purple shade. Polish them with a soft flannel cloth. Two cupfuls of onion skins will color eight or ten eggs. A greenish shade may be obtained by first boiling parsley leaves in water until the water becomes green, which should be a little darker than the desired color for the eggs. The leaves should be put in the water to soak overnight, then only a few minutes' boiling is needed to extract the color. Eggs boiled in vinegar in which beets have been kept will take on a pink or light red color. To produce the calico-colored eggs of grandmother's day, tie each egg carefully into a tight-fitting garment of bright-colored calico. Boil the eggs until the color from the print is transformed to the shell of the egg. All the dainty old-fashioned designs you will find in grandmother's piece bag.

Novel Idea for a Spring Festival.

AN attractive novelty for a Spring Festival is a fruit and vegetable stand, presided over by an old apple woman of the typical sort, impersonated by one of the girls. The costume should consist of a voluminous checked gingham skirt and waist, a small plaid shawl, pinned across the chest, and either a big round starched white cap or a straw poke bonnet. A clay pipe in the mouth will add much of realism to the make-up, and a big red cotton umbrella is a most picturesque addition to the outfit, the opened umbrella behind and over the apple woman's head being a fine background for a pretty face. For the stand, a regular push-cart is the best thing, but if this is not obtainable, a good imitation may be made of a plain kitchen table, rather low, with a little rim a couple of inches high standing up all around the edges. This stand should be painted green and supplied with real fruit and imitation fruit. Ordinary brown paper bags should be used to wrap the purchases.

The articles to be sold should be divided into three sections: One for real fruit, flowers, and nuts and candies, one for imitations, and one for "surprises". The imitations are easily contrived. Balls of orange-colored string may be piled up like oranges, banana-shaped pin cushions of yellow silk stuffed with wool wadding, emery cushions in the form of strawberries and radishes, tomato and cucumber pin cushions, and thimble holders made of English walnut shells opened, the meat taken out, and tiny holes burned through the shells by a red-hot hairpin, a narrow ribbon being slipped through these holes to tie two halves of the shell together. These fruits should be piled as neatly as are the real fuits, a stick with a placard at the top announcing the price of each variety.

Your Hands First!

IT would be an economy for you to use Ivory Soap for washing dishes. Its gentle action cannot roughen the skin; the hands need no extra attention after one works with it. And it costs so little more than ordinary yellow soaps and so little is needed for the work that the difference in cost is not worth considering. Try Ivory Soap a week for washing dishes and notice the difference in your hands—and in the dishes.

Savory Dishes With Fruits

By Marion Harris Neil

(AUTHOR OF "ECONOMICAL COOKERY.")

Serve More Fruits With Meat Dishes

The association of fruit with meats has not been very frequent in our every day cookery, though we have acknowledged the value of apple sauce and cranberry jelly as aids to the digestion of certain rich meats, and accepted red currant jelly as an accompaniment to others; but with the wise increase of fruit consumption the association is also likely to increase. Already various fruit sauces other than apple sauce are being served more frequently with fish, meat and poultry savories. For example, banana sauce with cutlets, gooseberry sauce with mackerel and others; stewed fruits are being served with certain meat dishes, as plums or damsons with beef, after the European fashion; and fruits are also being cooked with meats.

From the health standpoint more may be done in this direction with great advantage, especially in these days of increasing indigestion. The natural process of digestion by fluids in the body organs is greatly aided by the acids and peptones in fruits, their action being especially valuable in the case of the fats which are so abundant in the heavier foods.

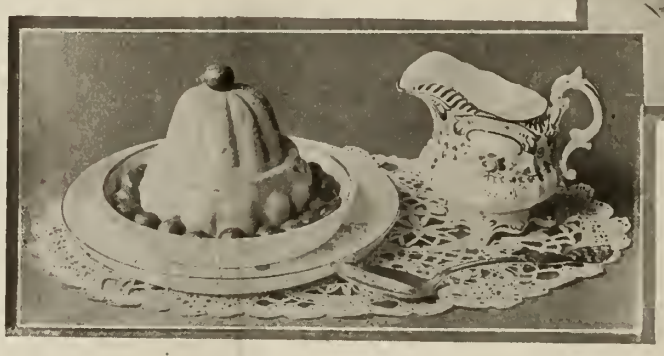
The earlier instructive use f fruits as dessert had its scientific basis in this fact; but the more intimate association of fruits with the meat courses is desirable, so we may well take a leaf from some Eastern cooks' books, as, for example, those of the Persians, who seem to make a fine art of the combination of meats and fruits.

The knuckle of a leg of mutton, which is not exactly a delicacy when cooked plainly according to many of the ordinary methods, emerges as a delicious dish, we are told by foreign residents in Persia, when it is stewed with butter and either unripe fruit, namely, plums or grapes, ripe sweet fruits such as apricots, or preserved fruits, such as prunes or raisins, and eaten with well cooked rice.

Another combination highly reputed is partridge stewed with butter, scraped walnut meats, and pomegranate juice.

From nearer home come many suggestions from cooks who have evolved very acceptable combinations of fruits and savories, some of which may well be tried by every earnest housewife.

Scalloped Fish and Potatoes.



Fish Pudding with Sauce.

Easter Salad.

Lemon Milk Jellies.

Canned Grape Sponge.

FOR RECIPES SEE PAGE 23

Venison Served With Fruit Sauce.—Take a small leg of venison, wipe it carefully and then lard it thickly with strips of fat bacon. Cover it with a greased paper and then roast it allowing twenty minutes to the pound and twenty minutes over. Baste the joint frequently with hot drippings while it is cooking, and do not allow it to become dry. When ready, remove the meat from the oven and allow it to cool slowly. When cold, decorate with chopped aspic jelly and serve with fruit sauce. To make the fruit sauce:—Take one pound of red plums or damsons, one cupful of sugar or corn syrup, one inch of cinnamon stick, two cloves, two tablespoonfuls of red currant jelly, one teaspoonful of lemon juice, one cupful of water and four tablespoonfuls of butter substitute. Choose ripe plums and wash or wipe carefully. Put them into a casserole with the sugar or syrup, cloves, and cinnamon, and cook slowly until reduced to a pulp. Then rub the fruits through a sieve and return the purée to a clean saucepan. Add the red currant jelly, lemon juice and water, bring to the boil and then allow to simmer for ten minutes. Then draw the saucepan to the side of the fire and add the butter substitute in small pieces. Do not boil again after the butter substitute is added. This sauce may be served either cold or hot.

Beef A La Mode With Prune Relish.—Have four pounds of round of beef well larded. Cook in a hot saucepan one-fourth pound of salt pork, add two onions, sliced, one carrot, diced, one bay leaf, two cloves, and three peppercorns for twenty minutes; add the meat and sear it quickly, cover, and cook for thirty minutes, then add six cupfuls of boiling water and simmer for three hours, adding more boiling water if necessary. Add one teaspoonful of salt if necessary one hour longer. Put meat on to a hot platter, strain liquor into a hot sauceboat and serve with prune relish made as follows:—Wash and soak one pound of prunes over night, then cook until tender and remove stones. Cook one cupful of sugar or corn syrup with one-half cupful of vinegar and a few spices tied in a bag until the syrup is very thick. Pour over the prunes and use.

Baked Mackerel With Gooseberry Sauce.—Take as many mackerel as required, clean and wash them, cutting off the heads and the fins. Wipe them dry, score the skin across several times, and season with pepper and salt equally distributed. Well grease a baking dish, lay the mackerel on it, squeeze over a little lemon juice, place a slice of fat bacon or a small piece of butter substitute on the top of each, and bake in a moderate oven from twenty to thirty minutes, basting once or twice with the fat. When the fish are ready, remove them carefully to a hot platter, decorate with parsley and serve gooseberry sauce separately. To make the gooseberry sauce, top and tail two cupfuls of gooseberries and wash them in cold water. Put them in a saucepan with one-half cupful of water, and cook slowly until the gooseberries are quite soft, then rub them through a sieve. Return the pulp to a clean saucepan, add two tablespoonfuls of butter substitute, one-fourth cupful of honey or sugar, and a pinch of powdered nutmeg, and allow to reheat.

Lamb With Banana Croquettes.—Put a layer of lamb in the bottom of a fireproof dish, place on this a layer of onions, tomatoes, and a layer of potatoes, next a layer of lamb, and so on, until the dish is three-fourths full, Season each layer with salt and pepper, then cover with a can of corn, and pour over one cupful of water. Cover and cook for two and one-half hours and serve banana croquettes separately. To make the banana croquettes:—Cut bananas in two, even off the round ends, roll in bread crumbs, then brush over with beaten egg and toss in crumbs again, and fry in smoking hot fat, or bake in a greased pan, dot with butter substitute, and cook for twenty minutes. Serve hot.

Duck With Orange Sauce.—Prepare and truss one duck as for roasting. Cover the bottom of a saucepan with thin slices of fat bacon, and lay some sliced carrot, turnip, and onion on the top, add a bunch of herbs and make these very hot. Then put in the duck, season with salt and pepper and fry until the duck and the vegetables are brown, add two cupfuls of brown stock or brown sauce and cover and cook until the bird is tender, basting occasionally. Lift the duck on to a hot platter, strain over the gravy and serve with orange sauce made as follows:—Place one cupful of red currant jelly in a bowl and stand it over boiling water until the jelly is melted, then add the grated rind and strained juice of one orange, the strained juice of a lemon, one-half teaspoonful of salt and a dash of red pepper. Mix the ingredients well together, and serve the sauce cold.

Stewed Rabbit With Raisin Sauce.—Choose a small rabbit, wash it carefully and allow it to soak in salt and water for thirty minutes. Then rinse it and cut it in small neat joints. Wipe one-half pound of salt pork and cut it also in small pieces. Skin three onions and cut them in slices, scalding them first if the strong flavor is objected to. Now put the rabbit, pork, and onions into a saucepan, cover them with boiling water and bring to the boil, skim if necessary and add a bunch of herbs. Put the lid on the pan and simmer slowly for two hours. Then remove the herbs and add one tablespoonful of cornstarch mixed smoothly with a little cold water Stir until well mixed, add salt and pepper to taste and one tablespoonful of chopped parsley. Dish up neatly and serve very hot with raisin sauce For the raisin sauce, stone and wash one cupful of raisins, and cook them in one cupful of water for twenty minutes. Blend together in a small saucepan two tablespoonfuls of butter substitute and four tablespoonfuls of flour, when browned add one cupful of water or brown stock, and boil until thickened, add two cloves, one-fourth teaspoonful of powdered nutmeg, one teaspoonful of brown sugar, the grated rind and strained juice of one lemon, and a saltspoonful of salt. Mix the ingredients smoothly together and pour on gradually the boiling juice from the raisins. Stir the sauce until it is smooth and thick, add the raisins, allow the sauce to boil for one minute and serve it hot.

Another method:—Pick and wash one cupful of seeded raisins, and cook them for twenty minutes in one cupful of water. Mix four tablespoonfuls of cornstarch with two tablespoonfuls of butter substitute, and stir it into the boiling fruit until the juice thickens. Add the grated rind and strained juice of half a lemon and one-half cupful of fruit juice. Serve the sauce hot This raisin sauce is good with boiled tongue

Boiled Turkey With Jellied Cranberries.—Singe, draw, stuff and truss one turkey, then tie the bird in a clean cloth, put it into a saucepan with sufficient boiling water to cover it, bring quickly to the boil, and then simmer until done. A ten pound turkey requires two hours. Take the turkey out of the cloth, remove the skewers. Put it on to a hot platter, pour over one cupful of celery sauce, serve the rest in a sauceboat and serve with jellied cranberries. For the jellied cranberries, wash and look over the cranberries, removing any that are soft or imperfect. Put them into a saucepan and sprinkle over them half as much sugar as you have berries. On the top of the sugar pour gently half as much water as you have used sugar. When they begin to boil, cover for just a few moments, but not long as you do not want the skins to burst. Then uncover and cook gently until tender. Pour into a wet mold. When cold the juice will be firm, enclosing the berries which will be soft but retain their form.

The cuticle at the base of your nails is all that protects the sensitive nail root. Read why cutting makes the cuticle rough, uneven.

Start to-day to have exquisite nails **without** *cutting. See what a difference one* **Cutex manicure** *makes.*

The delicate nail root is only 1/12 inch below the cuticle

Don't cut the cuticle

DO you know that the delicate, sensitive root of the nail is barely a twelfth of an inch below the cuticle?

Do you realize that the only thing that protects the nail root is this narrow rim at the base of your nails? That is why you should not cut it.

If you could see, magnified, the cuticle that has been cut, you would notice little raw, exposed places where more than the dead scarf skin has been cut away. All these tender cut surfaces grow up more quickly than the uncut parts. They form a ragged-looking, rough, uneven edge which ruins the appearance of your hand.

The popular actress, Alice Joyce, says: "Cutex made my manicure the work of a moment instead of an irksome duty."

You can have lovely nails without cutting the cuticle

Long ago, an expert who understood the injurious effects of cuticle cutting, undertook to solve the problem by working out a *harmless* cuticle remover. For years he worked before he perfected the cuticle remover you now know as Cutex.

Now, all need of cutting the cuticle is done away with. Cutex loosens the dry, dead skin. It does away with all risk of exposing or cutting into the live cuticle that protects the delicate nail root. Quickly and safely it removes surplus cuticle and leaves a smooth, even, thin line at the base of your nail.

The right way to manicure

In the Cutex package you will find an orange stick and a quantity of absorbent cotton. Wrap some of the cotton around the end of the orange stick, dip it into the bottle and work it around the base of your nails, gently pressing back the cuticle. The surplus cuticle is softened, removed! Then carefully rinse the fingers in clear water, pushing the cuticle back when drying the hands.

To remove stains and to make the nail tips snowy white, apply a little Cutex Nail White underneath the nails. Finish with Cutex Nail Polish.

At certain seasons of the year, the cuticle has a tendency to become dry and rough. This is especially noticeable after washing your hands. To overcome this tendency, apply a little Cutex Cuticle Comfort to the base of your nails just after washing your hands at night before retiring. This soothing cream will help to keep your cuticle always pliable.

Secure Cutex in any drug or department store. Cutex, the cuticle remover, comes in 35c and 70c bottles. Cutex Nail White is 35c. Cutex Nail Polish in cake, paste, powder, liquid or stick form is 35c. Cutex Cuticle Comfort is also 35c.

A complete Manicure Set for only 21c.

Mail the coupon to-day with 21c and we will send you the complete Cutex Manicure Set shown below. It contains enough Cutex to give you at least six manicures. See what a transformation you can make in your nails. Send for the trial set to-day. Address Northam Warren, Dept. 1106, 200 Mountain Street, Montreal.

MacLean, Benn & Nelson, Limited, Canadian Agents, 489 St. Paul Street West, Montreal.

For clean, white nail tips, apply a little Cutex Nail White underneath the nails.

If you want a brilliant, lasting polish, use Cutex Paste Polish first, then Cutex Cake Polish.

This Midget Manicure Set will give you at least six of the most successful manicures you have ever had. Send 21c for it to-day.

Music and Eastertide

By Hector Charlesworth

THOUGH among English speaking peoples, especially those of this continent, Christmastide has superseded Easter in importance as a community celebration, it is still to the theologian the most important of all Christian festivals; for the Resurrection which it celebrates is the foundation stone of the Christian belief. In what are now termed the ages of faith it was so regarded by the Christian peoples as a whole and the popular festivities associated with Easter were even more important than those of Christmastide. Necessarily its association with the art of music which played so great a part in public worship, was close, and the old ecclesiastical composers were especially active in devising new music for Easter day. To-day the holiday aspects of the feast have dwindled to comparative unimportance, but it is still kept alive and particularized through the art of music.

It is perhaps paradoxical that the name we give to the feast of the Resurrection is itself of pagan origin—a survival of the old Teutonic mythology. The Feast of Easter was celebrated by our Saxon and Celtic ancestors long before the message of Christianity came to Northern Europe. It was the feast of the goddess of spring who by the Anglo-Saxons was called Eastre or Ostara. The early Christian missionaries in their proselytizing zeal were quick to accept the popular festivals of paganism and turn them into Christian celebrations. Though in Canada and in the Northern United States, the connection between Easter and spring is frequently purely nominal, in Britain and Northern Europe it invariably occurs at a time when the leaves and flowers are achieving their yearly miracle of birth. It requires little imagination to discern why the re-birth of Nature was accepted by our primitive ancestors as a symbol of the survival of the soul, typified in the Resurrection of Our Lord, and why the feast of the Goddess Easter was with ease converted in the popular mind into a Christian festival.

THE Early Christians of Judea accepted a similarly transmuted meaning in connection with their national Feast of the Passover. It must not be forgotten that the Christian Church had its organic beginnings as a Hebrew sect, and for centuries the chief feast of the Hebrews had been that of the Passover. This commemorated the occasion during the captivity in Egypt when the destroying angel passed over the homes of the Hebrews and smote the eldest born of the Egyptian households. It will be remembered that the destroying angel was guarded against error by sprinkling the lintels of the doors with the blood of a Paschal or sacrificial lamb. The early Christians of Judea seized on this legend as symbolical of the divine sacrifice; so that to-day our Easter is still associated with the Feast of the Passover, and its name among the Italians, the Spaniards, the Danes, the Dutch and even the Welsh derives from that celebration. Of these synonyms for Easter the Italian "Pasqua" is the most musical.

Tangled in the mazes of ecclesiastical history is the question of why Easter should be a movable feast and Christmas a fixed one. At one time the different nations which had accepted Christianity celebrated it on different days according to their reading of tradition and of Scripture. Finally after many disputes, more or less acrimonious, the Christian Church decided that it must invariably be celebrated on the first day of the week and shift in accord with the Feast of the Passover, for the gospel narrative is positive in making the Crucifixon and the Resurrection coincident with that celebration. Therefore it was decreed that Easter Sunday should be the first Sunday after the first full moon following the vernal equinox, following the Jewish mode of fixing the Passover.

It will be seen that in our Easter we unite three streams of religious impulse; the old pagan tradition of thanksgiving for the annual re-birth of Nature, which we call Spring; recognition of the God of Israel, which is the basis of Christian dogma; and the hope of salvation as bodied forth in the Resurrection. The spirit of the celebration is one of rejoicing and thanksgiving and for these music is indispensable to the human need for expression. The spirit of the festival can be as marked in the smallest religious congregation as in the most august cathedral or conventicle, for it typifies the most deeply rooted emotions in the history of mankind, that have been common to the whole Western world since the dawn of civilization and the birth of religious feeling of any kind. Fortunately the musical literature that has grown up around Easter is so rich as to be available to all; and it is not necessary to possess a great choir of trained singers to give expression to the Easter spirit.

IN speaking of this phase of the subject, as it is likely to affect the majority of readers of this publication, it is perhaps unnecessary to say that allied with the music of Easter are the sacred associations connected with the events immediately preceding the Resurrection morn; Good Friday which commemorates Calvary, and Palm Sunday which celebrates the entry into Jerusalem, when the people ran ahead of the Saviour waving palms. These sacred events are also the subject of reference in most churches, and have their special music. For Palm Sunday, that immediately preceding Easter, a French musician and singer, Jean Baptiste Faure, composed "The Palms," one of the most beautiful sacred songs ever written, which has for many years been familiar all over the world and which is entirely suitable for general use. For Passion Week and Good Friday there is an abundance of appropriate music. Perhaps the most beautiful of such hymns is that written by Rev. Isaac Watts, in 1707; "When I Survey the Wondrous Cross," usually sung to the tune known to organists as "Rockingham", composed by Edward Miller in 1790, but which, by reason of its simple metre, can be sung to other familiar hymn-tunes. In many towns and cities nowadays, the week before Easter is marked by one or more renderings of "The Seven Last Words," a sacred cantata by the English composer, Sir John Stainer; and of late years another setting of the same episodes by the French composer, Dubois, has atttained great popularity. Another cantata, "The Solitudes of the Passion," by Dr. Albert Ham, organist of St. James Cathedral, Toronto, has proved impressive and has the feature of introducing hymns for congregational singing like that of Watts mentioned above.

WHEN we come to Easter itself, the song literature is very rich and appropriate, and brings forth many phases of the traditions surrounding the festival as outlined in the first part of this article. One of the most familiar is "Jesus Christ is Risen To-Day" with the refrain "Alleluia", which has the true ring of rejoicing and was composed by an anonymous hand in 1749. It is sung to a melody composed in 1708 of which the authorship is unknown. Quite as noble and preferred by some clergymen and choirmasters is an almost similar hymn, sung to the same tune, beginning, "Christ the Lord is Risen To-Day." It is from the pen of Rev Charles Wesley, a brother of the founder of Methodism, and dates from 1739. Yet another is the hymn beginning "Christ the Lord is Risen Again," which introduces "Alleluia" after every fourth line instead of every line. It comes from the Lutheran Church and was first translated in 1858 to be sung to the old hymn tune known as "Wurttemburg." The hymn "Hail Festal Day, to Endless Ages Known," though it has come into English usage only within the past thirty-five years, is very ancient and was translated from an early Latin hymn of Fortunatus, "Salve, Festa Dies." Another familiar hymn, "The Strife is O'er, the Battle

Attractive Dishes for Easter Time

By Marion Harris Neil.

AUTHOR OF "SALADS, SANDWICHES AND CHAFING DISH RECIPES."

Foods Should be Varied as Spring Approaches

THESE RECIPES ILLUSTRATED ON PAGE 20

Jelly Pudding.—Scald two cupfuls of milk and pour it over two cupfuls of fine bread or cake crumbs. With an egg beater beat this mixture until it is quite cold. Then beat in the well beaten yolks of four eggs slowly, the stiffly beaten whites of the eggs, one teaspoonful of baking soda and a few grains of powdered nutmeg. Pour this mixture into greased fireproof cups, having each cup only one-half full. Bake in a moderate oven for twenty minutes or until firm to the touch. Take out, turn from the cups or serve from the cups; make a slit in each with a sharp knife, and through this slit put one teaspoonful of apple or quince jelly and serve.

Macédoine of Fruits.—Now there are many fruit macédoines, there are also many fruits possible in connection with macédoines. There is difficulty sometimes, though, in combining fruits that will not clash. Now for this particular one, happening in April, let there be grape fruit cut in small pieces free from pith, some preserved pineapple diced, and a few preserved cherries halved, and over all a sprinkling of powdered sugar, one teaspoonful of lemon juice and one cupful of fruit juice, then set the macédoine away in a cool place to chill. Serve cold.

Pond-Lily Salad.—Arrange on a platter lettuce to form leaves, put the half of a hard-cooked egg yolk in the centre for the heart and simulate the pistil with pieces of cooked egg colored a delicate pink. This is easily done by dropping hard-cooked eggs while still hot, in hot beet juice. Serve with French dressing.

Fish Pudding With Sauce.—Wash one package of salt fish and soak it in cold water for half an hour. Drain, cover with fresh cold water, bring to boiling point and then simmer for ten minutes. Drain and flake the fish, add one cupful of bread crumbs, three tablespoonfuls of melted butter substitute, two eggs well beaten, one cupful of milk, three teaspoonfuls of chopped parsley, two teaspoonfuls of lemon juice, one-half teaspoonful of salt and one-fourth teaspoonful of white pepper. Mix well, pour into a greased mold, cover with a greased paper, and steam steadily for one hour. Turn out on to a hot dish, garnish with parsley and serve with the following sauce.

Blend together in a small saucepan over the fire two tablespoonfuls of butter substitute and four tablespoonfuls of flour, add two cupfuls of water or milk, stir until the mixture cooks for five minutes, then add one-fourth teaspoonful of salt and one-eighth teaspoonful of pepper, then two teaspoonfuls of vinegar and one hard-cooked egg chopped fine. Serve hot.

Lemon Milk Jellies.—Dissolve two and one-fourth tablespoonfuls of gelatine in two cupfuls of hot water, add three yolks of eggs beaten with three-fourths cupful of sugar, and three cupfuls of milk, stir over a slow fire until it thickens, but do not allow to boil, then add the grated rind and strained juice of one lemon. Divide into six small wet molds and set aside to firm. Pour the remainder of the mixture into a flat wet mold and turn out when firm. Place four of the small molds on the top and two on the serving dish. Serve very cold with whipped and sweetened evaporated milk, or any preferred sweet sauce.

Scalloped Fish and Potatoes.—Melt three tablespoonfuls of butter substitute in a saucepan, add three tablespoonfuls of flour and stir ntil well blended, then pour on gradually, while stirring, one and one-half cupfuls of milk. Bring to boiling point, then simmer for five minutes, season to taste with salt and pepper, then add one and one-half cupfuls of flaked canned or cooked fish.

To three cupfuls of hot mashed potatoes, add three tablespoonfuls of melted butter substitute, three tablespoonfuls of hot milk, two whites of eggs, one-half teaspoonful of salt and one-fourth teaspoonful of pepper, and beat thoroughly. Boil the yolks of eggs until hard and rub them through a sieve.

One-half fill greased scallop shells with the fish mixture, fill up with the potato mixture, reheat in the oven and serve garnished with parsley and yolks of eggs.

Canned Grape Sponge.—Mix three cupfuls of milk or water with one-half cupful of cornstarch, put into a saucepan, and bring to the boil. Then add one tablespoonful of butter substitute, one-half cupful of sugar or corn syrup, and the yolks of two eggs, and cook for ten minutes, stirring all the time. Then add one cupful of the grape juice, and allow to cool. Beat up the whites of eggs to a stiff froth and stir lightly through the ingredients. Pour into wet mold, and turn out when firm. Decorate with the grapes from the jar or can.

Easter Croquettes.—Make any desired croquette mixture and shape in the form of ducks or chickens. Toss in bread crumbs, brush over with beaten egg and crumbs again and fry in smoking hot fat. Drain on kitchen paper. For the chickens whole pepper may be inserted for the eyes. Bits of cloves may be used for the duck's eyes. These are best inserted before frying. Arrange the ducks or chicks on a bed of salad and serve hot.

Easter Dessert.—Simmer one-fourth of a pint of rice in four cupfuls of milk until very soft and thick (use a double boiler to prevent burning). Add one-fourth of a teaspoonful of salt, four tablespoonfuls of honey or corn syrup and cook for ten minutes. Pour into a greased fireproof dish, add one-half cupful of seeded raisins and bake until set. Spread over the pudding a thick layer of marmalade and serve with milk or cream.

Pineapple Junket.—One junket tablet, four cupfuls of milk, one-fourth cupful of sugar, three tablespoonfuls of pineapple juice, a pinch of salt and one tablespoonful of cold water.

Dissolve the junket tablet in the cold water. Heat the milk until lukewarm, add the junket tablet, sugar, pineapple juice and the salt; pour it into a dish, let it stand in a warm room until set, and then chill. Garnish with slices of canned pineapple. If desired, decorate it with whipped and sweetened cream or whipped evaporated milk to which has been added three tablespoonfuls of chopped pineapple.

Easter Sandwiches.—These sandwiches make a nutritious and appetizing dish for children. Mash four hard-cooked yolks of eggs with three tablespoonfuls of butter, add one-half teaspoonful of salt and one teaspoonful of paprika. Spread this mixture on slices of buttered bread, then sprinkle over the whites of eggs chopped fine. Cover with slices of buttered bread and stamp out with an oval cutter. Place a bunch of parsley in the centre of a large round plate. Dispose two or three toy chickens or ducks in the parsley and surround with the sandwiches.

Easter Salad.—Boil one package of vermicelli, macaroni or spaghetti in plenty of boiling salted water until tender, drain and rinse free from all adhering starch in cold water. Drain and chill thoroughly, and cut into pieces. Boil carrots until tender, and cut them in dice. Mix these two ingredients carefully, place on a bed of crisp lettuce leaves, and serve with mayonnaise or boiled cream dressing.

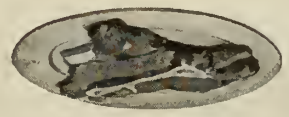
Pay Her $3

For Each Empty Package

A Suggestion to Men

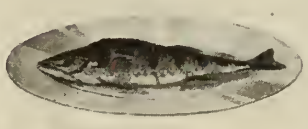
The 35-cent package of Quaker Oats contains 6,221 calories—the energy measure of food value.

In meat, eggs and fish the average cost of 6,221 calories would be at least $3.50.



So each 35-cent package served in place of meats saves around $3. And the housewife who saves it should have it

Make each empty package worth $3 in some special household fund. Then watch the fund grow.



This is how some necessary foods compare in cost, at this writing, based on their calorie value:

5½ Cents
Per 1000 Calories.

57 Cents
Per 1000 Calories.

60 Cents
Per 1000 Calories.

54 Cents
Per 1000 Calories.

78 Cents
Per 1000 Calories.

Cost of 6,221 Calories

In Quaker Oats	$0.35
In Round Steak	2.54
In Veal Cutlets	3.53
In Canned Peas	3.35
In Codfish	4.85

And Quaker Oats, which costs so little, is the greatest food in the list.

Analysis shows the oat to be almost the ideal food in balance and completeness.

Make Quaker Oats your standard breakfast. That's the best way to bring down food cost.

Quaker Oats

The Oat Dainty

Quaker Oats means extra flavor without extra cost. It is flaked from queen grains only—just the rich, plump, flavory oats. We get but ten pounds from a bushel.

In millions of homes this exquisite flavor has made the oat dish popular.

Two Sizes: 35c and 15c—Except in the Far West

Mending and Renovating Day Has Assumed a New Importance

By Louise Gunton Royston.

THE frayed or worn edges of an article to be darned should not on any account be cut even or trimmed. The stitches as they are drawn back and forth in the process of darning should not be allowed to form an even outline, but rather one as irregular as possible, some rows of stitches ending near the edge of the worn spot, others continuing well into the material surrounding it. This method reinforces the surrounding of the worn spot and the irregular, blurred outline makes the darn less conspicuous. The work should usually be done on the right side, so that the irregular edges may be caught and held in place. When darning a wool dress, threads of the dress material may be used. They can be drawn or unraveled from a left-over piece or from the inside of a seam. Buttonhole the edges of a hole in ribbed underwear and then fagot the edges together with a firm linen thread. This fagoting will yield with every movement of the wearer and will often outlast the garment itself.

To darn by machine, the edges of the hole should not be trimmed, as the machine stitching will weave over and over under all the ragged edges. Stretch the garment to be mended upon embroidery hoops, thread the machine, take off the presser-foot, and loosen the tension; then slip the embroidery hoop under the needle and proceed to stitch back and forth over weak places and even over rents. The removal of the presser-foot allows you to run the work back and forth either way without turning. If the place to be mended requires it, you can turn the work and stitch across as in darning by hand, but an ordinary weak spot if taken in time will only need the stitches one way across.

ALWAYS finely darn the heels and toes and places for garter catches of stockings before they have been worn at all. After holes finally come, before beginning to darn, tack a piece of coarse net lightly to the stocking over the hole on the wrong side, then darn over the net and be sure to also darn well into the stocking, as well as to keep the darn firm. It makes a smooth and neat finish. This is a good method to follow whether darning by hand or by machine.

When linen table-cloths are discarded because more darning would not be practical, they may be turned into four napkins, towels, and tray cloths. The four corners of a table-cloth seldom or never show any signs of wear or tear, so that they may be cut into four napkins as large as may be desired, hemmed, and taken for ordinary use. When the napkins are cut out, the remainder of the cloth forms a large-sized Maltese cross, which can be turned into towels, two shorter and two longer. These will not be as strong and lasting as the napkins, yet they are well worth the hemming. If any part of the Maltese cross is too worn to make a towel, then the good parts may be cut to the size of the various trays in the house and trimmed around the edges with lace. An old table-cloth, made of heavy linen in fair condition, will make hemstitched covers for the sideboard and serving table, or for bedrooms. If it is fairly heavy, the odds and ends can be used for plate and tumbler doilies, either scalloped on the edges or finished with lace or lace braid. Napkins that are past active service are not of much use unless they are carefully darned and laid aside for occasional use by members of the family. The best use that they may be put to is to use in case of sickness. When sheets wear out in the centre, which they always do, tear out the worn part, bring the outside selvedge edges together and hem the sides. When badly worn in the centre, make pillow-cases from the good parts. Cotton or wool blankets that are too thin and threadbare for use may be converted into quilts by covering with suitable material fastened with knots of cotton in a dainty color. Trim off the partly worn edge of a bedspread no longer in use and cut out the centre for a table cover. Dye it any desired color and edge with cotton fringe or crochet lace the same color. A large spread may supply sufficient material for a couch cover or slumber robe.

The good part of one garment may be put with the good part of another, but never make the mistake of combining heavy new material with partly worn fine material. Try as far as possible to have the weights of the materials the same, or in using material and trimming which are not new select those which have had about an equal amount of wear. When repairing white petticoats, cut away the worn part of the embroidery and stitch a new edge on by machine. Match the embroidery as nearly as possible, but avoid a very open pattern, for the reason that it will catch in your heel. Place the raw edge of the new embroidery under the turned-under edge of the old, and sew with two rows of machine stitching. This is flat and firm. Hems or ruffles which become frayed may be opened with a paper cutter, trimmed and the edges turned in and stitched together on the machine. This is a very quick but effective way of preserving a skirt, and if done as soon as the edges become frayed it will last twice as long.

Almost any mending can be done quickly and neatly on the sewing machine. The work can be done very satisfactorily without a darning attachment.

If there is a large tear, a piece of the same material may be laid underneath and the edges neatly fastened together by stitching. Woven underwear is quickly mended in this way and thin places reinforced.

THERE are three articles of men's wearing apparel that never should be thrown away—white shirts, collars, and neckties. Shirts that are frayed around the wristbands and neckbands may be mended with a piece of the goods taken from the bottom of the shirt, and when the shirts are entirely worn out at the top, the bottoms are still good and will make many articles, such as a child's petticoat, drawers, underwaists, bloomers, baby dresses, little girls' aprons, baby bibs, and other articles too numerous to mention. The material is very strong and is well worth using. Soak the starch out of old collars and use for collars on children's dresses and women's shirt waists, decorated with a little embroidery. Men's neckties are usually thrown away when slightly soiled, but that is a useless extravagance, as they may be cleaned to look like new. Before cleaning, baste them a short distance from the edge, then wash carefully and iron under a cloth. The basting prevents the lining from wrinkling. Fine silk ones should be cleaned with gasoline. Place them in the air to dry and then hang them on a rack. Do not place them in a box, as the odor will cling to them, especially the padded sort.

Shoes for the baby may be made out of pants cloth or the tops of discarded long kid gloves. Cut a pattern from an old shoe of the proper size, consisting of a heel piece, vamp, and sole. Sew the vamp to the heel piece with buttonhole stitch, buttonholing also around the top and across the front. Cut the soles double from an old felt hat and sew the uppers to the soles with buttonhole stitch, holding the upper part a little full at the toe and heel. Buttonhole all the seams neatly on the right side, leaving the shoe smooth on the inside. Children's white hose, that are merely worn at the top from pinning them up, and are good everywhere else, may be made into nice little socks. Cut them off at the top and crochet an edge of color to make them pretty and to prevent their raveling. One can make a number of practical things out of a discarded raincoat. An apron with a bib can be made for wash day or when you give the baby a bath, and caps, bags, and utility cases for traveling can be made out of this material.

Concerning Books That are Worth While

---and Some Others

By Owen E. McGillicuddy

Selected Addresses and Papers of Woodrow Wilson. Edited by Albert Bushnell Hart. Published by The Musson Book Co. Price, 70 cents.

COMING at this particular time, these contributions are bound to command the interest of a large number of people, not only in the United States, but in the rest of the English-speaking world. President Wilson has many times shown that he is possessed not only of a lofty imagination, a facility of expression, and a clarity of style, but that he has a far-seeing vision, which lends a fascination to his public documents and addresses which does not obtain in most works of this kind.

The book has been ably edited by Prof. Albert Bushnell Hart, of Harvard University, who has shown great care in retaining only selections which outline the spoken or written thought of the President since 1912, and are thus his most significant utterances. The foundation for the text is a set of pamphlet editions of the President's public addresses, which have been obligingly furnished by the President's office. These set forth in a clear manner the many difficulties to which any President must bring his thought and attention.

The practical uses of this volume are self-evident. It may be used as a book to read, for it is phrased in high literary and forensic style, but it is a great deal more than this alone, for it records quite clearly the policies of President Wilson, and is thus a summary of the great historical questions and discussions which have taken place during his administration as President of the United States of America.

Shakspere: His Mind and Art, by Prof. Edward Dowden. Published by the Musson Book Co. Price, $1.75.

ALTHOUGH this book was printed in a first edition forty-three years ago, it still remains one of the sanest and most admirable books on Shakspere and his plays. In most colleges and universities it occupies a place by the side of Shakspere's own plays, because of the fact that Prof. Dowden has proven himself one of the great master's best interpreters.

Teachers of Shakspere are gradually realizing that, if literature is to have a place in a humanitarian education, it must be presented as the real stuff of human life, without the trappings which so often allure the merely casual and superficial student. With the guidance of such a scholar as Prof. Dowden, the reader will rediscover in Shakspere a man who has revealed the verities of life as no writer has yet been able to do.

Prof. Dowden's "Shakspere" will always remain one of the best critical studies for the student of the great plays, and the book in this new edition is heartily commended to all readers of this column who enjoy the works of the play-maker of Stratford.

How to Sing a Song, by Yvette Guilbert. Published by The Macmillans in Canada. Price, $2.00.

THE author of "How to Sing a Song" is not accustomed to writing books, nor does she, in the present volume, aspire to any high literary laurels. Yet this little volume does reveal many of the most essential characteristics of real literature. It is not so much a text book as a personal expression of the ecstasy of a great artist in the propagation of her craft. Much of it, unconsciously, is autobiographical, and even when the author endeavors to be most strictly didactic, her personality makes itself felt with almost every sentence. For the general reader who entertains no ambition to learn "how to sing a song," the book is valuable, if for no other reason than that it offers an opportunity to become more closely acquainted with one of the great artists of the world.

Preparing Women for Citizenship, by Helen Ring Robinson. Published by The Macmillans in Canada. Price, $1.10.

HERE is a book that all those interested in the political and industrial future of womankind in America should read and place on the first shelf where it will be handy for re-reading.

Mrs. Robinson's counsel to the women of America shows a keen insight into the problems of the day and is written in a manner which is both whimsical and inspiring. In her first chapter entitled, "Where do we go from here?" she writes: "The Great War is doing more to teach women citizenship and give them a national outlook than ten thousand writers could accomplish with typewriters eternally unleashed. Women who never thought before are now really thinking. They are acquiring less of a mere sex and more of a human attitude toward public affairs."

"Everyone is saying, 'Nothing will be the same after the war,' saying it often with a glibness that serves as a counterfeit for thought. There is no doubt many things will be different. The question is, how will they be different? One thing is certain; the woman who is a good citizen, a good American, should do her part after the war, in seeing that patriotism and industry, patriotism and production, patriotism and consumption, are always so connected in the new America. She should, in other words, do her part in organizing politics into the service of the real interests of the family, and so the real interests of the nation, thus giving health, education, and sufficient leisure and opportunity for all the people and their children. That is not socialism—it is democracy. If we have not generally recognized the fact, it is because to most of us, men and women alike, democracy has been merely a phrase lolling around on clouds of language."

Mrs. Robinson's book voices the political ideals of the newly enfranchised women of America, and as such it should be eagerly read by all those who believe that women may achieve through the ballot many of those things which have been heretofore denied them.

The Tin Soldier, by Temple Bailey. Published by The Copp-Clark Co., Ltd. Price, $1.50.

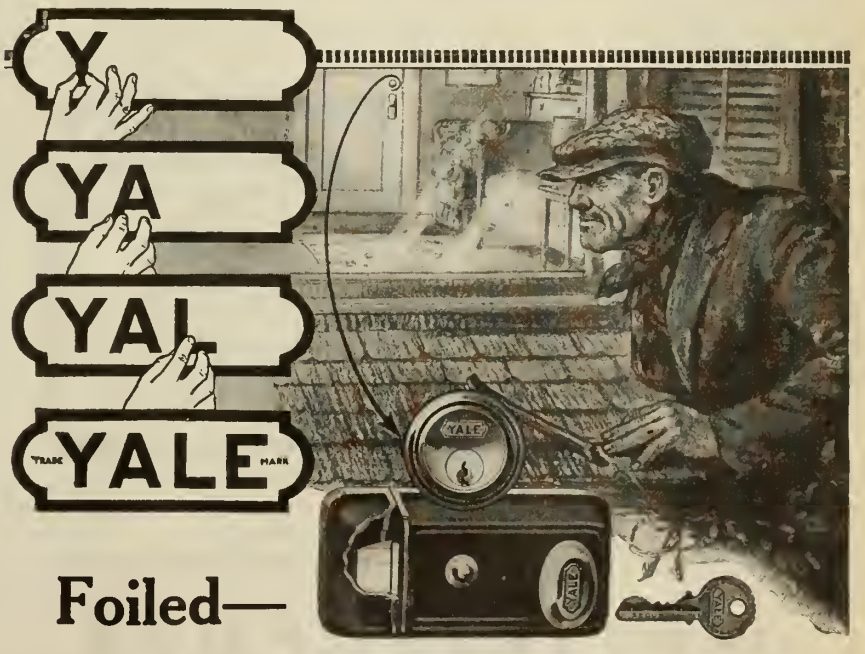
IF there is one war novel which these columns can with cheerful heart and easy conscience advise the reader to purchase and peruse it is "The Tin Soldier," by Temple Bailey.

While the action of the story occurs almost wholly in Washington, there is no spread-eagleism manifest in the tale as it is told. The story of Derry Drake with his troublesome millions and obligations, and of Jean Mackenzie with her sacrifices for Derry, her father, and her country, is perfectly charming. One thing which Mr. Bailey can do above all others, is to write swift and entertaining dialogue. The conversations are perfectly natural, and, if anything, accelerate the action of the novel. We would advise all those who like romance with a modern setting and excellently written, to read this altogether delightful novel.

(CONTINUED ON PAGE 72.)

The rightful loveliness of your skin!

The best tonic to waken the skin to its rightful loveliness is a soap whose pure, abundant lather delicately *creams into* tiny pores, as thoroughly *creams out again,* and rinses *out* and *off perfectly*—Fairy Soap!



If you have not already made friends with Fairy Soap, you have a pleasant surprise in store for you. You will do well to buy several cakes of Fairy Soap—use "Fairy" *consistently.*

For Toilet and Bath

THE N.K. FAIRBANK COMPANY LIMITED MONTREAL

If you are planning to build, look at pages 12 and 13 of this issue.

Foiled—

By the Yale Protected Closet

SELECT one closet. Make one place within your home safe from the burglar who may get in through a window.

In it place those articles of value you used to leave unguarded in many parts of the house.

Put a Yale Cylinder Night Latch on that closet door and you have a real safe deposit vault—a deadline against the porch climber, slinking intruder and the pilfering servant. They cannot pick, force or tamper with a Yale Cylinder Night Latch and they *know* it.

See your hardware dealer today. Ask him for a Yale Cylinder Night Latch, see the trade-mark "Yale" on it and install it on your closet door.

Yale Cylinder Night Latches are made by the makers of Yale Door Closers, Yale Padlocks, and Yale Builders' Hardware, all made in Canada.

Yale Products for sale throughout the Dominion.

Save the Pieces.

If you are shortening your curtains, do not throw away the piece cut off. From this end, you may make a pretty dresser or wash stand cover. Make it the correct size—hem it and finish it with lace or a simple crocheted edge. Besides using up the pieces you will have the satisfaction of having your coverings match your curtains. If the material is sheer, you might cut from a piece of prettily figured wall paper, a piece to exactly fit underneath the cover—and the result is quite effective.

OBSERVER.

To Loosen Hardened Putty.

One often has a great deal of trouble in getting hardened putty off the window sash. Try heating a poker or iron, until almost red-hot and running it along the putty. This will soften it so that it can be very easily removed with a knife.

MARY I. REID.
Orono, Ont.

Try a Hose.

Those who have to fill their wash tubs from a tap, will find using a piece of hose pipe a great labor saver.

M. A. W.

That Crushed Apron.

Are you one of the many who hang their aprons up by the strings, or by the band—and by so doing crush all the fresh appearance from them? Avoid this by taking a minute to sew on a tape hanger. Take a piece of tape about 2 inches long and tack it on the inside of the middle of the band of the apron—and you will always have a tidy apron. This same kind of hanger can be sewn on the band of one's underwaists too, which saves them from being hung up by the arm holes.

A Handy Cover.

Having opened a can of baking molasses, and not needing it all, it is often puzzling to know how to keep it till it is next wanted. Just draw a clean paper bag over it—and this will keep out all dust, and yet let enough air in to keep it from spoiling. Practice covering things with paper bags inverted over them—and you will wonder you did not think to use them for that purpose long ago.

The Quickest and Easiest Way.

The quickest and easiest way to open a jar of fruit is in this manner: Just take the handle of a knife or anything similar, and tap soundly all around the screw part. If it does not turn, tap again—only harder. I have yet to see the jar of fruit that couldn't be opened in this way. The old-fashioned way of turning the jar upside down in hot water is all right, but often the hot water is not handy—and the fruit is disturbed—but by this method, a jar can be successfully opened at any time.

To Clean Silver.

If silver is put into an aluminum pan and sprinkled with soda then boiling water poured over it, it will be found clean.

LITTLE HOUSEKEEPER.

Removing Grease Spots.

Salt dissolved in alcohol removes grease spots from cloth.

E. B., Hamilton.

To Remove Spots From Furniture.

To remove white spots from furniture, caused by heat or water, rub lightly with a cloth wet with camphor.

E. B., Hamilton.

Heat Nails to Prevent Damage.

A very hot nail will not split plaster when driven into it.

A READER.

To Keep Tin From Burning.

If you make Graham Gems and find that when the second pan is being filled two or three holes are empty—do not fear that the empty part of the tin will burn. If you put water in those empty holes your tin is saved.

M. K. M.

To Keep the Hands Free From Stains.

I use a little salts of lemon on my hands when they become stained. It is much better than pumice stone.

MRS. DUNCAN MORGAN.
Clairemont, Ont.

To Remove Frost From Windows.

Sprinkle salt over a portion of a soft cotton cloth then rub the glass lightly until the frost is removed. Frost will not appear on the glass again for some time.

MRS. H. J. B.

For Small Child's Coat.

Sew a wide piece of tape to an old suspender spring-clasp, clasp it to the child's sleeve and wrap tape around the hand; the little one will hold on to the tape, thus insuring comfort to the child and mother in putting on his or her coat.

ISLINGTON.

The Ideal Shopping Bag.

I have noticed very many ladies having trouble finding their purses, gloves, car tickets, etc., in the large shopping bags so much used, so when I made mine I put a large pocket with an elastic in the top, on the lining, and a small one close beside it with two compartments for car tickets, a flap on this one to fasten with dome fastener, both about 4½ inches from the top, and I find them most convenient. Try them.

ISLINGTON.

For the Chickens.

Bones that have had all the nourishment boiled out of them or that the dogs have left around the yard, may be used up in this way. Place them under the stove lids directly over the oven of the range. In a day or two they will turn white and crumbly and can be broken up and fed to the hens in place of lime or oyster shell.

"PASS IT ON."

When Using Molasses.

I have found that if I wish to measure out a cup of molasses, I do not waste a particle, if I warm and thoroughly grease the cup before pouring molasses into it. Then I can pour out my cup of molasses and not a bit will stick to the cup.

INSTITUTE WORKER.

Use for Coal Oil Stove Oven.

When I have more loaves of bread than my cook stove oven will hold, I use my coal oil oven on top of the cook stove. This is particularly good for the last half hour of baking, making room in the hotter oven for the loaves just ready for the oven.

M. J. C.

A Wheat Substitute.

As an occasional substitute for wheat cereal, try putting rice through the food chopper. Cook and serve same as wheat cereal.

The Journal Juniors' Club

Conducted by Ethel Bain

Original Prize Winning Stories by Our Boys and Girls

MY Dear HOME JOURNAL Children.

Welcome to all our new members. It was also a pleasure to receive contributions from many of our earlier members. Just keep on trying, and one of those tantalizing two dollar bills is sure to come your way in time.

So glad to hear that you appreciated your prize, Effie Perrin, and we feel that your winning same was indeed a reward for your patience. You certainly had a time training Rover to sit on the pumpkin, but it was worth it, for he makes such a quaint picture.

We gladly enroll you as a member, Ernest Brown, and shall look forward to receiving more letters from you. Continue your observations of the birds and you will find the study increases in interest. You can not choose anything better than nature study as a hobby.

That hungry waste paper basket does not exist, Monica O'Connor, for all unused contributions to this page are kept.

Yes—Flora Sproule—there are some birds, twelve and one-half inches in length, called Clark's Crows. These birds are a dirty white, with centre feather in tail black and have black wings touched with white. They are found in the districts of the Rocky Mountains. Although they have the habits of the woodpeckers they are very mischievous, like the blue jays. These are probably the white crows that you have heard of.

It is perfectly right to trap the rats—Mary Watson—for they carry disease and are no friends of the farmers. I hope you do not trap any of the smaller wild folk. Trapping is a cruel sport, unless the animals are killed at once.

Skating and hockey head the list of our members' winter sports. Hockey is indeed a splendid game, and skating—well, the more one skates the more fascinating the sport becomes, at least I've always found it so, haven't you?

Your sincere friend,

ETHEL BAIN.

APRIL CONTESTS

1. For children up to 9 years of age. A letter about an animal, insect or bird. Prize $2.00.
2. Why we should "Swat the Fly." Boys and girls 12 to 16 years of age Not more than 500 words. Prize $2.00.
3. For the boy or girl up to 16 years of age who sends in the best photograph, a prize of $2.00.
4. For the best essay on "Spring." Boys and girls up to 16 years of age. Prize $2.00.

Take care that your name, age and address are written on each contribution. Write on one side of the paper only.

PRIZE LIST FOR FEBRUARY CONTESTS.

1. "My Favorite Winter Sport." Awarded to Roy W. Graham, age 14, Haysville, Ont.
2. "The Winter Birds of Canada." Awarded to Ernest Brown, age 16, 28 Ann St., Galt, Ont.
3. Members under 12 years of age. Awarded to Flora M. Sproule, age 10, Westbrook, Ont.
4. Photograph Contest. Awarded to Thelma Fox, age 15, 154 Dougall Ave., Windsor, Ont.

HONORABLE MENTION.

Monica O'Connor, Andrew D. Jamieson, Fern Wingrove, Cecil Johnston, Lucy Watson.

PRIZE LETTER.

"The Winter Birds of Canada."—By Ernest Brown, age 16, 26 Ann St., Galt, Ontario.

SINCE attending a bird lecture in our town nearly two years ago, I have been an interested observer of our bird friends and as such have obtained much pleasure from studying their ways. During the winter months a large majority of our feathered friends are visiting farther south in order to avoid the cold north wind and snow, which make existence almost impossible. It is then that the winter birds need the help of human friends to hang bits of suet and fat in the trees, to keep them warm, and to sprinkle crumbs and bits of grain in sheltered spots around the house.

Perhaps the most interesting and most sociable of our winter birds is the black-capped chickadee, a cute little slate-colored bird with jet black crown and throat. He is very good-natured and no matter what the weather is like he is always cheerful and on the look-out for a meal. He is a great insect eater, and is usually busy flitting among the branches, now perched on a branch, now hanging on a tiny twig, and then climbing around the trunk, always after bugs. He is a great chatter-box, and when he is near you can plainly hear his incessant chickadee-dee-dee.

Another very interesting little bird is the slate-colored junco, easily recognized while perching, or on the ground by the pinkish-white bill and when flying by the white outer tail feathers and gray and white plumage. They are one of our most common winter birds and like the chickadees will come around the door-yards for crumbs. Their song consists of a sweet trill, which is especially beautiful when given by a flock in unison.

Two other small winter birds who are active insect destroyers are the white-breasted nuthatch and the brown-creeper. The white-breasted nuthatch is about the size of an English sparrow; its back, wings and tail are bluish-black in color with a black head and neck and a white bar on each side of its tail, while the under parts are white. Its tail is very short and frequently pointed upward, as the bird usually flies to the top of a limb and crawls toward the bottom in search of food. It has a long, sharp-pointed bill, well adapted to its mode of obtaining food. The brown-creeper is smaller than the nuthatch and more difficult to see because its brown and black speckled body is much the color of a tree trunk. Unlike the nuthatch it starts at the bottom of a limb and climbs upward carefully searching in the crevices for insects; on reaching the top of the limb it drops to the bottom and begins all over again. It is a very tame bird, not seeming to comprehend that danger can befall it. So tame are they that they have been caught under a hat.

The downy and hairy woodpeckers also do their share in winter towards eating insects and together with the crow, blue-jay and cedar waxwing complete the interesting set of winter birds which are in this vicinity, and which I have studied.

The prize photograph in the February contest.

Taken by Thelma Fox, age 15, of Windsor, Ont.

PRIZE LETTER.

"My Favorite Winter Sport."—By Roy W. Graham, age 14, Haysville, Ontario.

IT took no second thought of mine to decide what my favorite sport was. If the contest had included summer sports, the decision might have been more difficult.

Hockey is in my estimation the finest sport of the winter season. It is the game that keeps us, the boys of Canada, healthy and in good condition. If you live near a river you are, indeed, in luck, for in the open out-of-doors one constantly breathes the pure fresh air, and the rapid movements on the ice send the blood sizzling through one's veins.

In the summer and autumn we long for the river to freeze over. When at last the water is coated with that glorious substance called ice, we hurry from school with our skates. Generally when we arrive a mob of boys are already struggling for the puck. We pay no attention to anyone else for our sole desire is to get that black piece of rubber and rush for the goal. It is true we have many sore shins when we are finished, but what is that to the delightful boast that you have scored a goal?

So interested are we in the game that no attention is paid to the time until we hear the shrill whistle of a near-by factory. We wander home, looking forward to a good time at the skating rink after tea.

Here we have a limited space and, of course, only the best players may take part in the game. The unfortunate ones stand in the background and shout encouragement to the players. The clack of the puck against the boards and the irregular clatter of hockey sticks almost harmonize with the voices of the spectators.

The real fun begins when our council is confident that we are sufficiently practised for combat. A game is arranged with another team, and then our real efficiency is tested. If we win, we are very glad—if we lose, well—what's the use of crying about it? The loss makes us play much better in the next game.

I am very fond of another sport closely allied to hockey, namely skating. It is really delightful to go to the river some moon-light evening and quietly glide along the smooth, glass-like surface of the ice. The pleasure, I believe, is unequalled.

Now, when you sum all of the points up, do you not agree with me in saying that hockey is best?

PRIZE LETTER.

"Winter Birds."—By Flora M. Sproule, age 10, Westbrook, Ontario.

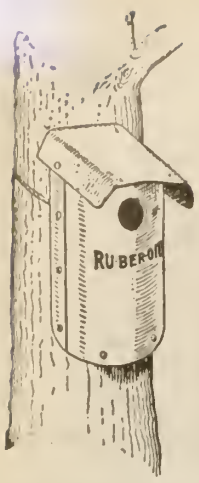
ONE afternoon in January, I went to the woods with daddy to help cut wood. I heard three or four happy little voices saying chickadee-dee-dee, I looked up and saw four little birds with little black caps on their heads and black rings around their necks. The wings and tail are a brownish color, and the underpart is a cream color. The chickadee lays from six to eight eggs, white speckled with a reddish brown.

Last Sunday daddy called me out to see a bird on the wood-pile. As soon as I saw it, I knew that it was a hairy woodpecker. The upper parts are black with a red band across the back of the head in the male only, and a white stripe down the middle of the back. White spots form bars on the wings and outer tail feathers and there is a white stripe above the eye and a longer one below. The underpart is all white.

One day last January in a snowstorm I saw about a dozen pretty little snowbirds in a flock on the road, picking for something to eat. They are white clouded with light brown in the winter.

Of course I have seen blue-jays. They look very pretty against the snow with their bright blue color.

Perhaps it is because we live near a city that we see crows all winter. The crows are black and glossy and as large as a small hen. A crow is ten or eleven inches long. It is said that there are white crows, so I suppose there are, just the same as there are black sheep.



HONORABLE MENTION.

"My Favorite Winter Sport."—By Monica O'Connor, Goderich, Ontario.

Of all winter's gladsome sports, skating is my favorite. It not only gives great pleasure, but it is also a source of healthy exercise.

In Ontario there is generally a lot of ice during the months of December, January and February. On this the skaters practice and play. Of course,

SPRING AND SUMMER

months spent in Training for Business in Shaw's Business School, Toronto, will lead you into a good salaried position in the Autumn. No vacations, enter any time. Write for new Catalogue. W. H. Shaw, Pres., 397 Yonge Street.

The Inhalation Treatment for Whooping-Cough, Spasmodic Croup, Colds, Catarrh, Asthma, Bronchitis, Coughs.

Simple, safe and effective, avoiding internal drugs. Vaporized Cresolene relieves the paroxysms of Whooping-Cough and Spasmodic Croup at once; it nips the common cold before it has a chance of developing into something worse, and experience shows that a neglected cold is a dangerous cold.

Mrs. Ballington Booth says: "No family, where there are young children should be without this lamp."

The air carrying the antiseptic vapor, inhaled with every breath, makes breathing easy and relieves the congestion, assuring restful nights.

It is called a boon by Asthma sufferers.

For the bronchial complications of Scarlet Fever and Measles, and as an aid in the treatment of Diphtheria, Cresolene is valuable on account of its powerful germicidal qualities.

It is a protection to those exposed. Cresolene's best recommendation is its 39 years of successful use.

Sold by Druggists. Send for descriptive booklet. Try Cresolene Antiseptic Throat Tablets for the irritated throat, composed of slippery elm bark, licorice, sugar and Cresolene. They can't harm you. Of your druggist or from us. 10c in stamps.

THE VAPO-CRESOLENE CO., 62 Cortland St., N.Y. or Leeming-Miles Building, Montreal, Canada.

Moore Push-Pins

Glass Heads, Steel Points.
Absolutely necessary in every Home, Store, Office, or School for hanging Pictures, Charts, Pennants, and all decorations without injuring paper or walls. No hammer needed. Simply push them in with the fingers.

Moore Push-less Hanger
"The Hanger with the Twist"
The only safe and easy way to hang heavy Pictures, Clocks, Hall Racks, Clothing, etc., or anything weighing up to 100 pounds. Won't mar the walls.

At Stationery, Hardware, Photo Stores 13c.
Send 10c for illustrated Booklet and Samples.
MOORE PUSH-PIN COMPANY
Philadelphia, Pa., U.S.A., Dept. E

Deafness

Perfect hearing is now being restored in every condition of deafness or defective hearing from causes such as Catarrhal Deafness, Relaxed or Sunken Drums, Thickened Drums, Roaring and Hissing Sounds, Perforated, Wholly or Partially Destroyed Drums, Discharge from Ears, etc.

Wilson Common-Sense Ear Drums
"Little Wireless Phones for the Ears" require no medicine but effectively replace what is lacking or defective in the natural ear drums. They are simple devices, which the wearer easily fits into the ears where they are invisible. Soft, safe and comfortable.
Write *today* for our 168 page FREE book on DEAFNESS, giving you full particulars and testimonials.
WILSON EAR DRUM CO., Incorporated
805 Inter-Southern Bldg. LOUISVILLE, KY.

The Girls' "Carry-On" Column

By Betty O'Hara

Some Short Courses Which Fit Young Women to Fill Important Positions

NOW that girlhood has taken its first flight in the business world, it will not soon relinquish its hold on the commercial realm, nor will employers ever again shake their heads, when the smartly clothed business girl tries to persuade them that she can "make good." Indeed, the four years which have just elapsed when the girls successfully shouldered burdens for their country, which up to that time would have been absolutely too appalling even to be considered, have changed all that.

But those trial days are over, and our girls have proved themselves efficient and willing for the tasks which confront them. As a result, girls will flock to the city and those who have not yet had their trial flight, will indeed, take their turn.

As a result of this migration to the large business centres, means must be provided for attending to the welfare of these girls, and the only organization capable of this tremendous task is the Y.W.C.A.

Their work stretches far and wide, and covers the whole Dominion, and although they have in the last few years been brought to the public eye very little in comparison with the Y.M.C.A., yet it has been quite as active and successful.

A few days ago I walked into a Y.W.C.A. Cafeteria. It was a wonderful sight. Hundreds of girls with their trays in hand, smilingly pointed to this or that meat or vegetable which suited their fancy.

Meat 10c. Potatoes 5c.
Bread 1c. Butter 1c.
Pie 5c., etc.

greeted my eye from a blackboard, which stood above the counter, and many a girl, as we sat at the little tables, unwrapped a package of cake and sandwiches and with a cup of tea or some hot soup had a splendid lunch for about 10c. Quite different, indeed, it was from the price list at the large restaurants, where a single order of meat at 40c., takes a large portion of the daily wages. And the smile I received at the desk, from the lady in immaculate white, as I walked out, carried me through the long weary day. She was one of the Y.W.C.A. canteen directors and had under her supervision, the feeding of five hundred wage earners every noon hour. Five hundred happy smiles to the toilers every day she gave and the girls rewarded her with a peep now and again, into their lives, as time permitted. And the rest room where the girls spent the balance of their noon-hour was a dream, chintz cushions, wicker chairs, and two or three comfortable couches for the forty winks found a place there, while writing material could be had for the asking. "At least," I said to myself, as I walked out, "I have found one place where the grappling, grasping money maker has no place."

THEN the Y.W.C.A. worker looks after the interests of the girls in the factories. She is the medium between the employer and the employee, and she straightens many a tangle that the employer finds himself absolutely unable to cope with. She tries to get a holiday for Mary, who is incapacitated for efficient work by long, sleepless nights spent with a sick little sister. Alice whose first beau brought about a marvelous change to frizzes, paint and lip rouge, does not escape her watchful eye, and in the next few days, the result of a little heart to heart talk with her brings back to the sweet, happy face a semblance of a natural human being.

Some workers specialize in physical culture. Every afternoon and a few evenings, they teach the wage earners hygiene, and physical exercises that will give health and poise to those on whom toil has a tendency to leave its indelible mark.

The Travellers' Aid department is one of the most important of the Y.W.C.A. work. It has a chain of workers which stretches from coast to coast. Girls who are travelling may get directions as to reliable boarding houses, and when going from one city to another, are met by these guardians and given all the careful consideration they would receive in their own home town. It is organizations such as these, that now enable a girl to travel either for work or pleasure, without misunderstanding or fear for her safety. For in all the large cities, the Y.W.C.A. can take a girl beyond the gossip and criticism which she is apt to come in contact with, alone in our modern city hotels.

But the girls and older women who are selected for this work, are not accepted in a hap-hazard way. They are carefully chosen and well trained by the Y.W.C.A. itself, and although the course of training is not as long as one might expect from the varied positions it holds out to its graduates, yet it is very comprehensive, and the salary when the course is completed, is indeed, ample for one's needs. In all it takes about three months, and the lectures are as follows:

Bible Study—Three hours a week.
Social Service Lectures—Two hours a week.
Community Problems—A course of ten lectures.
Association Lectures and Practice—Three hours a week.
Practical Work—One afternoon a week.

THE girls who wish to specialize, can do so in any branch which has been mentioned and after the course is finished, if they prove satisfactory, it will be a very easy matter to secure a position.

"I would like to get a couple of girls for factory supervisors this minute," said one of the Y.W.C.A. workers to me, as I talked to her about the work, "but the trouble is I can't put my finger on any trained girls who are not already filling positions."

Don't you think that is a good recommend for the Y.W.C.A. workers, that they are so much in demand that there are not enough to fill the vacancies?

There is a growing need for girls for this branch of work, and if I should tell you all that was whispered to me, of the new branches which are to be organized, you would then understand what a wonderful chance a girl who is trained for that work will have. And, girls, it is international; its opportunities do not stop with the borders of Canada.

"And what are your requirements?" I asked after having heard all about the work.

To be a Y.W.C.A. worker, a girl must be a judge of character and be sure what the right standards are. She must avoid intolerance of any sort, and above all, she must recall her own home atmosphere and think what it meant to her, so that she can try to create the same atmosphere for other girls.

LIBRARY work as a vocation for women has never received the attention and patronage which should have been its due, owing to its necessity to modern civilization. It is an ever widening sphere which calls for women workers alone, and any small town which can boast of a post office and a few stores is seldom found without its public library. It is the educator of the nation and the necessity of any intelligent community.

So insistent has been the call for trained women for this work, that one of the provinces has inaugurated a course of study to make librarians more efficient in the handling of books, in fact so successful has the training proved itself that already the graduates of this course are being given many of the responsible positions throughout the country. The fact that in the last ten years there has been an increase in the circulation of books in the public libraries for home reading of two hundred per cent., shows that the demand for librarians is rapidly on the increase and will continue to be so for years to come.

The following statistics will give an idea of the number of girls needed for this work in comparison to the population; and as the public becomes more interested this ratio must rapidly increase. In Ottawa with a population of 101,549 the total circulation for home reading was 249,493; there were 17 on the staff; in Toronto with a population of 473,820 a circulation of books for home reading of 1,123,229; number on the staff was 90; in Fort William with a population of 11,941 a circulation of 98,424 books for home reading; the number on the staff was 6. These statistics were taken in 1917, and these libraries have greatly increased their staff since that time.

The course itself lasts for three months. It consists of a series of lectures on: Book Selection, Bibliography, the Evolution of Modern Prose, Literature, with special attention given to popular novelists of the day.

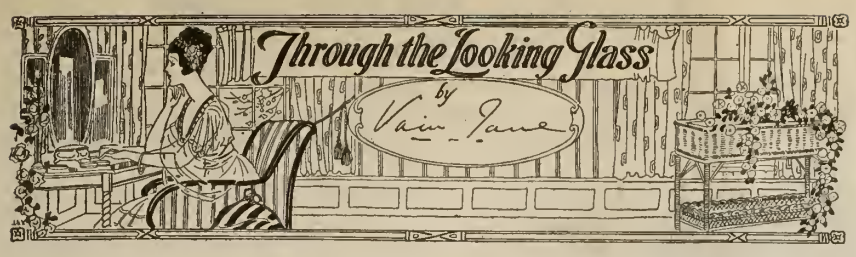
Reference Work—its organization and equipment, and the use of periodicals and pamphlets.

The Theory of the Classification of Books, with the purposes and use of the Card Catalogue, Shelf Listing and Accession work, including Stock Taking and Book Collection Records.

The Circulation and Readers' Advisory Work.

Organization and Equipment of a Children's Department.

Administration and Secretarial Library Work.



Routine of Library Work.

The students who take this course, spend half their time taking instruction and the other half at practical work.

THE graduate who takes her place at the desk of the circulating library must be attentive to her work. She must know the style of novel that would suit the dainty maid with fluffy hair who looks at her with a happy smile as she says: "I want one of your newest books, something romantic, you know." She must understand that the old gentleman with a grey beard and drooping shoulders who studies the bookshelves by the hour is fond of biography and history. And she must never make the mistake of handing a fantastic story like Maeterlinck's "Blue Bird" to the woman who puts her hair straight back from her forehead, with never a crimp nor a curl and tells her she has gathered a dozen eggs that day. "Hens is layin' good for this time o' year," she finishes as she is presented with a story whose environment she will readily understand and appreciate.

Then the reference library is a very interesting and absorbing branch of the work. It is here the students congregate and professors revel. Those who have an aim and a purpose in one part or another of the educational world congregate there. Those who are interested in research work will ask the girl who is in charge for books and pamphlets on the subjects in which they are absorbed. The college student will come to her for material for his thesis. Those whose line is literature or finance will find their way to this sanctuary and it

(CONTINUED ON PAGE 63.)

The First Milestone of Our Journey Into The Realm of Beauty

SEE how honest I am; I call myself Vain Jane. Dear ladies, you are all Vain Janes, too—some just a little vain, some quite enough and others too vain for their own contentment. But I wouldn't have you otherwise, for a woman without vanity is like a ship without its paint, useful doubtless, but a blot on the scenery. So now that we have admitted our common weakness, do let us be a friendly party. With all the cordiality in the world, I invite you one and all to meet here in this snug little space, which the managing editor has so thoughtfully surrounded by advertising and turned over for our exclusive use, and to be my guests for just a little time each month, while I try to entertain you with true stories of voyages of discovery into the land where Beauty reigns.

First of all to visit this country, there is a passport one must possess without which there is no hope of even sighting its lovely shores, and that is the passport of perfect cleanliness. And this brings us to the essential of soap—a prosaic thing, you may say, and not at all in keeping with a romantic voyage, but wait. Is it so prosaic after all? Not according to the Encyclopedia Britannica, which contains a long history of absorbing interest about its composition, its original discovery, the ancient cities where it was made and the remarkable improvements in its manufacture, which have made it possible for all the world to be supplied with the delicate perfumed article of to-day, instead of a substance of goat's tallow and beech ash, of which the first soap was composed. Though it is difficult to believe that anything so clean and useful to humanity came out of Germany, if we trust the great authority referred to, we must admit that soap first came from that country to the Romans, though it is thought that the substance referred to in the Old Testament as soap, was a mixture of ashes of plants and a very crude composition of purifying agents, far removed from the soap of to-day. In the thirteenth century the manufacture of soap was established at Marseilles, which has ever since been recognized as a centre of that trade through its ready command of the supplies of olive oil. England, however, produced more soap than any country in the world—think of the cakes of soap that must be provided every morning for John Bull's matutinal tub—and it is from the Mother Country that the greatest supplies of soap are obtained.

WHEN we find soap listed on our shopping needs it might be well to give the matter a little thought before the purchase is made and not just make a selection at random, even though the fragrance of a particular brand may appeal especially to our aesthetic sense. There are several quite important points to be considered besides an attractive wrapper and a pleasant perfume in the soap we buy. For instance, it is a wise thing to know that we are not spending our excellent money for something which contains a larger percentage of water than any other ingredient. Water, you know, is not a very expensive fluid, even though our tax rate on it may have risen since the war began. It would be very irritating to discover that we had paid ten or fifteen cents for the amount of water that could be contained in an average sized cake of soap. It would be as well also, to know that it is free from an excess of alkali and salts, which are likely to have an injurious effect upon the skin. We like the toilet soap we use to be delicately perfumed and agreeable to use, naturally, but we would be very foolish indeed to pay say, eighty-five cents for a cake of soap just because of its pleasant appearance and smell, when a much more beneficial soap might be had for a third of that money.

Of course, if we are one of those wilfully extravagant people who simply must have what they want when they want it and at any cost, it is a different matter, but most people, and especially women, like to know that they are getting value for their money, and indeed, an inherent good-breeding saves most of us from the vulgarity of flagrant extravagance. But there are good soaps to be had at reasonable prices even at this time when the effects of the war still keep the prices of toilet articles inflated. Take for example, the products of an Irish firm of soapmakers, familiar to Canadians, which are known to be made of pure vegetable oils and plant ash and contain no admixture of animal fats. This firm has a very large patronage in the Old Country and especially among members of the English aristocracy, many of whom are willing to lend their names to the recommendation of not only their soaps but their creams and various preparations as well. Now only quite recently I have found their soap displayed on the counter of one of our large departmental shops at a most reasonable cost—three cakes for seventeen cents, I think it was—the odd sum doubtless originating in the mind of the wily advertising manager, with a view to intriguing the public mind. This soap is pure and really worth a greater sum of money, but because it is a plain product, unperfumed and perhaps unfamiliar to many people, it was obliged to seek a place upon the bargain counter.

IT is not at all an unwise proceeding to make oneself known to the salesman or saleswoman from whom we are accustomed to purchase such important preparations of the toilet as soap, and to gain their confidence to the extent that they will offer a suggestion or sometimes direct our purchase. Usually they know their stock—the pure goods which sell for the cost of their intrinsic value—the highly ornamented goods which sell for their appearance—and those goods which are both pure and attractive to look upon and which appeal to the extravagant taste. When they know your demands they will have no difficulty in supplying them, and no matter which of the three classes you may require you will have the satisfaction of knowing that you have obtained your money's worth.

An interesting testimony that high priced soap is not always the choice of fastidious people is the fact that Madame Sarah Bernhardt, who is admittedly a past-mistress in the art of looking young and beautiful, always buys a soap which costs the small sum of ten cents a cake for her personal use. Doesn't that shatter your long-cherished ideas of theatrical opulence? As a matter of fact the English firm which prepares the particular soap Madame Bernhardt has so great a liking for, has an excellent reputation and produces a variety of very good toilet soaps, any one of which may safely be used without fear of harm to the complexion. The firm's name, which is well known in England, is daily becoming more familiar to the Canadian public as it has now manufacturing plants in several of the larger cities of the Dominion.

SPEAKING of soap in connection with the complexion, it is a fallacy which many quite intelligent people harbor that the face should never be washed with soap. A pure soap can never do the complexion anything but good, for it is perhaps the only means in human possession to thoroughly cleanse the pores of the skin and give them an opportunity to "breathe". Cold cream has excellent cleaning properties but the skin is never so free from impurities as when it has been cleansed with a lather of pure soap and warm water. Don't be afraid of washing the face with soap any more than you would your hands—provided it is a *good* soap; that's where the danger lies.

TORONTO LADY GROWS NEW HAIR

Prevent your Hair from falling out and renew your youthful complexion with a Branston

THIS LETTER SPEAKS FOR ITSELF

Toronto, March 12th, 1919.

Chas. A. Branston Co.,
355 Yonge St., Toronto, Ont.

Dear Sirs,—

After having the "Flu," my hair all fell out, leaving me practically bald. Some friends recommended me to use the Branston Violet Ray Generator. After three months' treatment I am glad to say that my hair is about three inches long, and nearly as thick as it ever was. I am writing this to you so that other people may know what a blessing it has been to me.

Yours truly,
(Name on file in office.)

P.S.—My hair was grey before it fell out, but now it is coming in almost its natural color.

Send for our book "Health Rays." It's Free if you mention this magazine

CHAS. A. BRANSTON CO., 355 Yonge St., TORONTO

A Velvety Skin for Every Woman

The woman with skin troubles usually envies the clear, soft skin of youth. It is possible for every woman to possess a lovely skin. The proper use of our treatments will wonderfully relieve, if not completely cure, defects in ladies' complexions. Hiscott Preparations have been used for 27 years with wonderful success in curing Pimples, Blackheads, Undue Redness, Roughness, Wrinkles, Crow's-feet, Blotches, Eczema, and all non-infectious skin troubles.

Princess Complexion Purifier	$1.50
Princess Skin Food	1.50
Princess Hair Rejuvenator	1.50
Princess Face Powder, all shades	.50
Princess Cinderella Cold Cream	.50

Write for Free Sample of this delightful cold Cream.

Our preparations are sent to any address in plain wrapper, carriage paid, with full instructions for home use, on receipt of price.

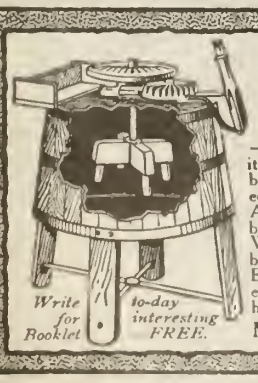
Kitchen Drudgery Abolished

SIX o'clock dinners mean afternoon kitchen work for the housewife. That means a restricted social life.

When she might be visiting her friends, she is busy cooking meals—providing she does not use modern, time-saving kitchen equipment.



The Knechtel Kitchen Cabinet is the first time-saving, drudgery-reducing, food-conserving improvement to be installed in the kitchen. It is not expensive. It is very durable, very clean and tidy looking. It has everything in its place within arm's reach. There is no waste of time, energy or labor.

When a Knechtel Kitchen Cabinet is used, kitchen drudgery is abolished.

This is just what every housewife and cook wants and should have. Our Booklet "C" tells a more complete story of what the Knechtel Kitchen Cabinet is and does. It is recommended by dealers in hundreds of cities and towns. You are interested, so why not write us right away?

Don't miss "The New Revelation" by Conan Doyle in the May number, in which he answers the question "Do we live after death?"

The Puzzle for April

By TOM WOOD.

In each circle are five distinct pictures.

If those in Number 1 are correctly guessed and arranged in proper order, the initials and finals will give you the names of two well-known birds.

The initials and finals of those in Number 2 will give you the names of two well-known flowers.

Those in Number 3 will tell you the names of two trees well-known in Canada.

Two prizes will be awarded, first, one dollar and a half, and second, one dollar, for the best solutions, judged according to neatness and accuracy.

THE CORRECT SOLUTION OF THE JANUARY PUZZLE:

1. If wishes were horses, beggars would ride.
2. An honest man's word is as good as his bond.
3. Fools rush in where angels fear to tread.
4. Habits are at first cobwebs, at last cables.
5. A bird in the hand is worth two in a bush.
6. A cat in mittens catches no mice.
7. Too many cooks spoil the broth.
8. People who live in glass houses shouldn't throw stones.

Two British soldiers went into a restaurant in Salonica, and asked for Turkey with Greece. "I am sorry, sirs," said the waiter, "but I can't Servia." "Then," said the soldiers, "bring the Bosphorus." When he (the manager) came, he said: "I'm sorry, sirs; I don't want to Russia, but you can't Roumania." So they had to go away Hungary.

The first prize goes to Mrs. Love, 15 Charles Street west, Toronto, and the second to Miss Ada Patten, St. George, Ont.

CORRECT SOLUTION OF FEBRUARY PUZZLE.

1. Icicles.
2. Snow shovelling.
3. Skating.
4. Skis (p. skees).
5. Valentines.
6. Toboggans.
7. Classes of all sorts.
8. Sleighing parties.

First prize does to Mrs. W. M. Fulton, Lumsden, Sask., and the second to I. McDowell, Brandon, Man.

Address: Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto, Ont.

B&B

TIME WAS when Hygiene was but little known, and practiced less. Today it is the handmaid of daily affairs.

Bauer & Black has devoted twenty-five years to making first aid in medical science a household word—bringing its beneficence within the reach of all.

B&B

THE PRODUCTS symbolized by the letters B & B have become models in medical practice. They manifest what science and skill can accomplish, ingenuity invent or vigilance create, to safeguard and conserve health.

Who Goes There?

(CONTINUED FROM PAGE 11.)

"Yes, please."

So they turned into a sentier which curved away through a fern-set rabbit warren, over a wooden foot-bridge, and then led them on through alternate flecks of sunshine and shadow through a noble forest of beech and oak.

The green and brown mast lay thick under-foot, premature harvest of wind-falls—perhaps the prodigality of those reckless sylvan spendthrifts, the squirrels and jays.

Here and there a cock-pheasant ran through a spinny at their approach; rabbits scuttled into wastes of bracken as yet uncurled and unblemished by a frost; distant crashes and a dull galloping signaled the unseen flight of deer. Now and then the dark disturbances of the forest floor betrayed where the horny, furry snouts of boar had left furrows of fresh black earth amid the acorns.

They came upon the stream again—or perhaps a different little brook, splashing and curling amid its ferns and green, drenched mosses. Stepping stones crossed it; Karen passed lightly surely, on little flying feet, and stood laughing on the other side as he paused to poke about in the pool in hopes of starting a trout into arrowy flight.

When he crossed she had seated herself under a fir, the branches of which swept the ground around her; and so utterly had she vanished that she was obliged to call him before he could discover her whereabouts.

"Under this green tent," she said, "if I had a bed, and some books, and clothes, and food, and my maid and—a piano, I could live most happily all summer." She laughed, looked at him—"if I had all these and—*you*," she added.

"Why drag *me* into such a perfect paradise?"

"I shouldn't *drag* you," she said gravely. "I should merely tell you where I lived."

"I didn't mean it that way."

"You might have, with reason. I have demanded a great deal of your time."

"I have demanded all of yours!" he retorted, lightly.

"Not more than I was content to give. . . . It seems all a dream to me—which began when you rang the bell at Hyacinth Villa and roused me from my sleep. And," she added with a gay flash of malice, "you have kept me awake ever since."

"And you, me!"

"Not a bit! You slept in the railway car."

"So did you."

"In your arms, practically. . . ." She looked up at him curiously: "What did you think of me, Kervyn?"

"I thought you were an exceedingly tired girl."

"I was. Is that all you thought about it?"

"You know," he said, laughing, "when a man is asleep he doesn't do much thinking."

"What did you think afterward."

"About what?"

"About my sleeping against your shoulder?"

"Nothing," he said carelessly.

"Were you quite—indifferent?"

He didn't know how to answer.

"I was not," she said. "I was contented, and I thought continually about our friendship—except when what I was doing made me uneasy about—what I was doing. . . . Isn't it curious that a girl could do a thing like that and feel comfortable except when she remembered that a girl doesn't usually do a thing like that?"

He began to laugh, and she laughed, too.

She said: "Always my inclination has been, from a child to explain things to myself. But I can't explain you yet. You are very different you know."

"Not a bit——"

"Yes, please. I've found that out. . . . Tell me, do you really mean to go to-day?"

"Yes, Karen, I do."

"Couldn't you stay?"

"I really couldn't."

"Why, please?"

"I must be about my business."

"Enlistment?"

"Yes."

"In the Guides," she said, as though to herself.

He nodded.

"The Guides," she repeated, looking rather vacantly at a sun spot that

(CONTINUED ON PAGE 35.)

Who Goes There?

(CONTINUED FROM PAGE 34.)

waxed and waned on the dry carpet of fir-needles at her feet. "I have seen them. They are odd, with their furry headgear and their green jackets and boots and cherry-red breeches. . . . I have danced with officers of the Guides in Brussels. . . . I never thought that my first man friend would be an officer in the Guides."

"I never thought my best friend among women would be the first woman I ever robbed," he said rather grimly.

"Oh, but you haven't done it yet! And I don't see how you propose to do it."

He looked up, forcing a smile:

"Don't you?"

"Not if you are going away. How can you? The only way I can see is for you to stay at Quellenheim in hopes that I might forget to lock my door some night. You know," she said, almost wistfully, "I *might* forget—if you remained long enough."

He shook his head.

"Then you have given it up?"

"No."

"But I don't see!"

She was so pretty in her perplexity, so utterly without art in her frankness and curiosity that the impulse to mystify and torment her possessed him.

"Will you bet that I shall not have those papers in my possession within ten minutes?" he asked.

"How *can* you?"

"I can. And I shall."

She gazed at him incredulously, then suddenly her cheeks lost their colour and she stood up under the fir-tree.

"Must I take them or will you give them up, Karen?" he asked, laughing, as he rose.

She took a step backward, away from him. The tree-trunk checked her.

"You know I can't give them to you," she said unsteadily. "It would be dishonourable."

"Am I to take them?"

"Are you going to?"

He said: "Very well, then," with an alarming frown.

"Kervyn——"

"What?"

"If you tear my gown I—I shall have to go to bed."

"I'm not going to touch your gown," he said. "I'm going to charm those papers so they'll leave their hiding place and fly into my pocket. Watch me very attentively, Karen!" And he tucked up his cuffs and made a few short passes in the air. Then he smiled at her.

"Kervyn! I thought you meant to take them. Do you know you really did frighten me?"

"I *have* got them," he said.

The colour came back into her cheeks; she smiled at him in a breathless way.

"You did frighten me," she said. She came slowly back and seated herself on the carpet of fir-needles. He sat down beside her.

"Karen, dear," he said, "you are a brick and I'm a brute. I took your papers this morning. I *had* to, dear."

And he drew them from his breast pocket and showed them to her.

The girl sat in wide-eyed amazement for a moment. Suddenly her face flushed and the tears flashed in her eyes.

"You have ridiculed me!" she said. "You have treated me like a child!"

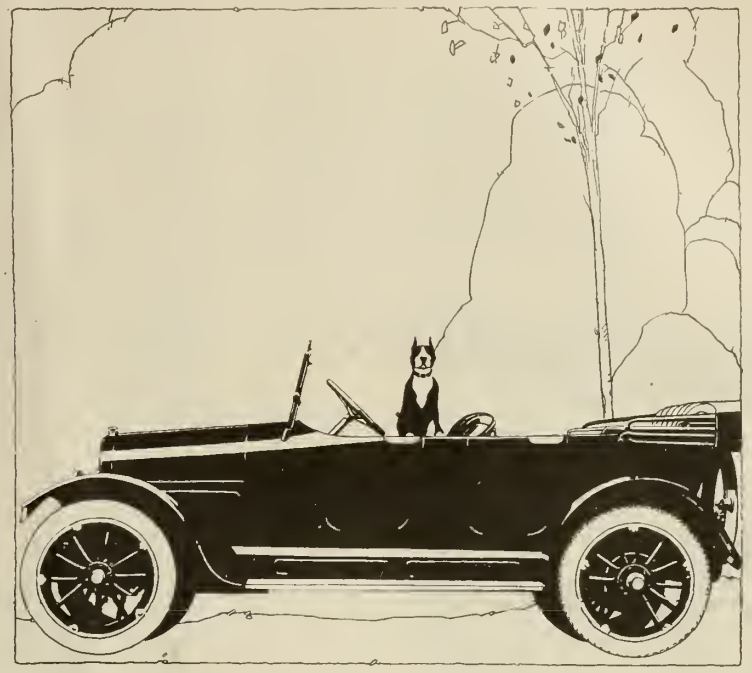
"Karen——"

"I will not listen! I shall never listen to you again! You have played with me, hurt me, humiliated me. You have ruled and overruled me! You gained my friendship and treated it—and me—without ceremony. And I let you! I must have been mad——"

Her mouth quivered; she clenched her hands, gazing at him through eyes that glimmered wet:

"How could you do it? I was honest with you; I had had no experience with a man I cared for. You knew it. You let me care for you until I didn't understand—until the sincerity and force of what I felt for you bewildered me!

"And now—and now I am—unhappy—unhappy—miserable, ashamed—" She caught her breath, scarcely able to see him through her tears—no longer able to control the quivering lip.



She rose swiftly, encountered something—his arm—felt herself drawn resistlessly into his embrace.

"Forgive me, Karen," he said. "I did not realize—what was happening to—us both."

She rested her forehead on his shoulder for a moment.

Who Goes There

(CONTINUED FROM PAGE 35.)

"Can you forgive me, Karen?"

"Yes."

"You know I truly care for you?"

"Yes."

Scarcely knowing what he was doing, he bent to touch her forehead with his lips, and she lifted her face at the same moment. His kiss fell on her mouth, and she responded. At the same instant her girlhood ended forever—vanished on her lips in a little sigh.

Dazed, silenced, a trifle faint, she turned from him blindly.

"Please," she whispered, in the ghost of a voice; and he released her.

For a few moments she stood resting against the fir-tree, her left arm across her eyes, frightened, motionless.

The forest was very still around her, as though every leaf were listening.

CHAPTER XVII.

"KAREN," she heard him say, in a constrained and unfamiliar voice, "I love you."

If he thought he was still speaking to the same girl whose soft and fragrant lips he had touched a moment before, he was mistaken. He spoke too late. The girl had vanished with her girlhood.

And now it was with a very different sort of being he had to do—with a woman whose mind had quickened under shock; whose latent emotions had been made conscious; whose spirit, awakened by a crisis, was already armoured and in arms. Aroused, alert, every instinct awake, proud of a new and radiant knowledge, new motives germinated, new impulses possessed her; a new and delicious wisdom thrilled her. She was ready, and she realized it.

"Karen?"

She heard him perfectly. Deep within her something was laughing. There was no hurry. She knew it.

"Karen?" he said, very humbly.

Conscious of the change within herself, still a little surprised and excited by it, and by a vaguely exquisite sensation of impending adventure, of perils charmingly indefinite, of the newness of it all, deep, deep within her she felt the certainty, the tranquillity, the sweet intoxication of power. Power! She knew she was using it now. She knew she was exercising it on this man. And, for a second, the grasp of the new weapon almost frightened her. For it was her first campaign. And she had not yet reconnoitered the adversary or fully developed his strength and position. Man, as an adversary, was still unknown to her.

"Karen?" he ventured rather anxiously.

Instantly she lost a large portion of her fear of him. Oh! but she had a long, long reckoning to settle yet with him. She cast a swift glance backward, but already her girlhood was gone—gone with its simplicity, its quaint perplexities, its dear ignorance, its pathos, its helplessness before experience, its naivete, its faith.

It had gone, slipped away, exhaled in a deep unconscious sigh. And suddenly she flushed hotly remembering his lips. Truly, truly there was a long reckoning still to come. . . . But there seemed to be no hurry.

Still leaning against the tree, she fumbled for her handkerchief, touched her eyes with it leisurely, then, still turning her back to him, she lifted her hands to her hair.

For a first campaign she was doing very well.

Her thick, burnished hair was not in any desperate disorder, but she touched it here and there, patted, tucked, caressed it with light, swift fingers, delicately precise as the exploring antennae of a butterfly.

"Give me my answer, Karen," he urged, in a low voice, stepping nearer. Instantly she moved lightly aside to avoid him—just a short step—her back still turned, her hands framing her bright hair. Presently she looked around with a slight laugh, which seemed to say: "Have you noticed my new wings? If I choose to use them, I become unattainable. Take care, my friend!"

The expression of her face checked him; her eyes were still starry from tears. The dewy lovcliness of them, the soft shyness born of knowledge, the new charm of her left him silent and surprised. He had supposed that she was rather low in her mind. Also he became aware that something about her familiar to him had gone, that he was confronted by something in her hitherto unsuspected and undetected—something subtly experienced and unexpectedly mature. But that a new intelligence, made radiant by the consciousness of power, had suddenly developed and enveloped this young girl, and was now confronting him he did not comprehend at first.

And yet, in her attitude, in the poise of the small head, in the slight laugh parting her lips, in every line of her supple figure, every contour, every movement, he was aware of a surety, a self-confidence, a sort of serene authority utterly unfamiliar to him in her personality.

Gone was the wistfulness, the simplicity, the indecision of immaturity, the almost primitive candour that knows no art. Here was complexity looking out of eyes he scarcely knew, baffling him with a beauty indescribable.

"Karen—dear," he said unsteadily, "have you nothing to say to me?"

There was laughter and curiosity in her eyes, and a hint of mockery.

"Yes," she said, "I have a great deal to say to you. In the first place we must not be silly any more——"

"*Silly!*"

She seemed surprised at his emphatic interruption.

"Yes, silly," she repeated serenely: "foolish, inconsequential. I admit I made a goose of myself, but that is no excuse for you to do it, too. You are older and more experienced and so much wiser——"

"Karen!"

"Yes?" she said innocently.

"What has happened to you?" he asked, disturbed and bewildered.

She opened her eyes at that:

"Nothing has happened, has it? Is my gown torn?"—bending over to survey her skirt and waist—"Oh, I forgot that the famous robbery occurred without violence——"

He reddened: "I don't understand you, Karen. Why do you fence this way with me? Why do you speak this way to me? What has suddenly changed you—totally altered you—altered your attitude toward me, your point of view, your disposition—your very character apparently——"

"My character?" she repeated with a gay little laugh, which seemed to him irresponsible, and confused him exceedingly.

"No," he said, troubled, "that couldn't change so suddenly. But I never before saw this side of your character. I didn't know it existed—never supposed—dreamed——"

"Speaking of dreams," she interrupted with calm irrelevance, "I never told you that I finally did cross that frontier. Shall I tell you about it while we are walking back?"

"If you choose," he said almost sullenly.

"Don't you care to hear about my dream? As I made a pillow of you during the process, I really think you are entitled to hear about it—" She broke off with a quick, involuntary laugh: "Why do you look hurt, Kervyn?"

At that he became serious to the verge of gloom.

"Come," she said sweetly, slipping her hand through his arm, "I want to tell you how I crossed that wonderful frontier——"

"I told you," he said gravely, "that I love you. Am I not entitled to an answer?"

"Entitled, Kervyn? I don't know to how many things you are *en*-titled. All I know is that you are titled—several times—aren't you?"

He reddened and bit his lip.

"Because," she went on gaily, "you served your time in the Guides. That is a very natural deduction, isn't it?"

He said nothing; he was very seriously upset. His stern mouth and darkened face betrayed it. And deep in Karen's heart the little imps of laughter danced to its mischievous beating.

After they had walked through the forest for a while in silence, she halted and withdrew her arm.

"You know," she said, "we are not nearly well enough acquainted for you to be moody and unamiable."

"I did not mean to be either," he said. "What is it that has come between us, Karen?"

"Why, nothing I hope," she said fervently.

(CONTINUED ON PAGE 45.)

A Little Story of Achievement

By Edith G. Bayne

AUTHOR OF "THE MADNESS OF M'ARA."

What happened when the gad-fly of ambition tortured the soul of Marya

DIVINE discontent being at the bottom of all worth-while enterprises, being in fact the motive power behind ambition, we might have called this little tale any one of a number of names or titles from, "A Cure for Complacency" and "Marya Makes Good" to "A Lesson in Progressiveness"—and you would have fancied you caught the point without further reading and in all probability, would have passed on to something more interesting.

It is easy to title fiction. But this happens to be fact. It is an attempt at a thumb-nail sketch of a wonderful little Ruthenian girl, who didn't wait for "a chance" but went out and set a trap for Opportunity and caught her.

Marya began by being discontented, just as many another girl in her 'teens has been at one time or another, only Marya labored under many disheartening handicaps, such as extreme poverty, ignorance of our language and customs, isolation, and the narrowest of narrow family prejudice. There were two things that stood on the credit-side of her ledger, though—excellent health, and an inflexible determination to measure up to a clearly defined ideal. In Marya's bright lexicon, there didn't seem to be any such phrases as "I can't" or "It's too much trouble" or "What's the use!"

Marya's earliest memories do not extend further back than to a sod shack in Saskatchewan. She doesn't remember the hurried flight from Russia, the long sea voyage in a ship's steerage with her parents and six brothers and sisters, the wearisome journey over flat, ugly prairie to a remote, cup-like valley beyond the File Hills, where the free land awaited them. Her first vivid recollections are of incessant toil, of crop failures that nearly set her father to killing himself, the forced marriage of her oldest sister and the hiding of a young Englishman, a kind of ne'er-do-well, in their root-cellar. It was this young man who taught Marya her first lessons in English. He had "raised a cheque" and the Mounted Police were on his trail for the whole of a winter and spring, but Marya's father, justifiably or otherwise, offered him sanctuary in return for labor and lessons in English and he escaped the penalty of his misdeeds, later dying of consumption, however.

MARYA'S first active rebellion occurred at the age of fourteen, when, in accordance with the Ruthenian custom, her father indicated his intention of marrying her off and invited the prospective groom and his father to ride across the valley on a given Sunday and enter into negotiations. Marya was in the first-flush of rosy youth, a handsome well-formed girl with muscles like a boy and an exhaustless supply of sheer animal strength. She milked ten cows night and morning, worked in the fields with her father and brothers, and also in the house, cooking, churning, washing and spinning. She would make Demetrius Rudka, or any boy, a fine wife! The fact that she and Demetrius had never seen each other mattered nothing. A Ruthenian marriage is like a marriage of royalty, strictly a diplomatic arrangement. Demetrius, though only seventeen himself, was a landed proprietor. He owned thirty head of cattle, a farm and a section of swamp land, later to be drained and sown in grain, and he was thinking of buying a Ford.

"But, I want to be educated," Marya protested.

"Educated!" snorted her parent contemptuously. "What do you want to be educated for? Are you not being married—and to the best catch in the valley? Foolish girl!"

"I want to go to town and work and learn better to speak English. I want to read and write. I don't want to slave for any man. I want to be a Canadian."

"To educate the boys that is all right. But a *girl!* Why your sister Marta was married when she was a year younger than you!"

"Yes, and look at her! Five kids and she goes round all the time half-sick. She's not nineteen and she looks forty. When she wants money or anything, she's got to ask a man. Her man is her boss. I'm not going to be like *that.*"

And the girl had her way in the end. When she struck the city, she must have made something in the nature of a sensation, for there is a record of many a "fresh" young man being slapped suddenly and soundly or of having his ears warmly cuffed at the brown, muscular hands of little Marya. She wasn't in the least forward or flirtatious either. It must have been the splendid, semi-barbaric beauty of her. She arrested the most jaded eye. In a crowd, her face and form stood out like a Marechal Niel rose in a garden of pale phlox. We first saw Marya in a popular down-town lunch-room, where she was engaged in the strenuous occupation of "biscuit-shooting."

"Who in the world is that lovely girl?" was of course the question that rose to the lips, directly.

"Her? Oh, she's a foreigner, I think." came the indifferent reply.

MARYA wound her way among the tables carrying aloft a loaded tray and more than one pair of admiring eyes followed her willowy form. Over a neat black dress, she wore a frilled apronette and her rich bronze hair was topped by a trim cap. She hadn't succumbed to the high-heel craze as yet and so walked with native grace, somewhat like an Assyrian woman carrying a water-jug. As she gathered up some cups and glasses from our table, we learned that she spent four evenings a week at the "Y" learning the three R's, plus some Scripture on the side. She seemed intensely eager to converse, for practice, no doubt. She had "hired out" to about seven or eight "private houses", she said, and so had picked up many of our words and customs and, alas, our slang, too. As she couldn't differentiate between pure English and mere colloquialism, there was sometimes an irresistible drollery to her quaint speeches. For instance:

"Ladies, I tell you it is a pleasure to listen about that God. He treats me white. He is on the square."

Or:

"That fat man over there got very mad yesterday. The boss said he was a big cheese. He said he was always on the horn. What has a cheese to do with a horn?"

One day we missed Marya. She had gone away. When next we found her she was hurrying to a night school. But she stopped and greeted us with her eager smile and informed us that she was working for a "real lady" this time. She had drifted from one thing to another restless dissatisfied, craving something—she didn't know what. But lessons kept her satisfied, and the lady was letting her go twice a week to the night class of a business school.

"Some day I will teach school—teach my people." she confided, shyly. "I want to be a teacher."

Out of a job more than once, Marya had never yet gone to the wall. "Up against it" sometimes, that flawless integrity, that essential sweetness and purity that were the very bone and marrow of her—"foreigner" though she was!— proved her anchor each time. Marya's virtue was founded on the eternal rocks. She had slept in the railroad station once (being for the time penniless) and gone breakfastless and dinnerless rather than return to a cafe, where the proprietor had tried to embrace her. She had worked in a hotel or two, but found the work "too easy."

"I wanted something *hard,*" she told us, "something to make me tired. Those hotel girls think they work hard! If they could come out with me on the farm and see how my little sisters work—how I used to work—they would faint!"

"But it isn't right."

"No."

"And you are never going back to *that.*"

"No."—very decidedly.

"Where will you go when you get your certificate?"

"Back to my own valley. There's a Ruthenian school out there. It is forty miles from the railway and they have trouble getting teachers to stay. I will take it."

"And you won't be afraid?"

She smiled.

"I am not afraid of anything in the world." she said, simply.

The next time we saw Marya she had her certificate. Not only that, but she spoke English with a barely perceptible accent. She had been doing housework for various ladies of the city, in the interval and had evidently profited considerably by the contact with refined minds. Not all however had been exemplary. Marya had been a good deal shocked at the amount of card-playing and smoking in some of the "places."

A YEAR elapsed and then on a June day, when all the prairie was sweet with roses, literally miles upon miles of them blooming along the trails, in the coulees and rioting, in rich masses on the uplands, chance took us to the very school where Marya was inculcating knowledge into the minds of forty of her young compatriots. They were singing as we rode up and the song was "O Canada!"—which is perhaps more hymn than song.

Recess came out while we tethered our horses and Marya came to the door to superintend some game but seeing the visitors changed her mind. It was hard to get her to talk about herself, but we gleaned the following facts: that ambition still burned brightly, that next year if all went well, she would take summer lectures at the University, that already some good had been accomplished in the way of elevating certain standards of living among her people and that only once had she been obliged to use her gun and then the mere pointing of it—it was a little twenty-two calibre, which she used for small game hunting—at her intruder, had been sufficient to show him that she meant business.

"I will get a bulldog, I think, that would have more—what do you call it?—*punch* in a case like that," laughed Marya, as she related the incident.

She lived in a tiny cabin adjoining her school, and the nearest human being was a mile away. It was a scattered colony and the school was the one great cohesive element. Everyone was interested in the school. There was a church of course. From where we stood we could see its bronze minaret shining in the distance beyond the level stretches of springing wheat, glinting in the sunlight like an inverted toy top—a little bit of old Russia set down in Canada. Marya's six best pupils were going to the annual school-fair convention in the fall, a feature of Western life, by the way that deserves a whole article for itself.

"The Ruthenian girls are gradually learning that life holds something more for them than a beast-of-burden existence." Marya said, using just this faultless diction. "Both my sisters are now past sixteen—they were the little ones when I left home—and they do not dream of getting in a panic because they have not selected—or been selected by—husbands. 'Plenty of time, when we are twenty-six,' they say coolly. My father cannot understand it though. He sits and shakes his head. My mother is a woman of thirty-nine only and already she is bent and grey. All her life she has been a beast-of-burden. She married at twelve and has had thirteen children."

WONDERING whence she had developed the vocabulary and the rhetoric as evidenced by the foregoing, we asked Marya what she had been reading.

"I have read all of Thackeray's works and most of Dickens." she said, simply. "I am now studying Stevenson and Poe."

It nearly bowled us over!

"Do you know that you are a very wonderful little girl?" we asked her, then.

She shook her head and in her wistful blue eyes there was ineffable sadness, loneliness beyond the power of words,—and still that unquenchable fire, that divine discontent, which had carried her on and on and up and up, an ignorant immigrant girl, whose only assets had been health and boundless ambition.

Just then a little flaxen-haired girl broke away crying from a noisy group in the playground and ran up to the teacher. After a little whispered admonition to the child, Marya sent her on a hastily-thought-up errand and turned to us again, shaking her head, with a troubled little sigh.

"That's Gertrude Schwartz, our only German pupil." she explained. "She is Gertrude Brown now because the Germans out here as you know have Anglicised their names—at least a good many have. I have daily trouble because of Gertrude.

(CONTINUED ON PAGE 44B.)

The Voice of the Voiceless

By Ella Wheeler Wilcox, Poet Laureate of Humanity.

I am the Voice of the voiceless;
Through me, the dumb shall speak;
Till the deaf world's ear be made to hear
The cry of the wordless weak.
From street, from cage, and from kennel,
From jungle and stall, the wail
Of my tortured kin proclaims the sin
Of the mighty against the frail.

For love is the true religion,
And love is the law sublime;
And all that is wrought where love is not,
Will die at the touch of time.
Oh, shame on the mothers of mortals
Who have not stopped to teach
Of the sorrow that lies in dear dumb eyes,
The sorrow that has no speech.

Oh, never a brute in the forest,
And never a snake in the fen,
Or ravening bird, starvation stirred,
Has hunted his prey like men,
For hunger, and fear, and passion
Alone drive beasts to slay,
But wonderful man, the crown of the Plan,
Tortures, and kills *For Play.*

The same force formed the sparrow
That fashioned Man, the King;
The God of the Whole gave a spark of soul
To each furred and feathered thing.
And I am my brother's keeper,
And I will fight his fight,
And speak the word for beast and bird,
Till the world shall set things right.

A Smooth Beautiful Hardwood Floor Free From Cracks or Crevices, Easy to Clean and to Keep Clean

What better contribution could you make towards your wife's spring housecleaning this year?

Beaver Brand Hardwood Floors

cost but little money, and last a life time. They will save work and promote the health of your family. And you can lay them yourself if you wish. Each strip interlocks with the next one, both on sides and ends. Hammer and saw are the only tools you need. Write for costs and full particulars to-day, and be sure to send the size of the rooms in which you are going to lay "BEAVER BRAND" Floors.

THE SEAMAN-KENT CO. LTD.

BELGIAN RELIEF FUND

Ontario Branch: 95 King Street West, Toronto

CLOSING MARCH 31st

The work hitherto performed by Relief Organizations will be undertaken by the Belgian Government after March 31st.

Contributions of money and clothing will be received at 95 King Street West, Toronto, until that date.

Fund for Belgian Orphans of the War

Will, however, remain open, but contributions for this Fund must be sent to N. Goor, Consul-General for Belgium, Ottawa, Ontario.

Monsieur E. Pollet, Consul-General for Belgium, London, England, makes the following appeal:

"The LIBERATION OF BELGIUM does not solve the problem of the future of the war orphans.

"Some idea can now be formed of the number for whom we shall have to provide. It can be stated that the orphans whose parents were deported and who died in Germany number more than those whose fathers have fallen on the battlefield."

MRS. ARTHUR PEPLER, Chairman.

9. Special Committees may be appointed at the discretion of the Board of Directors.

10. Parliamentary authority. (See Bourinot's "Rules of Order.")

11. That a Committee be appointed to secure Articles of Incorporation, etc.

12. Financing of the Federation. Left with the Board of Directors.

13. Order of business. Left with the Board of Directors.

Members of Committee: Geo. A. Putnam, Anita E. Hill, Abbie De Lury, Mary McIsaac, Jennie M. Watt, Adeline Blackwood-Wileman, Hazel McCain.

The officers elected are as follows:

President—Mrs. Arthur Murphy, Edmonton, Alta.

First Vice-President—Mrs. William Todd, Orillia.

Second Vice-President—To be named by the Cercles de Fermieres of Quebec.

The directors representing the organization in the different provinces are as follows:

Alberta—Miss I. Noble.

British Columbia—Mrs. Blackwood-Wileman, Duncan, B.C.

Manitoba—Mrs. W. H. Dayton and Mrs. Watt.

Ontario—Mrs. Wm. Todd and Mrs. James Patterson.

Saskatchewan—Mrs. Cameron and Mrs. Bracass.

Quebec—Miss S. J. Armstrong and one from the Cercles de Fermières to be named.

New Brunswick—Miss Eliza Campbell and Mrs. J. W. Lawlor.

These persons are to be approved by their representative provincial organizations, or persons named in their stead, and one additional member is to be named by Alberta and one by British Columbia.

It is fully expected that the Women's Institutes of Nova Scotia and Prince Edward Island, which were not represented at the Federation meeting, will name representatives on the Board of Directors and join the Federation.

The Superintendents of Institutes for the various provinces are ex-officio members of the Board of Directors without a vote. These are as follows:

Alberta—Miss Mary McIsaac, Edmonton, Alta.

British Columbia—To be appointed.

Manitoba—Miss H. J. Macdougall, Winnipeg, Man.

New Brunswick—Miss Hazel McCain, Fredericton, N.B.

Quebec—Miss A. L. Hill, Macdonald College, Quebec.

Saskatchewan—Miss A. De Lury, Saskatoon, Sask.

Ontario—Mr. Geo. A. Putnam, Parliament Bldgs., Toronto.

Standing Committees were appointed as follows:

Immigration—Convenor, a representative of the Manitoba Household Economics' Societies, and to be approved by the Executive legislation.

Legislation—Convenor, Mrs. Ralph Smith, British Columbia.

Public Health and Child Welfare—Convenor, Dr. Margaret Patterson, 97 Walmer road, Toronto.

Publicity—Convenor, Mrs. Nellie McClung, Edmonton, Alta.

Education and Better Schools—Convenor, Mr. George A. Putnam, Toronto.

Household Science—Convenor, Miss A. L. Hill, Macdonald College, Quebec.

The first National Convention will be held in Toronto in the fall of 1919, when the convenors of the various committees will present reports and representatives will be in attendance from all sections of the Dominion.

Fuller announcement as to plans for the National Convention will be made later.

The representatives of the Institutes and similar organizations throughout the Dominion who have been attracted to the Institutes because of the opportunity it affords to render service of a community and national character, can be depended upon to direct the interests of the rural women along lines which will mean much to the future of the Dominion, especially in so far as the health and education of the rising generation are concerned. The fact that the organization is to be strictly non-partisan, non-sectarian, and will avoid the discussion of those issues which are likely to divide the interests of the members, speaks much for their influence in securing for the women and children of the Dominion legislation and service which will be in the best interests of the whole people.

It will be noted that the Federation is entirely under the control of representatives appointed by the various provincial organizations. Superintendents of provincial organizations and convenors of standing committees will act in an advisory capacity, but the final decision of all questions will be left to the representatives of the people.

Details as to policy and plans of the Federation are being worked out by the Executive, and reports of their activities will appear in this journal from time to time.

Preparation for Summer Series of Meetings.

The members of the Provincial Board of Directors and the lecturers engaged to attend the summer series of Institute meetings will hold a conference in early April and decide upon a programme for the series of meetings.

The Provincial Board of Directors will complete plans for provincial organization and formulate plans whereby they can co-operate most effectively with the various departments of the Government in carrying out the programme which will be decided upon. There will, no doubt, be features of work to be considered quite apart from those features in which the department is directly interested.

The Annual Report of the Superintendent of Institutes.

Since we wish to publish somewhat in full the address of Mr. Putnam, the Superintendent, as delivered at the Convention in February, it will be necessary to carry it over until next month's issue.

Report of Seymour West Women's Institute.

It affords us much pleasure to report our Institute work, if by so doing we may be of any service to our noble organization. Our work has been of a twofold nature, educational and patriotic.

Our patriotic work has been confined to home work, leaving our regular meeting days for regular Institute work.

We made comforts for soldiers and hospitals.

One particular feature of our work was regular packing of individual boxes for boys overseas. These boxes contained socks, eatables, soap, smokes, stationery, in fact, everything a boy could wish to have. These articles were donated and collected monthly, and there was always an abundance of goodies.

The success of our work depends on our good organization for work. We have, besides our regular officers, an additional director on each 'phone line. The duty of this director is to call all members on her line and give any message the president or secretary may wish passed on. She also distributes yarn, Red Cross supplies, and collects from members for our boxes and Red Cross work. We have never neglected our regular Institute work, which has been carried on by our young girls, through our yearly programmes. The young girls have charge of each meeting, and have the privilege of asking one of the older members to assist at each meeting.

Our programme is divided into three parts: (1) A paper on a subject selected at the beginning of the year. (2) A paper on one of the standard authors whose work we were intended to follow as an educational advantage. The younger members are much interested, and the educational benefits are very marked. Their papers would compare favorably with any we may read, and are improving year by year.

(3) Social. The social or musical programme is the best we can provide and if possible must bear in some way on subject for the month. By following our programme, our regular work has not been interrupted so much by our patriotic work of which as a rural Institute we have done no mean share by knitting one thousand pairs of

(CONTINUED ON PAGE 36C.)

Canadian Women's Institutes

(CONTINUED FROM PAGE 36B.)

socks and making supplies, besides sending hundreds of boxes overseas. We try to raise the standard of members by thoughtful papers and regular study. No members wish to miss the meeting because of the benefits derived therefrom.

We are offering prizes to the schools in our district at rural fairs. We hope to encourage the boys and girls to greater production. The prizes are: (1) a large flag. (2) and (3) pictures having some bearing on incidents in our Canadian history.

We have also purchased one hundred buttons to present to boys and girls who have assisted in the "Greater Production Campaign." These are to be presented at Public meetings presided over by the Institute, these meetings addressed by prominent speakers, the subject to be of interest to the rural community of which we are proud to form no mean part.

Let us then be up and doing.
With a heart for any fate.
Still achieving, still pursuing.
Learn to labor and to wait.

M. MACOUN,
President, Seymour West Women's Institute, Campbellford.

THE FEDERATED WOMEN'S INSTITUTES OF ONTARIO.

At a meeting of the Provincial Women's Institutes' Directors appointed at the recent Convention, the following officers were appointed:

Honorary President, Mr. G. A. Putnam, Supt.; President, Mrs. Wm. Todd, Orillia; Vice-Presidents, Mrs. Jas. Patterson, Gadshill, Mrs. Jas. Reid, Renfrew; Secretary, Mrs. B. O. Allen, Port Arthur.

These, with the following, constitute the executive. Miss M. E. Pearson, of Merrickville, Miss Helen L. Beardmore of Port Credit, Miss Kate McKay, of Brechin, Mrs. John Clark of Englehart, Ont.

A meeting of this executive was held on the afternoon of February 7th for the drafting of the Constitution and By-laws for the Provincial Organization. A complete plan will be submitted to the Institutes of the Province at an early date, and in plenty of time to enable them to take action regarding the same, first, at the Branch Annual Meetings and, later at the District Annual Meetings.

The objects of the Provincial Organization will be as indicated below:

"The Federation of the Ontario Women's Institutes shall have for its objects, co-operation with the Department of Agriculture and other Branches of the Government in making their work with the Women's Institutes more effective, and the carrying on of any line of work which has for its object the uplifting of the home or the betterment of conditions surrounding Community life. The motto shall be "For Home and Country."

It was also decided that all Institutes belonging to the Federation shall be strictly non-partisan and non-sectarian in every phase of their work, and no Institute should be operated in the interests of any party, sect or society, but for the equal good of all citizens. Those Institutes which introduce sectarian, political, or partisan questions in their meetings will forfeit their right to belong to the Federation.

While the Federation has decided that those Institutes which deal with partisan and sectarian questions will not be entitled to join the Federation, the Department of Agriculture wishes it clearly understood that it does not assume in any way to dominate and control the individual organization, except when paid workers of the Government are in attendance at meetings. On such occasions, the time of the lecturer must be devoted to instruction and the discussion of ways and means whereby the Institutes can be of greatest service to the people. All are agreed that no Government can afford to pay speakers to attend meetings when even a part of the time is to be taken up in the discussion of partisan or sectarian questions. If the individual organization thinks it well to discuss such matters at some of its regular meetings, it will not be debarred from securing lecturers and instructors through the Institutes Branch, but will forfeit its right to join the Federation, which is an organization of and for the people and not dominated in any way by the Department of Agriculture.

While the Department is prepared to co-operate upon the above lines, it wishes to express the view that the best interests of any organization intended for the whole people, such as the Women's Institute is, can be permanently successful only when it debars partisan and non-sectarian questions from its deliberations.

A resolution was passed asking that provision be made whereby the individual Institutes and district organizations of the Federated Women's Institutes of Ontario will be made bodies corporate, so that they will be able to hold property.

Conventions shall be held at such time, and places as the Federation may determine, and the Federation shall determine as to the number of Representatives to be appointed at each Convention, such representatives to meet District Representatives appointed at the Central Convention, and proceed immediately after the Central Convention to complete organization for the year.

Girls' Work.

An address by Miss K. F. McIntosh, Brampton, at the recent Ontario Institute Convention.

Girlhood is the state of budding womanhood—"Standing with reluctant feet where the brook and river meet." We are beginning to realize these days the importance of woman's work; she has come more prominently to the front, during the war, than ever before. That high sense of honor which has existed among good men, is being introduced to a greater extent among women. We must eliminate the little, mean, petty things that have sometimes characterized women, especially in work among girls must this be so. Set such high ideals before them that they will be big enough to overlook such things

This is a day of organization. We should get the girls interested in organizations, that count, teaching them that the highest thing in the world is Love and Service. We have realized that more than ever before during the last four years. Having the girls realize that, they learn that the highest service they can render is for Home and Country.

Young womanhood has the joy of youth and we need to incorporate this in our older organizations. Let the older women catch the joy of living and the beauty of life girls can bring to the Institute by the influence of contact; we are part of all we've met and known. The call of normal womanhood is for home and motherhood. For so many of us now that can never be; our dreams are different now. It is not just from the fact that our men have been taken away—our dreams have gone with them. We must counteract that by helping the girls to work for others, to realize that only in service is the balm that can heal. Service is simply love in action. To give ourselves to Universal Motherhood is after all only the giving of ourselves to others in numbers, where we would under other conditions have given ourselves to the few in a home life.

Perhaps you would allow me to speak of some work we have been doing in Peel County. Through the efforts of the late Mr. J. W. Stark of Brampton, Home Demonstration work was begun last April. Although some 1,550 Demonstrators are working in the States, this is the first time it was ever tried out in Canada. The idea standing back of it was to have a Woman Representative who would render to women, girls and children the same service to be rendered by the Agricultural Representative to men and boys. Previously, Demonstration Short Courses had been held throughout the county, and during each a Junior Women's Institute was organized. A great deal of our effort was directed to the girls. We have now five Junior Women's Institutes and a Girls' Club, one just recently organized. Last summer we organized a Canning Team in each Junior organization. Four girls in each team were trained in different methods of canning, and at the County Fair a Canning Competition was held in the Department of Agriculture tent, the five teams competing closely. A practice had been held

Stop Forgetting!

THE PROOF OF

PELMANISM

IS IN RESULTS

Better Memory	Power of Concentration
Keener Observation	Courage and Self-Confidence

The Pelman Mind and Memory Training Course is being followed in Canada by persons of all ages and occupations. Thousands of men and women, housekeepers, farmers, ranchers, returned soldiers, clergymen, doctors, lawyers, teachers, laborers, housemaids—are building up strong personalities by its aid. Here are some of the things that Pelman students are saying about the course:

From a Housekeeper in Saskatchewan: "Since taking up Pelmanism I have found housekeeping more interesting, less worrying, get better results and more leisure time, working more by method than formerly and observing."

From a Workman in Ontario: "I am sorry I didn't obtain the course years ago for, although I have invested in many ways, this has proved the one real investment in my life, and I feel that the money spent is as nothing in comparison to the value obtained."

From an Editor in Quebec: "I see a substantial improvement in my memory, and every day I appreciate the development of the power of concentration which I attribute solely to the Pelman Instruction. I have found the course intensely interesting and my only regret is that volume twelve is the last."

From a Rancher in British Columbia: "The course has undoubtedly 'pulled me together' mentally. I have more control over my mental processes. I am more definite as to alms I have in view and methods I must employ to achieve them. My outlook on life is more hopeful."

From a Returned Soldier: "Your system, although I have practised it but for a short time, is without a doubt restoring my self-confidence and helping me to get hold of myself," writes a Lieutenant returned from overseas service.

From a Music Teacher in New Brunswick: "I can never be too thankful that I had the privilege of taking the course."

From a Student at a Girls' College: "I enjoy this course more every day and find it helping me some way in almost all I do."

It will take no time from your regular daily work; it will give you a better memory, concentration, self-confidence and all-round mental efficiency.

with the Instructor each one of the seven weeks preceding, some of the teams meeting oftener. We can safely say thousands of people visited the tent that day at Brampton. The idea standing back of it was education and conservation.

One would be surprised to find out how few women do canning. Preserving is an ancient art but canning, especially of vegetables, had scarcely entered the minds of a great number. By getting the girls enthusiastic over it, the women became enthusiastic. At the competition many questions were asked, the influence spreading to each one with whom the girls came in contact. Short Courses have been carried on most successfully under the auspices of either Women's or Junior Institutes.

Mr. Putnam and Miss Sutherland have been exceedingly good to us in the matter of giving instructors and we wish to thank them for it. Already this year we have completed one in Home Nursing and First Aid, one in Food Values and Cooking. Two others in Home Nursing and First Aid are arranged for to begin shortly. Full preparations were made for a Physical Culture Course, but it was postponed indefinitely on account of the influenza epidemic. Just here I should like to urge all to take advantage of Short Courses offered by the Department.

One other effective means of reaching the girl is through Mothers' classes. Patterns for the making of infants' layette were loaned by the Provincial Board of Health. A common laundry basket was prepared to serve as the only cradle a baby needs. Garments were all simple and could be made by any mother. The child is our greatest asset. By interesting the girl in the child—she is interested—by teaching her the proper care of the child in every detail, the value of this work goes ringing down the ages, one generation passing it on to the next. That our classes were interested was plainly evident, when every few days we were asked for patterns.

There are so many things we might tell, but we will first give you one little message from our Short Course at Palgrave. We ran Agricultural and Home Economics classes concurrently for one month. Our work with the girls was most interesting, a most kindly spirit existing among the members. We decided to choose a class motto; several were suggested for discussion, but the one finally decided on was "Carry on." (Applause.)

Perhaps you will allow me to close with the little quotation we gave the Palgrave class as a closing message.

"THE SALUTATION OF THE DAWN,"
FROM THE SANSKRIT:

For yesterday is but a dream,
And to-morrow is only a vision.
To-day, alone, is ours;
But each to-day well lived,
Makes every yesterday a dream of happiness,
And each to-morrow a vision of hope,
Live well this day,
Such is the salutation of the Dawn.

SENTENCE REPORTS FROM THE INSTITUTES.

Ontario.

The report from the PAISLEY BLOCK INSTITUTE is as follows: Since the war has ended we are taking up Home and School improvements, helping Children's Shelter and Crippled Children's Hospital. Each monthly meeting is made so interesting that no member wishes to stay away. Miss A. Barber is the President.

Mrs. Will Elliott, President of the CENTRAL DUMFRIES INSTITUTE, reports that this Institute is doing Community work and gradually getting back to regular programme. On March the 4th this society entertained the Farmers' Club. An address was given by Hon. W. C. Sutherland on "Rules and Form of Parliamentary Procedure at meetings," and the speaker presented the Institute with books on this subject.

A Belgian child is supported by the members of the GRAND VALLEY INSTITUTE, in addition to their work in helping disabled soldiers and knitting for the sailors. Mrs. W. L. Craig is President.

The SHENSTON INSTITUTE, with Mrs. M. A. Dolph, President, is planning to have a Social event for Easter Monday, and is giving Easter greetings to the school children. This Institute is collecting money for a church shed,—$76.00 and some material having already been secured.

The March meeting of the SANDFORD INSTITUTE was made interesting and helpful by an address on "The Care of Poultry." The President is Mrs. R. Week; Mrs. M. Best, Secretary.

Mrs. W. H. Johnston, President of the MANVERS INSTITUTE, reports that this society is interested in the young girls of the community, and is striving to have them become interested in the work of the Institute. The purchasing of a knitting machine is being considered, and the organizing of a music class.

The BANCROFT INSTITUTE has decided to beautify the school grounds and plant maple trees in memory of the boys who served their King and Country from that community. The President is Mrs. G. L. Jarman.

"The largest attendances at meetings for a long time past," is the encouraging report which comes from the President of the ACTON INSTITUTE, Mrs. George Havill.

Miss Florence Webb, President of the NARVA INSTITUTE, reports that this Institute is very interested in Belgian Relief work.

"The February meeting was specially for the men," reports the President of the LEICESTER INSTITUTE, Mrs. Fred Trerice. Improved conditions of the school is the objective.

The CONMEE INSTITUTE, in addition to work for the Belgian refugees, and preparations for the establishing of a memorial to the soldiers from Conmee killed in the war, is interested in having a woman trustee on the School Board. Mrs. J. Arnold is the president.

The improvement of home conditions is the objective of the members of the ATTERCLIFFE STATION INSTITUTE, but at the same time they are making quilts and comforts for Belgian sufferers. Mrs. W. Troughton is president.

The February meeting of Varency Institute was held at the home of Mrs. S. F. Saunders, when it was decided to continue the Relief work. Mrs. R. Parkinson is the President.

"The Sebringville Institute is engaged in French Relief work," reports the President, Mrs. P. L. Kastner. "The street lights installed in the town are proving a decided success—the Institute has pledged itself to keep one light burning, which is twelve dollars a year."

Mrs. C. R. Tobey, President of the Tara Women's Institute, reports: "For the past two years we have taken a Y.M.C.A. offering at our regular meetings and have been able to send $5.80 every three months. We also take a cent collection, which we devote to flowers for our sick and shut-in folk."

Improvement of rural schools and medical school inspection is the splendid aim of the Milverton Institute, with Mrs. R. J. Tanner as President.

The Wabash Institute, with Mrs. Fred Kelley as President, is giving a reception for the returned soldiers and presenting them with a purse of money.

Mrs. J. S. Porter, President of the Stayner Institute, reports that this society is still doing Red Cross work; 1,020 pounds of apples and vegetables were sent to the Barrie Canning centre last year, and $48.85 donated to Sailors' Fund. Bales of clothing were also sent to Serbia, and to the soldiers overseas.

Mt. Brydges Institute is interested in the building up of their library, and the members of this Branch are also thinking of devoting their time to providing the much needed amusement for the young people of their community.

Medical Inspection of Schools is engaging the attention of the members of the Clachan and West Elgin Institute, and their President, Mrs. John L. Wright, would like to have information on this subject.

The Northumberland Institute, with Miss Mabel Rogers, President, is still doing Red Cross work, and $75.00 was sent to the Belgian Relief Fund.

An "At Home" was held on February 12th by the Norwich Institute, and an enjoyable time resulted. Relief work and the knitting of amputation socks for soldiers in Whitby Hospital is being undertaken by this Society, with Mrs. J. P. Stephens as President.

Kelvin Institute raises money for Belgian Relief work by holding Ten Cent teas. Village improvement and community work are also engaging the attention of this Society, with Miss L. Chamberlain as President.

Mrs. W. G. Hill, President of the Queensville Institute, reports that this Society is interested in Belgian Relief work, a large box of clothing having already been sent.

The Hampton Institute is still doing Red Cross work. An announcement was made from the pulpits of their churches asking for donations for Serbian relief. Clothing and bedding to the amount of two hundred dollars was collected as a result. Mrs. L. Niddery is President.

Mrs. A. S. Backus, President of the Wallacetown Institute, reports: "We are helping to erect a memorial to our local boys who fell in battle. The boys coming home are given a welcome in the form of a social evening."

The President of the Glen Oak Institute, Mrs. Samuel Paisley, asks the question, "What can the Institute do toward reconstruction?"

A successful "Pancake Social" was held by the Wingham Institute, led by the President, Miss Priscilla Powell A box of clothing is ready to be sent to Serbia.

Newmarket Institute greatly appreciates the value of the First Aid Course, and is much interested in getting a Y.M.C.A. with a Y.W.C.A. in the town. An "At Home" is being held to raise funds for the upkeep of the North York Cot in Queen Mary Hospital at Weston. Mrs. R. A. Starr is the President of this Institute.

Granton Institute is buying a piano for use of Granton Girls' Club. Mrs. A. Westman is President of the Institute.

A large box containing clothing and soap was packed for Serbian sufferers by the Silver Water Institute. Mrs. O. M. Thomson, President.

Fifty dollars in cash and several bales of clothing have been forwarded to headquarters for Serbian relief by the Kirkwall and Valens Institute, with Miss Jean McKnight, President.

Nine hundred dollars has been sent to the various Patriotic Funds by the members of the Richards' Landing Institute, in addition to assistance and clothing given to the Children's Shelter, Sault Ste. Marie, and the Royal Victoria Hospital.

With thirty-six members the Windham Centre Institute was able to give much assistance to the poor of that community. The Secretary, Mrs. MacVicar, reports that they are doing Patriotic work.

Orrville had the honor of being the first Institute to contribute funds to the Children's Aid Society at Parry Sound. A donation of twenty dollars was their contribution.

To provide a treat for the community—is the object of the Glen Morris Institute, with Miss Mary Turnbull as President, when the members arrange for an excellent concert each year. One year Jessie Alexander was present to entertain, and this year the Maple Leaf Quartette of Galt will assist.

Victoria Harbor Institute succeeded in having Medical School inspection recently. This Society is also knitting socks for Serbians, and they have raised $25.00 toward School Fair Fund. Mrs. Thomas Lumsden is President.

Mrs. F. E. Pond, President of the Sandusk Institute, reports that this Society is at present interested in Belgian relief work, and preparing purses for the returning soldiers.

Special speakers on live topics at their meetings are proving very satisfactory to the members of the Delhi Institute, with Miss Minnie Kent, President.

Gouiais Bay Institute, with Mrs. Maicous McLean as President, is planning to hold a box social on St. Patrick's Day, when home-made articles will be sold.

The Fingal Institute's aim is to promote social life in the community, to help the returning soldiers, to give assistance to the different Children's Shelters, sew for Belgian relief and help the Salvation Army. Mrs. M. Anderson is the President.

(CONTINUED ON PAGE 74.)

EDITOR'S NOTE.—In the March number it was stated that the amount of cash and goods donated by the Ontario Institutes in 1917-18 was $85,000. This should have been $855,000.

Masterpieces of Canadian Art

AFTER THE BATH *Painted by Paul Peel*

Paul Peel, a member of the Ontario Society of Artists and the Royal Canadian Academy, was born in London, Ontario, in 1860. He studied at the Pennsylvanian Academy, Philadelphia, and later at the Royal Academy Schools, London, England, and the Beaux Arts and Julian Academies, Paris, France. ¶ In 1889 he exhibited a picture entitled "Life Is Bitter" at the Paris Salon, and received an honorable mention. ¶ The following year he was awarded a third class medal for his picture "After the Bath," which is reproduced on this page. This picture, after changing owners several times, has, through the advice of the Advisory Arts Committee of the Canadian Government, found a place in the Natural Gallery, Ottawa. ¶ This most promising young Canadian painter died in Paris, France, in 1890, at the early age of thirty, and in his death Canadian art suffered a very serious loss.

If you wish a house that is distinctive, plan something like this

Carefully preserve the trees, if you are so fortunate as to possess them

The HOUSE AND ITS ARRANGEMENT

A hall treatment, plain but not severe, and charming when kept in warm deep coloring

The careful use of light toned chintz makes this bedroom a delight. The outside world could never intrude upon the quiet restful atmosphere of such a room

A living-room expressing both comfort and good taste, without a cumbersome amount of ornament or bric brack, yet homelike and pleasing

Will they—?

What? Snap properly?

A natural question if you have never used Wilsnaps before!

A "proper" snap, we think you will agree, holds fast through thick and thin. It lets go without coaxing. It is rustproof, of course.

Yes. On the familiar orange card you will find your proper snaps.

No matter whether your material is light or heavy, Wilsnaps will snap simply because they *are* Wilsnaps. Look for that reassuring name.

Wilsnaps—always Wilsnaps—where ever snap fasteners are used.

Always will snap

Prize Contest

Can You Tell These Stars by Their Eyes?

Above you see the photographs of the eyes of six of the many famous motion picture beauties who endorse and use Ingram's Milkweed Cream and whose names are listed below in the coupon. These pictures were taken from portraits used in our advertising during the past year. Your problem is to identify the actress by her eyes. First, note the number opposite each photograph. Then, when you have decided upon your guess as to the actress, write the number opposite the proper name in the coupon and forward the coupon to us. If you guess correctly the names of three of the six actresses we will forward to you, without charge, a souvenir set of four Autograph Carbon Portraits of these stars, also, trial sizes of four of our Preparations.

Ingram's Milkweed Cream

and Other Ingram Toilet Requisites

The Souvenir

Consists of four Autograph Carbon Portraits, 5½ x 9½ inches, without any advertising, and suitable for framing; also trial sizes of Ingram's Face Powder, Rouge, Milkweed Cream, Zodenta Tooth Powder and Ingram's Perfume. Enough to introduce you properly to Ingram Quality. Mail coupon to

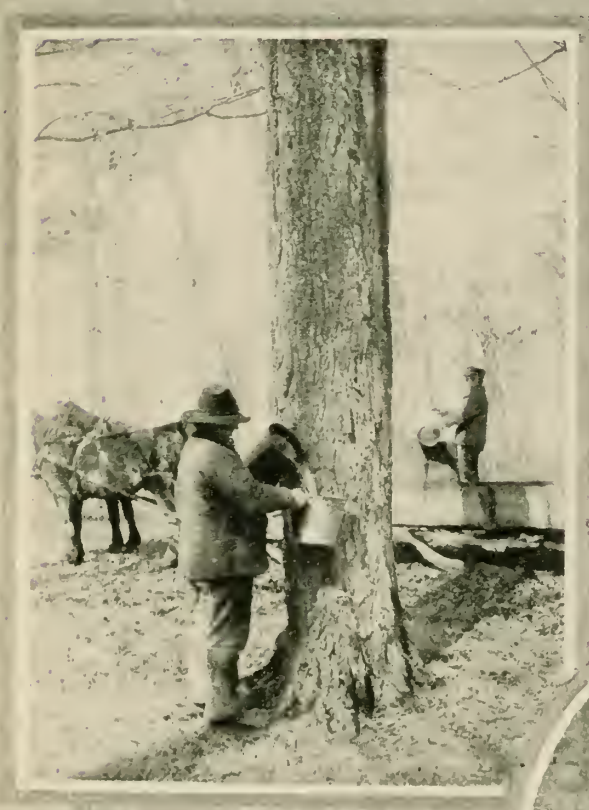
Summons of Spring

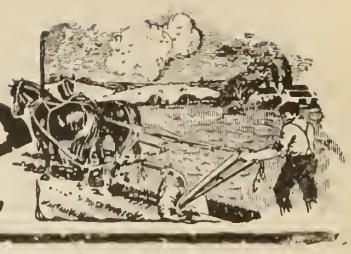


"Boiling Down" in the sugar making process

Preparedness

Those soft warm Spring days when every wood voice calls you forth

When the sap runs merrily



Grandfather sniffs the breeze and sets about tapping the first tree

Then come potato planting days

War to Peace

Give Welcome to Our Soldiers' Dependents

THE fighting is over. But the splendid war-work performed by Canada's women must still be carried on.

Twenty-two thousand women and children have to come to Canada from overseas — dependents of our soldiers. There still remain to be brought to Canada about 50,000. Some of these went to England in the early days of the war. But most of them will be strangers to this country — new-comers in our midst.

They are coming at the rate of 5,000 to 6,000 each month. Preparations have been made to bring our women and children home with all the comfort consistent with transportation facilities.

The soldier is more interested in his dependents than he is in himself. It now remains for the women of Canada to do individually what the Government itself cannot do—to provide a fitting welcome and to help them in the work of home-building.

Some of these women and children will be settling in your town. You can display towards them a spirit of neighborliness—the type of friendly interest that Canadian women have always shown.

Women's organizations should make every endeavour to have our new Canadian citizens become members of their organizations, thus getting them into closer touch with the life and interests of the community.

In each district receptions and social gatherings should be held from time to time so that these wives of Canadian soldiers will feel the warmth of Canada's welcome.

To Canada's women, in this work as in war-work, comes the call for service and understanding—it is a further piece of continued war-effort.

THE REPATRIATION COMMITTEE

OTTAWA

Kathleen Howard, One in a Million

(CONTINUED FROM PAGE 7.)

when a girl will not have to go through all I went through in order to develop her talent, but do it in her own country. But the wonderfulness of Europe for those whose eyes are open cannot yet be replaced by America, and a real artist will surely flower more perfectly on that side of the water."

FASCINATING indeed is the description of life as Kathleen Howard found it in both France and Germany. After studying in New York and realizing that she could never go back to her home town, marry the man to whom she had become engaged, and give up her career, she sought to find an opening in New York, but on every hand she was met with the one question "Have you had experience," to which she was forced to reply "No." Facing conditions as they existed the young singer knew that she must now go abroad to gain that much desired experience and development, but here lack of finances blocked her way. Undaunted, however, she started to study French, and to her great surprise and joy, Mr. and Mrs. Frank Smith Jones, friends whom she had made in the New York church in which she had sung, came to her aid and sent her to Europe in company with her sister.

Work then began in earnest for this ambitious girl. Languages were mastered, and all manner of studies undertaken. Let anyone who imagines stage work is all roses read Kathleen Howard's description of the artists with whom she associated in her operatic work in Metz. "The men principals have their historical costumes, with the exception of wigs, tights, and shoes, supplied to them but the women must provide their own. The collection of men's clothes in an old theatre is sometimes quite remarkable, some of the suits of a hundred years ago being actually of the period.

"THEY retain the smells of the period also, many of them; for in a theatre like that of Metz I don't believe the men's clothes were ever cleaned. Things which have been worn several times a week for seven months a year during the past hundred years, accumulate a richness and variety of odours which must be sniffed to be appreciated—a very ancient and fish-like smell indeed. As Amneris, to force your way for the entrance in the triumph scene, through an Egyptian populace composed of German infantrymen, is a squeamish business at best; but when they are attired in clothes that haven't been washed for years, it is a feat before which any one may quail.

"Washing was not any too popular in Metz even among the principals. I have dressed with leading women whose arms showed streaks of white where the water had run down as they washed their hands, stopping conselentiously at the wrists. Their make-up would be removed night after night with the same rag during the whole season. Our operetta tenor played the whole season in the same shirt, powdering the bosom freshly each evening with a yellowish powder which he used for his face."

From Germany Kathleen Howard went to Holland, Norway and at length to London, where Her Royal Highness Princess Christian of Schleswig-Holstein and her daughter Princess Victoria consented to be patronesses at her concert. Success followed success, and two years ago Kathleen Howard returned to America where she has since met and married Edward Kellogg Baird.

Just what it must feel like to be the husband of a Metropolitan Opera Star I cannot imagine, but Madame Howard assured me that she had married the most lovable man in the world, and as each considers the demands made upon the time of the other, there is no misunderstanding whatever.

Kathleen Howard voices Schumann-Heink's advice to girls who are beginning an operatic career—"Sing everything, no matter what they ask you to do."

Do You Want to Become a Nurse?

The Salvation Army offers a unique opportunity to Christian young women (Salvationists or otherwise) desiring to take a course in Maternity nursing. Thorough and efficient Hospital training given under physicians and graduate nurses.

For terms and other information write the

Women's Social Secretary, S A. Headquarters Albert Street, Toronto.

Trained Nurses earn $15 to $25 a week. Learn without leaving home. Send for free booklet. Royal College of Science, Dept. 39, Toronto, Canada.

A Little Story of Achievement

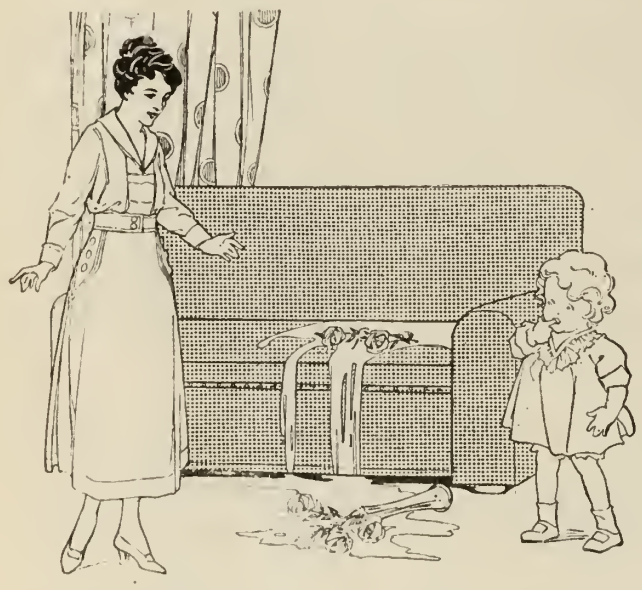
(CONTINUED FROM PAGE 36A.)

The others call her a Hun and as you can see she's rather a nice little thing and sensitive. Just now they wanted to play bombing a town and they wanted Gertrude to submit to being crucified on the pump over there— all in pretence of course. They said they'd give her a taste of Kultur and the poor child is nearly terrified out of her wits. They have drawn serpents in her geography and her grammar and written 'Kultur' underneath and already I've punished two of the boys for yelling 'Kamerad!" at her in school time."

"So you have to be a diplomat as well as pedagogue!"

"I have to be all things to all people," said Marya, smilingly. "One has to in a remote settlement such as this."

"It must seem a very long time since the old biscuit-shooting days?"



"What is it that someone has said about not scorning the stepping-stones by which we arrived? Not that I consider I've arrived, by any means," said Marya. "There's a long trail yet to travel."

BUT Marya will travel it. She will reach the utmost goal, because there is that in her which will continue to spur her on. She is one of those who are marked for a high place and some day she will reach it and find her life work and her happiness either as supreme head of some institution such as a Ruthenian Girl's College or as the wife of some young Ruthenian professor, who is likewise giving his life to the betterment of his own people here in our midst.

Marya is not an idealized symbol. She is a flesh-and-blood girl. Are there many native-born Canadians of twenty-one who can measure up to her? Are there many native-born girls of that age who have read all of Thackeray's works to the neglect of "throbby" fiction imported from New York? Above all, where could one find another girl with the radiant beauty of Marya who has so consistently avoided at least the minor temptations of flaunting herself and attracting attention? For Marya to-day in the high tide of her physical charm is as sweetly unconscious of it, is as simple and as sincere and as straightforward and unpresuming as the day she slapped Demetrius for daring to kiss her and turned her back on the old narrow life to enter upon the new.

THE END.

The Secret of Social Charm

How the Most Delightful Woman I Know Makes and Holds Her Men and Women Friends --- An Art Acquired Through One Evening's Reading

—By Laura Kent Mason—

"I'M just asking a few friends in to meet my cousin, Dorothy Vick," Frances had said over the telephone that morning. "Bring your knitting."

With the privilege of an old friend (I had been maid of honor at Frances' wedding four months before), I came a little early. Though the invitation had been casual enough, I knew that this informal afternoon gathering was more important than it seemed. Dorothy Vick was the first house-guest entertained in the new home, and Frances was anxious to present her in quite proper form to our group of friends.

In the few minutes before the others came, while the three of us gave final attention to the small items of preparation, Dorothy Vick impressed me with her thoughtfulness in helping attend to the details that crowd upon a young hostess at the last minute. She seemed to think of everything, to remember like a flash every little thing that ought to be done.

Miss Vick was really a very handsome girl of just about Frances' age, with an ease of manner and a graciousness that, to me, made her a person very much worth while knowing. But I was hardly prepared for the way she captivated the other guests during the next hour or two.

The gathering was in her honor, of course, but that didn't begin to account for the quick sympathy and friendship that seemed to spring up between Dorothy Vick and all the women she was meeting for the first time.

I noticed particularly that as she acknowledged her introduction to each guest she repeated the name clearly and pleasantly, and during the afternoon she remembered and used the name of each one as she spoke to her. There were not more than twenty women present, but if you have ever met so many strangers at one time, you know how almost impossible it is to keep their names straight and to identify each face with its right name afterward. But Dorothy Vick did it that day, and it gave each of us a feeling of importance that made us her friends at once. At the time I couldn't account for it, for I knew we all hadn't made such a strong impression on her.

The affair went off delightfully. Dorothy Vick was easily the most admired person there. She told entertainingly about some of the recent interesting things she had read. She recounted several experiences she had had, and when the time came for the guests to separate, each one of us, I think, was a bit envious, although thoroughly admiring, of Miss Vick's charm and attractiveness. I made up my mind to find out, if possible, just what it was in her that made her company so pleasant.

A few mornings later Frances and Dorothy Vick, in Frances' little runabout—a wedding gift from her father—called for me to go shopping. We spent an hour or two in the stores and then drove out along some of the nicer residence streets, to give Dorothy a glimpse of the town, pointing out to her the homes of some of the women we had met that first afternoon. Several times during our shopping and marketing, Dorothy reminded Frances of things she had said she needed, and saved us a return trip. Dorothy seemed to have everything clear in her mind, and it helped us tremendously in getting our business calls made. Her conversation was as entertaining as before. It seemed as if her mind was a perfect storehouse of interesting and useful things. My first pleasant impression of her was strengthened by our second meeting.

"The men all seemed to find out at once that here was an unusually fine girl."

My curiosity reached a crisis after the Country Club dance, which occurred the following week. Perhaps you have noticed that frequently women who are much admired by members of their own sex do not greatly attract men, and—the other way about—women who are admired by many men, do not seem to form real friendships among women. Well, Dorothy Vick proceeded right from the start to prove the error of that ancient rule. She greeted the women she had met before with the most flattering cordiality, remembering the name of each one. To several she said something nice about their homes and even remembered their streets and house numbers. I had forgotten that we had even pointed them out to her.

And the men, through some mysterious radio system of theirs, all seemed to find out at once that here was an unusually fine girl,—one worth while dancing with and talking to. The whole affair was a triumph for Dorothy Vick, and she left the clubhouse that night the possessor of probably more friends, both men and women, than any of the rest of us. There was something more to her attractiveness than personal charm, as not the prettiest girl in the world could have gained such quick popularity on her looks alone.

From that evening Frances' home became a perfect Mecca for the unattached men of our crowd. Dorothy received more invitations than she could possibly accept, and her time was so fully taken up with dances, picnics, theatres and automobile rides that she had little time for Frances or me. Rivalries for her favor seemed to spring up over night, and Frances told me afterward that one or two of Dorothy's admirers had even appealed to her to present their causes advantageously to the attractive visitor.

"I know you don't hypnotize them," I said, "but do tell us what it is. Frances and I are entitled to your secret, anyway."

"Well," said Dorothy, "you needn't laugh when I tell you that I used to be a veritable wall-flower at dances and a perfect mouse at women's parties. Frances will tell you the same. I have changed, I know, and it has all come about in the last few months. In fact, I can trace it back to a single evening.

"I had heard of the Roth Memory Course, as probably you have also. It never occurred to me that *I* needed to improve my memory until one afternoon I found myself in a most embarrassing situation. I had forgotten the name of a man who came to call on me, and was obliged to ask him for it before I could introduce him to my mother.

"I simply couldn't forgive myself for my apparent rudeness, and for that matter, the man never forgave me either. I decided that my memory, while it was just about average in most ways, needed improving. The Independent Corporation, publishers of the Roth Memory Course, sent me Mr. Roth's seven little lessons for free examination as soon as I asked for them.

"You know I hate things that have to be studied and worked over and I rather dreaded the effort of starting the Course. But I was simply amazed the evening I took up the first lesson to find it as interesting as a good game, and so fascinating I could hardly put it down. That first evening, in just thirty minutes, I learned the whole secret of a good memory and since then it has helped me in a hundred ways. I can remember names, faces, appointments, things that I have seen and read, things I have heard about people, social engagements, things to be bought and to be done, and perhaps best of all, things to talk about and to say to everybody. It has been a Social Education to me."

Dorothy Vick's visit came to an end several months ago. Before she left her engagement was announced to one of the finest young men of our town. Some of the mothers of the girls I know were rather dismayed by the news, but she left such a delightful impression with everyone she met that we are looking forward to the time when her home will be here. Frances and I have followed her advice and subscribed for the Roth Memory Course. I have thanked her for the suggestion a dozen times, and told others about it. Now I write this simply so that more women than I could ever possibly tell will find out what it can do for *them*.

JUST YOUR NAME

You need send no money whatever. So confident is the Independent Corporation, publishers of the Roth Memory Course, that you will see at once how easily you can acquire the secret of a good memory in one evening and increase your social charm that they are willing to send the course on free examination.

Just your name and address on the coupon below mailed to the Independent Corporation will bring you the complete course at once, all charges prepaid. If you are not entirely satisfied with it, send it back any time within five days after you receive it and you will owe nothing.

On the other hand, if you are as pleased as are the thousands of other women who have used the course, send only $5 in full payment. You take no risk and have everything to gain, so mail the coupon.

Letter writing, composition and photograph contests are conducted monthly by Ethel Bain to encourage the efforts of the younger Journal readers.

The Last of England

By Mapleleaf

WITH excited anticipations, with fondest hopes and pictures of his coming months as a fighting man, the Canadian soldier landed in England. How the realization has measured up to his anticipations is a matter of personal opinion.

He may have been disappointed in the English winter. He may not have found the life in the trenches quite up to the requirements of a summer holiday jaunt. He may have been forced to eat "bully" when he wanted turkey, to smoke "fags" when he wanted a real Turkish, to bathe in a dixie when he hungered for the "old swimmin' hole" at home.

But anything that interferes with pleasant remembrances of the Motherland, at least so far as his last days in it are concerned, is outside the power of the authorities to prevent.

Rhyl is a camp in a thousand. Rhyl, in North Wales, from which he will probably bid farewell to English winters and English ways, is not those long bleak slopes out before Arras, for instance, or the rest camps back of Ypres where "rest" was relative in its meaning. It is not sandy, straggling, misshapen Etaples. It may not be billets in four-storey mansions on the Rhine, with coffee in bed, a maid to shine your shoes, and a dignified host to remove his hat in your presence as a mark of homage to the conquerors. But it is the best substitute in England.

There are well made drives and walks that are as near to mudless as climate permits. There are trees that never heard a gun. There are parks and villages, sightliness everywhere, and days of comparative leisure.

And there are evenings of entertainment *de luxe*. I dropped into the camp one early February afternoon, unheralded. There was no reason why I should be heralded—no good reason. I just wanted to see what was doing—how those final few days before home were filled for the impatient Canadian. As elsewhere in the Canadian camps, entertainment was in the hands of the Canadian Y.M.C.A.

THE first hut was a large one—indeed, a very large one. In its 250 feet in length it included a whole community. There were the officers in front, then a canteen with a writing room off it, afterwards a large, quiet room with easy chairs and lots of reading matter, and last of all a large theatre. At 2.30 was the first "show." It consisted of entertainers from Liverpool—one a tried old comedian who could play on anything from a gut-covered tin can to the feelings of his audience. He could sing a song whose chorus threatened the roof, or dance more spontaneously than the soldier to whom two weeks' leave has come unexpectedly on top of a cheque from home. The others completed a programme of music, elocution and laughter.

It was a popular "show." When it came to the National Anthem there was such persistent applause that the customary conclusion had to be postponed for a number or two. It was very gratifying to the entertainers—except that they had another show to put on in another hut after only a short interval for dining. An hour later the movies were filling the same house.

That was in Number 4 "Y" Hut. Down in Number 13 Hut shortly after six I enjoyed a different kind of show. It was local talent—that is, camp talent. It was none of your amateur reciters, interspersed with pseudo-darky songs and unpracticed instrumentals. The men who are in the ranks are artists, many of them.

This was in the form of a contest. The "Y" had offered money prizes to the three best "stunts," and the stunters were there with all their paraphernalia and art. There were the strong men, the baritones, the buck-and-wing dancers, the monologists, the tumblers. "Shea's" in Toronto, could find places for many of them to its profit. If the Coliseum in London, knew its crowd it could satisfy it better at less cost if it signed contracts with some of these "amateurs."

THE decision was left to the audience—and the camp had crowded in with such determination that only "pull" found me a place to stand behind the canteen. The first prize went to a pair of colored gentlemen who had a patter of feet and tongue that brought down the house. Primrose and West, or Dockstader, never had better end-men or specialties. The audience went on the basis that any man can develop a muscle to break a logging chain on his chest—but nobody but a real "coon" can buck-and-wing with more beats than a jazz pianist can squeeze out of his instrument. So it was the colored gentlemen unanimously. There were three dusky men near me who wanted to vote six times.

Then, to show that its tastes were not vulgar, the second prize went to a baritone who hadn't an art but his voice—who didn't sing a single song anyone else would have chosen for a soldier audience. There wasn't even a chorus—which is directly contrary to every axiom of khaki entertainment.

I tried to count the crowd, but after I had reached 800 the mass at the back became so packed that distinction was difficult. And I was told that most of the crowd had been there for the lecture on Russia that preceded the concert—a rather surprising characteristic of camp attendance that would disconcert theorists.

THERE was a canteen at the back of that hut. By all the laws of soldiers' appetites the canteen service would have disorganized the concert. As a matter of fact, I stood on the cash desk, and I was in a position to know there wasn't a cent spent.

But after the show—ah, that was different. Quietly something close to 800 boys lined up in their turns and passed along the counter for the good night cup of coffee and piece of cake. And at ten the "Y" sergeant simply shouted the time, and every soldier buttoned his coat and went out to bed.

That was one of the things that surprised me. Two soldiers wandered into the hut a half minute after the signal had been given. They were told of the hour, and without a word they turned about and disappeared into the rain.

During all this amusement Number 1 Hut was passing through a different experience. It had acquired something of a reputation as the "quiet" hut. And there scores of soldiers were writing home. Women had special charge of that hut, under the Canadian "Y," and their touch was manifest in the flowers on the tables and the general freshness mere man cannot obtain.

Motoring back to Rhyl, I entered a Canadian "Y" club for soldiers that would make a respectable one for any town. Three women did all the work—even to preparing the special sandwiches sold with the coffee and cake and candy and tinned goods. Small tables covered with chintz were filled with boys drinking from hot cups and eating pastry. Upstairs were other tea rooms, a writing room, a reading room, a billiard room and a music room. Not a male official went near the place, except as was necessary in connection with the "Y" control. The Canadian boys so respected the type of service provided by three women, one of them a mother to them, that the silence about the place was almost oppressive—yet they came and went in crowds.

There was still another, less ambitious, club in town. A large modern castle near the camp was being fitted up by the "Y" as an officers' club. A Canadian "Y" man was secretary of the committee that controlled the camp sports, and the Canadian "Y" provided all the athletic equipment. Six football grounds formed part of the camp conveniences.

In addition there was a N.A.C.B. theatre, where admission was cheap, and two or three other organization huts and several regimental canteens where the "Y" was putting on programmes.

That is why I am prepared to believe that, whatever the disappointments of the army life, the Canadian soldier will leave England with fond memories of his last few days—and with some misgiving as to who is to provide all this entertainment for him when he gets back home.

WHO GOES THERE

(CONTINUED FROM PAOE 36.)

"I hope so, too. . . . You have been different since—" He hesitated, and she turned her head carelessly and looked back at the little brook they had crossed. When her blush had cooled she resumed her leisurely walk and glanced up at him inquiringly:

"Since *when* have you thought me different?"

"Since we—*kissed*——"

"Please, Kervyn! Not *we*. I think it was you who performed that very childish rite."

"Is that the way you regarded it?"

"Didn't you?"

"No."

"You didn't take it seriously!" she exclaimed with an enchanting laugh. "Did you really? I'm so dreadfully sorry!"

The dark flush on his face frightened her. It was her first campaign and she was easily alarmed. But she was wise enough to say nothing.

"Yes," he said with an effort, "I did take it very seriously. And I took you seriously, too. I don't understand your new attitude toward me—toward life itself. Until to-day I had never seen any lightness in you, any mockery——"

"Lightness? You saw plenty in me. I was not very difficult, was I?—on the train? Not very reticent about my views concerning friendship and my fears concerning—love. Why should you be surprised at the frivolity of such a girl? It has taken so many years for me to learn to laugh. Nineteen, I think. Won't you let me laugh a little, now that I know how?"

"Have I any influence at all with you?" he asked. "I thought I had."

"I thought so, too," she mused, innocently.

"What has happened to destroy it?"

"Why, nothing, Kervyn!" opening her eyes.

"Does any of my influence with you remain?"

"Loads of it. Oceans! Bushels!"

"Do you care for me?"

"Of course! The silly question."

"Seriously?"

"Yes, but I don't wish to weep because I care for you."

"Could you learn to love me?"

"Learn? I don't know," she mused aloud, apparently much interested in the novelty of the suggestion. "I learn some things easily; mathematics I never could learn. *Why* are you scowling, Kervyn?"

"Could you ever love me?" he persisted, doggedly.

"I don't know. Do you desire to pay your court to me?"

"I—yes——"

"You appear to be uncertain. It seems to me that a man ought to know whether or not he desires to pay his addresses to a girl."

"Can't you be serious, Karen!"

"Indeed I can. You ought to know it, too. I was serious enough over you, once. I followed you about so faithfully and persistently that even when you took a nap I did it too——"

"Karen, do you love me?"

"I don't know."

"Will you try."

"I'm always willing to try anything —once."

"Then suppose you try marrying me, once!" he said, bluntly.

"But oughtn't a girl to be in love before she tries that? Besides, before I am quite free to converse with you on that subject I must converse with someone else."

"What!"

"Had you forgotten?"

"Do you mean the——"

"Yes," she said hastily—"you *do* remember. *That* is a prior engagement."

"Engagement!"

"An engagement to converse on the subject of engagements. I told you about it—in the days of my communicative innocence."

He was patient because he had to be.

"After you have made your answer clear to him, may I ask again?"

"Ask me what?"

"To marry me."

"Wouldn't that permission depend upon what answer I may give *him*?"

"Good Heavens!" he exclaimed, "is there any doubt about your answer to him?"

She lifted her eyebrows: "You are entirely too confident. Must I first ask your permission to fulfill my obligations and then accomplish them in a manner that suits your views? It sounds a little like dictation, Kervyn."

He walked beside her, cogitating in gloom and silence. Was this the girl he had known? Was this the same ungrateful and capricious creature upon whom he had bestowed his protection, his personal interest, his anxious thoughts?

That he had fallen in love with her had surprised him, but it did not apparently surprise her. Had she instinctively foreseen what was going to happen to him? Had she deliberately watched the process with wise and feminine curiosity, coolly keeping her own skirts clear?

And the more he cogitated, the deeper and more complex appeared to him her intuitive and merciless knowledge of man.

Never had he beheld such lightning change in a woman. It couldn't be a change; all this calm self-possession, all the cool badinage, all this gaiety, this laughing malice, this serene capacity for appraising man and his motives must have existed in her—hidden, not latent; concealed, not embryotic!

He was illogical and perfectly masculine.

She was only a young girl, awakened, and making her first campaign.

CHAPTER XVIII.

As they came out of the forest and crossed the grassy circle where the fountain was splashing, they saw an automobile standing in the drive by the front door.

"What does that mean?" exclaimed Guild, under his breath.

Both had halted, checked by the same impulse.

"Is it likely to be Baron von Reiter?" he asked, coldly.

She said, with admirable composure: "Whoever it is, we shall have to go in."

"Yes, of course. . . . But if it happens to be the Baron——"

"Well?" she asked, looking away from him.

"In that event, have you nothing to say to me—*now*?"

"Not now."

"Haven't you, Karen?"

She shook her head, gazing steadily away from him.

"All right," he said, controlling his voice; "then I can make my adieux to you indoors as well as here."

"Are you leaving immediately?"

"Yes. I should have left this morning."

After a moment's silence: "Shall I hear from you?"

"Have I your permission to write—if I can do so?"

"I don't know yet. I shall write you first. Are you to be at Lesse Forest for a few days?"

"Yes. A note will reach me in care of Mrs. Courland."

Her pretty head was still averted. "We ought to go in now," she said.

Guild glanced sharply at the car as they passed it, and the chauffeur touched his cap to them. It was a big, dark blue, three seated touring car, and there semed to be nothing at all military in its appointments or in the chauffeur's livery.

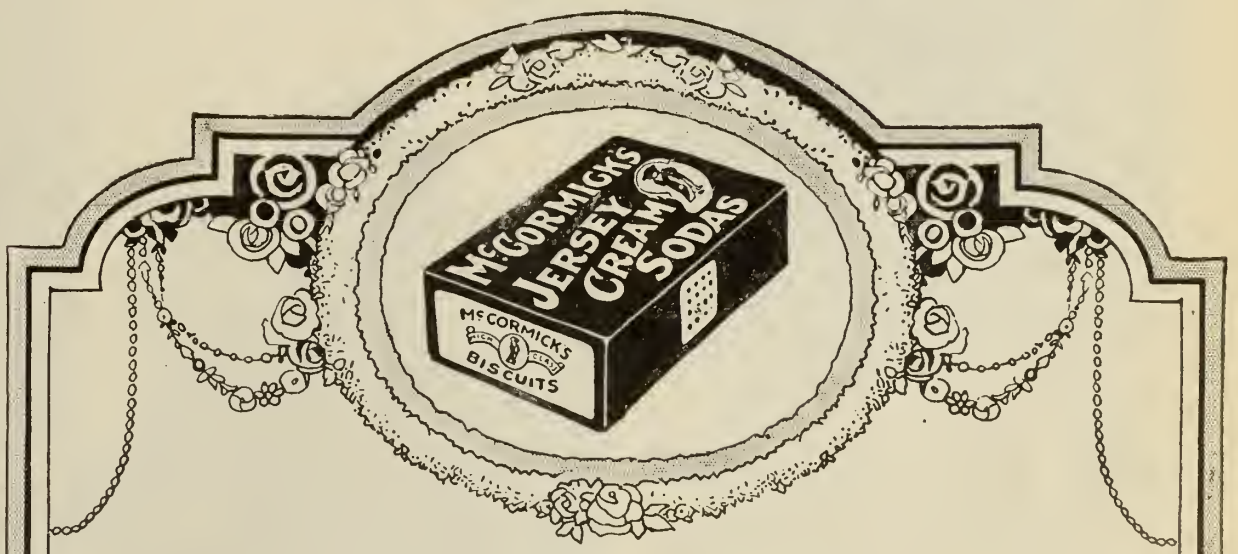
He opened the front door for Karen, and they walked into the hall together.

A man rose quickly from a leather chair, as though he were a little lame. "Hello, Kervyn!" he said gaily, advancing with hand extended. "How are you, old top!"

"Harry!" exclaimed Guild; "I'm terribly glad to see you!"

They stood for a moment smiling at each other, hand clasped in hand. Then Darrel said:

"When your note came this morning, we decided to motor over, Miss Courland and I—" He turned toward a brown-eyed, blonde young girl: "Valentine, this is the celebrated vanishing man I've been worrying over so long. You may not think he is worth worrying over, now that you see him, and maybe he isn't; but somehow or other I like him."



Miss Courland laughed. "I think I shall like him, too," she said, "now that I know he isn't merely a figment of your imagination—" She turned her brown eyes, pleasantly and a trifle curiously, toward Karen, who had paused beside the long table—a lithe and graceful figure in silhouette against the brilliancy of the sun-lit doorway.

"Karen," said Guild, "this is Miss Courland who extends her own and Mrs. Courland's charity to me—" He checked himself, smiling. "*Do* you still extend it, Miss Courland?"

Valentine had some forward and had offered her hand to Karen, and retaining it for a second, she turned to answer Guild:

"Of course! We came to take you back with us." And. to Karen: "It isn't a very gracious thing for us to do—to steal a guest from Quellenheim—and I am afraid you do not feel very grateful toward me for doing it."

(CONTINUED ON PAGE 59.)

COME and take a glance inside McCormick's Biscuit Palace, the finest in America. See the snow-white interior and the spic-and-span white uniforms of the employees. Look at the immense windows through which the sunshine streams in. Note the perfect ventilation—how pure and fresh the air. See the white-enameled ovens—the wonderful mixing machines, and so on. The more you look around the greater your admiration—and you certainly will enjoy McCormick's Jersey Cream Sodas after seeing where and how they are made.

Sold fresh everywhere. In sealed packages.

The New Suggested by these for Peace Year

A braid-trimmed box-jacketed serge suit is shown, with open front filled in with white vest collared with self material and girdled with black satin.

This shows the extended hip-line popular this Spring. Fabrics used are figured pussy willow and blue taffeta. Collar, double girdle, side fastening and deep cuffs are worthy of consideration.

Tartan kaismette cloth is combined with satin for this cleverly designed costume. This is a new material and a near relation to ratine, only it is silk.

Silhouette Capes Coats & Gowns the Springtime

A new short dolman wrap of sand and gold Roshanara crepe is shown in the illustration. The close-fitting turban with its towering mount is a Spring feature.

This model is typical of many of the taffeta frocks shown for Spring with its narrow underskirt and lamp-shade tunic. The embroidery and collarless neck line are also correct.

This misses' suit has a slightly raised waistline with double belt. The peplum is box pleated all the way around, with braid trimming on each pleat.

7461—Ladies' Blouse (25 cents). Seven sizes, 34 to 46 bust. Open neck finished with a vestee crossed in front. Large revers joined to collar at shoulders and crossed in front; ends are plaited and buttoned to belt.

7704—Ladies' Skirt (25 cents). Five sizes, 24 to 32 waist. Width at lower edge of skirt about 1½ yard, width of each half of tunic (at lower edge) about 1½ yard. The costume in medium size requires

6 yards 36-inch satin
2⅛ yards 36-inch lining for underbody and top of skirt
⅜ yard 18-inch white satin.

12312 — Blue or yellow transfer pattern (18 motifs and 3 yards of 2½-inch border), 15 cents.

8015—Ladies' Dress (25 cents). Six sizes, 34 to 44 bust. Size 36 requires

6 yards 36-inch Pussy Willow taffeta
⅜ yard Georgette crêpe
2⅛ yards 36-inch lining for underbody and gores

Here are the new plaited panels, that may hang loose, or they may be held in by a fringed sash at the waistline.

11453—Blue or yellow transfer pattern (5 yards of 2-inch border), 15 cents.

7388—Ladies' Blouse (25 cents). Five sizes, 34 to 42 bust.

7874—Ladies' Two-Piece Gathered Skirt (25 cents). Five sizes, 24 to 32 waist. Width at lower edge about 1½ yard. The costume in medium size requires

5⅜ yards 36-inch crêpe de Chine
½ yard 18-inch Georgette for vestee
2⅜ yards fur banding
2 tassels
⅞ yard 36-inch lining for underbody

Skirt has three-inch high waistline and closes at left side-front. Back gore and left side gore (cut in one) extending to center-front and tacked underneath front gore at center. Back tunic section is irregular in outline, perforated for straight outline.

12419—Blue or yellow transfer pattern (6 yards of border), 15 cents.

7929—Ladies' Blouse (25 cents). Six sizes, 34 to 44 bust.

7993—Ladies' Two-Piece Tunic Skirt (25 cents). Six sizes, 24 to 34 waist. Width at lower edge of skirt about 1½ yard. The costume in medium size requires

6⅞ yards 36-inch satin
¾ yard 36-inch white satin for collar, cuffs and vest facing
⅞ yard 36-inch lining for underbody

A good-looking afternoon frock of black satin with the fashionable contrast provided by the collar and cuffs of white satin. A shawl collar may replace the collar illustrated, and the surplice bodice is draped around to form a girdle. The skirt has 3-inch high waistline and closes at left side. Very smart in style is the pointed tunic.

7697—Ladies' Blouse (25 cents). Five sizes, 34 to 42 bust.

7702—Ladies' One-Piece Draped Skirt (25 cents). Five sizes, 24 to 32 waist. Width at lower edge of skirt with plaits drawn out about 2⅛ yards. The costume in medium size requires

5⅞ yards 36-inch check worsted
¼ yard 10-inch lace for vestee
2½ yards braid
⅞ yard 36-inch lining for underbody

Skirt has straight lower edge (suitable for bordered materials), high waistline and is closed at left side-back under plait. Straight wide trimming-pieces (each side of center-back) are caught under lower edge of skirt.

Plaited panels of chiffon and Georgette crêpe are introduced on many of the newest afternoon frocks, or they may show a tunic or a touch of drapery. Lines are kept simple, and there is a tendency to lengthen and narrow skirts. Black satin is a prime favorite for these frocks, and next comes navy blue. Rich dark shades of brown, taupe, terra cotta and Algerian red are also good. Combinations of beige with blue, and gray with blue are still in vogue.

If your local dealer cannot supply these patterns, send direct to the Pictorial Review Co., 263 Adelaide St. W., Toronto.

Standing, sitting *and* walking correctly are the first essentials to good health *and* that elusive charm we call style

ALL women wish to be well; but all women do not appreciate the vital importance of correct corsetry as an essential to good health. The well-known medical authority, Alice S. Cutler, M.D., warns us: "As a physician who knows that if it were not for ill-fitting and the wrong kind of corsets we would have very few female invalids, I am naturally determined to do everything in my power to educate women in the proper fitting of corsets. Most learned physicians now recognize the modern corset as a hygienically healthful garment and one that is often the best means of providing corrective support for many bodily ailments."

The healthy woman is the beautiful woman, and that most coveted charm called style is simply a correctly poised body induced by a correctly designed and fitted corset.

GOSSARD CORSETS

The Original-Unequalled Front Lacing Corsets

have attained their unquestioned superiority by assisting nature to perfect expression.

Every Gossard is hygienically correct. Properly fitted to the figure for which it was designed it will give scientific support to abdominal and back muscles, with no chance of undue pressure at the waistline; the organs of nutrition will be free from pressure; the erect posture which is induced will encourage deep breathing and the diaphragmatic muscles become strong with use. A woman so corseted will have the undeniable beauty of health and that grace of body standing, sitting, or walking which is best expressed in the one word, style.

Gossard Corsets are easy to buy because of the exact science with which they are designed for the needs of the various figure types. Their proper purchase means only that thoughtful care you always give to matters of importance.

Adjusting a Gossard is simplicity itself; it is so simple as to offer no excuse for neglecting that daily adjustment by which alone the full benefits and service of the corset may be realized.

Every Gossard Corset represents complete corset economy regardless of its price; the superior wearing service alone is worth the price of the garment.

If every woman will take a little time to acquaint herself with modern hygienic corsetry—just enough so she may purchase and wear her corset with a full understanding of its possibilities—she will eventually buy a Gossard as the perfect expression of those front-lacing principles by which alone she can attain the ideal proportions of her type with perfect comfort, safeguarded health, and that correct poise of body that can only result from a faultlessly fitting corset.

7832—Ladies' Blouse (20 cents). Eight sizes, 34 to 48 bust. Size 36 requires
2⅜ yards 36-inch material
3 yards edging

The blouse has a square neck and large collar in two sections.

8047—Ladies' Blouse (20 cents). Nine sizes, 34 to 50 bust. Size 36 requires
1⅜ yard 36-inch silk
⅞ yard 40-inch Georgette

Garnishing

What Garnishing Does

Note Alice Bradley's Fifteen Unique Suggestions

THE great dietetic reason for garnishing with lemons lies in the salts and acids that give lemons their delicious tang. For these salts and acids are natural digestive aids — a fact recognized by all physicians. This fact is important because complete nutrition comes only from digested foods.

A slice of lemon is more than a decorative garnish. Its healthful juice, when used in place of vinegar on fish and vegetables, is a digestive aid. Thus a garnish of lemons is not only attractive but useful as well.

Serve lemon juice with at least one food at every meal, and all the other foods are thus increased in efficiency.

There's more, therefore, than the attractive appearance of meals to recommend garnishing with lemons. The juice from a lemon garnish — Nature's sauce — furnishes a zest that makes foods more wholesome and delicious.

In fact, the cheaper cuts of meat, which are often the most nutritious, can be served with approval if well garnished.

Many authorities say that we could eat less and be healthier if we would digest what we consume.

So garnishing with lemons not only makes meals more efficient and attractive, but permits economy in the use of cheaper foods and smaller portions.

California's Sunkist Lemons are best for garnishing. They are waxy, clean and bright; juicy and tart; and firm, tender and practically seedless, which makes them easiest to cut in neat designs. They cost no more than other lemons, and are sold in all first-class stores.

Always serve lemons with your oysters, fish and meats. And try lemon juice instead of vinegar on beans, spinach and other vegetables.

CALIFORNIA
Sunkist
Uniformly Good Lemons

To Relieve and Prevent Colds

Hot lemonade, sweetened or unsweetened, is an efficient agent in relieving and stopping colds.

Take a hot bath just before retiring, drink the hot lemonade, get into bed immediately and cover well so that you perspire freely.

Combinations of Fabrics and Colors are in Vogue

8150—Ladies' Tunic Blouse (25 cents). Six sizes, 34 to 44 bust. Size 36 requires

2⅞ yards 44-inch check serge
¼ yard 36-inch white satin for turn-back cuffs
2 yards narrow black braid for trimming
⅞ yard 36-inch lining for underbody

The blouse is made with U-shaped neck and flowing sleeves.

8092 — Ladies' Skirt (20 cents). Nine sizes, 24 to 40 waist. Width at lower edge about 1½ yard. Size 26 requires

2⅞ yards 44-inch blue serge

If intended for dressy wear the blouse may be of Georgette crêpe and the skirt of satin or velvet.

8071—Ladies' Long-waisted Dress (25 cents). Eight sizes, 34 to 48 bust. Width at lower edge about 1⅝ yard. As illustrated, size 36 requires

2⅝ yards 36-inch Hydrangea blue crêpe meteor
2⅛ yards 36-inch brown tricolet.

Without lining: to be slipped on over the head. Open neck with inset vest straight at top; finished with revers and a square collar, or with a shawl collar. Three-quarter length flowing sleeve sections attached to short kimono sleeves; or long close-fitting sleeve sections. Two-piece skirt attached at low waist-line.

7952—Ladies' One-piece Dress (25 cents). Eight sizes, 34 to 48 bust. Width at lower edge about 1⅝ yard. Size 36 requires

4½ yards 44-inch blue serge
⅜ yard white cloth for collar

Closing at center-front. High neck with standing collar, perforated for V-shaped neck with rolling collar. The front of dress laid in plaits on the shoulders and finished with long plaited trimming-pieces, which are omitted in this view. Long one-piece sleeves flaring at the wrists, or shorter sleeves with turn-back cuffs. Straight belt closed in front.

11453—Blue or yellow transfer pattern (5 yards of 2-inch border), 20 cents.

8093 — Ladies' Long-waisted Dress (25 cents). Six sizes, 34 to 44 bust. Width at lower edge about 1⅜ yard. Size 36 requires

2½ yards 44-inch tricotine
3 yards 36-inch satin

The closing is arranged on the left shoulder and under the left arm. V or square neck. Long plain one-piece sleeves. Two-piece skirt attached at low waist-line, and side panels which may be omitted. The panels are perforated for shorter length.

12493—Blue or yellow transfer pattern (2½ yards of 1¾-inch and 9-inch borders), 25 cents.

8152—Ladies' Tunic Blouse (25 cents). Six sizes, 34 to 44 bust. Size 36 requires

3 yards 36-inch satin

12372—Blue or yellow transfer pattern (3½ yards of 2- and 3¾-inch borders), 20 cents.

7830 — Ladies' Two-piece Gathered Skirt (20 cents). Seven sizes, 24 to 36 waist. Width at lower edge about 1½ yard. Size 26 requires

3 yards 44-inch serge.

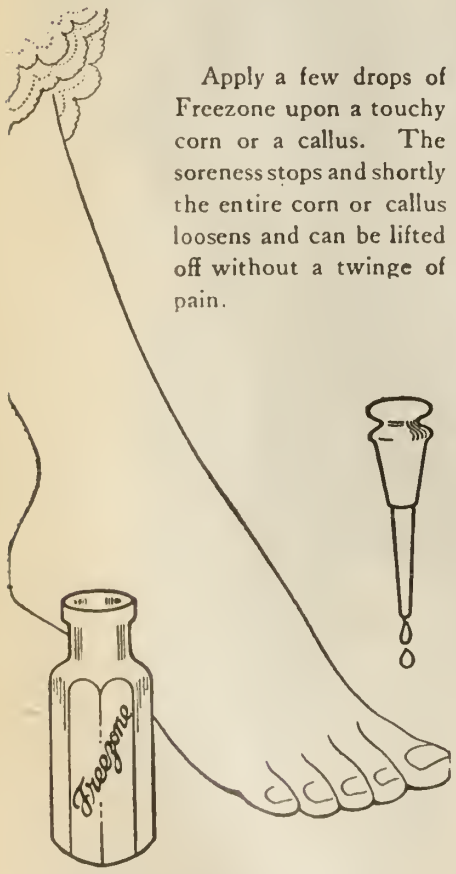
Skirt has three-inch high waist-line and is closed at left side seam. Wide belt (in two sections) is made with tab extensions in front; the belt may be omitted and a leather belt used instead. Inserted pockets may be omitted.

Best for Baby

After many years' use by parents of all classes, in Royal Nurseries and humble homes, Savory and Moore's Food has the reputation of being a thoroughly reliable food for infants.

The experience of parents, nurses, and medical men all goes to show that babies *do* thrive remarkably well on this famous food, that its use prevents infant ailments, and that it builds up a strong constitution, so important in later life. You may therefore bring up baby on Savory & Moore's Food with the assurance that you are doing the best you can for your child.

MOTHER'S GUIDE FREE



Savory & Moore's little Book, "The Baby," is full of useful information on Infant Management, and contains hints on such subjects as Feeding, Teething, the Toilet, Exercise, Weight, Infant Ailments, and many others. It is just what a young mother requires, and will prove invaluable in the home. A Free Copy may be obtained on application to Savory & Moore, P.O. Box 1601, Montreal.

SAVORY & MOORE'S FOOD

Of all Druggists and Stores

Lift Corns Out With Fingers

A few drops of Freezone loosen corns or calluses so they lift off

Apply a few drops of Freezone upon a touchy corn or a callus. The soreness stops and shortly the entire corn or callus loosens and can be lifted off without a twinge of pain.

Freezone removes hard corns, soft corns, also corns between the toes and hardened calluses. Freezone does not irritate the surrounding skin. You feel no pain when applying it or afterward.

Women! Keep a tiny bottle of Freezone on your dresser and never let a corn ache twice.

Tiny bottle costs few cents at drug stores anywhere

Most Engagingly Girlish Are these Early Spring Frocks

8026—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 4¾ yards 44-inch gabardine. Width at lower edge about 1½ yard. Braiding No. 12426, blue or yellow transfer pattern. Just the thing for early Spring street wear is this frock of blue gabardine absolutely untrimmed save for the braided girdle. The closing is at the back, and allowance is made for plain sleeves and an accordion-plaited skirt, in addition to those shown.

Dress 8026 Braiding 12426

Dress 8055 Embroidery 12372

Dress 8096 Braiding 12058

Dress 8131

Dress 8124

Dress 8128 Braiding 11453

8131—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 3 yards 54-inch wool velours—¼ yard 36-inch check organdy for collar—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅜ yard. The waist closes on the left shoulder and under the left arm, and the one-piece gathered skirt at left side-back.

8055—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires if made as illustrated with back panel 4¾ yards 48-inch serge. Embroidery No. 12372, blue or yellow transfer pattern. Width at lower edge about 1¼ yard. This smart frock of serge may be made up quite plainly with surplice blouse ending at the girdle, and with plain sleeves. It is illustrated in its more dressy form here with large collar that forms broad revers, with flowing sleeves, and with a short tunic at the sides.

8096—Misses' Long-waisted Dress. Four sizes, 14 to 20 years. Size 16 requires 2½ yards 44-inch serge—1¾ yard 44-inch bias plaid—¼ yard white satin for collar. Width at lower edge about 1½ yard. Braiding No. 12058, blue or yellow transfer pattern. Instead of the short double panels illustrated, this frock may be made with wide long panel front and back. The foundation dress is long-waisted, the waist section of plaid and the skirt section of serge.

Dress 7896

Dress 8105

Dress 7802

8124—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 2¼ yards 44-inch serge—2 yards 36-inch satin—4½ yards braid. Width at lower edge about 1¼ yard. Instead of the short tunic illustrated a long one may be selected, perforations being given in the pattern for shortening it. V neck with rolling collar may be substituted for the round neck illustrated, and there are long sleeves perforated for the short length illustrated.

8128—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 3 yards 44-inch Poiret twill—2⅜ yards 36-inch satin—⅞ yard 36-inch lining for underbody. Width at lower edge about 1¼ yard. Braiding No. 11453, transfer pattern in blue or yellow.

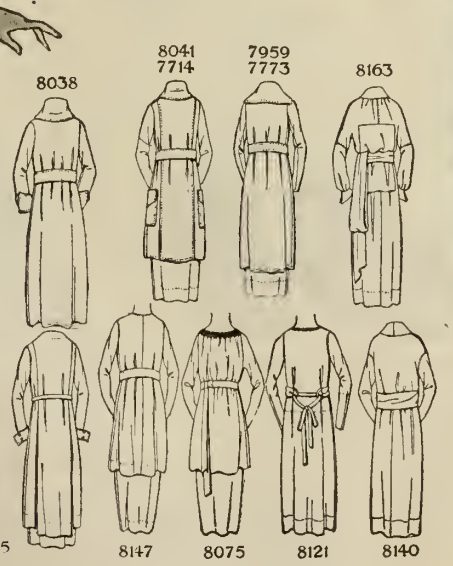
Chic Suits, Frocks, and Coats for the Well-Dressed Miss



8135—Misses' Dress. Three sizes, 16 to 20 years. Size 16 requires 4⅛ yards 44-inch serge—⅞ yard 36-inch lining for underbody. Braiding No. 12319, transfer in blue or yellow. Width at lower edge about 1⅜ yard.

8147—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 4½ yards 36-inch velvet—⅞ yard 36-inch lining for underbody. Width at lower edge about 1⅜ yard. The tunic blouse is perforated for shorter length and closes on the left shoulder and under the left arm. Underbody and two-piece skirt close in front. Like many new models this is collarless.

8121—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 2¾ yards 44-inch plain gabardine—1½ yard 44 inch bias plaid. Width at lower edge about 1⅜ yard. The dress which is without lining closes on the left shoulder and under the left arm, and the oval collarless neck is perforated for round outline. The front of the skirt extends up to form a bib effect on the waist, and the back of the waist and the skirt are cut in one. The blouse extends down at the sides to low waist-line, and the skirt forms distended pockets. Perforations permit of shortening the sleeves, the short sleeves to be finished with flaring cuffs. Later on this could be duplicated for Summertime wear in plain and plaid gingham, or in plain and striped linen or chambray.

8075—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 3⅝ yards 36-inch satin for foundation dress—2⅛ yards 40-inch Georgette crêpe for tunic blouse—⅞ yard 36-inch lining for underbody. Width at lower edge about 1¼ yard. Over a foundation dress of satin, which consists of a kimono waist attached to a one-piece draped skirt, is slipped a long tunic blouse with oval neck-line finished with shirred tucks. The blouse is slipped on over the head.

8163—Misses' Dress. Four sizes, 14 to 20 years. Size 16 requires 3½ yards 36-inch flowered voile—1¾ yard 36-inch plain voile—⅞ yard 36-inch lining for underbody. Width at lower edge about 1¾ yard. Delightfully girlish in style is this frock with gathered kimono blouse closing at the back. The skirt is a one-piece gathered model. There is a delightful suggestion of the Japanese costume in the bib like trimming section applied on the front of the frock.

8140—Misses' Long-waisted Dress. Three sizes, 16 to 20 years. Size 16 requires 2¾ yards 54-inch wool velours—⅜ yard white satin for vest—⅜ yard fringe—1⅛ yard 36-inch lining for underbody. Width at lower edge about 1⅜ yard. Sash extensions on the long-waisted blouse are crossed and looped at the side, and the surplice closing is outlined by a long collar.

Who Goes There?

(CONTINUED FROM PAGE 45.)

Their hands parted and their eyes rested on each other for a second's swift feminine appraisal.

"Baron von Reiter has not yet arrived," said Karen, "so I do not think Mr. Guild has had a very interesting visit. I feel as though I ought to thank you for asking him to Lesse."

Guild, who was talking to Darrel, heard her, and gave her a rather grim look.

THEN he presented Darrel; and the light, gossipy conversation became general.

With one ear on duty and one listening to Darrel, Guild heard Karen giving to Valentine a carelessly humorous outline of her journey from England—caught the little exclamation of interest and sympathy from the pretty brown-eyed American girl, and still was able to sketch for Darrel the same theme from his own more sober point of view.

Neither he nor Karen, of course, spoke of the reason for Guild's going to England, nor that the journey had been undertaken on compulsion, nor indeed, did they hint at anything concerning the more sinister and personal side of the affair. It merely appeared that a German general, presumably a friend of Guild, not being able to get his daughter out of England after hostilities had commenced, had confided the task to a man he trusted and who was able to go unquestioned into a country at war with his own. But it all seemed quite romantic enough, even under such circumstances, to thrill Valentine Courland.

"Do come back to Lesse with us. won't you?" she asked Karen. "My mother and I would love to have you. You'd be bored to distraction here with only the housekeeper. Do come!"

"I haven't any clothes," said Karen frankly.

"I have loads of them! We'd be so glad to have you at Lesse. Won't you come back with us?"

Karen laughed, enchanted. She could see Guild without looking at him. His attitude was eloquent.

"If you really do want me, I'll come," she said. "But you and Mr. Darrel will remain to luncheon, won't you? I'll speak to the Frau Forster—if I may be excused—" She fell for a moment again, unconsciously, into her quaint schoolgirl manner, and dropped them a little curtsey.

Guild opened the pantry door for her and held it.

"May I explain to them a little more clearly who you are, Karen?" he asked in a low voice.

"Yes, please."

He came back into the hall where Miss Courland and Darrel were talking. Valentine turned swiftly.

"Isn't she the sweetest thing!" exclaimed the girl warmly.

"She is really very wonderful," said Guild; "let me tell you a little about her accomplishments and herself."

They were still listening to Guild, with an interest which absorbed them, when Karen returned.

"The few clothes I have," she said, "are being repacked by Frau Bergner. Kervyn, shall she repack your sack?"

"No, I'll do that," he said, turning away with the happiest face he had worn that morning. And the girl knew that it was because they were going away together again—taking life's highway once more in each other's company. Involuntarily she looked after him, conscious for a second, again, of new and powerful motives, new currents, new emotions invading her; and she wondered how vitally they concerned this man who had so suddenly destroyed a familiar world for her and as suddenly was offering her as substitute a new and strange one.

Emerging from her brief abstraction she looked across the hall at Valentine Courland, who, seated on the oak table, chatted animatedly with Darrel. The girl was exceedingly attractive; Karen realized that at once. Also this pretty American had said very frankly that she was certain to like Guild. Karen had heard her say it.

"Miss Girard," said Darrel, "is the shooting good at Quellenheim? I imagine it must be, judging from these trophies." He waved a comprehensive hand toward the walls of the room.

Karen came slowly over to Valentine: "I really don't know much about shooting. There are boar and deer here. I suppose at Lesse Forest you have really excellent sport, don't you?"

A walking boot of distinction for those who prefer the long vamp and medium narrow toe, combined with the military heel. Made in all leathers, 8 or 9 inch height.

When You Buy for Style

THERE is a point beyond which the adding of refinements to a shoe can add nothing to its value. There is a certain definite limit to the fineness of leathers and fabrics.

Shoes of graceful design, and in perfect good taste, can readily be obtained at moderate prices, and little extra service value can be secured at any price. There is no reason why you should not pay extravagant prices if you can afford it, but you should understand what your dollars are really buying.

The model shown above is correct and attractive in style, and represents good value for the money in any of the grades in which it is made. Our booklet "How to Buy Shoes" gives some interesting information about different types and grades of shoes. We gladly send it to any address in Canada upon request to our head office at Montreal.

My Bob

(CONTINUED FROM PAGE 10.)

dug out here and there, full of men and rats. The Germans were making an awful noise which made my head ache but after a day or two I didn't mind that. I kept close to Bob all the time during the day and at night kept the rain off him. I had a dreadful fight with a big old rat and his family and after that the other rats kept away from us. I guess somehow they found out I was nearly a champion.

About two weeks after we arrived, Bob's men started to make a noise with their guns and Bob put me in a safe place where I couldn't see very well. I peeked my head out just in time to see Bob jump out of the trench with a lot of his men after him. I thought I'd better not disobey Bob again so got back to my place. I waited and waited and waited but he didn't come back. About half of the other men did, and some of them were hurt, and some of them were so sick they lay still and had to be carried away. I got out of my place to look for Bob but couldn't find him. The Germans stopped their noise and things were so quiet it made me frightened. I thought likely Bob had licked them and would come back with a medal or a cup or a dozen blue ribbons, but he didn't come.

I WAITED and then I thought I heard him call from away out in the dark, for the night had come. It wasn't much of a jump, out of the trench, and I started to look for him. It was so quiet I knew if I heard him again I could find him. My scent isn't very good because my muzzle is so short but my ears are long and haven't been cut so I could hear quite plain. I looked a long time and then I heard a voice I knew, quite near me, saying.

"Buddy Boy, where's the Little Mother?"

I bounded over to Bob. He was so quiet and his face was covered with blood, but I licked it all off and tried to tell him I was th re. He woke up and put his arm around me and said.

"Call the Little Mother, Buddy,"

I knew he must be sick like I was when I had the distemper and had such funny dreams, so I cried out at the top of my voice and then yelped and howled and made as much noise as I could. It didn't do any good at first so I kept on. We must have been near the Germans for when I stopped 'cause I didn't have breath to go on I could hear them talking and grunting and making a fierce noise. I heard a sharp bang and at the same time felt a burning feeling in my ear and blood running down my chest; I knew I must have been shot.

Then I heard more bangs and heard little thuds all around us. My ear was hurting worse than the time the Russian Wolf Hound bit my leg and I knew that wasn't any place for Bob and me. I tried to wake him but he wouldn't wake. We were on a little hill with a big hole at the bottom so I tried to pull Bob into the hole out of the way of the Germans. I only weigh fourteen pounds so it was some pulling, but I got him started from the front and then got behind him and pushed with all my might. He started to roll when I wriggled him on to the steep part. I hung on to him, digging my feet into the ground to keep him from rolling too fast. The dirt was soft in the hole and it didn't hurt him much when he fell into it, and I jumped in after him.

THEN I started to howl again to tell Bob's men we were there and to hurry and get us out. The Germans started to make more noise and there was an awful storm. Just when I thought it was all over there was a big bang right beside us and a lot of dirt piled in on top of us. I dug my way out and then started to dig out Bob. He was still asleep and couldn't help any so I had to dig nearly an hour before I got him all uncovered. You see I had to be careful not to scratch him with my nails. By the time I had him all out of the dirt the Germans stopped their noise. I commenced howling again. It seemed longer than the time I was side-tracked on the way to New York before somebody leaned down in the hole and yelled, "Here's the little beggar down in this shell hole," and tried to haul me out. I wouldn't let him though 'til he got Bob out. When he jumped down after me, he found Bob and called out to somebody else. Another man came and they lifted Bob out, then me, and put Bob on a stretcher with me on his chest.

I am taking too long telling this I believe that cat's at my bones, so I'll skip some and tell you about that hospital where they don't allow dogs, even if their father was an International champion, and they've been to the war. Well, they took us back to England. On the boat Bob woke up. It was all those doctors could do to keep me from licking the bandages off his head I was so glad. Bob put his arm around me and said, "Good old Buddy Boy," and made me forget all about my sore ear, that has spoilt me for getting my championship now for sure.

IN England they took us to the hospital. Bob kept me out of sight, for one of the doctors who said he had a dog at home like me and tried to make my ear better, had told him to hide me or they wouldn't let him take me in the hospital. I never liked hospitals anyway; if it hadn't been that Bob hung to me so tight I believe I would have been frightened. It wasn't so bad after you got inside. I began to think I would like it, 'specially as the Little Nurse was good to me and kept me well fed and out of sight when the doctors and the lady that lived there and seemed to own all the nurses, were around. She was fine to Bob and told me he was going to soon get better. I was so happy I tried to tell her that next to Bob and the Little Mother I loved her.

But one day that woman that lived there found me. She told Bob I couldn't stay. He pleaded so hard and the Little Nurse pleaded so hard and I pleaded so hard but it didn't do any good; she was sterner than the judge that put Bayside Rex over me because of my ears, so the first thing I knew Bob was bidding me good-bye and the Little Nurse was taking me off to the steamship with my address tied to my collar. I felt so bad and acted so disgracefully I didn't say good-bye to her, though I intended to, because she kissed me good-bye.

I have been home a long time now and if Bob was only here would be happy again. The Little Mother and even the sisters are good to me. They show everybody the scar on my ear and tell them I saved Bob's life. They seem excited to-day; maybe it's because Bob has written to say he has been married. Goodness, I'm afraid it will be some woman who doesn't like dogs and won't let Bob love me any more. I worry a lot about this when I'm alone. About two hours ago the Little Mother and the sisters went away in the car and said they wished they could take me but I'd be restless at the reception. Maybe I would be as my nerves aren't as good as they were before I went to the front.

Here they come now. Who is that with them? It's the Little Nurse. And who's that she's got her arm around, that man between her and the Little Mother? Stand back! It's BOB, MY BOB!

THE END.

Out of The Butterfly Class

(CONTINUED FROM PAGE 7.)

"Do you think you will rent it?" asked the gentleman. "My lease expires in two months, but if you would like it for the summer, I could make arrangements for the rental agent to come out and see you."

Pauline flushed. She did not want a visit from any Whiteside resident. "I prefer to pay the rent to you in advance, if I may. I don't expect to stay any longer than two months. Would that be satisfactory?"

"Perfectly. And you may take possession this very afternoon, as I am anxious to leave at once."

PAULINE drove back to Whiteside in a confused frame of mind. Tucked in the corner of her purse was a receipt for two months' rent. The transaction had been closed so quickly that she was a little dubious if she had done the right thing.

"Well, I'll have a rest, anyway," she concluded. "And happy thought! I'll get Roxy to teach me to cook."

The soft color flooded her face. The thought had called up a vision of a tall young man with earnest grey eyes. Was it to please him that she wished to learn? But, she instantly repudiated the idea. Of course not! It was only to prove that cookery was not such a wonderful and unattainable art for even a frivolous society girl.

She would not permit herself to dwell on an analysis of her motive; for, it could be of no consequence to him, she reasoned. It would be some quiet domestic girl that he would care for. Yes, it was better to go away. She would be saved the embarrassment of constant association with him.

Her first duty on reaching home was to write a note to Mrs. Hendrie, stating that she was leaving town and would be unable to sing that evening. No hint of her destination was given. She knew it would throw the haughty lady into a state of excited offense; and she laughed to herself as she sealed the dainty envelope.

The note despatched by a messenger boy, she turned to the few remaining duties. It was an easy task to pack the simple clothing she had decided to take with her, and to lock away her silver and jewelry. Before the afternoon shadows began to lengthen, the rose and grey apartments were closed, and, with a bewildered and protesting Roxy beside her, she was again speeding toward the little cottage. The hardest part of the whole proceedings had been to persuade the irate maid of the saneness of this project. Roxy was a privileged servant, having been in the family since Pauline was a baby, and never hesitated to express her views. She could see no sense in leaving a good home and gadding off to the wilderness.

But Pauline was too happy to heed her expostulations. Now that she had actually made the break, she was filled with a very abandonment of joyous relief.

OF course Whiteside society gossiped and conjectured. Mrs. Hendrie was indignant that she should have treated her hospitality with such impertinence, as she termed it, declaring that she had spoiled her reception.

But as the days went past and no one grew any wiser, things settled back into their accustomed routine, and Pauline was forgotten by all, save a grey-eyed young man who continued to wonder and to speculate.

In the rose-bowered cottage, Pauline was strangely contented. In place of time dragging wearily as she had anticipated, the hours passed too quickly. There were so many interesting things to do, so many discoveries to make, that every minute was a source of joy. She rose early in the morning while the dew still pearled the greenery, just to hear the birds sing. There were flowers from the tiny garden at the rear of the house to be arranged daily in the bowls and vases, which seemed to be legion. Pauline once remarked to Roxy that the person who furnished that cottage must have been especially fond of home.

At the foot of the hill on which the cottage stood, she discovered a creek with shading willows, and tiny fish darting through its clear waters. She spent long hours rambling along its banks. Sometimes, she even removed her shoes and stockings and waded in the shallow places.

Practical Roxy scorned "sech foolishness," but was quick to see the value of the fish. "It will save us from buying meat; tho' Lord knows where we would find meat in this wilderness," she would declare. Poor Roxy missed the ways of town. But she showed the girl how to make a fishing rod, and seldom a day passed that fish was not part of their dinner menu.

PAULINE had become quite proficient at cooking them; for she had insisted on Roxy teaching her. But, at other things, she was less successful. Her cakes were always flat; her biscuits were hard and tasteless. The last attempt had resulted in such utter failure the whole thing had to be thrown away. Roxy was disgusted, and declared she would not be a party to "sech wasteful doin's."

Pauline laughed at her when she became overly scornful; but she would sigh, and watch with envy the skilful manner in which the other turned out feathery cakes and pies that would melt in one's mouth. She was beginning to believe that her illiterate maid was cleverer than she, and that cookery was an art not to be despised.

Four joyful, care-free weeks slipped swiftly away; when one bright morning the perfect blue of her sky was darkened. The dark spot was occasioned by Roxy, garbed in cloak and bonnet with a huge telescope valise clutched in her hand. She vigorously declared that she didn't propose to live in a wilderness any longer, and break her back carrying water; to say nothing of never seeing a living soul to speak to. She might as well live in a tomb.

Pauline expostulated and cajoled, offering to carry the water herself from the well, which, in truth, was only a few rods from the cottage. But to no avail. Once Roxy made up her mind, heaven and earth could not change it.

"Very well, then," said Pauline, realizing further argument was futile. "But how will you get back to Whiteside? I won't take you in the car. And mind, Roxy, don't tell any person where I am."

"I'm not going back to Whiteside," returned Roxy grimly. "And it ain't likely as I'll be seeing any folks you know. I'm going to visit my sister at Hillsborough. There's a flag station half a mile from here, and I can walk."

BUT Pauline did not let her walk. She swallowed her indignation and took her to the station in the electric car. It was with a sinking feeling she watched the maid step onto the train. Another time, she would have laughed at the awkward figure Roxy cut with her unwieldy valise. But the situation was too serious for humor. Here she was, left completely alone in the country without even a cook to prepare the meals.

"I wonder how long one can live on fish," she mused as the car hummed slowly back. Then, the funny side appealed to her, and she laughed aloud. What would the fastidious Mrs. Hendrie say if she could know of her predicament? She would be horrified.

"I won't go back to Whiteside if I have to live on mush," she decided. "Anyway, Roxy will have left quite a lot on hand."

But, when she reached home and took stock of the provisions she found that it was a very meagre one. Only one loaf of bread and a few cookies were in the box. On the pantry-shelf stood a small bowl of beans and a dish of cold potatoes—remnants of the mid-day meal. Nothing else could she find. Scheming Roxy had apparently left no alternative but for her young mistress to return to town.

And just because she had, Pauline, with characteristic independence, was the more determined to remain.

For the first day she managed quite well on left-overs, but, when by noon the following day, the larder was absolutely bare, there remained nothing but to go back to Whiteside or eat of her own cooking.

"And I'd just about as soon starve as do either," she thought ruefully.

She had caught a fish that morning; but when she came to get it ready for the oven, she realized with a shock, that before, she had merely cooked them, while Roxy had done all the preparatory cleaning—an entirely different art. She struggled valiantly for a while with adhesive scales, but finally gave it up in disgust and abandoned herself to a menu of canned goods purchased at a neighboring store.

She was beginning to feel that it would be necessary to vacate the pleasant little cottage. Between quietness and insufficient diet, her nerves were becoming affected.

Enveloped in one of Roxy's big aprons, many sizes too large for her, she thought it over as she mixed the ingredients of a cake, the recipe of which was the only one she remembered. Through the dimity-hung window before her she could see the little garden with its riot of bloom; on a honeysuckle shrub a robin sang cheerily; and over all was the glamour of sunshine. She would be loath to leave. It was the only place in which she had ever been perfectly content. But one cannot live on flowers and sunshine, however agreeable.

The purr of a motor sounded apprehensively near. Pauline listened nervously. It was days since any one had passed the cottage, and this one appeared to decrease in speed as it drew nearer.

She poured the cake-batter into a pan—in her haste leaving a third of it in the mixing bowl—and shoved it in the oven. Then, she ran to the living-room and glanced through the open window. Yes, the motor had stopped, and a tall gentleman in a grey suit was opening the wicker gate.

She did not look any longer. Without even waiting to remove the overall apron, she flew out the kitchen doorway and down the path leading to the creek.

UNDER a friendly willow she paused for breath. Who could it have been? Had Mr. Dawn broken his promise and told the rental agent? She almost wished she had not been in such a hurry before making her escape.

Meanwhile, the tall gentleman, not receiving an answer to his summons, had entered the cottage, and was gazing around with bewilderment written all over his handsome face. The rooms had a singularly feminine air, quite at variance with a bachelor's domicile. Evidently, his tenant had provided himself with a housekeeper—an artistic one judging by the array of flowers in every room; tho' not especially tidy, if the condition of the kitchen was any criterion. The table was littered with baking utensils and dirty dishes, whilst the floor was liberally sprinkled with flour.

His eye fell on a rose-wreathed hat thrown carelessly on a window seat. Beside it was a copy of Longfellow's poems. The soft morocco binding had a distinctly familiar look. He picked it up and opened it; and the dazed expression changed to joy. "Pauline Fitzgerald," written in a girlish hand, stared back at him from the fly leaf. He had given her the volume as a Christmas gift only last year. What could she be doing here?

Through the interlacing trees, he glimpsed a flying figure in a blue gingham apron. Obviously, she had run from him. He laughed; then, being an insistent young man, immediately followed her.

Pausing for a moment, Pauline turned and saw him. Whoever it was, he evidently meant to interview her. Realizing that further flight was useless, she waited.

Then, as she recognized him, the color flamed into her face and her heart beat tumultuously. The very last person she wanted to see! He was very near now; so she ruled herself to outward calm.

"HOW do you do, Mr. Maurice," she said coolly,—avoiding his outstretched hand—her own, besmeared with cake batter, and smarting from angry red burns, were behind her back.—— "This is a surprise." Her voice held a suggestion that she wished him to infer the surprise was not a welcome one.

His grey eyes twinkled. "I may say it is a surprise, Miss Fitzgerald, and a very pleasant one."

"Oh, then you did not know I was here," exclaimed Pauline, off her guard; but her eyes sparkled angrily. How dare he follow her when he must have seen she did not want callers?

"Assuredly not. To be absolutely frank, it is the last place I would expect to find you. May I ask if this has been your hiding place since you

Be suspicious of tender gums

BE suspicious of any tenderness or bleeding of the gums. This is usually the first stage of Pyorrhea—an insidious disease of the gums that destroys the teeth and undermines bodily health.

Gradually the gums become spongy. They inflame, then shrink, thus exposing the unenameled tooth-base to the ravages of decay. Tiny openings in the gums form gateways for disease germs to enter the system. Medical science has traced many ills to these infecting germs in the gums weakened by Pyorrhea.

They are now known to be a frequent cause of indigestion, anaemia, rheumatism and other serious conditions.

So watch carefully for that first tenderness or bleeding of the gums. Try Forhan's immediately. It positively prevents Pyorrhea (Riggs' Disease) if used in time and used consistently.

And in preventing Pyorrhea—it guards against other ills.

Forhan's (For the Gums) cleans teeth scientifically as well. Brush your teeth with it. It keeps the teeth white and clean.

If gum-shrinkage has already set in start using Forhan's and consult a dentist immediately for special treatment.

Do the Week's Wash Without Fatigue

"1900" Cataract Electric.

The time that is spent over the wash tub every week is worse than wasted. The time is a dead loss, but much more serious is the waste of precious human energy.

You can take all the hard work out of the weekly wash, by using the "1900" Cataract Electric Washer. Simply connect it with any lamp socket, turn the switch and go about your other duties. Your clothes will be washed spotlessly clean in a surprisingly short time without any injury to the most delicate fabric.

The Cataract Washer is not only built to wash, but is built to last. The frame is all metal, and the tank is of pure sheet copper, plated on the inside, to prevent verdigris. It is equipped with a power wringer, having five-year-grade pure white rubber rollers.

Our liberal trial offer enables you to test the Cataract Machine before you actually buy it. Write us for details, or drop in and see the Cataract at our store.

Our line also includes an excellent water power washer, hand-operated washers, the Simplex ironer, lawn clothes reels, wash tub ejectors, etc.

Who Goes There?

(CONTINUED FROM PAGE 59.)

"Our guests seem to find the shooting good," replied Valentine. "My mother and I go out with them sometimes. I don't know whether we shall be able to offer anybody any shooting this autumn. We are exceedingly worried about Lesse Forest. You see, every autumn we renew the lease, but our lease expired last week, and we can't renew it because nobody seems to know where our landlord is or where to find him."

"Is your landlord Belgian?"

"Yes. He is a wealthy brewer at Wiltz-la-Vallee. And the Germans bombarded and burnt it—everything is in ruins and the people fled or dead. So we are really very much concerned about the possible fate of our landlord, Monsieur Paillard, and we don't exactly know what to do."

GUILD returned, coming downstairs two at a time, his attractive features very youthful and animated. And Karen, discreetly observing him and his buoyant demeanour, felt a swift and delightful confusion in the knowledge of her power to make or unmake the happiness of a grown man.

Frau Bergner appeared with cloth and covers, beaming, curtseying to all; and very soon they were at luncheon—a simple but perfectly cooked luncheon, where everything was delectable and there did not seem to be very much of any particular variety, yet there was just a trifle more than enough for everybody. Which is the real triumph of a good German, French, or Belgian housekeeper's calculations.

And when luncheon was ended the luggage already had been placed in the car; the chauffeur emerged from the kitchen where Frau Bergner had been generous to him; and in a few moments the big blue machine was whirring smoothly on its way to Lesse, through the beautiful Ardennes forests over smooth, well-cared-for roads, the sun shining in a cloudless sky, and four young people making rapid headway in a new acquaintanceship which seemed to promise everything agreeable and gay.

At the huge, moss-grown gate-posts of Lesse a forester lifted his grey felt hat and opened the gates; and around the first curve appeared the celebrated and beautiful old lodge of weather-stained stone and slate, the narrow terrace blazing with geraniums and scarlet sage.

Guild noticed a slender, red-haired girl seated on the steps, knitting, with a heap of dark-blue wool in her lap; but when the car drew up, Valentine Courland addressed her as "mother"—to the intense surprise of Karen as well as of himself, for Mrs. Courland seemed scarce older than her own daughter, and quite as youthfully attractive.

She welcomed Karen with a sweet directness of manner which won the girl instantly; and her manner to Guild was no less charming—an older woman's delightful recognition of a young man's admiration, and a smiling concession to this young man's youth and good looks.

When Valentine mentioned Karen's plight in the matter of wardrobe, her mother laughed gaily and, slipping one arm around Karen's waist, took her off into the house.

"We shall remedy that immediately," she said. "Come and see what suits you best."

"As for you," said Darrel to Guild, "your luggage is in your room. I suppose you are glad of that."

"Rather," said Guild with such intense feeling that Valentine Courland laughed outright.

"Take him to his beloved luggage," she said to Darrel; "I had no idea he was so vain. You know the room, don't you? It is next to your own."

"Harry, why are you limping?" asked Valentine as Darrel rose to go.

"I'm not."

"You are. Why?"

"Rum. I drink too much of it," he explained seriously.

SO the young men went away together; and presently Guild was flinging from him the same worn clothing which, at one terrible moment, seemed destined to become his shroud; and Darrel sat on the bed and gave him an outline of the life at Lesse Forest and of the two American women who lived there.

Music and Eastertide

(CONTINUED FROM PAGE 22.)

Done," also comes from the Latin and was translated in 1859. It is sometimes sung to an old French melody and sometimes to a tune entitled "Victory" composed by Palestrina in 1504. Perhaps no hymn is more appropriate to the spirit of Easter than "Welcome, Happy Morning! Age to Age Shall Say," which was also written by Fortunatus in the sixth century, and translated in 1868 by Rev. John Ellerton. It may be sung to several familiar hymn tunes and a very excellent and simple setting of it was made by the late Sir Arthur Sullivan, the composer of "Onward Christian Soldiers." All these hymns and many more of similar appropriateness are to be found in "The Book of Common Praise," the authorized hymnal of the Church of England in Canada and most of them are no doubt included in the hymnals of other churches.

For the benefit of readers who may be specially interested in the celebration of Easter, the writer may mention a number of anthems and solos suitable to the feast, which may be obtained from most music dealers, and can be sung by ordinary choirs. Handel's famous oratorio, "The Messiah" contains at least two numbers essentially appropriate to Easter. One is the "Hallelujah" chorus, which requires an augmented force of choristers, but which may be used in towns where there are trained child voices to draw on. The other is the lovely solo, "I Know that My Redeemer Liveth," for the soprano voice. One of the most effective of Mendelssohn's anthems is a setting of "The Strife is O'er." Another very appropriate choral number is Schilling's "Christ Our Passover is Sacrificed for Us"; while Freyer's "I am He that liveth" is suitable both for Easter and general use. Of the first named chant there is also a standard setting in anthem form, by John Adamson. Among other examples of works easily within the abilities of the small choir willing to practice seriously, are Schnecker's "Jesus is Risen"; W. Reed's "As it Began to Dawn"; E. W. Hanscom's "The Choir Angelic"; Clayton E. Hotchkiss' "Thanks Be to God"; J. C. Macy's "He Hath Risen" and John Adamson's "First Easter Morn." The writer has by no means exhausted the subject, but has merely endeavored to make a few helpful suggestions.

The Girls' Carry-On Column

(CONTINUED FROM PAGE 30.)

is the girl at the reference desk who supplies all their needs.

The girl to whom the general public does not appeal will find her niche in the cataloguing department. It is her duty to classify the books according to their subjects, by means of figures. It is by this means that a library is made of use to the public. Her work must be accurate, and well done; if she neglects even the tiny item of one figure it may mean that the book is misplaced and half a day's search will not dislodge it from its hiding place and put it into the eager hands outstretched to receive it. The cataloguer is the backbone of our public libraries and although she is not always in the foreground, she has an important place to fill.

THE last and most interesting is the children's department. Every day at four o'clock they troop in to this semblance of a kindergarten, this world of books. Johnny who has just learned to read sits on the edge of his chair, his eyes wide open, as the children of fiction play on the closely written pages. And Mary whose heart and soul are wrapped up in her school work, comes to the lady in charge for a book which will help her to write the composition which the teacher has just assigned her. Every day of every week these children take possession of their part of the library and I must admit that they show a much keener interest in the realms of books than do the grown-ups.

Then there is the Saturday morning story hour, when the children's librarian must hold the interest of forty or fifty tiny tots in the annals of fairy land. The Prince Charming and the wonderful Princess must take on a new life and must become part and parcel of the stirring memory of these little ones. All week they look forward to the story hour for, as they tell the people at home, the lady tells the stories in such a wonderful way that it surely must have happened years and years ago. And this story telling is quite as important as any part of the children's library work, for truly, the girl who can tell an interesting story, has won the heart of each tiny tot who crosses her threshold.

QUESTIONS AND ANSWERS

I would like to know if you could secure a position for me as housemaid. My friend is going to the city and I would like to accompany her.

MINEE MILLS.

We will not be able to secure a position for you directly but I have handed your name and address to the Government Employment Bureau and I am sure you will not have any trouble in securing a position.

I am a country girl who would like to be a big sister to some lonely returned soldiers; how can I get in touch with them? Perhaps some convalescent lads who have no home and few friends would appreciate letters and boxes.

SOLDIERS' FRIEND.

I am sending you names of two or three soldiers who I am sure would be delighted to receive letters and boxes.

Even the Small House May Be Distinctive

(CONTINUED FROM PAGE 12.)

materials might be used with good effect—frame covered with rough cast, with a colored shingle roof. Or the walls might be of either brick or stone or a combination of both with roof of stained shingles or slate.

The verandah which extends across the front of the house is 8 feet wide. Note the construction of the arches at the ends, making a suitable place for climbing roses. By covering the posts supporting the verandah roof with lattice, they also could be used for the vines to climb upon.

The interior of the house could be simply or elaborately treated as the owner wishes.

The living room into which one enters from the hall has French windows opening on the verandah, a large fire-place with small windows on each side and double doors, making it possible to throw the living-room and dining-room together when desired.

The dining-room has large bay window and recess for the sideboard. A scheme of decoration for these three rooms (hall, living-room and dining-room) which could be successfully carried out, would be to have the walls panelled, the ceilings beamed—a slightly different size and design in each room. Or in the living-room simple moulded oak panels running to the ceiling with moulded wood cornice at the ceiling line. A small flat band of modelled plaster ornament on the flat of ceiling about a foot from the wood cornice, would complete a most attractive decoration for such a room.

Notice the arrangement of serving pantry connecting the dining-room and kitchen, shown on the plan, also the service entry where all supplies can be brought into the house. And at the left of this back hall is the indispensable broom closet.

From the hall one may pass up stairs, a landing on the second step allowing a door to open into a coat closet, which is lighted by a small window. Another window on the stairway permits of no dark corners on the steps.

Three bedrooms (each with a clothes closet), a hallway, bathroom and linen closet complete the bedroom floor of this compact little house. The rooms are all well lighted, one having an open fire-place.

Plays ALL Records Correctly

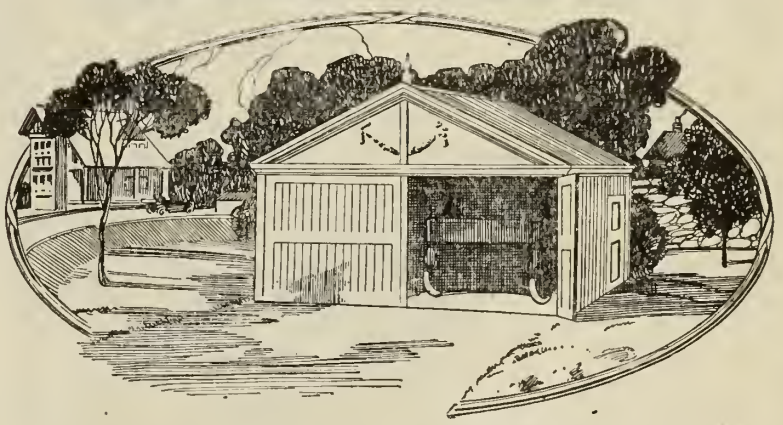
(NEVER INJURES ANY RECORD)

Different makes of records require different weights, as well as different diaphragms and different needles.

The Brunswick is the only Phonograph that has the famous "Ultona" reproducer, which, by a mere twist of the wrist, provides the **exact weight, proper diaphragm,** and **correct needle** for **every** make of record.

And because it gives the exact weight, the "Ultona" does away with all risk of injury to any make of record. This is a very important point, upon which the makers of "Me-too" Phonographs are studiously silent.

Naturally, you want a real "all-record" Phonograph—an instrument that will bring into your home all the artists who sing and play for all the world's records. The Brunswick alone does this.



Mail us this Coupon for Illustrated Booklet concerning the Brunswick new method of reproduction.

The Musical Merchandise Sales Company,
Dept. H.J., Excelsior Life Bldg., Toronto

"DO WE LIVE AFTER DEATH?"
is answered by Conan Doyle in the May Number

Man a Machine

"CLOGGED-UP"

By Walter Walgrove

IF YOU had an automobile and never cleaned it internally, but allowed the oil, the residue from the fuel, and the particles of waste which the machine itself produces to accumulate, you would not be surprised if it clogged up and acted badly, even if it would "act" at all.

If your watch is left to its own resources and not cleaned internally in the most thorough way, it will, even though "dust tight," produce in itself enough foreign matter to put it out of business.

And every day that you compel an "unclean" watch, auto, or any other machine to run, wears seriously its vital parts and saps its vitality.

Just so is the human vitality sapped and the "works" of humans worn—not, mind you, if we lived strictly up to the simple, primitive but rigorous laws of nature, but who does and who can?

If we were all farmers and labored in the fields from morning till night, or lumbermen chopping trees the day long—if we were able to earn our salt in one of the few the very few, occupations, which call into play every muscle and joint which nature has supplied for the purpose of effectually throwing off the waste which our systems naturally create and accumulate—

If, in addition to this, we ate, drank and slept in strict accordance with exacting Mother Nature's demands, no one would have cause to say, "I have Spring Fever"; "I feel Yellow"; "I am Blue"; "I am Nervous"—but show me one who violates any of her laws who can truthfully say, "I am never afflicted with any of these."

Are you ever so afflicted?

The life we live is to a great extent artificial. Many of us endeavor in our spare time to satisfy Nature's requirements as far as possible by exercise, but does this suffice? Does this absolutely obviate for you all the mild and serious ailments to which you are subject? If it does not, as is doubtless the case, what further is required?

Man of to-day is as near a machine as he probably ever can become, and still exist, and to keep him in perfect "running order" he has to be treated as such. Now, if your watch or auto was "clogged up" with foreign matter threatening its very existence unless removed, would you apply acid to rid it of this foreign matter? You could get an acid that would do it, but you know that it would also injure the mechanism.

So I don't think you would use it—you would cleanse with that which nature has provided to make and keep it clean with no injury to the "works."

I wonder why everyone does not treat the most precious thing on earth to them, their physical bodies, in the same considerate fashion. Everyone knows that their internal organs make waste which is rank poison to the blood and the system, and, under our present mode of living, the functions ridding it of these are, without aid of some kind, unable to accomplish it.

Their first thought is of the drug shop and medicine. Never a thought of whether Nature can be assisted by her own provisions, but "Acid to the machine"—that's just what it means.

Prof. Alonzo Clark, M.D., of the New York College of Physicians and Surgeons has said: "All of our curative agents are poisons, and as a consequence, every dose diminishes the patient's vitality."

Prof. Joseph M. Smith, M.D., of the same school, has said: "All medicines which enter the circulation, poison the blood in the same manner as do the poisons that produce disease."

This waste in the system can be effectually reached, and the intestines cleansed and kept pure by Nature's greatest cleanser and healer, warm Water, which, if properly introduced, is the only rational, safe and sure way of purifying, sterilizing and keeping in perfect working order the internal organism.

Would you believe that five or ten minutes of time devoted to systematic internal bathing can make you healthy and maintain your physical efficiency indefinitely? Granting that such a simple procedure as this will do what is claimed for it, is it not worth while to learn more about that which will accomplish this end? Internal Bathing will do this, and it will do it for people of all ages and in all conditions of health and disease.

No poison, no violence here. Just as sensible and sure a method as is external bathing certain to keep the pores open and the external organism sweet and clean.

That dangerous and incidentally very expensive disease, Appendicitis, is caused solely and directly by accumulated waste. Indirectly I would hesitate to name the complaints attributable to this same cause. It is a well-known fact that the blood, in circulating, comes in contact with the contents of the colon twice in twenty-four hours, and, taking up by absorption the poisons they contain, distributes them throughout the entire system.

The system is gradually weakened until it is no longer able to fight successfully against the microbes which are taken into the body through the air and otherwise, and are continually struggling for the mastery—those germs which are dominant at the time inevitably gain the upper hand and the particular illness which they produce develops.

If you would keep your blood pure, your heart normal, your eyes clear, your complexion clean, your head keen, your blood pressure normal, your nerves relaxed, and be able to enjoy the vigor of youth in your declining years, practice internal bathing and begin to-day.

Now that your attention has been called to the importance of internal bathing, it may be that a number of questions will suggest themselves to your mind. You will probably want to know WHAT an Internal Bath is, why people should take them, and the WAY to take them. These and countless other questions are answered in a booklet entitled "THE WHAT, THE WHY and THE WAY OF INTERNAL BATHING," written by Doctor Charles A. Tyrrell, the inventor of the "J.B.L. Cascade," whose lifelong study and research along this line has made him the pre-eminent authority on this subject.

Not only did internal bathing save and prolong Doctor Tyrrell's own life, but the lives of multitudes of individuals have been equally spared and prolonged. No other book has ever been written containing such a vast amount of practical information to the business man, the worker and the housewife.

All that is necessary to secure this book is to write to Tyrrell's Hygienic Institute, Suite 230, 163 College St., Toronto, and mention having read this article in CANADIAN HOME JOURNAL and same will be immediately mailed to you free of all cost or obligation.

It will be very interesting to everyone as it shows clearly how rational is the system of Internal Bathing, and in what way it differs from and is superior to forcing and injuring the functions by drugs—much clearer and in greater detail than can be covered by this brief article.

Read the following stories in the May number—
"Cure for Burned Fingers" by William Hugo Pabke
"The Ranee's Bracelet" by E. A. Taylor
"Sharing Dad with Judy" by Madge MacBeth

Barterers

(CONTINUED FROM PAGE 9.)

missed one of the girl's motions. Not an advance or retreat, not a bow, slide or salute passed unnoticed.

"Oh," breathed the woman, "She's quite wonderful. How long has she been here?"

"Some weeks back I picked her up in a tobacco factory where she works day-times," he answered indifferently, as he drew out a large diamond-monogramed watch and snapped it open. "The girl's been on a few amateur nights, and knocked down first prize every time. She could hold her own with a profesh." Then as if regretting the confidence, he added sourly, "But she won't be worth all the money and time I've spent on her. None of 'em are. Once the crowd likes 'em, twice it gets tired. —Bah, that's rotten bad," he muttered to himself, "she's got to go on from the start with more life for that stunt."

"See here, Yetta," he lumbered forward and gripped the girl's shoulder as she came running up the stairs from the dressing room. "You do like I showed you last night when you do that Bacchante business, hear me?"

MISS MEYER from her place in the flies, saw the girl shrink from the man's brutality and put her hands in protest over her face.

"Ach, no, no," she half-sobbed, "I can't. No, no."

"You do it, I tell you. Stir 'em up. Get 'om goin' and see here," roughly he pulled away the flimsy cheesecloth from her throat and bosom. "Lower than that, yet."

With frantic fingers she clutched at the neck of the dress and tried to pull it up. "Please, no, Mr. Goldman," she pleaded piteously. "I don't can dance that way. I dance good way. I love me for to dance good way, but it makes me so to shame myself to dance—"

He gave her a little push but his eyes shone. "You do as I say, girlie. What's the good of your being pretty if you don't show it? You dance like I said or—"

Again Miss Meyer's whole gaze settled on Yetta. In a long flowing garment of white cheesecloth, magnificent blue-black hair, unbound and floating to her knees, she was slowly advancing to the center of the stage. Around her shapely head was a chaplet of green-paper leaves, and she carried a leaf-twined wand in one hand. The little face was devoid of all color now. Miss Meyer bit her lip in an effort at self-restraint, when she caught one glimpse of the big, pleading child-eyes.

In an instant the little gilt-slippered feet were twinkling and the slender form swaying, undulating, every movement alive with radiant grace. There was an unconscious sensuousness, an artless abandon in every posture of the frail body, which seemed to palpitate in harmony with the music. Soon she had risen to the height of ecstasy, and her whole frame thrilled in rhythmic response.

Miss Meyer's glance had never swerved, but she sensed the exultation of the man at her side. He was gloating over the girl's art. Then, just before the young dancer yielded herself to the climax, the two spectators in the wings saw a flood of color run high into her face—a look of something like shame leap into the tragic eyes. In spite of clenched hands, a groan escaped the girl as she sank down with well simulated exhaustion, a little white heap. Instantly she was on her feet and gone from view.

THE audience shouted, clapped, whistled! But Yetta Solomon had walked straight into Miss Meyer's outstretched arms, where she lay, sobbing with all the vehemence of a nature fired with emotion.

Isaac Goldman scolded, commanded, cajoled, but Yetta refused to return, though the audience still clamored. In the end the manager stepped before the curtain and suavely explained their favorite's sudden illness. Then he rushed back to discipline the offending Yetta. For the moment he was too completely filled with the one idea to notice the presence of a newcomer, the young shoemaker. Israel had somehow managed to slip in the alley door. His eyes shone with mournful adoration as he stepped appealingly toward the girl, but Goldman was nearer.

"See here, Yetta," he began, with eyes like steel points, "you can't put on none of them high-strikes. It won't do, you know. I ain't goin' to learn you all this and have you act like a fool."

Yetta freed herself from Miss Meyer's embrace, and faced the man who continued to bluster, "I intend to put you on my New York theatre, but them New Yorkers won't stand for no such foolishness."

Then Yetta spoke huskily, "I ain't goin' to New Yorruk."

Israel Grabowsky gave vent to his feelings in a sigh of relief, almost a sob.

Isaac Goldman replied in a high pitch of rage, "Ain't what? You don't know what you're talkin' about. Why, girl, I'm givin' you the chance of a lifetime. You'll be wearin' 'em bigger'n these some day." He held out a finger on which a ring with three gigantic diamonds blazed.

The girl's eyes glittered. Unconsciously she drew nearer him. A sudden fear chilled Miss Meyer. Trembling she waited. Yetta repeated in the same gentle tone, "I ain't goin' to New Yorruk."

"SURE you're goin', Yetta," Goldman returned, assuming a conciliatory air. "I'm goin' to make a great dancer of you some day. Just wait and see all I'll do for you."

The look in his eyes was a revelation to Miss Meyer; she never quite forgot that one glimpse of a naked, human heart.

"I ain't goin' to New Yorruk," reiterated Yetta.

"This is your doin'," Goldman flung out to the older woman. "You've gone and persuaded her. I'll—"

"You has wrong," Yetta broke in incoherently, "she ain't said me one word, yet—only good words. She don't make me shame myself. I ain't dance no more." She turned away, hiding her face in her hands.

"Sure, you'll dance again to-morrow night. You know you love the dancin' business, and you said you were crazy for money."

"Money—oh, my dear, you shall have money," the teacher cried in a voice which she could not keep steady. "Only tell me how much you want. You need not earn it this way."

"Ach, Yetta, Yetta. I give you money. I have much money saved—. I give it you from my heart out." This from Israel.

There was utter silence a moment, then the manager said with a business-like air, "You want money, Yetta. Well, I'll engage you to dance here all next week—and pay you twenty-five dollars."

Almost before Miss Meyer could find her voice, Israel had screamed. "Don't dance, Yetta. I give you t'irty dollar."

"Dance, Yetta, and I'll make it thirty-five," the man offered with a quick intaking of the breath.

"I'll give you thirty-five dollars, dear. Come, oh, please, let's go home." Miss Meyer in thought had already plunged deep into the purse of Jacob Rothschild, the founder of the "Rebecca Rothschild Institute." She took a step toward the girl. Yetta had faced about, her tear-burnished eyes wide with excitement, her hands nervously clasping and unclasping. In a half-audible tone she was saying to herself, "T'irty-five dollar, t'irty-five dollar."

"FORTY dollars is a pretty big sum, Yetta," Goldman grumbled. His commercial instinct had fully appraised the girl's art. "You ain't worth it, but it'll be in your pay envelope next week."

"Forty dollar!" the voice held a sob of joy.

"Yetta, look at me," commanded the teacher firmly, tilting the girl's chin so as to meet her eyes squarely, "how much money will you take to go home with me to-night, and keep your word not to dance again on the stage?"

Without an instant's hesitation, the girl answered glibly, "A hundred dollar."

"One hundred dollars!" The words almost formed themselves on Miss Meyer's lips, and she lowered lids over eyes dark with distrust.

"Before t'ree months," the girl went on in a monotone so low that only the woman could hear, "before t'ree months I say to myself, I need money

(CONTINUED ON PAGE 75.)

A Provincial National Flower —The Trillium

The Natural Order Liliaceae---Common Names, Wake Robin or Wood Lily---is Suggested

At a recent meeting of the Horticultural Society in Toronto the matter of a National and Provincial Flower for Canada was discussed, and the following remarks were made by Mr. A. Gilchrist, the well-known Horticulturist.

THIS beautiful genus is exclusively a North American plant—all the species are low plants rising by a single stem from a tuberous root or creeping root stalk. All parts of the plant are in threes, the stem bearing a whorl of three leaves; and the solitary flower having three green sepals, and three white petals.

There are four varieties native to Canada, and about eight varieties in America. Trillium Grandiflorum is the finest of the genus, the flower vying in beauty with that of any spring blooming plant. No one who has seen a mass of this species in full bloom in the garden as we have grown it for years, will wonder at our classing the Trillium among the choicest garden flowers.

The three leaves on the stem represent the three nationalities, England, Ireland and Scotland, as the basis of the British Empire of which we form a part. The three sepals represent the Trinity, the basis of our Christianity, the three pure white petals represent purity, truly a divine flower. What flower could be more appropriate for a National Flower for this fair Province of Ontario? As a child of the Canadian wood, I loved to pluck it and love it still, and it might justly be called Kipling's Lady of the Snows.

"Flower in the crannied wall;
I pluck you out of the crannies.
I hold you here, root and all, in my hand,
Little flower—but if I could understand
What you are, root and all, and all in all,
I should know what God and man is."

—*Tennyson.*

A National Flower For Canada

FIRST, it should be a native of Canada, hardy, easily grown in the gardens of the common people.

Second, it should be adapted to be grown on the graves of our fallen heroes in France and Flanders.

Third, it should possess qualities as a cut flower, lasting well when cut: distinct in form and color, to be used in wreaths or garlands, heraldic and symbolic devices. From an extensive experience of our native flora, I would like to suggest our Canadian Lily of which we have three species, Lilium Canadense (common name, Yellow Canadian Lily) flowering June and July, Lilium Superbum (common name, Turk's Cap Lily) flowering July and August. Lilium Philadelphium (common name, Orange Lily) flowering June and July.

These lilies have been introduced into the gardens in the United States and England. William Robinson, founder and editor of "The Garden" speaks thus of Lilium Superbum—"A very tall kind with slender stems and leaves and a profusion of flowers with from ten to forty blossoms on a stem." Edward Rand, Jr., author of "Seventy-Five Flowers," speaks of it thus: "Lilium Canadense and Superbum, two splendid species with drooping yellows and reddish orange flowers, are worthy of every care, for they are among the most graceful and beautiful of the family. We have had Lilium Superbum in our garden eight feet high with thirty flowers on a stalk and the groups when in bloom were magnificent." I have a group of Lilium Superbum in my garden planted about twelve inches deep and among them Trillium Grandiflora planted about six inches deep growing two crops of flowers in the same bed; my soil is a moist black sand. There is nothing better as a cut flower for they can be cut with long stems lasting more than a week after cutting and every bud opening to the very top.

LILIUM PHILADELPHIUM was found in great abundance at one time near my home east of the Humber River on the dry, sandy plane and now nearly exterminated by fires and people pulling them up when in bloom. Very few found now. It is more plentiful in the west, but nearly exterminated in older Ontario. Flower erect, orange spotted with purple inside. This is the characteristic of our native lilies, a most charming native plant.

Lilium Canadense quite distinct from L. Superbum or L. Philadelphium; flowers vary from yellow to orange, bell shaped, heavily spotted inside with brown, very graceful and pretty. It likes plenty of moisture, found along river banks and streams. It produces quantities of flowers when established in the garden.

THE lily is a symbol of purity and next in popularity to the rose. The lily sweet and modest has been entwined with the rose in heraldic emblems in ancient times. The United States in recent years have adopted thirty-eight State flowers, twenty-five by legislative enactment, the balance by popular vote. But they have still left us the lily, the pride of them all. There are no poor relations or weedy plants in the lily family. By some the lily has been regarded as queen of flowers. Linneaus called the lily "the noblest of the flowering kingdom."

Pliny remarks "Lilium Nobilitatum—"

"The lily's height bespeaks command,
A fair, imperial flower,
She seems designed for Flora's hand.
The sceptre of her power."

THE HANDMADE HANDKERCHIEF

THE woman who delights in making dainty handkerchiefs is usually interested in novel ways of varying the plain square which she wishes to beautify. The handkerchief with the "roll and whip" border (the hem of which is rolled tightly by moistening it a little with the finger tips, and whipped around and back again with colored thread, to form tiny crosses for a border) has been such a favorite that it is now being ornamented by drawn threads of a deeper hue, inserted parallel to the edge, which give a most effective touch to the finished handkerchief. It is but a simple matter to draw these through the linen, if they are attached carefully to the ends of the threads of the original fabric, which are to be removed to make room for the colored ones. When the old thread is slipped out, the new one follows automatically in its place. Two lines may be inserted parallel, if preferred, to give more color and character to the design. A simple initialing at one corner is, perhaps, the most satisfactory decoration to finish the gift. Handkerchief linen is obtainable in a variety of exquisite shades, which are most attractive, when set off by a finishing touch in darker hue.

ROYAL
VINOLIA
TOOTH PASTE

Miss Phyllis Neilson-Terry, the celebrated English actress, says: "I think the ROYAL VINOLIA articles are splendid and shall always use them. I am particularly delighted with ROYAL VINOLIA TOOTH PASTE."

WALTHAM
THE WORLD'S WATCH OVER TIME

Colonial "A"
Extremely thin at no sacrifice of accuracy

The WALTHAM *Guarantee*

THE reputation of the guarantor is the all-important consideration in determining the value of a guarantee.

The Waltham Watch Company, established in 1854, was the first company in the world to manufacture entire watch movements.

At the present time the normal staff at the main factory includes 4,500 expert workpeople, hundreds of whom have spent the whole of their working lifetime on Waltham Watches.

The factory equipment includes many marvellous automatic machines developed exclusively by Waltham experts for shaping, drilling, polishing and finishing the myriad small parts entering into high-grade watch mechanism.

Every part is standardized. Guesswork is unknown. Inspection and re-inspection is a rigid rule.

The unvarying quality assured by such organization and equipment has resulted in the winning by Waltham of every gold medal awarded since 1854 by the great World's Fairs for supreme watch merit.

And it is these things which give weight to the Waltham Guarantee.

Waltham Watch Company, Limited, Montreal
Makers and Distributors of Waltham Products in Canada

RENNIE'S SEEDS

Make your garden a source of pride and profit this year by sowing seeds of tested quality. Healthy, productive plants will not grow from poor, undersized seeds. Rennie's are selected seeds, which have been tested for germination before being offered for sale.

For Planting up to April 15th

VEGETABLES

Brussels Sprouts—Amager Market. Oz., $1.25; pkt., 20c.
Cabbage—Rennie's First Crop. ¼ lb., $3.00; oz., $1.00; pkt., 10c
Rennie's XXX Autumn—Winter Drumhead. ¼ lb., $4.50; oz., $1.50; pkt., 10c.
Onion—Rennie's Selected Yellow Globe Danvers (Private Stock). ¼ lb., $1.25; oz., 40c; pkt., 10c.
Cauliflower — Rennie's Danish Drouth-Resisting. ¼ oz., $2.50; pkt., 25c.
Celery—Paris Golden Yellow. Extra Select. ½ oz., $1.10; ¼ oz., 60c; pkt., 25c.
Tomato—Bonny Best (Original), ¼ lb., $1.75; oz., 60c.; pkt., 10c. Rennie's Improved Beefsteak. Oz., 75c; ½ oz., 40c; pkt., 10c.

FLOWER SEEDS.

New Giant Astermum—Mixed Colors. Pkt., 15c.
Rennie's XXX Giant Comet Asters—Mixed. Pkt., 10c.
Early Blooming Cosmos—Mixed. Pkt., 10c.
Rennie's XXX Exhibition Mixture Pansy. Pkt., 25c.
Rennie's XXX Prize Ruffled Giant Single Petunia—Mixture. Pkt., 25c.
Rennie's XXX Large Flowering Globe Stocks—Mixture. Pkt., 20c.
Rennie's XXX Mammoth Verbena—Mixture. Pkt., 10c.
Giant Zinnia—Mixed. Pkt., 15c.

The Rennie Catalogue contains an extensive variety of vegetables and flowers, together with many helpful hints on gardening If you have not already received a copy send us your name at once.

Make your selections from the Rennie Catalogue and have your nearest dealer fill your needs. Should he be unable to fill your order completely, write us direct.

BRUCE'S

Summer Flowering Bulbs

GLADIOLUS

Unequalled for beauty of bloom. Plant in May and June, blooms in August and September. Easily grown and bulbs good for several seasons.

Bruce's Choice Mixed. A good mixture. 10 for 50c., 25 for 90c., 100 for $3.00, postpaid.

Bruce's Superb Mixed. A grand mixture of all sorts. 10 for 80c., 25 for $1.80. 100 for $6.50, postpaid.

Separate Colors. Whites, Yellows, Pinks, Scarlets. 10 for 75c., 25 for $1.50, 100 for $5.50, postpaid.

Named Varieties. Each separate and distinct. 12 for $1.12, postpaid.

DAHLIAS

Very handsome flowers. Plant in May, bloom in September. Easily grown and tubers good for several seasons.

Named, Show, Decorative, Cactus, Collarette, and Single Varieties. 30c. each, $2.70 dozen, postpaid.

Mixed Varieties, 20c. each, $2.00 dozen, postpaid. Also Callas and other Lilies, Tuberoses, etc.

Canada's Great Need

Tree, Shrub and Flower Planting

BY A. GILCHRIST

CANADA has arrived at a time in her history when thoughtful men and naturalists, artists, and men of means are demanding that more attention be given to our native trees, shrubs and hardy plants. We can never have a purely Canadian landscape until we use more of our own material. No country in the temperate zone has such magnificent forest trees, such beautiful shrubs, and lovely flowers; the maple, our own emblem—hard or sugar maple—what tree possesses such foliage in autumn? While the foliage of the soft maple lacks the wealth of color and glory of the sugar maple, the bark, especially on the branches, is as fine as an etching. The elm tree is always bewitching, every branch having its own tracery. The bark of the elm is corrugated, and in color like the ruts of a dry country road. The oak has the allegiance of centuries, for beneath its shadows the Druids worshipped and built their altars. Words are weak when they essay an oak tree epic.

We have the Red Oak, the Mossy Cup and the White Oak—magnificent trees. The birch, with its pendular branches and white, shining bark against the sky line has truly been named the Lady of the Forest, and a beech tree is a picture in winter, with its silvery grey bark.

The Mountain Ash makes a striking object, with its bright red berries, providing food for our bird friends when they can find little else.

In the smaller trees we have the hawthorn, covered with snowy white blossoms in spring; the native crab apple, (Pyrus Coronaria), with beautiful coral pink blossoms; the black and red fruited elder, two fine shrubs, white flowered; Pyrus Arbutifolia, common chokeberry, with white flowers, beautiful glossy foliage and black fruit; the Dogwoods, the red wooded called the Osier, a lovely shrub for winter—it is so striking against the snow line.

There are also the white berried and the black berried Comus. The Comus Florida, the finest genus, abundant in south western Ontario; the witch hazel, a remarkable shrub, which flowers late in autumn, ripening its seed in the spring. We have a variety of evergreens, but to see them at their best we must go to the country, for in Toronto they are all dying on account of the smoke. They retain their leaves in winter and the smoke seems to fill the breathing pores (for trees breathe). Evergreens are a great protection in winter, as well as a joy and beauty for country homes.

IN winter the individuality of trees comes out. In summer their leaves obscure this. We cannot study a tree's shape in summer—it is shut in by its own leaves and shadow, but when winter hacks away the last tatter of summer finery, and leaves the tree to stand naked as an Indian warrior, then does it proclaim itself.

Bring the woodland groves to the schools that the children may become acquainted with all the beautiful things in this wondrous Canada of ours. Children as a rule love to pluck flowers, and their young minds are susceptible to pure impressions which last through life. Nothing is better than a study of flowers, birds, insects and animals, to implant a real love for country life.

Our educationists should see that every child be given a chance to get in touch with everything that can make life pure, healthful and pleasant. Then we would hear less of the young people leaving the farm for the artificial life of the city.

In Canada we have more land than we know what to do with, which might be planted with trees, shrubs and flowers, say a dozen plants in a clump. Make it informal—no straight lines or fancy figures. Imitate nature in the work—a woodland wild. Every school in the country should have an acre or more for forest planting. Our native trees, shrubs and plants are not grown in the nurseries; get some small plants one or two feet high from the woods, (by taking them small they are more sure to grow), in either fall or spring time, whenever you have the time to gather them. Emerson says: "I am a son of the soil—I must plant trees. I am not a Henry George—he vexes my soul."

TEACHERS, just one word to you. If you help the boys and girls to plant one woodland, you will never regret the labor of love in after years. It will be a monument of love; you will be remembered long after you have passed to the great Beyond. It will be the happiest time in your life to see the work progressing in your hands. Never say fail.

Just a word for the farm; every farm should have a plantation near the house—at least a few acres of a wood lot for fuel—also for a shelter from the north and west winds in winter, adding comfort, beauty and wealth of real value. The great need of Canada is tree planting.

Native Herbaceous Plants that will Transplant well.

COLUMBINE, Liver-leaf, Bloodroot, Cardinal Flower, Harebell, The Lily Family, Phlox, Wake-Robin, Solomon's Seal, Dogtooth Violet, Spurge, Butterfly-Weed, Wind Flower, Meadow-Rue, Sneeze-Weed, Cone Flower, (purple and yellow), Sun-Flower, Beard-Tongue, Mayflower—Ground Laurel, Squirrel Corn, Dutchman's Breeches, Violets, Lupine, Geranium Cranesbill, Wood Sorrel, New Jersey Tea, Saxifrage, Blazing-Star, White Snake-root, Elecampane, Golden Rod, Starwort, Oswego Tea, Norse Mint, Wood Betony, Waterleaf, Dogbane, Skunk Cabbage, Bellwort.

Native Trees

PIN OAK, Swamp Hickory, American Aspen, Hornbeam Blue Beech, White Birch, Swamp White Oak, Basswood, Beech, White Elm, Sugar Maple, Red Oak, Butternut, Mossy Cup White Oak, Black Ash, Buttonwood, Silver Maple, White Ash, Red Maple, White Oak, Black Walnut, Slippery Elm, Tulip Tree, Chestnut, Shell Bark Hickory, Corky White Elm, Balsam Poplar (Balm of Gilead), Paper or Canoe Birch, Chestnut Oak, Pignut Hickory, Mountain Maple, White Pine, White Spruce, Black Spruce, Balsam Fir, Hemlock Spruce, Red Pine, Larch or Tamarac.

Native Shrubs

SWEET Fern, Dwarf Shadbush, Chokeberry, Maple-leaved Viburnum, Native Apple, Common Elder, Red Osier, Round-leaved Dogwood, Witch Hazel, Ceanothus New Jersey Tea, American Holly, Cockspur Thorn, Sassafras, Common Meadow Sweet, Mountain Maple, Silky Cornel, Purple Flowered Raspberry, Scarlet Fruited Thorn, Leatherwood, Red Berried Elder, Shadbush Juneberry, Shepherdia, Snowball Guelder Rose, Alternate-leaved Dogwood, Snowberry.

Native Creepers

VIRGINIA CREEPER, Bittersweet, Honeysuckle, Virgin's-Bower, Native Grape, Canadian Moodseed, Ground-nut Wild Bean, Smilax Catbrier.

The Journal Juniors' Club

the beginner gets a great many very hard tumbles when learning, as found out by experience, but he feels amply repaid when after a few weeks' patient practising, he finds himself one of the "ice-flyers," and an everlasting friend of winter's slippery floor, the ice.

The clear, pure air invigorates a person as he glides along, for all the world like the mythical Mercury (with wings on his heels). I am sure it would take a pretty agile Mercury to overtake an expert skater. There are many winter sports, such as coasting, snow-balling and the merry sleighride on a calm, starry, frosty night, but I think skating is king of them all.

Many people dislike winter because of its frost and cold, and they long for summer, but for skaters winter is a never-failing and long-looked-forward-to source of pleasure and delight which will never be forgotten. Are you not of the same opinion as I?

THE WORK OF APRIL DAYS.

By Ethel Bain.

I saw with open eyes
Singing birds sweet
Sold in the shops
For people to eat,
Sold in the shops of
Stupidity Street.

I saw in a vision
The worm in the wheat,
And in the shops nothing
For people to eat;
Nothing for sale in
Stupidity Street.
—Ralph Hodgson.

THE grass fairies were very busy shaking out their new green dresses, so fresh and smart they were, for April had showered them plentifully with her tears. Still April did not weep every day. Showers there had to be, for April had her work to do and always after every rainfall the old earth looked cleaner and brighter, for April was really doing good. The earth, trees and rocks all needed washing and the rivers and streams needed cleaning out, and who but April could do it so well?

Spring was to arrive any day. The message had been delivered by the whispering wind from the south. "Awake, spring is on her way." Obediently the sleeping things had rubbed the sleep dust from their eyes and had risen. Then Mother Nature, that most experienced of housekeepers, had set them all to work. First of all she warned the snow fairies to depart for their Arctic home. They hurried, for well they knew that the penalty for disobeying would be death, so they made haste and after one last mad dance, which mankind called a snow flurry, they left for the frozen regions of the far north.

The annual spring cleaning had begun in earnest and every feathered worker was busy all day long, but only those that loved Nature and her children realized the great change that was taking place. The sleeping sentinels of the woodlands awakened and the life giving sap moved upwards in the trunks, creeping even to the tips of the slender branches, feeding the sticky little buds that now appeared. Every day the buds got fatter and the dresses of the grass fairies grew longer, for the golden sun shed its warm rays and thawed the frozen earth.

THE caretakers of the trees were hard at work and each knew the daily task. Here was a family of feathered carpenters, the woodpeckers. In the orchards, chickadees were busy hunting for that insect pest, the apple plant louse. The chickadees search eagerly for the eggs of this

The Journal Juniors' Club

(CONTINUED FROM PAGE 67.)

pest and one bird will destroy as many as four hundred in a day, so don't disturb these dainty blackcaps when you see them at work in your orchard. Just think of the good they are doing, and the number of eggs one of the tiny workers destroys in a week—two thousand and eight hundred—for remember a bird has seven working days. It has to work to find food and so a bird never takes a holiday on Sunday. If one chickadee consumes that quantity, how many eggs would one hundred chickadees eat? Beside the woodpeckers and chickadees, the nuthatches, brown creeper birds and the dainty kinglet birds are one and all taking care of the bark of the trees and bushes.

With the first signs of spring the messengers arrive—the robins and bluebirds. The bulbs in their cosy beds in the brown earth, obediently answer the call of the great mother, and weeks before we see the first green shoots of the new plants there is a stirring in the hearts of the little brown balls. The time has come for them to grow once more, and so, refreshed with their long sleep they push their new roots downward and long sharp pointed leaves upward. Like white spears they appear above the ground and then the light and air soon turns them green. Slowly they grow until one day spring arrives and to honor her arrival, the snowdrops burst into bloom.

DURING this month it is interesting to watch our birds at work. Mother Nature's plans are so well balanced that every bird has its share. Beside the caretakers of the bark, there are birds that look after the leaves of the trees and shrubs. Amongst these are the vireos and warblers. Their duty is to clean the leaves, especially those on the ends of the branches. This sounds strange, but if you were able, the first warm days of spring to look carefully under all the new leaves of the trees in your district, you would find countless eggs, many almost too tiny to be seen. These have been laid by ants, flies, cankerworms and many other insects, wise enough to know that the tender foliage will be the best food for their young ones when hatched. They deposit their eggs on the under side, so that they will be protected from the rain and warmth of the sun's rays, but thousands of these eggs never hatch for they are destroyed by the warblers and vireos.

Mother Nature does not neglect the ground floor or basement either, for she has many capable servants in feathered coats, that, like the fox sparrow, dig the insect pests out of the ground in the most marvellous way. Millions of insect enemies lie hidden in the undergrowth, amongst the grass, in the twisted roots of trees and under the carpet of last year's leaves. The white grubs of May beetles, wireworms and maggots that always work under cover of the soil, the deadly army worms that ruin crops worth millions of dollars every year, are some of the worst pests. Silently these enemies work, but the feathered soldiers know the best time to attack and with their sharp bills for bayonets they dig out the foe and destroy it. One of the best ground soldiers is the meadow-lark, because it is always hunting insects. The number of grasshoppers it destroys alone, makes it worth-while for the farmer to protect it. Yet, how often the meadow-lark is a mark for the gun of the hunter, who classes it as a game bird. You cannot mistake a meadow-lark for its bright yellow breast and throat betray it at first sight. Whenever this bird sees mankind near, it turns its back upon him, for by so doing the yellow parts are hidden. Not very polite, but the meadow-lark believes in "Safety First."

ROBINS, brown-thrashers, blackbirds, crows, oven-birds, yellow-winged woodpeckers and many other birds march in the land army, for by so doing they help Dame Nature to keep her house clean. If she did not, the whole earth would soon be overrun by insect pests and grass, trees, animals and mankind would die.

The value of birds, that not only entertain us with their sweet songs, but work hard for our benefit, can never be talked about too much. It is indeed a sad sight to see dead meadow-larks offered for sale in the poultry stores, simply because mankind is too stupid to understand that one live bird in a field is worth a hundred slain, for a rich man's dinner.

So as we wander about the roadside or take our walks through the woods this month, and stand to watch our feathered friends as they tirelessly carry out their duties, let us realize, more than ever we did before what a wonderful and beautiful world we are living in.

Who Goes There?

(CONTINUED FROM PAGE 62.)

"Courland loved the place," said Darrel, "and for many years until his death he spent the summers here with his wife and daughter.

"That's why they continue to come. The place is part of their life. But I don't know what they'll do now. Monsieur Paillard, their landlord, hasn't been heard of since the Germans bombarded and burnt Wiltz-la-Vallee. Whether poor Paillard got knocked on the head by a rifle-butt or a 41-centimetre shell, or whether he was lined up against some garden wall with the other poor devils when the Prussian firing-squads sickened and they had to turn the machine-guns on the prisoners, nobody seems to know.

"Wiltz-la-Vallee is nothing but an ill-smelling heap of rubbish. The whole country is in a horrible condition. You know a rotting cabbage or beet or turnip field emits a bad enough smell. Add to that the stench from an entire dead and decomposing community of three thousand people! Oh, yes, they dug offal trenches, but they weren't deep enough. And besides there was enough else lying dead under the blackened bricks and rafters to poison the atmosphere of a whole country. It's a ghastly thing that they've done to Belgium!"

Guild went to his modern bathroom to bathe, but left the door open.

"Go on, Harry," he said.

"Well, that's about all," continued Darrel. "The Germans left death and filth behind them. Not only what the hands of man erected is in ruins, but the very face of the earth itself is mangled out of all recognition. They tore Nature herself to pieces, stamped her features out, obliterated her very body! You ought to see some of the country! I don't mean where towns or solitary farms were. I mean the *land*, the *landscape!*—all full of slimy pits from their shells, cut in every direction by their noisome trenches, miles and miles of roadside trees shot to splinters, woodlands burned to ashes, forests torn to slivers—one vast, distorted and abominable desolation."

Guild had reappeared, and was dressing.

"They didn't ransack the Grand Duchy," continued Darrel, "although I heard that the Grand Duchess blocked their road with her own automobile and faced the invaders until they pushed her aside with scant ceremony. If she

(CONTINUED ON PAGE 71.)

Where Our Rubber Comes From

Its Growth, Cultivation and Ultimate Use.

FEW people think of Christopher Columbus in connection with rubber, yet Columbus was the first white man to make the acquaintance of rubber and to first introduce rubber into Europe. When Columbus stepped upon the soil of the wonderful new Western world he found strange red-men, whose feet were encased in water-proof shoes, playing a game with a round ball that bounced, and wearing fantastic ornaments of a material entirely unfamiliar to his old-world eyes. These shoes, balls and ornaments were of rubber or "caucho" an Indian term meaning "weeping tree."

Samples of these articles and of raw rubber were carried back to his native shores by Columbus and aroused much curiosity and interest among his friends. But it was not until almost four centuries later that the commercial possibilities of rubber began to be recognized.

In 1770 Joseph Priestly discovered that rubber would erase pencil marks and here we have the derivation of the English name "rubber". Not until 1844, however, did Charles Goodyear learn the secret of vulcanizing rubber to give it wearing qualities heretofore lacking. From that time on dates the utilization of rubber to minister to man's needs.

Originally the world was dependent upon tropical America for its rubber. Brazil had practically a monopoly of the crude rubber industry because it was in that country that the best rubber producing trees grew, the Hevea Braziliensis and the Castilloa. And jealously as a lover did Brazil guard her treasure. It remained for an adventurous Englishman, Wickham by name, to smuggle a shipload of Hevea seeds out of Brazil in 1876 and thus break the monopoly. These seeds were planted at Kew in England and later the saplings were transplanted to British possessions in India and the East Indian Islands. This was the beginning of the British Rubber Industry which to-day controls 80 per cent. of the world's production of crude rubber.

CRUDE rubber is a vegetable product and is gathered from certain species of trees, shrubs, vines and roots. There are some three hundred and fifty different varieties and grades, but these can be divided roughly into two chief classes, wild and cultivated. During the past few years, however, the rubber plantation industry has been developed to such an extent that now the great bulk of the rubber used is of the cultivated variety.

The first class, or wild rubbers are collected from trees which have grown wild and where no cultivation processes whatever have been used. These rubber producing trees, shrubs, etc., are found mostly in northern South America, Central America, Mexico, Central Africa and Borneo.

Until the time that cultivated rubber reached its present state of perfection, fine Para was considered the finest rubber in the world. Para rubber is gathered in the Amazon regions of South America. The methods in use are practically the same as those used over a century ago. The natives go out into the forests and, selecting a rubber tree, cut "V" shaped grooves in the bark with a special knife made for the purpose, these grooves being cut in herring-bone fashion diagonally around the tree with one big groove cut vertically down the centre like the main vein in a leaf. The latex of the tree from which the rubber is taken flows from these veins and down the centre vein into a little cup which the natives place to receive it. After the little cups are filled, they are gathered and brought into the rubber camp and there the latex is coagulated by means of smoke. This is done by the use of a paddle which is alternately dipped into a bowl of the latex and then revolved in the smoke from a wood or palm nut fire. This smoke has a preservative effect on the rubber, as well as drying it out and causing it to harden on the paddle, each successive layer of the latex causing the size of the rubber ball or biscuit to increase. When a biscuit of sufficient size has been thus coagulated, it is removed from the paddle and is ready for shipment to the various countries where rubber products are manufactured.

THERE are a number of other grades of wild rubber including Caucho, Castilloa, Guayule, all from Central America, Mexico and South America. From Central Africa and from Borneo come a number of other wild rubbers, all of lower grades than the Para rubber of South America.

The second class, or cultivated rubbers, are obtained from East India, Ceylon, Malayan Peninsula and Southern Mexico.

The chief and best among these is the Ceylon rubber which is being grown mostly from sprouts taken from wild Para rubber trees of South America. These cultivated rubber trees have been very carefully reared and scientific methods used to tap them so as not to, in any way, hurt the bearing qualities of the trees. The Ceylon product is very uniform as modern scientific methods are used in coagulating, drying and otherwise treating the rubber before it leaves the plantation so that there is a minimum deterioration due to oxidation and other action during the time the rubber is en route from the plantations to the rubber manufacturer. The cultivated rubbers grown in East India and the Malayan Peninsula are similar to the Ceylon product and all come under the general head of Ceylon rubber.

The method used in treating the rubber at the factory of the rubber manufacturer is very interesting. When the crude rubber first arrives at the factory in Canada it is generally stored in bins in dark and fairly cool store-rooms where it is kept until ready to be used. The rubber passes directly from the storage bins to the wash room, where it is cut up into small pieces, put into large vats of warm water and allowed to soak in order to soften it sufficiently to be broken down in the machine. It is then fed into a cracker, a machine consisting of two rolls with projections on their surfaces shaped like little pyramids, the two rolls revolving with a differential, one going considerably faster than the other, and being adjustable so that they can work close together or with some distance between them. The rubber is fed between these rolls and broken down into a coarse, spongy mass, water flows onto the rubber during the process, bringing down sand, dirt, bark and the many other foreign materials which become mixed with the rubber. The rubber is put through this machine a number of times until it is worked into a uniform condition. Some of the rubbers, like the Ceylon and Para, will sheet out into a coarse sheet by being put through this machine: others, like the majority of the African rubbers will fall apart and come down in chunks and have to be fed into the machine with a shovel.

AFTER the rubber is broken down sufficiently, it is next put through a washing machine. Here a large quantity of water is kept constantly running over the machine while the rubber is being put through and the rolls work close together, so that the rubber is finely ground and run into a thin and comparatively smooth sheet, allowing the water flowing between the rolls to take out practically all of the foreign matter that remains. The rubber is put through this machine a number of times until the experienced inspectors in charge are satisfied that it is thoroughly washed.

The next process in the treatment of the rubber is the drying. Before rubber can be used in any article of commercial value, it must be thoroughly dried as any moisture in the stock would turn to steam during the vulcanizing process and cause blisters to form in the goods. There are two ways in which rubber is usually dried. The method most used and which is generally practiced with all the better grades of gum, is to hang the washed strips on horizontal poles and place them in aisles so that air can freely circulate all along the surface of the rubber, the dry room being kept at a constant temperature. Low grade rubbers, which have a comparatively large percentage of resin in their composition cannot bear their own weight when hung on horizontal poles, but drop off and stick in piles on the floor. Hence it is necessary to dry rubber of this low quality in trays in a large air-tight receptacle.

(CONCLUDED IN OUR MAY ISSUE.)

Your Husband Values Your Opinion on Tires

Don't think that tires are just a man's proposition.

Your husband entrusts to you the spending of a very large part of his income.

He values your opinion on the clothes he wears.

He consulted you about the car before he bought it.

Why shouldn't he seek your advice on tires?

And when he does discuss tires with you, you will bring to the discussion the acumen that has made woman the world's great purchasing agent.

You will point out to him that cost-per-mile is the only basis on which to judge tires.

That low price is no standard of value.

That the largest selling tire in the world is probably mighty good value.

You will advise Goodyear Cord Tires, because their higher price is more than offset by greater mileage and greater comfort.

And if you have had experience with tires, you will tell him to go to a Goodyear Service Station Dealer for them.

Times of Rejoicing

EASTER is a time when all Christendom rejoices—the ushering in of Spring with the vital, desire-compelling appeal of awakening life for things beautiful, dainty and chaste.

While Nature gladdens the heart and eye with its splendor and good taste—assist by bringing added happiness to your loved ones.

The arrival of a box of Patterson's Chocolates, ever a time of rejoicing, gives the finishing touch to the Joyous Easter Season. These delightful confections are always appreciated—and your consideration approved as a matter of good taste.

As Your Easter Greeting Send

Patterson's

A Matter of Good Taste

Mrs. Knox Says

Experts call Knox Gelatine the "4 to 1 gelatine" because each package makes 4 pints of jelly—or four times the quantity made by ordinary brands—and it is measured so that you can make the full quantity, or any portion desired.

As an example of a real delight I suggest this exquisite but easily made dessert of

KNOX
SPARKLING
GELATINE

Orange, Banana or Apple Sponge

½ envelope Knox Sparkling Gelatine
¼ cup cold water
½ cup boiling water
1 cup orange, apple or banana pulp
1 cup sugar (½ cup if banana pulp is used)
2 tablespoonfuls lemon juice
Whites of two eggs. Few grains salt

Soak Gelatine in cold water five minutes and dissolve in boiling water. Add sugar, and when dissolved, add lemon juice. Strain, cool slightly and add fruit pulp. When mixture begins to stiffen, beat until light; then add whites of eggs beaten until stiff, and beat together thoroughly. Turn into mold, first dipped in cold water, and chill. May be served with a custard sauce made with the remaining egg yolks. If a Charlotte is desired, line mold with strips of stale cake.

Including pure lemon flavor, for quick use

Plain, for general use, easily prepared

Note—This recipe only uses ¼ package of Gelatine and makes over 1 pint of Sponge.

Write for the Knox Knowledge Books—"Dainty Desserts" and "Food Economy." Sent free, if you mention your grocer's name and address.

Out of the Butterfly Class

(CONTINUED FROM PAGE 61.)

left Whiteside so unceremoniously?"

"It has. I wanted new excitement; something different from the old routine. You see,"—drily—"frivolous people crave innovation."

She watched his face closely to observe the effect of her words.

But his countenace remained imperturbable. He merely smiled and said. "I hope you found the experiment satisfactory."

"Entirely so," she answered coldly. "How are all my friends at Whiteside?"

"Before we discuss that, let us finish your journey to the creek. I must say I am very fond of this old creek with its overhanging willows and its shadows and sunshiny ripples. It always reminds me of Tennyson's 'Brook.'"

Pauline glanced at his profile half-curiously as she walked beside him. "You speak as if you knew this place intimately," she observed with studied carelessness.

"I have been here several times," said Mr. Maurice, non-committally He dropped down on the cool, moist turf beside the creek, while Pauline seated herself on a mossgrown log. "Ah, this is pleasure unalloyed after a stuffy office. I hope you will forgive me my curiosity, Miss Fitzgerald, if I ask how you came to get possession of all this?"

Pauline smiled. "I will, if you tell me how you come to be calling."

"That's only fair," returned Maurice with a laugh. "And it is as easily answered. I came to see Dawn. But, apparently you have turned him out."

The girl dimpled with amusement. "How very unfortunate! And instead of a nice, companionable bachelor, you found frivolous me. But I didn't turn your friend out. He went of his own accord. I am merely finishing up his lease."

Then, noting his look of surprise, she added. "I made him promise not to tell anyone. I didn't want to be bothered with any Whiteside people."

Maurice threw back his head and laughed, a boyish ringing laugh that brought the color to Pauline's cheeks.

"Well, that's honest at any rate. I admire honesty more than anything else. Present company excepted, I hope. And yet you are unjust enough to call yourself frivolous. Don't you know that only a serious person can enjoy solitude? By the way, how's Roxy?"

"I really am not able to say at present, seeing she is somewhere else."

"She hasn't deserted you!"

Pauline's affected reserve vanished, and her sweet laugh gurgled out from the fullness of her white throat. "According to your definition, she is the frivolous one. Poor Roxy couldn't live in a 'tomb,' as she called this place. You see, one doesn't enjoy the advantages of a water system here, and she objected, among other things, to carrying the water half a mile."

HER merry laugh rippled out again; and Maurice, watching her, thought she had never looked so sweet. He noted with approval the gingham apron. He had never seen her thus; and to his home-loving heart she looked even more desirable than in her most costly evening robes.

"I suppose Roxy felt the disadvantage and the loneliness more than I," she resumed, "for she doesn't enjoy old Mother Nature's companionship. And to tell the truth, I had to agree with her about the water when I came to carry it myself."

"You haven't been living here alone!" exclaimed Maurice aghast.

"'I am monarch of all I survey!'" she quoted with mock grandiloquence. "Why not? I've been alone two days now, and I'm still unharmed." Not for the world would she tell him that she could no longer endure the loneliness, and had decided to leave.

He looked at her with unconcealed admiration. Even he would have found the solitude too much.

"You haven't told me anything about Whiteside," she said suddenly.

"You don't really care to know, do you?" he asked frankly. "Whiteside doesn't belong here. This is too natural. Natural things don't combine becomingly with the artificial. Be kind and let me forget it for this short while, you who have had your full measure of nature's charms."

She laughed at his earnestness. "As you will then," she acquiesced. "Do you know where this stream leads to?"

"Why, yes; it empties into a small river not far from here. Would you care to follow it up?" He sprang to his feet, as eager as a boy. "No, please don't remove the apron. It is too becoming."

"But it is miles too big," objected Pauline. "How can I walk in it?"

"Tuck it up," pleaded Maurice. "It is a long time since I had the pleasure of seeing a woman in an apron."

SO, to please him, she tucked it up, notwithstanding its discomfort. She walked beside him in happy abandon, oblivious of time. It was so much like the old days when he was a struggling reporter, and she not even a society bud. How much she had missed in those three will-o'-the-wisp years!

Twenty minutes brought them to the river; and on its sloping green-clad banks they lingered till the sun began to lower behind the distant hill-tops. Maurice had been very quiet; it was greater pleasure to listen to Pauline. She had forgotten to impress on him her seeming frivolity, and had talked with unreserve new to her, all unconscious that she was revealing her inmost longings and character.

Then they returned, and Maurice showed her a new path that led to the cottage. By the garden she paused. "I must gather some flowers for your office before you go," she said, breaking the stem of a tall verbena. "I just wonder who planted all these flowers."

Maurice did not answer. He was thinking of how well she fitted into the surroundings. She looked like a flower herself, she was so dainty, so sweet and wholesome.

"So you like this place?" he observed quietly.

"Like it!" she cried. "I love every spot of it. I just wish I did not have to leave."

"You don't need to," said Maurice with a peculiar earnestness in his voice."

Pauline looked up quickly. She was about to ask how he knew; but she stopped all at once and began nervously to arrange the flowers in her hand. She had seen an expression on his face that had never been there before—a look that made her heart suddenly beat very fast.

"I DON'T want you to leave it," he pursued. "It is the place I have always dreamed of you in." His voice deepened. "Do you think you could learn to care enough for me to give up your old life entirely?"

He waited anxiously for her answer. But Pauline was silent. She was too confused to say anything. It seemed so wonderful, that he should want to marry her, and all the while she had been sure he had no thought for her.

"I know it is selfish of me to ask you to give up so much; but I love you, Pauline!"—earnestly—"I think I have always loved you. Don't let me go without some assurance."

Quebec: Its Romance and Literary Tradition

(CONTINUED FROM PAGE 16.)

tion of a literature which has no excuse for failure. All the elements of life at a most adventurous, colorful and stirring period were combined. Against a barbaric life there were sent echoes from the then intellectual centre of the world, Paris. Nature, dramatic contrast and action were all godmothers at the christening of Canadian literature.

Nearly half a century ago the late Edmond Lareau wrote his "L'Histoire de la Littérature Canadienne," a book of five hundred pages. He began his record in the reign of Francis I., and when it closed M. Frechette had not been crowned by the French Academy, and neither Lampman nor Roberts had been heard of. It is an interesting fact that fifteen years later England's attention was called to "The Songs of the Great Dominion," collected by Mr. W. D. Lighthall, of Ottawa. French-Canadians have done more to preserve the historic records of Canada than all other Canadians put together.

An interesting figure in this literature is Sir James Le Moine, of Quebec. His career began in 1862, with the publication of a volume of the legendary lore of the St. Lawrence. He published many volumes afterwards. But, most of all, he has stood,

did that she's as plucky as she is pretty. That's the story, anyway."

"Have the Germans bothered you here?" asked Guild, buttoning a fresh collar.

"Not any to speak of. Of course they don't care anything about the frontier; they'd violate it in a minute. And I've been rather worried because a lot of these Luxembourg peasants, particularly the woodsmen and forest dwellers, are Belgians, or are in full sympathy with them. And I'm afraid they'll do something that will bring the Germans to Lesse Forest."

"You mean some sort of franc-tireur business?"

"Yes, I mean just that."

"The Germans shoot franc-tireurs without court-martial."

"I know it. And there has been sniping across the border, everywhere, ever since the destruction of Wiltz-la-Vallee. I expect there'll be mischief here sooner or later."

(TO BE CONTINUED.)

THE NEW PHOTOGRAVURE SECTION OF CANADIAN HOME JOURNAL.

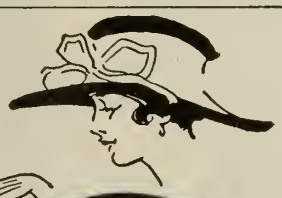
The long-promised picture section of the Canadian Home Journal is at last a reality. We appreciate exceedingly the patience of our readers in waiting for this section after our repeated promises and its non-appearance. Labour conditions, however, and difficulties in connection with transportation forced us to wait until this issue to introduce the new feature, which appears on pages 37 to 44.

It is our intention each month the section appears to reproduce a masterpiece of Canadian art, with a short biographical sketch of the artist. Accordingly, the famous painting, "After the Bath," by Paul Peel appears on page 37. In future the actual reproduction of the picture will be larger than in this number, and suitable for framing.

SIR WILFRID LAURIER.

The picture of Sir Wilfrid Laurier, reproduced on page 39, painted by John Russell, is the latest portrait of Canada's great statesman.

When the commission was given for this important work, it afforded Sir Wilfrid Laurier great pleasure to feel that the honor was to go to a Canadian artist. He frequently remarked "I am glad it is a young Canadian who is painting my portrait." Thirty sittings were required before the large canvas was completed showing Sir Wilfrid in his most characteristic attitude—dignified but kindly always—truly a picture of which Canada may be proud.



KODAK

"Click" the shutter, open the little door at the back of the Kodak, write the date and title—then, and only then, is the record complete.

Such a picture story of the children and other less important members of the family is forever fascinating, and permanently authentic.

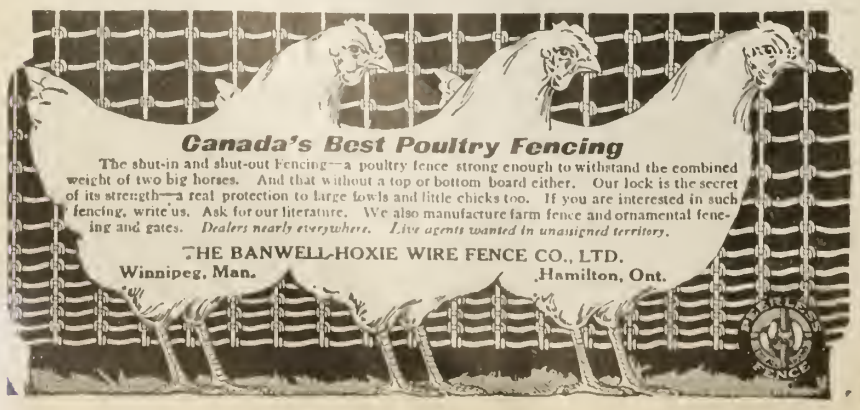
Canadian Candy and Chocolate

IN recent years, it has been demonstrated to the world that in most lines of manufacture the Canadian product is equal to, and in many, superior to foreign-made goods.

In the manufacture of candy and chocolate, Canada is at the top. The Pure Food Laws guarantee a wholesome product, while skill in manufacture has produced a quality and deliciousness unequalled in any country.

Within the last few months a tremendous demand for Canadian candy and chocolate has grown up in England and Europe. The large supplies sent to our men overseas during the war gave to many Europeans their first opportunity of appreciating the high qualities which the Canadian product possesses. European merchants and candy lovers are now clamoring for Canadian candies.

There may be some Canadians who do not realize that the most wholesome and delicious candy and chocolate are made here at home—but this is true.



You can eat Canadian-made candy and chocolate with assurance of their high quality and wholesomeness.

Candy and Chocolate Made in Canada.
The Best.
They are Splendid Food.

Concerning Books That are Worth While

(CONTINUED FROM PAGE 25.)

The Four Horsemen of the Apocalypse, by Vicente Blasco Ibanez. Translated by Charlotte Brewster Jordan. Published by J. M. Dent & Company. Price, $1.90.

IF we are to judge works of fiction by the broad humanitarianism which is also contained in a story well told, then undoubtedly "The Four Horsemen of the Apocalypse" is the greatest novel written in recent years.

That it should be written by a native of Spain is of added interest because, for a great many years, no novel of international importance has emanated from that country. But in "The Four Horsemen of the Apocalypse," Ibanez demonstrates that he has not only read widely of the great masters of fiction in all countries, but that he is conversant with most of the great economic movements which are now at work throughout Europe and America.

The story of the book concerns the family of Desnoyers and the way in which the Great War brings about a patriotic and spiritual rebirth in the hearts of its members. In the opening chapters the father of the family, Marcello Desnoyers, to avoid military service, leaves Paris in 1870 for Buenos Aires. After winning a fortune in South America he loses it and becomes employed with a millionaire rancher, Don Madariaga. Desnoyers marries Luisa, one of Madariaga's daughters, and a young German, Karl Hartrott, also employed by Madariaga, marries the other daughter, Elena by name. As the Hartrott family begins to grow up Karl, the father, plans to return to Germany and sells his share of the ranch so that he may buy preferment in official circles at Berlin. Later on Desnoyers places his large ranch in the hands of capable managers and decides to return to Paris. He reaches Paris an old man, seventy-three years of age, a few months before the outbreak of war.

But this is only the prologue of the great drama which is unfolded in the following chapters, which describe modern Paris, before and during the war, in vivid pictures which will be remembered for a long time by all careful readers.

The recital of the story of the Apocalypse by the Russian, Tchernoff, in Julio Desnoyers' rooms the night before the declaration of war, as related in the last chapter of Part One, is imaginative fiction of the highest degree. "The Four Horsemen are Pestilence, War, Famine, and Death, who precede the great beast of the Book of Revelations, as related by the Prophet John. The Russian was shaking his head with a fatalistic expression. The unhappy woman had not taken the death leap of her own accord—someone had intensified her desperation . . . The horsemen! The Four Horsemen of the Apocalypse! . . . Already they were in the saddle, already they were beginning their merciless gallop of destruction. The blind forces of evil were about to be let loose throughout the world; the agony of humanity, under the brutal sweep of The Four Horsemen, was already begun!"

The story then proceeds with the mobilization of troops on the western front, the great retreat to the Marne River, the hurling back of the Germans almost at the gates of Paris, and the wiping out of the Desnoyers' castle at Villeblanche en sur Marne, where the old man, Marcello Desnoyers, lives through the attack of the Germans and the counter-attack of his fellow-countrymen. The picture written by Ibanez, of the Battle of the Marne, is one of the most realistic descriptions, if not the greatest, which has yet been recorded.

"The Four Horsemen of the Apocalypse" epitomizes the spirit of France to a greater degree than any other novel which has so far been issued from the presses during the war. But it does more than this—it reveals the brutality of the military idea, of pride engendered by greed, of the need for better international relationships in business, art, and all fields of human endeavor. Vicente Ibanez has written a great work which is appealing to a sorrow stricken world as few books have ever appealed before. What is more, it will continue to appeal to readers of all classes, races, and creeds, for many years to come, and its message concerns the utter futility of war and all military effort.

Canadian Women's Institutes

(CONTINUED FROM PAGE 36D.)

Slate River Branch, in addition to its relief work, is building an Institute Hall. Mrs. G. D. Smith is President.

An entertainment is being planned by the Conmee Institute, with Mrs. J. Arnoid as President, to raise funds for Belgian relief work.

The Pickering Institute is planning some social meetings at which they will finish up work on hand for relief and Red Cross. Mrs. Robt. Clark is President.

Moorefield Women's Institute still keeps up the interest along Red Cross lines, and much splendid work has been accomplished during the war. The support of one Belgian child was pledged some time ago; for this purpose a collection is taken up every month, and if the required sum of 2.50 is not realized the balance is taken from the treasury. This branch has decorated the stage and purchased a piano for the Town Hall, also renovating the Council Chamber, and at the December meeting voted $25.00 to the village Public Library with more to follow. Being non-sectarian and having no creed but "For Home and Country," the Institute has been an important factor in the community, bringing together as it does in bonds of mutual interest and sympathy, very many women and girls who might otherwise meet very seldom; in this way gaining a wider knowledge of the questions touching particularly the lives of women and children. We might suggest that a little more space be given the matter of the use of the ballot by women, teaching them how to make the most intelligent use of the power now placed in their hands by the franchise.

Clayton Women's Institute holds its meeting on the last Saturday afternoon of each month. For the month of January four quilts were patched and quilted for the Belgians, we also knitted socks and stockings, and collected second-hand clothing in good repair. We gave $25.00 to the Rosmond Memorial Hospital, Aimonte, and $25.00 to the Muskoka Free Hospital for Consumptives. Now that the war is over we have decided to do some home improvement. Mrs. Newton Halfpenny is President of this Society.

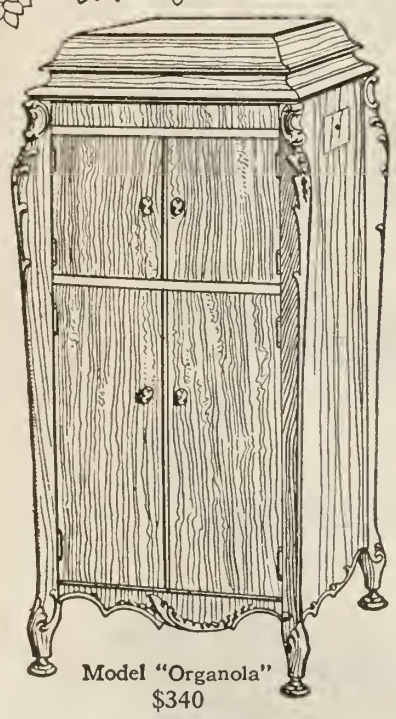
The Milford Women's Institute, with Mrs. Lewis Minaker as President, assisted by the Secretary, Mrs. Jas. McQuoid, raised the sum of $660.00 in various ways, viz., sale of home-made quilts, conducting booths at school fairs, Red Cross bags, etc., with which we bought yarn and material. Twenty-five dollars was sent to the Belgian Relief Fund, twenty-four dollars to the Prisoners of War Bread Fund, also forty dollars to the Serbian Relief Fund. During the last month the ladies have made a canvass of the Township and have collected nearly $400.00 for the new hospital in Picton, and are furnishing a two-bed ward complete, in honor of our boys from this locality who have made the supreme sacrifice. Now we are planning comforts for the Refugees.

In addition to Red Cross, Y.M.C.A., and Blind Institute work, the Uno Park Women's Institute is partially maintaining a patient in the Muskoka Free Hospital for Consumptives; matters of interest for the community's welfare are also discussed. Mrs. J. T. Welbourn, President; Mrs. G. L. Foster, Secretary-treasurer.

One box valued at $52 has been sent for Belgian relief and another is being prepared by the Price's Corners Institute, with Mrs. P. M. Hipwell as President.

Shelburne Institute, with Mrs. A. Wrigglesworth as President, and Miss May Hall, Secretary, has sent away 200 boxes during the year, and 170 pairs of socks.

Malton Institute is loud in its praise of the splendid nursing course which they have completed under the supervision of Miss Gradon. Mrs. D. J. Lanny is President of this Institute.



Alfred Park and Governor's Road with Mrs. Warren Turnbull as President, held a joint meeting on January 20th, to which the gentlemen were invited in the evening, after the government delegate had spoken in the afternoon.

The West Branch Listowel Institute, with Mrs. Alexander Ferguson as President, is specially interested in the younger members of their Society. They are urged to take part in the meeting and assist in the programme. A little girl of four years sang two songs at the December meeting.

Last year the York Road Institute raised over $550 for material to make up in Red Cross supplies. Mrs. Wm. Rankin is President of the Institute.

The Sheffield Institute, with Mrs. Truman Main as President, held a house-to-house canvass and raised

Model "Organola"
$340

The Only One With Organ Pipes

A credit to Canadian ingenuity and Canadian skill. The only musical instrument of its kind in the world equipped with tone control resonating pipes which include every note in the scale. That Phonograph is the

"Phonola" REGISTERED

Declared by experts to be the most wonderful improvement in Talking Machines since the beginning of the industry.

Records played on this "Organola" Model are given a really wonderful reproduction. Play a "sextette" record on the "Organola" Model, and you will have a real idea of the value of the tone control pipes. There is none of that confused blurring as when played on ordinary makes of phonograph, the tone control pipes of the "Organola" Model separating the different voices and notes, giving a pure, clear, lifelike rendition.

We take pleasure in announcing to the public that in the future the Phonola will be equipped with a new Universal Seamless Tapered tone arm which does away with all attachments. The entire arm is beautifully designed and finished, and is a marked contrast to the cheap dye cast arms seen on other makes of Phonographs.

It is the only Universal tone arm that is scientifically designed and the only one that will play all makes of records perfectly.

The Phonola will also be equipped with a new Aluminum Reproducer fitted with a special insulated rubber connection which eliminates metallic sounds from being transmitted to the Amplifier.

Equipped with these two new devices, the Phonola takes another step in advance of all competitors as furnishing the truest, clearest and sweetest tone it is possible to reproduce.

"Phonolas" from $25 to $340.

Hear Them

There's a new list of selections each month. They are played with a sapphire point. No needles to change. Beautiful, clear, "Phonola" records that are practically indestructible.

DEALERS: The "Phonola" agency is the most valuable asset you can add to your business today. Write for particulars.

Quebec: Its Romance and Literary Tradition

(CONTINUED FROM PAGE 71.)

he and the beautiful manor house. "Spencer Grange," near Quebec, for the color and charm of early days. Here he entertained all the stray lights from the old world and the new that came by way of Quebec. The historian, Parkman, loved the "Grange," and so did Dean Stanley and Charles Kingsley, and Howells and Goldwin Smith, and many others.

It seemed like a dream to stand in that old library of his the other day, with a delightful granddaughter of the historian to show one old books and prints and bric-a-brac especially beloved by the collector. "Spencer Grange" is typical of the residences of Quebec gentry nearly a century ago. Then the architectural ideal had departed a little from the austere French town houses of an earlier period which still abound in Quebec City. There is a spaciousness and an English tone creeping in which makes them altogether charming. In the drawing-room of the Grange a great oval window looks out on meadow-like spaces of garden and shrubbery. Sir James Le Moine owned many acres of the land surrounding his house, part of which was bought by the Government for the official residence of the Lieutenant-Governor of the province, so that "Spencer Wood" adjoins the Grange. In the quaint, circular-shaped library, which has been left practically untouched, are

—much money. I don't can money enough in the factory get. I must get some other way."

Impulsively she stooped and drew from her stocking a small roll of greasy, ragged bills.

"Here is money. You give me hundred dollar?"

Before Miss Meyer, her face pale, distressed, could answer, Israel had burst out, "Yetta, Yetta, you want hundred dollar? I give you it—mine all."

"Israel—I go home."

Suddenly Isaac Goldman showed an apparently complete change of front. Indifference might be a better drawing card with the girl.

"Yes, you better go home, Yetta. Come round to-morrow night, and get your money. You may change your mind about the New York proposition, or—dancin' next week."

With a leer in the girl's direction, and a cold sneering laugh, he was gone.

Not one of the three spoke a word until the theatre was well lost in the night's blackness.

"Tell us all, dear," urged Miss Meyer, hardly above her breath. "We're your good friends."

"I want hundred dollar. I must have hundred dollar," breathed Yetta.

Sickened by the thought that the poison of money had already stolen into the veins of this tender young thing, Miss Meyer groaned, "Yetta, Yetta, what do you want with so much money?"

"Ach, no, no, Miss Meyer, please don't ask me no more. You and Israel here, sure you're my best friends. I only wish I could tell you, but, no, I must have hundred dollar. That's all. I dance for money. I like for dance by our school. I hate, hate, hate, for to dance by the t'eater. It's bad t'eater. I shame myself to dance by bad t'eater, only I make more money. I must have hundred dollar. You let me the money borrow off you, Israel. I work and work, Missis Teacher, and give back, but I ain't goin' to dance in the bad t'eater no more."

And that was all of Yetta's confidence that could be won despite Miss Meyer's entreaties and Israel's shy lovering.

BUT Miss Meyer was not one to give up hope. Somehow she would draw the truth from Yetta. All through her work-steeped day at the Mission the teacher's thoughts were busy with the teasing problem. Her mind was fired with new determination. That night when the class filed in, she noted that the last comers were Israel and Yetta. At the close of the lesson she beckoned them to her.

"It made me very happy to see you here again to-night, Yetta," she came down from the platform to grasp the girl's hands. "You—."

"Miss Meyer," interrupted a voice from the doorway and she turned to greet Jacob Rothschild. "I was afraid I should be too late," he smiled the smile that always made you feel you were his best-loved friend. "A blow-out a half mile from town. No, don't go," he included the girl and the young shoemaker in his glance, "My business is with you, Miss Yetta Solomon, I believe. I have just come from your room. I was told I should find you here.

"Things have been happening during my illness, Miss Meyer," Mr. Rothschild said in his genial way. "You see, I put in a new manager in the Rothschild Emporium the day before I came down with pneumonia, and he installed a fine new system of checking up departments and clerks. Some while back he discovered that a young girl had been stealing us blind."

A sobbing breath escaped Yetta, but Mr. Rothschild apparently had eyes and ears only for Miss Meyer.

"It seems he finally got this girl to confess she'd been helping herself rather liberally to blouses, furs, and what-not, and he decided to make an example of her. So he gave her her choice of full restitution of every penny or—prison."

Her eyes dilated with terror, Yetta moaned aloud.

"This morning when I made my first visit to the office in some months," Mr. Rothschild went on to explain, "I learned that Miss Yetta Solomon had just been in to make her last payment and pay—"

"Telegram over the 'phone for you, Mr. Rothschild," the Institute office-boy sang out from the door-way.

No one moved or spoke for a full minute after Mr. Rothschild's hurried exit. Then Israel laid his hand tenderly on the arm of the girl who stood, her head drooping, her fingers tensely interlaced. "Ach, Yetta," he whispered, "I'm much with you lovin'. No matter, you are one good, beautiful girl, and once we get married—."

"That can't never be, Israel," Yetta raised great tragic eyes to his. "You can't never have for wife a t'ief—."

"I can't and won't believe it, Yetta," Miss Meyer said sadly. "There must be some mistake. We are your good friends. Tell us how it happened."

"There ain't nothin' to tell. It's done and all over, and paid for. Oh, it's been so hard," with a little heart-breaking cry.

"As I was saying," Mr. Rothschild startled the little group by his unexpected appearance, "the name of Becky Solomon is now stricken from

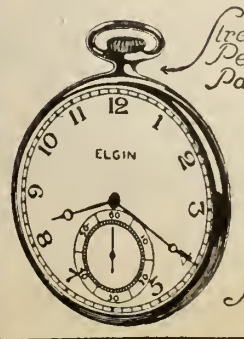
Elgin—"The Spirit of Reconstruction"

"Zero Hour"

"THE secret of our success Over There is bound to be the secret of our success in the business world. And right here is it's symbol—my Elgin watch."

The Elgin stands for the new idea in war and in business – everything must run *on schedule time.*

When zero hour for Germany was set by the Allies, it not only marked the downfall of autocracy, but also registered the last zero hour of the Allied schedule.



For weeks, months, years, our great war machine worked on schedule. Everything moved like well-oiled watch-works—in unison and to the tick of time.

When the Elgin marked 11 o'clock on November 11th, our chief task was completed our great work done. The whole world knows how the bravery, the resource and the efficiency of our own Canadian boys have won for us glory and honor.

Now a new chapter opens. Reconstruction is the vital issue. Greater production in every factory, every mine, on every farm, by every Canadian man and woman—is the first essential—*we must all work to schedule.*

The Elgin is at once the symbol of all this and the gateway to its fulfilment. It continues to be our trusted Ally in Peace and production—just as faithfully and unerringly as it upheld the service on land, on sea and in the air.

There is a jeweler in your vicinity who is equipped to help you safeguard your Time.

$111.75 for a reception for their returned soldiers.

One member of the River Valley Institute, Mrs. Wm. Meggison, holds the record of knitting 350 pairs of socks for the soldiers. Can any one beat this? In addition to their Red Cross work, this Institute, with Mrs. Edgar Morrow as President, has taken a keen interest in a domestic science short course. This Institute has also undertaken to clothe a small needy child in Belleville.

The Williscroft Institute, with Mrs. James Rushton as President, is studying reconstruction problems pertaining to their community.

Victoria Harbor Institute is already planning for their 1919 School Fair and local improvement work of all kinds. Mrs. Lumsden, the President, reports that it is more difficult to get workers now than it was during the war.

The Charlecote Institute, with Mrs. Welch as President, is engaged in making quilts for the Belgian poor, six having already been completed.

The members of the Morewood Institute, accompanied by their husbands and friends, held their annual "At Home" as the guests of Mr. and Mrs. S. A. Glascow. The President, Mrs. H. Myers, reports an unusually delightful time.

Mrs. C. Macoun, President of the Seymour West Institute, reports that this Institute is interested in educational and social problems, particularly school advancement.

The Rothsay Institute, with Mrs. J E. Oxby as President, made certain that every soldier and nurse from Rothsay had a Christmas box, all arriving in good time. Belgian relief and patriotic work are the chief interests of the Club.

Miss Mabel Hannah of Wesley Institute, Fort William, addressed the Port Arthur Women's Institute on Community Work at their last regular meeting. Mrs. A. J. Barrie is President of this Institute.

Dr. Barnardo's Home for Boys, the Toronto Sick Children's Hospital and the French refugees have all benefited by the good work done by the Dunchurch Institute, under the leadership of the President, Mrs. W J. Markham.

The Staffa Institute, with Mrs. A R. Oliver as President, have had a piano rented for the past year, and find it so helpful in their meetings that they have decided to purchase it.

Mrs. J. A. Connell, President of the Algonquin Institute, reports that this Society sent two tons of vegetables and fruit to the Khaki Club, Montreal At present they are making garments for the Belgians.

Home improvement and charitable work are engaging the attention of the Wheatley Institute, with Miss Mary Plastow as President.

Outside of war work, the Thornton Institute, with Mrs. James A Jamieson as President, has been assisting the Children's Shelter in Barrie.

The Devlin Institute led by the ex-President, Mrs. Beninger, erected a flag in honor of their boys at the front. The flag pole was set in a cement block and the flag hoisted at the Children's Fair. Mrs. Arthur Cook is President of this Institute.

Mrs. P. L. Kastum, President of the Sebringville Institute, reports that they have been able to interest the citizens in securing street lights and eleven have been installed in the town. Relief work is also being done.

The Wellesley Institute is undertaking village improvement, and also considering a sewing course. It was decided at their January meeting to dispose of their Red Cross funds by donating to the Serbian relief. Mrs A. J. Saunders is President of this Institute.

Newmarket Institute has started a campaign for the Y.W.C.A. There is much need for such a place for lonely girls in this village, and the Institute is doing a very commendable work under the supervision of the President, Mrs. Starr.

"Mrs. Pankhurst and Women's Work" was the subject discussed at the Sandford Institute January meeting. Mrs. R. Meek is President of the Society.

The West Ops Institute led by the President, Mrs. Geo. Darke, purchased a Victory Bond, and held a sale for the benefit of the Home Relief Society, realizing about $70.

our records clean. I am giving myself a great pleasure, Miss Yetta," he drew an envelope from his pocket. "Here is the full amount of your payments. I fancy you can use it for wedding finery," with a smiling glance at the young shoemaker who involuntarily had pressed closer to Yetta as if to protect her from he knew not what. "And now will you honor an old man by shaking his hand?"

"My dear," Miss Meyer drew the young girl into her arms, when the door had closed behind Yetta's benefactor. "So it was all Becky's fault—"

"Ach, she is so pretty," interrupted Yetta, championing her sister's cause hotly, "she wanted pretty things to wear. It is right a pretty girl should look pretty. Never wished she to do wrong. My little, little Becky. Ach, Missis Teacher, all the time I said by myself I must my promise keep by my poor dead mother. She said, 'Yetta, you are older as Becky. Always of her take care and think for her first.' I tried so hard, and see what I let her do." Tears blinded her. Suddenly she dashed them away with a gesture of impatience.

"What for do I cry? I'm happy, happy. I have here my two good friends, you, Missis Teacher, and—my Israel, and I ain't never goin' to dance in the bad t'eater no more."

THE END.

In and About Your House
AND BARNS WITH
Northern Electric
POWER and LIGHT

NORTHERN Electric Power and Light means *Power* to do most of the chores in half the time, doing away with a lot of hard work.

It means *Light*—a good supply of happy, clear, safe, glowing electric light—better than you ever had the old way.

Never in the history of isolated electric generating systems was there an ideal so reliable, so successful as *Northern Electric Power and Light*. It has all the finishing touches to make it the most complete, efficient, reliable, economical electric Power and Light System that modern science has devised—truly it is a great achievement.

Hundreds and hundreds of farmers throughout Canada are using Northern Electric Power and Light with intense satisfaction, and you, too, can very easily become one of them.

Electricity will turn the grindstone, cream separator, grain grinder, churn and a host of other chores about the farm. It will clean the house, wash and iron clothes, wash the dishes, cool the home, and do a score of other household tasks all at a surprisingly low cost.

Northern Electric Power and Light is automatically controlled—simple and easy to look after. Back of it is more than twenty-five years of electrical experience, a Dominion-wide distributing organization with complete stocks in nine of Canada's largest cities.

When you buy Northern Electric Power and Light you get a system which enjoys an international reputation—a means of easily procuring almost every kind of electrical appliance built especially for this service, such as Northern Electric lamps, wire, motors, pumps, irons, sewing-machine, vacuum cleaner, etc. See that your whole electric outfit is Northern Electric.

Quebec: Its Romance and Literary Tradition

(CONTINUED FROM PAGE 74.)

volumes which collectors covet hopelessly and prints of old Quebec that are invaluable. I noticed, pinned against a bit of woodwork, a proclamation in French, dated 1812, ordering all American residents to leave Quebec, and under it, in English, the order for mobilization of 1914.

The very names of Garneau, De Gaspe and Bourassa evoke a whole train of literary reminiscence that it would be fascinating, indeed, to follow.

IT is, however, in poetry that these French-Canadians excel. Octave Cremazie is our first French poet, and he wrote valiant war songs. I thought of his lines calling on the dead soldiers of the past to support the banner of to-day in that much-loved poem, "Le Drapeau de Carillon," as I stood in the low-raftered room on Buade street where he used to spend many hours in his brother's book shop. Probably the most truly national poet among the French-Canadians is Frechette, whose work contains a stirring racial touch. His inspiration was found, not in the Quebec of the past, but the Quebec of to-day. Here is a man who ranks with Lowell or Whittier in new world literature. He is a democrat of the democrats. He is known to his countrymen as "le rossignol de la democratie." His greatest work is perhaps the tragedy of "Papineau," which was crowned by the French Academy in 1881. Pamphile Le May, is there not a mystical pathos in the very name? And his work reminds one of the music of Chopin and Liszt. Cremazie has been called the Hugo, Frechette the Lamartine, and Sulte the Beranger of Canada.

When I asked about present day writers, with a special reference to French-Canadian poets—for there is tradition to be followed here—I was met, for the most part, with something very much like negation. Quebec people are proud of the work of their fellow-citizen, Canon George Frederic Scott, but do not point to any one man or woman among the French who is doing remarkable work at present. I was shown one pretty lyric written by Leon Mercier Gouin, a son of the Premier of the Province, in "Le Terroir: Organe de la Societe des Arts, Science et Lettres de Quebec." I heard of several other promising writers, and meeting many of the young French-Canadians, hearing the music of their speech—for it is an absurd fallacy that the French-Canadians of family have forgotten their traditions—realizing in them the sensitiveness of an inherently poetic race, I do not believe that the flame will die out.

And, after all, does not the eternal romance of this ancient city lie in the fact that in her history extremes have always met? The natural extremes of a climate that can be bitterly cold and at times sun-warm to the core; the extremes of temperament, as the abiding place of two races far as the poles apart in their expression of feeling.

That is the way one must take and leave it, town of old dreams and dear desires, looking out on the river and the hills from under the Citadel, over which two flags have flown—Quebec, the immortal city of the new world.

Literature and Journalism

SEVERAL inquiries have been received as to the placing of photo plays in Canada.

At the present time there is no market in Canada, from the fact that there is here no producing centre. There is talk of such a centre near Banff, the city of Calgary having voted a generous sum towards its inauguration. It is rumored that the Allen Theatre Company also entertain the idea of a Producing Centre. But these plans are as yet in embryo. The chances for an unknown writer of scenarios, however good the work, would be poor indeed in the United States, where it is a well-known fact that the unprotected writer in this special field is at the mercy of unscrupulous readers, who do not hesitate to appropriate a good plot.

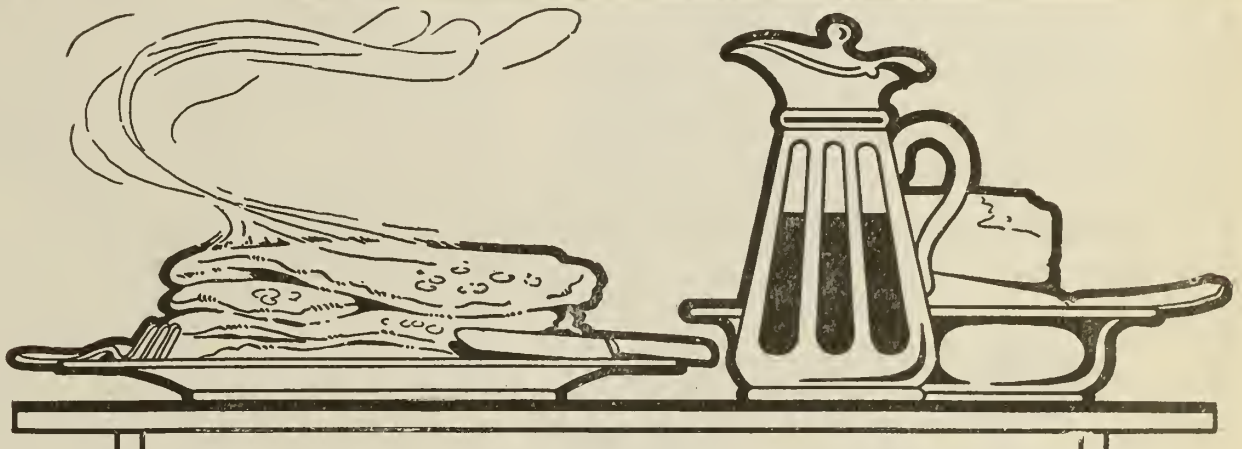
I would strongly advise inexperienced writers who hope to achieve screen dramas and are not sure of the way to market them, to subscribe to "The Canadian Moving Picture Digest," Toronto, where students can get an idea of what is being produced, in story form, and also of American markets. Moreover, the editor assures me that any particularly promising plots or scenarios submitted to the "Digest" and sent on by them to American centres, would be, in a measure at least, protected.

THE qualifications for this work are a keen dramatic instinct, originality, and a practical knowledge of the uses of action in play-writing. No field is more promising so far as financial benefit goes, to the writer possessed of these essentials.

I am asked what text book I would advise as a practical guide for the study of poetic metre.

Looking at my own book shelves, I find that nothing can ever take the place of Sydney Lanier's splendid work, "The Science of English Verse." Brander Matthews has also written an excellent text book on versification. As a brief practical guide, "The Editor," of Ridgewood, New Jersey, issues an inexpensive little book called "Rhymes and Metres," by Winslow, which might serve as a valuable help.

Everyone That Has a Home or Wants a Home Needs This Book



Write for Free 1919 Furniture Catalogue

It is just off the press, and contains descriptions of hundreds of beautiful new pieces of furniture, rugs and stoves, profusely illustrated, some being shown in colors. Burroughes pays freight charges anywhere in Ontario.

LUX

Out of the Butterfly Class

(CONTINUED FROM PAGE 70.)

"But I am only a butterfly," objected the girl, tremulously. "And I can't cook. All I can do—Oh, Ivan, my cake!"

She dropped the flowers, and flew to the kitchen, all unawares that she had called him by his first name. But he had noticed; and it offset his momentary chagrin over her seeming disregard of his sincerity.

A cloud of blue smoke poured from the oven when she opened the door. She drew out the cake, a blackened, charred thing, and flat as the proverbial pancake—she had forgotten the baking powder.

If her face had been red before, heat and mortification made it even redder now. That he of all people should witness such a humiliating spectacle! She could have burst into tears. Yet she wanted to laugh at the absurdity of it. Instead, she set the pan on the reservoir and turned half-defiantly to Maurice, who had followed her and stood in the doorway.

"There now! You see what a failure I am. You don't want a wife who is not even an excuse at cooking."

He laughed; and a wavering little smile flickered across her red lips. If he could laugh at it——

"You don't need to cook," he said comfortingly. "We'll hire a maid to do that."

"No, we won't either," she flashed back with her old-time imperiousness. "I'll go to a cooking school and learn for myself before I'll marry any man. I'm not going to have you eating maid's——" She stopped in embarrassment.

He was beside her in a moment. "Then you do care for me," he said eagerly, grasping the little burnt hand that hung limply at her side. "Pauline, tell me, do you care enough to marry me? I want you so, dear."

She lifted sweet, serious eyes to his. "I do love you," she said earnestly. "Only, you oughtn't to marry such a—such a poor——"

She did not finish; for he had her in his arms and his lips were on hers.

"I CAN'T wait for you to learn to cook," he said after a time. "Will you marry me to-morrow, Pauline? We'll persuade Roxy to come back, and I'll have a water system installed."

"Do you mean we won't have to leave here?" she cried in delight, disengaging herself from his arms. "Oh, Ivan, I'd go anywhere with you, but it would be heaven to live here. Only—perhaps the agent had another renter in view. And wouldn't it be too long from your office? I'd hate to go back to Whiteside; but, if it would be easier for you, I'd go."

He laughed and drew her to him again. "My little doubter, don't raise any more objections. We won't need to rent the place; for, you see, it is already mine."

Then, in answer to her bewildered look, he explained: "I own the cottage, dear. Do you remember the day last summer when we were talking by the lake shore, you remarked that you'd like to live in the country? I knew then that you were tired of the other life. Well,—I bought this place then and had it furnished."

"But that was a year ago," she said, perplexed. Then, as light dawned on her—"Oh, Ivan, and you even thought of the Blue Willow china."

"It was too presumptuous of me, wasn't it? But, you see, I wanted you even then, sweetheart. Did you never wonder whose house this was?"

"I guess I was too excited to ask who owned it." she admitted. "Just to think I've been living in your house all these weeks!"

"Ours," he corrected. "It will be to-morrow, if you'll just say so. You didn't answer my question, dear."

"I'll have to be married in Roxy's gingham apron, then," she said with a happy laugh, "for I haven't anything to wear. Do you suppose she would mind?"

THE END.

Girls! Lots of Beautiful Hair

35 cent bottle of "Danderine" makes hair thick, glossy and wavy

Removes all dandruff, stops itching scalp and falling hair

To be possessed of a head of heavy, beautiful hair; soft, lustrous, fluffy, wavy and free from dandruff is merely a matter of using a little Danderine.

It is easy and inexpensive to have nice soft hair and lots of it. Just get a 35 cent bottle of Knowlton's Danderine now—all drug stores recommend it—apply a little as directed and within ten minutes there will be an appearance of abundance, freshness, fluffiness, and an incomparable gloss and luster, and try as you will you cannot find a trace of dandruff or falling hair.

If you want to prove how pretty and soft your hair really is, moisten a cloth with a little Danderine and carefully draw it through your hair—taking one small strand at a time. Your hair will be soft, glossy and beautiful in just a few moments—a delightful surprise awaits every one who tries this.

Try a 35 cent bottle at drug stores or toilet counters.

You Admire a Well Kept Lawn

There is no further need for you to envy your neighbor's lawn. You can have one just as good yourself by using a **J. D. LAWN RAKE.** It removes all dead grass and rubbish, without injuring the young shoots. The J. D. Lawn Rake is approved and used by Government Institutions, etc. NOW is the time to buy one of these rakes. If your dealer cannot supply you, write us direct. Dept. 25.

Swift's Premium Ham

The new steam treatment for pale sallow skins

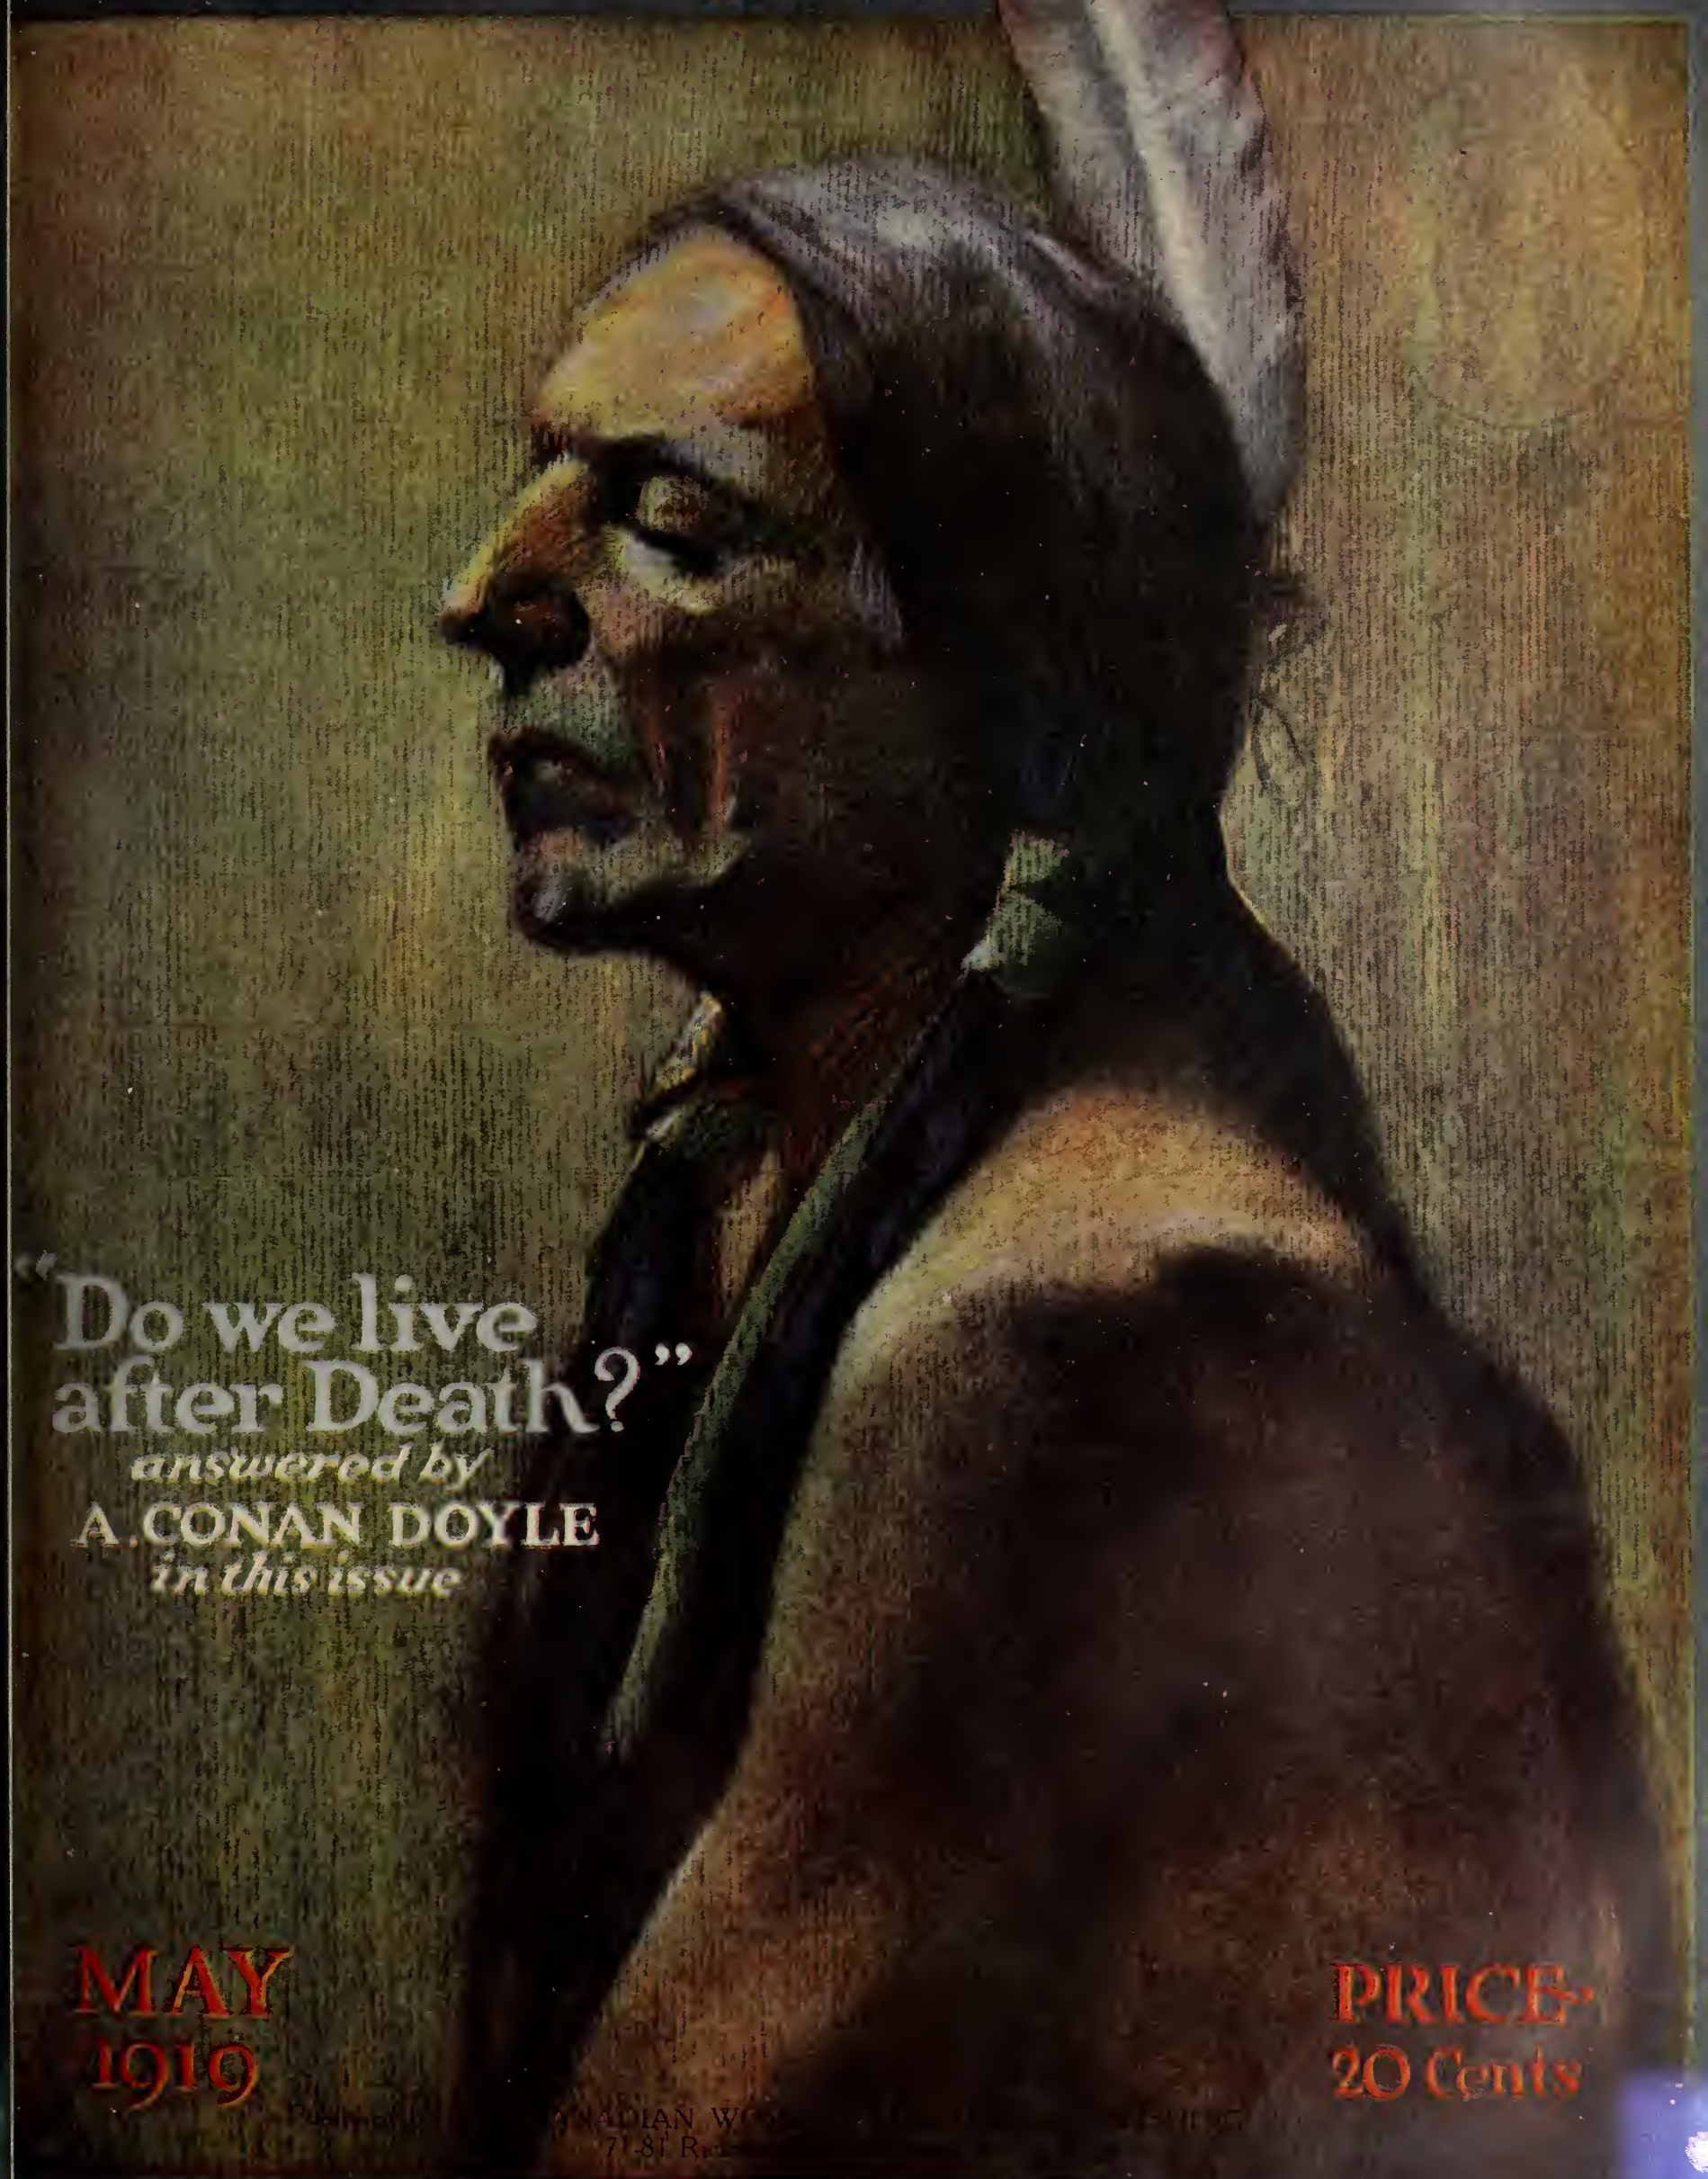
WHEN your skin is pale and colorless, "pasty," try this treatment one night a week. After the very first treatment your cheeks will begin to show a fresh, new color.

Fill your basin full of hot water—almost boiling hot. Bend over the top of the basin and cover your head and the basin with a heavy bath towel, so that no steam can escape. Steam your face for thirty seconds.

Now lather a hot cloth with Woodbury's Facial Soap. With this, wash your face thoroughly, rubbing the lather well into the skin with an upward and outward motion. Then rinse well with warm water, then with cold. Finish by rubbing for thirty seconds with a piece of ice.

A 25c cake of Woodbury's Facial Soap is sufficient for a month or six weeks of this treatment and daily cleansing. For sale at drug stores and toilet goods counters throughout the United States and Canada.

Send for sample cake of soap with booklet of famous treatments and sample of Woodbury's Facial Powder



Send 6 cents for a trial size cake (enough for a week or ten days of any Woodbury Facial treatment) together with the booklet, "A Skin You Love to Touch." Or for 12 cents we will send you the treatment booklet and samples of Woodbury's Facial Soap and Facial Powder.

Address The Andrew Jergens Co., Limited, 5204 Sherbrooke St., Perth, Ontario.

"Gillett's Lye Eats Dirt"

Gillett's Lye Cleans and Disinfects

Do you use

GILLETT'S LYE?

If so, you will never be without it, but if you are not familiar with its many uses, investigate. There is probably no article on the market to-day that is useful for so many purposes in and around the house as Gillett's Lye.

For making soap—One can of Gillett's Lye dissolved and mixed with refuse grease drippings, scraps, etc., will make ten pounds of fine cleaning or laundry soap in 20 minutes.

For washing dishes—By using one small teaspoonful of Gillett's Lye in a gallon of hot water dishes can be washed in half the usual time.

For cleaning and disinfecting refrigerators.

For removing ordinary obstructions from drain pipes and sinks.

For removing crust and grease from frying pans, broilers and roasting pans.

For house cleaning, scrubbing, cleaning chambers, cuspidors, bath tubs tile floors, etc.

By the use of Gillett's Lye outdoor closets can be kept in perfect sanitary condition. If sufficient is used, closets of this kind need never be cleaned. As the article is very cheap, it should be used freely.

It will save doctors' bills.

For disinfecting dog kennels—It absolutely destroys all bacteria and infectious germs, and prevents disease.

For the stables—Stables may be thoroughly cleaned and disinfected by the proper use of Gillett's Lye, which will give them a healthy atmosphere and to a great extent remove the stable odor.

For spraying trees and vines.

For killing roaches, vermin, etc.

A positive exterminator of rats and mice.

"Improved!" You Will Exclaim When You See The Big June Number

The Photogravure Section will appear again in this issue, continuing the series of masterpieces by Canadian painters. Homer Watson's picture, "Truants," which hangs in the Canadian National Gallery, will be reproduced, also a picture of the artist and a short biographical sketch. The "Truants" shows a forest scene, and is truly representative of the style and method of treatment used by this great Canadian painter.

The other pages of the Photogravure Section contain pictures of "The Daughters of the Devonshire Household," photographs of interesting bungalows which may be built at moderate cost, also Douglas Fairbanks in several of his unique "stunts," and a page of the newest bathing suits.

The June cover will have an exceptional appeal to all lovers of Eastern color. "The Cockatoo," painted by Carton Moorepark, has all the brilliance of color for which this bird is noted. A Japanese girl in native costume holds the cockatoo in her arms, admiring its gay plumage, her own brilliant kimono and deep coloring making the entire picture a riot of Oriental splendor.

Montreal and Its Literary Traditions is the subject of Katherine Hale's article in the June Number, continuing the series which is proving so helpful to our readers.

A new feature will be introduced in the June Number in the form of a Fashion talk, by Charlotte M. Storey. This writer is in a position to tell Canadian women about all the newest "wrinkles" in dress, and about all the little accessories to the successful costume.

"A JUNE EVENING," a poem by L. M. Montgomery. The poet has said, "What is so rare as a day in June?" but Miss Montgomery in her charming poem, "A June Evening," says, "What is so rare as a night in June?"

"AMATEUR NIMRODS AMUCK IN TEMAGAMI." One of the welcome sounds we hear in the spring is "Sap's running," and almost at once we hear, "Let's go fishing." That is just what we are going to do with Harold C. Lowery in "Amateur Nimrods Amuck in Temagami." This is a really true fish story, and the scene is laid in Temagami, that charming spot in Northern Ontario. The story has been illustrated by Peter C. Sheppard, one of our own Canadian artists.

Perhaps some of us think we know all the tricks in the fishing game or have caught the largest fish in Ontario. If that is so, we ought to read the story in the June issue with added interest, comparing our experiences with those of Mr. Lowery.

"FORTY-LOVE." Did you ever play tennis, and were you ever interrupted by some fussy individual just when you were scoring "forty-love"? What would you do if that fussy individual were an old man who blurted out, "Will you marry me?" Of course you wouldn't, and so the old chap who had set out to marry the first good-looking young girl he saw had to set his face homeward to his old housekeeper, who declines his offer of marriage in favor of the town butcher, leaving our old friend, as the story goes, "a better and a wiser man."

"MORE PLAY IN THE COUNTRY" is the theme of a timely, practical and unusually helpful article in the June Number, by Louise Richardson Rorke.

We have shown plans for city houses, summer houses, small houses and large houses, but for June, Clarence Thetford has designed a house particularly suited to the country.

This Month's Cover

Throughout America it would be difficult to find a studio of any consequence in which the old Blackfoot Indian, Thundercloud, has not posed.

This interesting character, which Peter C. Sheppard has so cleverly drawn for the cover of the present number, was born in Canada, near Battleford, but, true to the roving propensity of his kind, he travelled afar, and finally became a scout in the United States army. Joining a circus, old Thundercloud went to Europe, but later returned to America to take up his "artistic career," and for twenty years he posed in studios in all parts of America. From one of these he selected his wife—a white girl, studying art at the time—and they made their home in Dingman's Ferry, Pennsylvania.

The sketch shown on the cover was made when the old red man was quite aged, nearing seventy years. With his death, which occurred about three years ago, art students lost an interesting model.

Neōlin Soles

Peace-Time Production *on* Neōlin Soles

If you have been deprived of the comfort and economy of Neōlin Soles, you will welcome the tremendously increased production of our factory.

War's urgent needs prevented us from securing additional heavy steel machinery. But now all bars are down. Production is ahead on a peace-time basis greater than ever. Shoe manufacturers can be supplied with all the Neōlin Soles they need. Shoe merchants can show you all kinds of shoes with Neōlin Soles. Every pair of shoes you buy now can be Neōlin-Soled.

Think what this means to you and your family in shoe economy, in comfort, in style. Neōlin Soles are flexible—even on narrow, smart shoes; they are long-wearing and waterproof.

Ask your shoe merchant to show you the new spring models with Neōlin Soles; the school shoes for children; persuade your husband to try Neōlin Soles, too.

Neōlin Soles—half-soles and full-soles—are nailed or sewn on all kinds of shoes by manufacturers, repairmen, and at home.

Neōlin Soles have been a great success. So they have imitators. But the methods and materials that make Neōlin Soles superior are known only to Goodyear. You can be sure of Neōlin Sole quality only when you see the trade mark "Neōlin" on the bottom of the sole.

This price ticket will mark for you the store where shoes with Neōlin Soles are in stock.

The Goodyear Tire & Rubber Co. *of* Canada, Limited

CANADIAN HOME JOURNAL EDITORIAL

THE TOWN IN WHICH YOU LIVE. There are many very excellent reasons, perhaps the strongest being its tremendous need, why the Spring of Nineteen-nineteen should be a red letter one in community improvement throughout Canada. For four years every energy has been rightly devoted to the production of food, but with the home-coming of our soldiers the task is being taken up by an ever-increasing number of workers, thus permitting time for the improvement of homes, towns and communities.

A careful stock-taking of the conditions of many Canadian towns reveals almost an absolute lack of plans for the beautifying of their streets, parks and individual buildings. Anyone who desires may improve his own property, but the towns as a whole are not entering into big schemes and interesting every man, woman and child to make their town the prettiest in Canada. There is scarcely a village which does not boast of perhaps one beautiful velvety lawn with trees, shrubbery and flowers, but just as "one robin does not make Spring," so one beautiful home cannot cover up a whole community of neglected ones. It is the effort on the part of every citizen which will transform our ugly places into beauty spots. No stone should be left unturned to influence public opinion in favor of a "clean-up" campaign—the schools may assist, the women's organizations, the men's meetings and the churches each should have an important share in the boosting for more beauty everywhere.

One reason which retards progress in the beautifying of our homes and communities is the constant moving which takes place. People are here to-day and there to-morrow, and are prone to say: "What's the use?" Why can we not overcome this feeling and, although mere renters, plant something for permanency—a rosebush, a flowering shrub or a tree, something which will beautify the earth even if we may not be present to enjoy its fragrance? Someone will—and flowers are always better than rubbish. Let us put forth a sincere effort this Summer to make at least one spot in this old world more beautiful.

Do we realize that our boys are coming from some of the most beautiful places in the world? They will undoubtedly be delighted to see their native land, and will view it through eyes softened by sentiment and prejudice, but they cannot fail to compare the villages here with those beautiful spots in England and France. And they will do us a very great amount of good—if we will but listen and profit by their suggested improvements. They should be the means of disseminating much information and artistic feeling throughout Canada, and in a few years the improvement in our architecture and town planning will doubtless be evident.

YES, PHYSICAL CULTURE FOR BOYS, BUT FOR GIRLS, ALSO. "Mother," (it was a small boy who had just completed a course in swimming who spoke), "you must find a teacher and take lessons, or how will you feel this summer when we go to the lake together?"

This question from a boy of nine brings us face to face with the fact that much more is being done for the development of Canadian manhood than womanhood. Physical culture, swimming and all manner of sports are planned for the boy as soon as he is able to take the training, but if the girl wishes to have these advantages, it is a much more difficult matter to arrange in other than our larger cities. The excellent work of the Y.M.C.A. for the young boys is not duplicated by any organization for girls, yet the need is equally great.

Canada is lax in this. And it remains only for the people generally to become aware that such is the case to have the fault corrected. We do not have to wait for legislation. It is quite within our power to make physical culture classes and gymnasiums for girls more numerous, more popular and more helpful.

It is not uncommon to see churches turning their attention to boys' problems, boys' sports and boys' welfare so carefully that they quite forget their girls have the same requirements. The work as far as it goes is quite commendable, but it is only meeting the problem half-way. Not all of our young men are returning wounded—thousands will come back perfectly trained and fit—yet very little is being done that our young women may be equally developed.

A prominent educationist recently said: "We cannot have A1 mothers from C3 girls." Following the great educational wave for "better babies" which swept over this continent recently, was one which demanded "better mothers"; now we are going back still one step farther and crying "better 'teen age girls." Then shall we have A1 mothers.

Thoughtlessness about physical training for girls may probably be traced to the old-time fondness for the fragile type of doll girl, who could faint gracefully at the psychological moment without any difficulty whatever, and sweetly and resignedly "fade as the Autumn leaf" if she were disappointed in love. This lamentable condition is fortunately now safely past, and there is perhaps nothing in this old world considered more beautiful and more admired than the sparkle of perfectly healthy girlhood. So far, then, have we gone. Now it remains for us to make it possible for each and every girl in our land to be physically strong. Not only possible, but easy. It is the simplest and most natural course possible for the boy to enter classes for his training. They are planned for him. They tempt him. His chums all attend. It should be exactly the same for the girl.

LETTERS FROM ACROSS THE SEA. Can you remember when you were "just past ten" what a joy it was to receive a letter, addressed unmistakably to you, from someone you had never seen, and coming from across the ocean? Perhaps you did not have such a treat until you were too grown up to appreciate it, but you can at least imagine the thrills.

Because some thoughtful people have realized what a far-reaching influence an empire-wide correspondence among the children would have, they have formed a plan by which either schools or individual children may write to and receive letters from boys and girls in Great Britain, Australia, India or South America.

It reads like a fairy tale, but it is quite true, and children are already receiving and sending letters from and to all parts of the British Empire. What an interesting way to study geography, and perhaps history, too. Surely there will not be a teacher in Canada who will not take advantage of this new method of combining pleasure with education for her pupils.

This work is undertaken by what is known as the League of Empire, and we trust such a splendid effort will meet with the co-operation and support of Canadian teachers, pupils and parents.

OUR AIM

To publish a magazine which will be worthy of Canadian womanhood.

To at all times keep both editorial and advertising columns clean, wholesome and truthful.

To be a leader in thought, and a fearless speaker in all vital questions.

To, as far as possible, publish and reproduce the work of Canadians that our readers may become familiar with their own people, their own literature, and their own country, with its wonderful possibilities and glorious history.

The piquant charm of a clear, soft skin. Read below how by proper care you can have this greatest of all attractions.

The right treatment for skin blemishes

Nature intended your skin to be flawless

IS YOUR skin fine, soft, attractive? If not, find out just why it is marred by blemishes; then start immediately to gain the natural beauty, the clear, radiant skin that can be yours.

Your skin is changing every day. As the old skin dies, new skin forms to take its place. This new skin is fine, clear, unblemished. By proper care, you can keep it as flawless as nature intended it to be.

Skin specialists are tracing fewer and fewer troubles to the blood. They say more often, skin blemishes can be traced to the bacteria and parasites that are carried into the pores of the skin with dust, soot and grime. To clear your skin of blemishes caused by this insidious and persistent enemy, use regularly the following special treatment:

To remove skin blemishes

Just before retiring, wash in your usual way with warm water and Woodbury's Facial Soap; then dry your face. Now dip the tips of your fingers in warm water and rub them on the cake of Woodbury's until they are covered with a heavy, cream-like lather. Cover each blemish with a thick coat of this soap cream and leave it on for ten minutes. Rinse very carefully with clear, hot water, then with cold.

In addition to this special treatment, use Woodbury's regularly in your daily toilet. This will make your skin firm and active. It will help the new skin to resist the frequent cause of blemishes. Before long your complexion will take on a new clearness and freshness.

Get a cake of Woodbury's Facial Soap today and begin tonight the treatment your skin needs. You will find this treatment, and many others for the commoner skin troubles, in the booklet wrapped around every cake of Woodbury's Facial Soap. Woodbury's is on sale at drug stores and toilet goods counters throughout the United States and Canada. A 25-cent cake will last a month or six weeks.

BLACKHEADS ARE A CONFESSION *that you are using the wrong method of cleansing for your type of skin. A special treatment for this trouble is among the famous treatments in the Woodbury booklet wrapped around every cake of Woodbury's Facial Soap.*

Sample cake of soap with booklet

of famous treatments and samples of Woodbury's Facial Powder, Facial Cream and Cold Cream for 15 cents.

For 6 cents we will send you a trial size cake (enough for a week or ten days of any Woodbury Facial treatment) together with the booklet of treatments, "A Skin You Love to Touch." Or for 15 cents, we will send you the treatment booklet and samples of Woodbury's Facial Soap, Facial Powder, Facial Cream and Cold Cream. *Address The Andrew Jergens Co., Limited, 5205 Sherbrooke Street, Perth, Ontario.*

MADE IN CANADA

Sharing Dad With Judy

"Judy," whispered the child, extending painfully stiff arms, "I have to tell you something. Come close and listen. Maybe I will die before you forgive me—"

Nan—an important young lady.
Dad—her father.
Judy—her new stepmother; the modern twentieth century stepmother, very unlike Snow White's. But this Nan did not know at first, hence a story

By Madge Macbeth

ILLUSTRATED BY MARY ESSEX

NAN'S opinion of step-mothers was definite and disagreeable. It coincided exactly with that of Grimm and Hans Andersen from whose portrayals it had been formed. To Nan a step-mother was a step-mother just as black was black and wrong was wrong; a fascinating monster of deceit who could cheat an enthralled father into thinking her a model parent, all the while she was inflicting the subtlest cruelties upon his children.

"Like Snow White's," thought Nan, bitterly.

The child sat in starched uncomfortableness on the top step of the verandah. Her heart seethed with hot rebellion and with self-pity. She was actually too miserable to cry although it seemed impossible to put her finger on the spot where something hurt.

To escape unhappiness for ten years is more than most of us expect, but Nan did not realize this. She thought that Life's entire course should run as smoothly in the future as the past, with a background of sleepy old Bayfield, with Granny, with puppies and kittens and a few children, and with occasional visits from Dad. Nan's mother had died when she was born and her father, filled with a sudden loathing of the place where Hope and Happiness lay buried under a bed of lilies-of-the valley, went back to the city and feverish business activity, which he said, provided him with a fair substitute for the waters of Lethe. Granny was both father and mother to Nan, who was seldom conscious of her loss.

BUT a week ago, something had happened. Granny had received a long letter from Dad. It had made her very thoughtful and a little tearful. Simultaneously, Nan felt herself an object of unwonted interest in the straggling little village; glances of well-intentioned commiseration followed her and frequently her sensitive ears caught the words, "Poor child!" as she passed. She spoke to Granny.

"Your father has married—again, my dear." The old lady spoke bravely. "This is quite as it should be, for he must have been very lonely all these years. I have had you, and you have had me, but he has had no one. I am very glad, and know you are."

"He has had me," protested Nan.

Granny nodded. She could not explain that Lawrence Johnson had always looked upon his child as the too-extravagant price he paid for her mother's life and that his visits to Bayfield were prompted by duty rather than love.

"I am going away for a little holiday," she continued, "for you are big enough to look after yourself and Dad will not require two women to look after him."

Nan wriggled out of her grandmother's embrace. She felt more indignation than sorrow at the thought of the old lady's departure for youth accommodates itself to vacancies in the home with unflattering ease. But this summary eviction, the first act of a cruel and heartless step-mother, was intolerable! No wonder Granny wiped her eyes as she read the letter, and no wonder people said, "Poor child!" It would probably be her turn next.

AMY MEADE supplied her with further information. Amy was a ferret-like child who possessed unerring judgment in picking out the gossipy gems from her elders' conversations. These she polished and set in a fashion delightfully original.

"I know something about you," she challenged with a triumphant superiority which galled. "You've got a step-mother!" The tone was such as might have been used had she said, "You've got a jail-bird in the family."

"As if I didn't know," Nan flung at her, angrily. "She's *my* step-mother, you see."

Nan took no joy in her possession. On the contrary. But she did not intend to be looked upon with mawkish pity. Rather she chose to be regarded with respectful awe, as a Chistian martyr, one who bears the blows of Life without flinching and with uncomplaining fortitude.

"That's nothing to brag about," taunted Amy, "even if she *has* got the money. She's snippy and citified and 'she has different ideas,'" the quotation was one of the neighborly speculations. "You'll see how long it'll be before you go away to your grandmother. 'It always complicates matters when there is a child,'" she ended borrowing one of Mrs. Henderson's lugubrious prognostications.

NEITHER of them understood this, but Nan felt that every awful fate, including sudden death, hung over her. She resolved not to wear the woman's gifts, eat her food, sleep with her door unlocked and never, never to allow the fiend to comb her hair!

Pride and a sort of fatalism prevented her from appealing to Granny. Were they not both powerless?

So Granny had left and Nan was left, to greet her father and his bride. She wished she could think with passionate tenderness of her father, but as hers was a nature which loves most fondly that upon which it can demonstrate its affection, the nearest approach she could make, was a feeling of fierce jealousy new-born with loss. "My own dear lost Dad," she murmured repeatedly.

A horn sounded and Nan drew herself up stiffly, her eyes fastened upon the distant gateway. The sharp coughing of a motor climbing the steep hill which curved suddenly into the grounds was no louder than the beating of her heart. She felt that suffocation would kill her before the car drew up at the steps.

"HELLO, little girl," called her father. "Here we are—dusty and thirsty. How are you? You look very sweet and clean."

Nan went slowly down and lifted a cool cheek to her father. With a child's keen intuition she saw that he was nervous, that he hoped this first meeting would be pleasant and that his anxiety was not for her—no! but for his bride. Nan hugged herself and felt very wicked and powerful and triumphant. There was grim satisfaction in having the upper hand, even for a moment.

"Come, dear, and welcome—er—Judy," her father continued. "You two must love each other heaps."

The child turned insolent eyes toward the woman who had climbed out of the car. Neither so young, nor beautiful, nor dashing as she had expected. Furthermore, she was not at all nervous.

Nan extended three limp fingers.

Judy hesitated the fraction of a second before taking them and Johnson watched uneasily while pretending to fuss with bags and parcels. If Nan expected her indifference to be met by any sign of conciliation or affection, she was disappointed. Her face flamed under the keen scrutiny of her father's wife who smiled as she said:

"I AM so glad to have a grown up daughter to help me make things comfortable for Dad. We are going to have lots of fun spoiling him, aren't we, Nan?"

Nan set her teeth and made no reply. But Judy had not waited for one. She admired the view, and sniffed happily among the lilacs and said she was vulgarly hungry. Then she passed into the house

Do We Live After Death?

The New Revelation by A. Conan Doyle

ILLUSTRATED BY E. J. DINSMORE

THE subject of psychical research is one upon which I have thought more, and been slower to form my opinion about, than upon any other subject whatever. Every now and then as one jogs along through life some small incident occurs to one which very forcibly brings home the fact that time passes and that first one's youth, and then one's middle age, is slipping away. Such an incident occurred to me the other day. There is a column in that excellent little paper, "Light," which is devoted to what occurred on the corresponding date a generation—that is thirty years—ago. As I read over this column recently I had quite a start as I saw my own name, and read the reprint of a letter which I had written in 1887, detailing some interesting spiritual experience which had occurred to me in a seance. This will confirm my statement that my interest in the subject is of some standing, and I may fairly claim since it is only within the last year or so that I have finally announced that I was satisfied with the evidence, that I have not been hasty in forming my opinion. If I narrate some of my personal experiences and difficulties, the reader will not, I hope, think it egotistical upon my part, but will realize that it is the most graphic way in which I can sketch out the points which are likely to occur to any other enquirer. When I have passed over this ground I will be able, I hope, to discuss something more general and impersonal in its nature.

When I had finished my medical education I found myself, like many young medical men, a convinced materialist. I had never ceased to be a theist, because it seemed to me that Napoleon's question to the atheistic professors on the starry night as he voyaged to Egypt: "Who was it, gentlemen, who made these stars?" has never been answered. To say that the universe was made by immutable laws only put the question one degree farther back as to who made the laws. I did not, of course, believe in an anthropomorphic God, but I believed then, as I believe now, in an intelligent Force behind all the operations of Nature—a force so infinitely complex and great that my finite brain could get no farther than its existence. Right and wrong I saw also as great obvious facts which needed no divine revelation. But when it came to a question of our little personalities surviving death, it seemed to me that the whole analogy of Nature was against it. When the candle burns out the light disappears. When the electric cell is shattered the current stops. When the body dissolves there is an end of the matter. Each man in his egotism may feel that he ought to survive, but let him look, we will say, at the average loafer—be it the loafer of the street corner, or even more perhaps the club loafer—would anyone contend that there was any obvious reason why *that* personality should carry on? It seemed to me a delusion, and I was convinced that death did indeed end all, though I saw no reason why that should affect our duty toward humanity during our transitory existence.

This was my frame of mind when spiritual phenomena first came before my notice. I had always regarded the subject as the greatest nonsense upon earth, and I had read of the conviction of fraudulent mediums and wondered how any sane man could believe such things. I met some friends, however, who were interested in the matter, and I sat with them at some table-moving seances. We got connected messages. I am afraid the only result that they had on my mind was that I regarded these friends with some suspicion. They were long messages very often, spelled out by tilts, and it was quite impossible that they came by chance. Someone, then, was moving the table. I thought it was they. They probably thought I did it. I was puzzled and worried over it, for they were not people whom I could imagine as cheating—and yet I could not see how the messages could come except by conscious pressure.

ABOUT this time—it would be in 1886—I came across a book called "The Reminiscences of Judge Edmunds." He was a judge of the United States High Court and a man of high standing. The book gave an account of how his wife had died, and how he had been able for many years to keep in touch with her. All sorts of details were given. I read the book with interest, but absolute skepticism. It seemed to me an example of how a hard, practical man might have a weak side to his brain, a sort of reaction, as it were, against those plain facts of life with which he had to deal. Where was this spirit of which he talked? Suppose a man had an accident and cracked his skull, his whole character would change, and a high nature might become a low one. With alcohol or opium or many other drugs one could apparently quite change a man's spirit. These were the arguments which I used in those days. I did not realize that it was not the spirit that was changed in such cases, but the bodily medium through which the spirit worked, just as it would be no argument against the existence of a musician if you tampered with his violin so that only discordant notes could come through.

I was sufficiently interested, however, to continue to read such literature as came in my way. I was amazed to find what a number of great men—men whose names were to the fore in science—thoroughly believed that spirit was independent of matter and could survive it. When I regarded spiritualism as a vulgar delusion of the uneducated, I could afford to look down upon it; but when it was endorsed by men like Crookes, whom I knew to be the most rising British chemist; by Wallace, who was the rival of Darwin, and by Flammarion, the best-known of astronomers, I could not afford to dismiss it as beneath my intellectual level. For some time I was sustained in my skepticism by the consideration that many famous men, such as Darwin himself, Huxley, Tyndall and Herbert Spencer, derided this new branch of knowledge; but when I learned that their derision had reached such a point that they would not even examine it, and that Spencer had declared in so many words that he had decided against it on *a priori* grounds, while Huxley had said that it did not interest him, I was bound to admit that, however great they were in science, their action in this respect was most unscientific and dogmatic, while the action of those who studied the phenomena and tried to find out the laws that governed them, were following the true path which has given us all human advance and knowledge. So far I had got in my reasoning, so you will perceive that my skeptical position was not so solid as it had been.

It was somewhat reinforced, however, by my own experiences. I was, of course, working without a medium, which is like an astronomer working without a telescope. I have no psychic powers myself, and those who worked with me had little more. Among us we could just muster enough of the magnetic force, or whatever one may call it, to get the table movements, with their suspicious and often stupid messages. I still have notes of those sittings and copies of some, at least, of the messages. They were not always absolutely stupid. For example, I find that on one occasion on my asking some test question, such as how many coins I had in my pocket, the table spelt out: "We are here to educate and to elevate, not to guess riddles," and then: "The religious frame of mind, not the critical, is what we wish to inculcate." Now, no one could call that a puerile message. On the other hand, I was always haunted by the fear of involuntary pressure from the hands of the sitters. Then there came an incident which puzzled and disgusted me very much.

(CONTINUED ON PAGE 62.)

Let us again state that the accompanying article is published that the readers of Canadian Home Journal may have a knowledge of what Spiritualism is. It is distinctly an educational essay, and as a magazine we neither endorse nor condemn the statements made. The subject is one of present day interest, and one about which all should be informed.

We had very good conditions one evening, and an amount of movement which seemed quite independent of our pressure. Long and detailed messages came through, which purported to be from a spirit who gave his name and said that he was a commercial traveller who had lost his life in a recent fire at a theatre at Exeter. All the details were exact, and he implored us to write to his family, who lived, he said, at a place called Slattenmere, in Cumberland. I did so, but my letter came back, appropriately enough, through the dead letter office. To this day I don't know whether we were deceived by some tricky sprite, or whether there was some mistake in the name of the place; but there are the facts, and I was so disgusted that for some time my interest in the whole subject waned. I was content to study a subject, but when the subject began to play elaborate practical jokes upon me it seemed time to call a halt. If there is such a place as Slattenmere in the world I should even now be glad to know it.

I WAS in practice in Southsea at this time, and dwelling there was General Drayson, a man of very remarkable character, and one of the pioneers of spiritualism in this country. To him I went with my difficulties, and he listened to them very patiently. He made light of my criticisms of the foolish nature of many of these messages, and of the absolute falseness of some. "You have not got the fundamental truth into your head," said he. "That truth is, that every spirit in the flesh passes over to the next world exactly as it is with no change whatever. This world is full of fools and knaves. So is the next. You need not mix with them, any more than you do in this world. One chooses one's companions. But suppose a man in this world who had lived in his house alone and never mixed with his fellows, was at last to put his head out of the window to see what sort of place it was, what would happen? Some naughty boy would probably say something rude. Anyhow, he would see nothing of the wisdom or greatness of the world. He would draw his head in, thinking that it was a very poor place. That is just what you have done. In a mixed seance, with no definite aim, you have thrust your head into the next world and you have met some naughty boys. Go forward and try to reach something better." That was General Drayson's explanation, and though it did not satisfy me at the time, I have come to the conclusion that he knew a great deal more than I did.

These were my first steps in spiritualism. I was still a skeptic, but at least I was an inquirer, and when I heard some old-fashioned critic saying that there was nothing to explain, and that it was all fraud, or that a conjurer was needed to show it up, I knew at least that that was all nonsense. It is true that my own evidence up to then was not enough to convince me, but my reading, which was continuous, showed me how deeply other men had gone into it, and I recognized that the testimony was so strong that no other religious movement in the world could put forward anything to compare with it. That did not prove it to be true, but at least it proved that it must be treated with respect and could not be brushed aside. Take a single incident of what Wallace has truly called a modern miracle. I choose it because it is the most incredible. I allude to the assertion that D. D. Home—who, by the way, was not, as is usually supposed, a paid adventurer, but was the nephew of the Earl of Home—the assertion, I say, that he floated out of one window and into another at the height of seventy feet above the ground. I could not believe it. And yet when I knew that the fact was attested by three eye-witnesses, who were Lord Dunraven, Lord Lindsay and Captain Wynne, all men of honour and repute, who were willing afterward to take their oath upon it, I could not but admit that the evidence for this was more direct than for any of those far-off events which the whole Christian world has agreed to accept as true.

I still continued during these years to hold table seances, which sometimes gave no results, sometimes trivial ones, and sometimes rather surprising ones. I have still the notes of these sittings, and I extract here the results of one which were definite, and which were so unlike any conceptions which I held of life beyond the grave that they amused rather than edified me at the time. I find now, however, that they agree very closely with the revelations in "Raymond" and in other later accounts, so that I view them with different eyes. I am aware that all these accounts of life beyond the grave differ in detail. I suppose any of our accounts of the present life would differ in detail—but in the main there is a very great resemblance, which in this instance was very far from the conception either of myself or of either of the two ladies who made up the circle. Two communicators sent messages, the first of whom spelled out as a name "Dorothy Pothelthwaite," a name unknown to any of us. She said she died at Melbourne five years before at the age of sixteen, that she was now happy, that she had work to do, and that she had been at the same school as one of the ladies. On my asking that lady to raise her hands and give a succession of names, the table tilted at the correct name of the headmistress of the school. This seemed in the nature of a test. She went on to say that the sphere she inhabited was all round the earth; that she knew about the planets; that Mars was inhabited by a race more advanced than we, and that the canals were artificial; that there was no bodily pain in her sphere, but there could be mental anxiety; they were governed; they took nourishment; there was no sleep; she had been a Catholic, and was still a Catholic, but had not fared better than the Protestants; there were Buddhists and Mohammedans in her sphere, but all fared alike; she had never seen Christ and knew no more about Him than on earth, but believed in his influence; spirits prayed and they died in their new sphere before entering another; they had pleasures—music was among them. She added that they had no rich or poor.

THIS lady bade us good-night, and immediately the table was seized by a much more robust influence, which dashed it about very violently. In answer to my questions it claimed to be the spirit of one whom I will call Dodd, who was a famous cricketer, and with whom I had some serious conversation in Cairo before he went up the Nile, where he met his death in the Dongolese Expedition. We have now, I may remark, come to the year 1896 in my experiences. Dodd was not known to either lady. I began to ask him questions, exactly as if he were seated before me, and he sent his answers back with great speed and decision. The answers were often quite opposed to what I expected, so that I could not believe that I was influencing them. He said that he was happy, that he did not wish to return to earth. He had been a freethinker, but had not suffered in the next life for that reason. Prayer, however, was a good thing, as keeping us in touch with the spiritual world. If he had prayed more he would have been higher in the spirit world. (This, I may remark, seemed rather in conflict with his assertion that he had not suffered through being a freethinker, and yet, of course, many men neglect prayer who are not freethinkers.) His death was painless. He remembered the death of Polwhele, a young officer who died before him. When he (Dodd) died he found people to welcome him, but Polwhele had not been among them. He had work to do. He was aware of the fall of Dongola, but had not been present in spirit at the banquet in Cairo afterward. He knew more than he did in life. He remembered our conversation in Cairo. Duration of life in the next sphere was shorter than on earth (both spirits said that). He had not seen General Gordon, nor any famous spirit. Spirits lived in families and in communities. Married people did not necessarily meet again, but those who loved did meet again.

I have given this synopsis of a communication to show the kind of thing we got—though this was a very favorable specimen, both for length and for coherence. It shows that it is not just to say, as many critics say, that nothing but folly comes through. There was no folly here. On the other hand, what proof is there that these statements are true? I could see no such proof, and they simply left me bewildered. Now, with a larger experience in which I find that the same sort of information has come to very many people independently in many lands, I think that the agreement of the witnesses does, as in all cases of evidence, constitute some argument for their truth. At the same time, I could not fit such a conception of the future world into my own scheme of philosophy, and I merely noted it and passed on.

The greatest joy of Heaven is emptying Hell.

I continued to read many books upon the subject and to appreciate more and more what a cloud of witnesses existed, and how careful their observations had been. This impressed my mind very much more than the limited phenomena which came within the reach of our circle. Then or afterward I read a book by Monsieur Jacolliot upon occult phenomena in India. Jacolliot was Chief Judge of Chandragore, with a very judicial mind and rather biased against spiritualism. He conducted a series of experiments with native fakirs, who gave him their confidence because he was a sympathetic man and spoke their language. He describes the pains he took to eliminate fraud. To cut a long story short, he found among them every phenomenon of advanced European mediumship, everything which Home, for example, had ever done. He got levitation of the body, the handling of fire, movement of articles at a distance, rapid growth of plants, raising of tables. Their explanation of these phenomena was that they were done by the Pitris or spirits, and their only difference in procedure from ours seemed to be that they made more use of direct evocation. They claimed that these powers were handed down from time immemorial and traced back to the Chaldees. All this impressed me very much, as here, independently, we had exactly the same results, without any question of American frauds, or modern vulgarity, which were so often raised against similar phenomena in Europe.

SOME time before this, about 1891, I had joined the Psychical Research Society, and had the advantage of reading all their reports. The world owes a great deal to the unwearied diligence of the society, and to its sobriety of statement, though I will admit that the latter makes me impatient at times, and that I feel that in their desire to avoid sensationalism they discourage the world from knowing and using the splendid work which they are doing. Their semi-scientific terminology also chokes off the ordinary reader, and one might say sometimes after reading their articles what an American trapper in the Rocky Mountains said to me about some university man whom he had been escorting for the season. "He was that clever," he said, "that you could not understand what he said." But in spite of these little peculiarities all of us who have wanted light in the darkness have found it by the methodical, never-tiring work of the society. Its influence was one of the powers which now helped me to shape my thoughts. There was another, however, which made a deep impression upon me. Up to now I had read all the wonderful experiences of great experimenters, but I had never come across any effort upon their part to build up some system which would cover and contain them all. Now I read that wonderful book, Myers's "Human Personality," a great root book from which a whole tree of knowledge will grow. In this book Myers was unable to get any formula which covered all the phenomena called "spiritual," but in discussing that action of mind upon mind which he has himself called telepathy he completely proved his point, and he worked it out so thoroughly with so many examples, that, save for those who were wilfully blind to the evidence, it took its place henceforth as a scientific fact. But this was an enormous advance. If mind could act upon mind at a distance, then there were some bodily properties which were quite different to matter as we had always understood it. The ground was cut from under the feet of the materialist, and my old position had been destroyed. I had said that the flame could not exist when the candle was gone. But here was the flame a long way off the candle, acting upon its own. The analogy was clearly a false analogy. If the mind, the spirit, the intelligence of man could operate at a distance from the body, then it was a thing separate from the body. Why then should it not exist when the body was destroyed? Not only did impressions come from a distance from those who were just dead, but actual appearances of the dead person came with them, showing that the impressions were carried by something which was exactly like the body, and yet acted independently and survived the death of the body. The chain of evidence between the simplest cases of thought-reading at one end, and the actual manifestation of the spirit independently of the body at the other, was one unbroken chain, each phase leading to the other, and this fact seemed to me to bring the first signs of systematic science and order into what had been a mere collection of bewildering and unrelated facts.

About this time I had an interesting experience, for I was one of three delegates sent by the Psychical Society to sit up in a haunted house in Dorsetshire. It was one of these poltergeist cases, where noises and foolish tricks had gone on for some years, very much like the classical case of John Wesley's family at Epworth in 1726, or the case of the Fox family at Hydesville, near Rochester, in 1847, which was the starting point of modern spiritualism. Nothing sensational came of our journey, and yet it was not entirely barren. On the first night nothing occurred. On the second, there were tremen-

Cure for Burned Fingers

By William Hugo Pabkc

ILLUSTRATED BY NORMAN PRICE

"I just dare you to convince the crowd we are on our honeymoon! I'm some actress," said the girl.

"I'm some actor," chuckled Billy.

And this is the way the fun began. But you must read the story to learn of the cure for their "burned fingers."

"I was in an exultant mood this afternoon," said Billy, "but it has passed now. The end is too near."

IT was suffocatingly hot. The people in the chair car were lolling in dejected attitudes and fanning themselves languidly. It would have needed very little imagination to picture them with their tongues hanging out. As the train pulled out of Montreal, Billy Brayling sank into his seat prepared for a desperately uncomfortable time.

Things had not gone well with Billy recently. His ingenuous face looked decidedly woebegone. Before leaving Boston for his Canadian trip he had been given a letter of introduction to "the dearest girl in Toronto"; so Mrs. Fleming had assured him. When he called to present his letter he had found the house closed and the people away for the summer. Furthermore, his real mission in Canada was to sign up John K. Stafford, of Montreal, for a large contract for machinery. But Mr. Stafford had not been in Montreal; he had gone to Quebec the day before.

Billy let his languid glance wander the length of the car to rest uninterestedly on one after the other of his fellow-passengers. A most dismal-looking lot they were as they suffered patiently or impatiently, according to temperament, in the sweltering car. He turned his chair slightly and became interested forthwith. In the chair beside his was a girl who looked refreshingly immaculate and cool, which fact of itself was a relief and a distinction. He studied her covertly through his thick-lensed glasses for a few moments and gave silent thanks that there was something attractive to look at. She seemed entirely unconscious of him as she divided her attention between the magazine in her lap and the view through the car window of the stewing suburbs.

BILLY decided after careful scrutiny that he entirely approved the cool green of her travelling suit and the contrast of the white wings in her jaunty hat. He liked her very evident joyousness that refused to be quenched by temporary discomfort. Above all he was attracted by her face, prettily flushed and holding the charm of mobility. As openly as he dared he watched its play of expression and the sudden light in her eyes as she saw something that interested her for the moment. A very companionable girl he thought. Too bad that the conventions forbade—. Oh, pshaw! what was the use?

It was merely tantalizing to watch her so he turned away and stared moodily out of his window. He began to speculate upon what would happen if he should politely and respectfully offer her a magazine—very politely and entirely respectfully. She would probably freeze him. And then how'd he feel!

The train stopped at St. Lambert, and Billy was on the point of making up his mind to shatter the conventions. He had reached the vindicating motto, "Faint heart ne'er won, etc.," when the Pullman conductor entered the car with a telegram.

"Miss Grey," he cried. "Miss Hazel Grey."

The girl eagerly reached for the message and tore it open. Billy gasped and then chuckled audibly as his hand sought an inner pocket. He stood before her and bowed low as he presented a small white envelope rather the worse for wear.

"The gods are good sometimes even to the least deserving, Miss Grey," said Billy.

SHE took the letter with a little puzzled frown, hastily glanced at the address and opened it. After a moment's perusal she looked up brightly at the tall young chap towering above her.

"How delightful, Mr. Brayling," she exclaimed, giving him her slender hand. "I was dreading a lonely trip to Quebec, but after all, I am to have a nice companion. I don't even have to use my own judgment about your being nice because Ruth Fleming says you are."

"That's like Ruth," laughed Billy; "she sees everything through rose-colored glasses." He seated himself with an exaggerated sigh of content.

"But what a coincidence—our meeting like this." Miss Grey laid aside her magazine and very definitely made preparations for conversation.

"I called on you in Toronto and found the house deserted," said Billy. "You can imagine my disappointment in view of the fact that Ruth described you as being the 'dearest girl in Toronto.'"

"I'll have to quote you and say 'that's like Ruth; she sees everything through rose-colored glasses,'" laughed Hazel.

"It is rather remarkable our being on the same train. Of course I didn't know you from Adam—from Eve rather—until the conductor called your name." Billy looked a trifle sheepish and continued ingenuously: "I have to confess that I was wondering what would happen if I offered you a magazine, or a book, or a box of candy—or—or a touring car or some little thing like that."

"As though I didn't know it," she jeered, wrinkling her nose at him impishly.

"YOU did? I thought you were absolutely unconscious of my existence."

"That's the eminently proper attitude for a girl; isn't it? Besides, I'm a fair actress and I like to practise."

Later, at luncheon, across a small table in the dining-car they veered from generalities to the fascinatingly personal topic of plans for the immediate future.

"The telegram that was the primary cause of our meeting," said Hazel, "contained my marching orders from Dad. He couldn't wait for me at Quebec. He says he has engaged rooms for me at the Chateau Frontenac. So I am to stay there to-night and then proceed—proceed is the proper term, I believe—to Metis Beach to-morrow afternoon."

"What do you know about that!" exclaimed Billy. "Why—why—I've got to go there to-morrow myself." He tried his best to make it sound convincing, and in his earnestness, almost believed it himself.

"How perfectly wonderful," cried Hazel gaily. "What a coincidence!" She cast a quizzical glance across the table, which Billy, absorbed in quick mental calculation, missed entirely. He was rapidly planning his coming interview with Mr. Stafford, whom he hoped to find at the Chateau. Perhaps it would be possible to do his business that night; if not, surely the next morning would suffice.

"By the way," he began musingly. "how far is it to—er—to this place where we're going to-morrow?"

"What place?" asked Hazel, her eyes dancing

"Why—the beach you just mentioned."

"Where you had planned long ago to go?" asked Hazel innocently.

Billy reddened furiously. He looked up. Their eyes met and together they burst into wholehearted laughter.

"Oh, what's the use?" he protested. "Be nice."

"All right; I will. It's Metis Beach—and it's about two hundred miles east—and you never heard of it before in your life. So there," she ended with a grimace.

"What's a little white lie between friends?" said Billy joyously.

ARRIVING at the Chateau, Billy found that Mr. Stafford had just left for parts unknown. After a few moments' cogitation he shrugged his broad shoulders. If business persisted in eluding him there remained pleasure, at least, and he should worry. After a cheerful, companionable dinner he and Hazel tried dancing but gave it up as being too hot. They strolled out on the terrace. Even among that throng they were a noticeable pair. The boy was tall and broad-shouldered with a shock of fair hair above his frank, ingenuous face; the girl at his side graceful and laughing-eyed, every fibre of her being

Hand in Hand With the Centuries and Strictly British

By Ethel Cody Stoddard

A History of The Hudson's Bay Company in Canada

Crest of the Hudson's Bay Company.

WOVEN with romantic adventure, which at times rivals Fenimore Cooper, the friend of our 'teens, the history of the most wonderful organization of its kind in the world—and that British—reads like an enchanted tale. It dips back into the centuries, struggles through two of them, and emerges stronger than ever in the third—the twentieth.

While Eastern Canada has always, and still does, feel the influence of the Hudson's Bay Company, yet it is primarily the West which it has mothered, and over which it still has a strong hold. But even at that, from Labrador to British Columbia it has interests, especially in fur trading and land.

In Labrador there are three fur trading posts under this company's name, In Quebec twenty-eight. It has two stores in Ontario, twenty-four fur posts, and holds land in seven townsites; in Manitoba, one store, sixteen posts and nine townsites; in Saskatchewan, eleven posts, two stores and seven townsites; in Alberta, four stores, five townsites and sixteen fur posts. British Columbia holdings are sixteen fur posts, five stores and two townsites, and in what many of us think of as being lost in the shuffle—the North-West Territories—there are fourteen fur posts. All of which covers the Dominion fairly well, and seems to bind up the country and the company part and parcel with each other.

Bastion at Victoria, Built in 1842.

THE year 1670 looks to be a long way past yesterday. But in that year men were keenly alive to all things new, and the glint of a gold piece did not go unseen.

Charles II., though unwilling to allow any minute to escape till squeezed dry of all possible pleasure, had at the same time a taste for commerce. He, therefore, listened attentively to the project of two adventurous Frenchmen—Radisson and Chouart (afterwards the Sieur de Groseilliers), who had gone to Canada in the middle of the seventeenth century, and, becoming enamoured of the country, wanted to follow up its possibilities. Backed by the King and such men as the Duke of York, Prince Rupert, Christopher, Duke of Albemarle, the Earl of Craven, the Earl of Arlington, and the Earl of Shaftesbury, these men finally set out on a history-making voyage, the influence of which has come down through the centuries.

In June, 1668, two vessels—the "Nonsuch" and the "Eaglet"—sailed from Gravesend. The skipper of the latter, however, even after crossing the Atlantic, decided that the whole thing was a foolish venture, and returned to London. The "Nonsuch," with more adventurous spirits on board, including Groseilliers, kept on and found the Bay which a little more than half a century before had been discovered by Hudson.

The ship entered the Nemisco, on the south-east corner of the Bay, and the representatives of King Charles took possession of it, naming it Prince Rupert's River, after their distinguished patron. Here a stone fort was built and called "Charles Fort." After the long winter passed they sailed out of the Bay and down to Boston, and from there back to London to give an account of their adventures, and in general to start things moving toward permanent prosperity.

Hudson's Bay Post at Telegraph Creek, B.C.

The Hudson's Bay Fort Garry Post in 1868, now the City of Winnipeg.

Norway House.

In looking over the charter of this company, one wonders why Charles II., in a generous mood, did not hand over all of Canada to it. As it was, he apparently came very near to the mark. For instance, he gave the company "the whole trade of all those seas, streights and bays, rivers, lakes, creeks and sounds, in whatsoever latitude they shall be, that lie within the entrance of the streights commonly called Hudson's Streights, together with all the lands, countries and territories upon the coasts and confines of the seas, streights, bays, lakes, rivers, creeks and sounds aforesaid, which are not now actually possessed by any of our subjects, or by any subjects of any other Christian prince or state."

IN general, the grant included the trade of the country, "the fisheries within Hudson's Streights, the minerals, including gold, silver, gems and precious stones, shall be possessed by the company."

More than this, power was given the company to make their own laws, not only for their own forts and plantations, with all their officers and servants, but having force over all persons upon the land ceded to them so absolutely.

Among the Snow-capped Peaks Nestles the McWames Creek Post.

The Ranee's Bracelet

By E. A. TAYLOR Illustrated by E. J. DINSMORE

A Story of India in 1857 and 1914

IT WAS February, the month of roses in Northern India, and the garden of the Moti Bagh (House of Pearl) literally overflowed with rose color and perfume. The tropical plants and shrubs, waiting their day of glory and bloom when the fierce summer of their land should come, seemed only a background for th .t riot of rose blossoming.

The house in the garden was a lofty one-storey building, of small drab bricks with white cornices. There was a carved balustrade round the flat roof, and a pillared portico along the front; and it look·d rather a fine home for the eight women missionaries who lived there. But the inside was plain enough; there were no ceilings, only the large beams that supported the thick roof of bricks and earth. And the earth floors were covered with coarse, eheap rugs of aloe fibre, while the scanty furniture was of cane.

From the portiec the big entrance doors opened into the hall, where a hundred people could sit down to tea or a meeting. On one side were the dining-room and library, and on the other the eight bedrooms, with their string beds and thick, coarse cotton rugs, all as small and elean and bare as the eells of cloistered nuns.

Alice Ross, the head of the little band, stood in the portico. She was a tall woman, with the luminous eyes of a mystie, and she smiled across the roses at the two teachers, Elizabeth Dunn and Lois Aird, who came from the girls' school, in an outbuilding. They were two grave young women, who believed devoutly in their mission—and in Alice. Then the three went in together to the library, where the other five had gathered: Ella Glen, oldish and thin, with a prim mouth, who was housekeeper; Laura Hood and Rose Thorn, the zenana workers, who looked tired and plain in their painfully plain dresses; Kitty Lee, youngest and prettiest of them all, who was assistant to Marion Davidson, the woman doetor; and Marion herself.

Marion wore the same plain costume as the others; yet she did not look in the least as if she belonged to them, as she sat unconventionally on the edge of a table, swinging her feet. She was a long-limbed bit of splendid womanhood, more than merely pretty, with her splendor of bronze hair and the frank eyes of a boy knight who had never a thought of sin, yet who loved clean fighting, and fun and adventure.

"MARION has been in Aladdin's palace," exclaimed Kitty.

"She has actually got into the Rajah's palace," explained Ella; "though he is so opposed to our work, and the Ranee is even more bitter than he."

"Yet it was she who sent for Marion," put in eager Kitty. "You remember the boy who died three months ago, the Rajah's only son? Well, it was his wife, only thirteen, and a Hindoo widow, that Marion was called in to see. Oh, Marion, what was everything like?"

Marion laughed good-humoredly. "It was a ehapter out of the 'Arabian Nights' certainly, but I had no time to notiee anything at first, for they had waited till the poor little girl hadn't half a chance for her life before they sent for me. I did save her, though, and the baby, too—a fine boy, but I couldn't have done either if the Ranee had not stood by me all the time, seeing that every direetion I gave was obeyed instantly and exactly. She never misunderstood me, and I fancy the others did not eare to misunderstand her. She looks about thirty, and it would take a poet to describe her beauty and jewels, for she was beautiful, though all the while she made me think of a tigress—a soft, purring creature, but still a tigress.

"When I left my patient she took me to the most lovely room I ever saw, all carved ivory and mother-of-pearl. She made me sit down by her, while servants poured out trays of jewels and money before me. I saw an empty marmalade pot of unset diamonds, and a cardboard box with ropes of pearls, besides a heap of other things: with small sacks of gold mohars and piles of silver rupees. And the Ranee was inviting me to take it all. I blunderingly explained that we did not take pay for our services. You know I can't talk; but I asked her if she would let some of you visit her and the palace women. She knew what we had eome to India to try and teach, and she answered so softly:

" 'Miss Dr. Davidson, you mistook me when you thought I offered to pay you. Can we pay the sun for his light, or the river for the water which is our life? No, I only hoped you would take these poor things to remember us by. You are very learned, Miss Doctor, but you do not understand that our blood, our race instincts, are the medium through which we must see God. And it is not best for one people to try to adopt the faith or customs of another. But you are going out of this house, never probably to enter it again, so do take something to remember us by. We will always remember you.'

"So I took this thin silver braeelet, and the Ranee looked disappointed for a minute, and then said: "Miss Doetor, you have shown me that a love-deed may not be paid for in gold; it must be love for love and life for life. Yes, life for life. Who knows what to-morrow may bring? We are but the sport of the Lords of Life and Death, who move our passions as the dust is moved by the wind. So, if you ever want a friend, Miss Doctor, send the braeelet back to me."

Ella sighed meaningly, not because of the Ranee's hints, no one gave them a thought, but Marion knew it was over her shorteomings as a missionary, as well as the Ranee's determined "heathenism," and she flushed, uncomfortably, wondering if she had really failed somehow because she did not compel the Ranee to consent to be taught a religion that she evidently did not want. Then the eight scattered to their various tasks while the bracelet—a thin silver band with the name of the Ranee Rajmahli Singh on it in Persian characters—was dropped into a drawer and forgotten.

In the evening of that day Alice walked in the garden, which she loved with the quiet passion of her soul for all things calm and beautiful. There was a slight stir among the pansies and convolvulus as she passed their bed, and a half-seen snake slipped away into the rose-scented

A House Plan of Seven Rooms Showing Two Methods of Exterior Treatment

House at left built of brick. Same design at right but built of brick and roughcast plaster.

Designed by Clarence Thetford, Architect

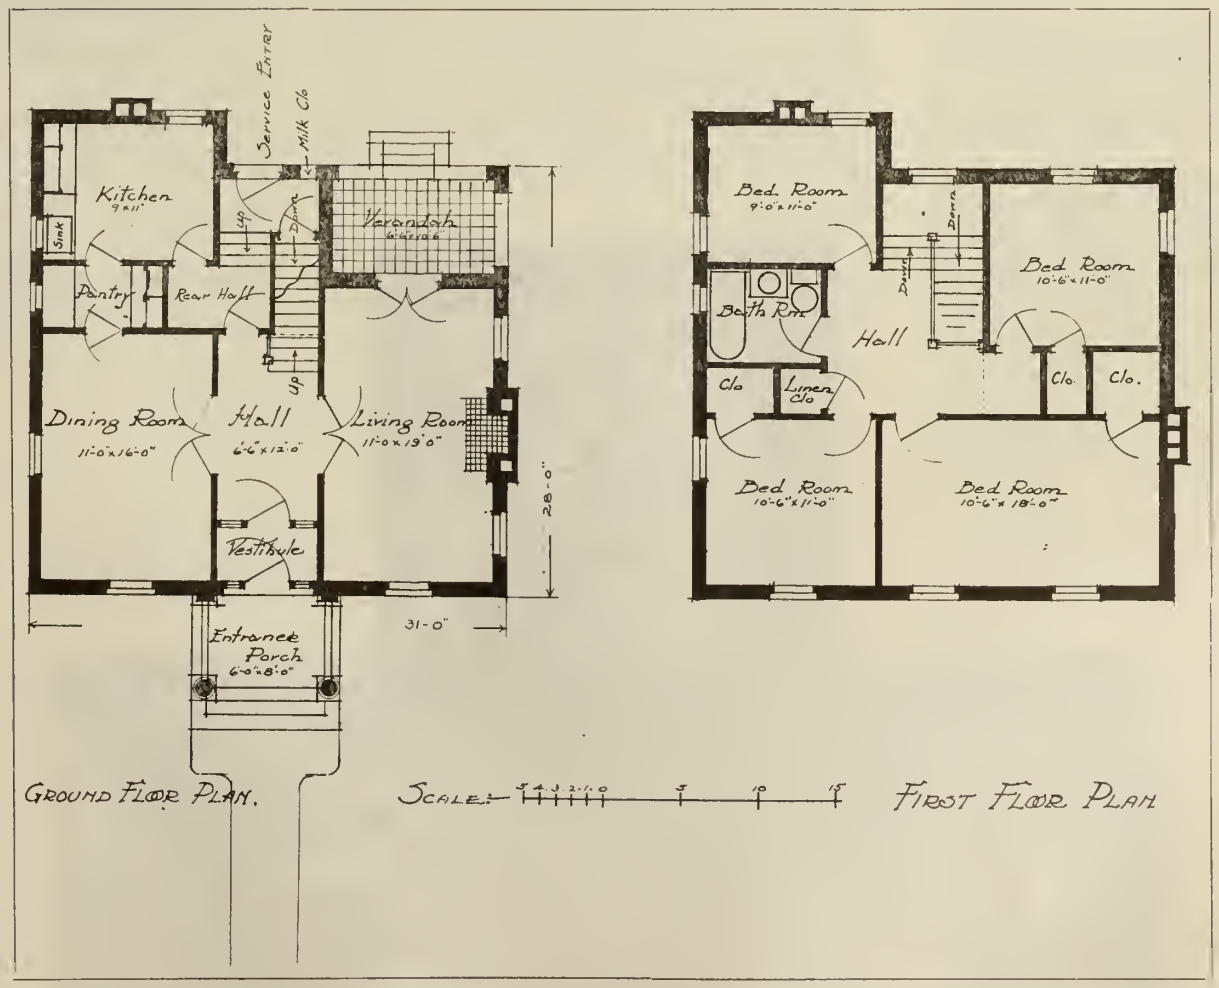
IN house arrangement it must be conceded, there is no plan so pleasing as the centre entrance hall. For economy of space, the hallway at the side is possibly more advantageous, but where a home of fairly generous proportions and an attempt at artistic arrangement is desired, the centre entrance hall plan should be selected.

The house illustrated on this page is an excellent example of a centre hall treatment, with double doors on two sides opening into living and dining rooms. It is a much simpler matter to decorate a hall of this kind than one with an unbroken wall space at one side, where there is usually the additional problem of making a stairway attractive.

The hall is the one and only room in the house which may be extreme in color or design, perhaps both if carefully handled. Halls are not to be lived in, therefore, one may introduce something which is rather more daring than artistic and the effect will be good.

At the back of this hall the stairs ascend. Note the convenience of the rear hall behind the front square hall. This smaller passageway has a door opening into the kitchen, and an outdoor exit through a Service Entry.

BY referring to the drawing it will be seen that the living room, which is eleven by nineteen feet, has a fireplace situated on the long side wall. The advantages of this arrangement will be noted when a large number wish to congregate around the open fire. A pair of French windows open on a large verandah at the rear of the living room which provides a delightful view of the garden in summer, permitting of easy access—steps leading down from the side of the verandah to the lawn.



In winter this verandah may be closed in with sash, and if properly heated makes an ideal sun room. A tile floor, kept in dull and warm color and softened by one or two grass rugs, is most suitable, while the chintz curtains may be gay to the extreme, contrasting with the dreary, wintry aspect out of doors. Many flowers, a few birds and some books with the wicker furniture complete a very homy and exceedingly attractive room.

The dining room, well lighted and of convenient proportions, is connected with the kitchen by a small serving pantry fully equipped with cupboards and shelves. The kitchen is nine by eleven, and has two windows, one thoughtfully planned to be directly over the sink, providing both light and a refreshing breeze for the hot days.

THE bedrooms on the upper floor are four in number, each having two windows to insure perfect ventilation. Three of the bedrooms have clothes closets, and opening from the hall next to the bathroom is a linen closet. The hall is lighted by a window placed on the stairway landing. This meets two needs: gives abundant light for the entire stairway and lights the upper hall.

Two methods of exterior treatment of this house are shown at the top of this page. The design at the left shows the house built of red brick, with white mortar joints, with well proportioned porch, the entablature of which is supported by Doric columns. The roof is of red slate. This with white woodwork and green shutters (the right shade of green, for there are many) completes a very pleasing and comfortable looking house.

The drawing at the right shows a house of freer design, built of solid brick or brick veneer at the ground floor, and of roughcast plaster or brick or roughcast on wood framing on the bedroom floor. The rafter ends are left exposed, and the roof may be covered with shingles stained a suitable color. If shingles are dipped separately in stain before laying, color will be much more permanent and satisfactory. This is a detail frequently overlooked.

THIS plan, therefore, permits of a great variety of treatments, making it suitable for almost any locality, and any requirements. Houses built from these designs will be simple in line, well-proportioned, and will have an air of permanence and solidity, so lacking in many of our modern medium priced homes.

Next month there will be a design for a rural house, showing plans and perspective drawing. While the houses shown in this department have all been suitable for country homes, the next dwelling will be designed specially to meet the needs of the rural resident. Moderate in size and cost of construction, it will show many pleasing features, which may be introduced into houses already built as well as the new home.

Articles on better sanitation for country houses will appear in the future issues of this magazine.

Gladiolus Americana

First Prize Collection of Vegetables, winning the Championship Cup, grown on a vacant lot where burrs and burdocks were growing six feet high the previous year.

Lilium Auratum Vitatum

Gardening Discretion

Gloxinia and Tuberous Begonia.

THE Gloxinia as shown on this page, is one of the most beautiful of all tuberous rooted plants, for it produces broad, handsome leaves and abundance of large bell shaped flowers in various colors, shades and markings. It is easy to grow, and therefore takes rank as one of the best plants for amateurs to grow in the house. A little heat is required in the early stages of growth, but when the plants come into bloom, they are best in a cool sun-room, and the flowers which are erect last well. Gloxinias may be raised from seed in winter in the same way as tuberous Begonias, the two making a charming combination; they will flower in less than six months. By regulating the heat a succession of bloom may be obtained. If not raised from seed, store the tubers the same as Begonias during winter, and restart them in the spring. Plants may also be raised by inserting the leaf stalks in sandy soil, and keeping moist. The Gloxinia is not suitable for the garden.

Before moving your house plants outdoors for an airing or repotting, mix the following ingredients together in equal parts: dry Nitrate of Soda, crushed charcoal, soot, wood ashes, and powdered Sulphur. Mix well together, and put a heaping teaspoonful of the mixture to two quarts of water, and give a good soaking once a week.

Window Box, a Thing of Beauty, and a Joy Forever.

DELIGHTFUL as a well kept window box is in summer, brightening the aspect, pleasing the observer, and giving satisfaction to its possessor, it is much to be regretted that so many of them are allowed to remain for a goodly portion of the year in a state of neglect which is not at all edifying. There is no need whatever for a window box to be neglected with the passing of summer or early autumn. Not in the most forbidding neighborhood, nor in the least inviting aspect need any window box look disreputable, or unkempt, although it is admitted they cannot always look gay. If one cares to take a little trouble, then at least one may have something pleasing to look at, immediately outside or inside one's window, no matter what the aspect and quite irrespective of season. The "scheme" to be here outlined is one which, while designed primarily to provide a window box that shall be pleasing to the eye the whole year round, will also assist in furnishing plants for the table. The scheme in brief, is to provide a sufficient number of plants in pots to be able, as soon as those in position in the box itself give out, to ring the changes with others which in the meantime have been plunged in the garden. The mere lifting or transplanting of plants from the garden is not nearly so successful as the use of the established plants in pots, and the plunging both in the garden and the window box is essential to success; further the pots used should be as nearly as possible the same size.

Lilium Auratum Platiphylum

Method of covering unsightly board fences. Pumpkins and marrow in foreground were grown on fence.

Do It Now

By George R. Baldwin F.R.H.S.

The preparation of the box itself may now be described. With the drainage in the box, and the box in position, the pots may be taken in hand—as many as will stand comfortably without crowding. An overcrowded box never looks well. The pots should have a layer of moss placed around them and tied on with raffia. The interstices round the pots may then be filled with prepared soil, packed close and watered. These interstices may be planted with anything at hand, or left overs from the garden. The roots of the objects planted in the interstices will run into the moss layers around the pots and so form a pot shaped pocket, from which the pot in position may be easily withdrawn and a fresh one just as easily inserted. Before withdrawing a pot from the box a slight rotation of it should be made, so that any rootlets adhering to the outside may be disconnected. By this method it will be seen that there can be no check to the plants themselves, and, providing the supply of suitable plants is maintained in the garden, the box may be renewed as often as may be desired.

AS soon as Jack Frost starts to come around, suitable plants for the late autumn and the winter may be found among the varieties of low growing shrubs such as Box, Euonymus, Veronica, etc., the window raised and the box set on the inside ledge, when bulbs for Christmas and January blooming can be inserted in the interstices. One of the chief advantages of this scheme is the satisfaction of always having something ready to look at, and the elimination of the uncertainty as to whether or not particular plants will develop in that particular situation. There is no interval of waiting while things grow. Now then you who live in apartments, no more excuses for not being amateur gardeners even if you are on the 'steenth floor of a sky-scraper.

THE following are a few of the favorite hardy flowers which should be in every garden, "to help keep sorrow out." The single white Arabis albida, also known as Rock or Wall Cress, which is one of the earliest plants to flower in Spring. The plants

Dr. Laura S. M. Hamilton will answer letters relating to health, baby welfare, feeding, clothing and general care of the child.

Post Poison Proceedings

A Health Talk by Dr. Laura S. M. Hamilton

DIRECTOR OF CANADIAN HOME JOURNAL DEPARTMENT OF CHILD HYGIENE.

ANY illness contracted through an infection is really a poisoning, just as much and sometimes with more lasting results as if a so-called actual "poison" had been wittingly swallowed

As a matter of fact all illness might be said to be caused by infection, except such as results from fractures or accidents or operation.

Any of these may speedily become infections or poisonings if the wounds become unclean or the excretory channels of the body become occluded.

Diseases producing bacteria or "germs" and their products are responsible for this poisoning.

It was a Vienna physician nearly a hundred and fifty years ago who first drew attention to the fact that all disease was caused by bacteria. He also discovered that different diseases were caused by different species. He was considered quite mad and his discoveries were allowed to die with him.

It is a fact worthy of note that the rank and file of the human race usually consider the discoverer and promulgator of new thoughts or ideas as either quite mad or quite bad, according to their particular viewpoint.

In the last twenty-five or thirty years wonderful strides have been made in the study of the habits and differentiation of the forms of bacteria. While it has been discovered that the greater bulk of disease of all sorts is the work of bacteria, on the other hand it has been ascertained that not by any means are all "germs" bad "germs," but that to the good ones may be credited far more of the beneficent processes that surround us than we have any idea of.

One writer says "The part played by bacteria in the causation of disease may be regarded as of surpassing importance, but the work done by them in other directions exerts a mighty influence upon the welfare of mankind. Bacteria not only act as scavengers in destroying dead organic material, but they also change the form of important chemical elements, such as nitrogen and carbon, into substances which are available for the nutrition of the higher plants, thus proving themselves as important in constructive as in destructive processes."

BACTERIA, as I pointed out in a former paper, live in their food, which is called pabulum. As long as this food stuff remains in suitable condition for their development, they continue to flourish. They increase by what is called "fission" or dividing. Some species divide, or double their numbers every half hour, so that one can form a slight idea of the extraordinary rapidity of their increase.

Now the pabulum may become unfit to further nourish these forms of life, either because of the resistive energy of their "host" or the body in which they are residing, or because of the excreta thrown off by the bacteria themselves, the gases they form or their own dead bodies. In this event some bacteria possess the power of making little cases for themselves, and retiring as it were from active life, or sleeping as the bear or squirrel does, till their environment improves. In this shape they are called "spores." In such form they are peculiarly resistive to the effects of both heat and cold, and to the action of most disinfectants. Such a sleep may last for months or even for years, when they can wake up and start growing again. It behooves us then, even the ordinary every-day person, to know sufficient of the peculiarities of disease bearing bacteria to be able to so adjust ourselves after an illness as to rid our bodies and surroundings of these unwelcome guests. And better still in every possible case to keep both person and environment in such condition that should we have these visitors they will find a welcome completely lacking.

The lodgment of the bacteria themselves, which constitute foreign bodies; and the substances produced by them, which are not only foreign bodies but in many cases active poisons as well, produce the various symptoms of illness which we find in persons suffering from any infectious disease, from a so-called simple "cold" to a severe case of typhoid fever.

The larger proportion of disease bearing bacteria enter the body through the mouth and nose, lodging first temporarily in the mucous membrane or moist lining of these parts. Some of them remain here, and merely the poisons produced travel to other portions of the body. Others again find some other location more suitable for their particular housekeeping requirements, and resort thither at the earliest opportunity.

In either case two things immediately occur. Nature hastens to eject the intruder, and by means of her servant, the blood, hurries hither and thither endeavoring to get the bodily house cleaned. This causes a heated condition of the blood stream called "fever." Then also the bacteria throw off poison, and the fight between them and the blood produces more poison, these poisons at once circulating throughout the whole body, and causing varied symptoms, apparently having no connection with the original infection. Some of the most common of these symptoms are headache and constipation, occasionally diarrhoea.

CERTAIN bacteria seems to have a preference for poisoning certain organs. But in almost every case the heart is the organ that must bear the brunt, not only of the poisoning, but with the poison the strain of all the extra work that the blood has to take on itself of ejecting the intruder, while the supplies at the base of the army of defence are probably very low on account of the effect of the enemy poison on the stomach.

For instance, let us consider a concrete example, the symptoms of which most of us at the present time are unfortunately too familiar with, that of influenza.

The poisoning (not the actual germ) of influenza not only produces the symptoms noted above, but almost invariably gives violent pains in the muscles. These are most noticeable in the back and limbs, but the poison evidently affects the whole musculature of the body. And of all the muscles, again it is the heart that suffers most. Hence we find long continued weakness and general malaise for weeks or even months after the actual illness itself is past, also in a sadly large number of cases a train of symptoms not generally recognized by the laity but which to the physicians spell just one word, "heart."

Now the pathos of this lies in the fact that if people only understood a little of what I am trying to teach, or not understanding would have the wisdom and faith to obey and trust those who do, many a chair that to-day is vacant would be filled, many a home that is shadowed would be rejoicing in the sunshine of peace.

Many of my readers have handled the heart of a sheep or other animal. You know that it is a firm, strong, muscular organ, having certain (actually four) cavities within. Such is a healthy heart. A poisoned heart is as flabby as a kid glove.

A little thought will show you that blood circulating through that firm, healthy heart will as it passes along only extend its strong, elastic walls temporarily, and that they will at once spring back into their original shape. The same thing is true of the little doors within the heart that form the exits of the different cavities, and that must shut tight when the time to shut comes, or else cause trouble commonly called "a leak." You can imagine that even a sudden onrush of blood caused by a lift or some excitement or other exertion would not injure such strong muscular walls as that heart shows.

BUT on the other hand supposing that heart were just as floppy as an empty kid glove. Supposing the walls were just as soft and non-elastic as the "flesh" of the arm is after a long illness, then it does not take much thought to show you that even the ordinary blood stream might prevent a return to normal shape, that every movement and effort of such a heart must necessarily be laboured and slow, that a sudden exertion or emotion causing a violent onrush of the blood-stream might be fraught with dire results—must in the oest of cases have a deleterious effect.

Such a flaccid condition of the heart is the effect of practically every infection. This heart poisoning is particularly marked in the cases of influenza, diphtheria, pneumonia, and some other diseases.

The poison of the present epidemic of influenza is peculiarly virulent and lasting.

This poisoned condition almost invariably clears up, and the heart returns to its normal firmness and ability, given the care and rest in elimination of poison, at the right time,—that is, bed together with proper measures for helping immediately on the cessation of the violent symptoms of disease. I mean that patients should stay in bed and be treated as more or less invalids till they themselves feel as strong as usual, and until the doctor says that the pulse has returned to normal beat and time.

Danger lies in the fact indicated above, that if strain, even the strain of the ordinary daily tasks, or in acute cases of getting up and down, is put upon a heart in the flaccid condition described, irreparable injury may be done to it, by a permanent enlargement of some of the orifices taking place. While if a little patience is practiced the walls of the heart harden up again as the other muscles of the body attain normality, and as the last of the poison leaves the system.

A CASE in point came to notice recently. A young girl away from home had taken cold she thought. The fact that influenza was prevalent should have put her on her guard, but it did not. She was boarding, so after staying indoors for a few days she returned to work. She had not been very sick, but she remained unaccountably tired. She had seen no physician. Her cough got better, but the tiredness remained, and increased. Her work was a misery. Even going up and down stairs became an effort. She decided to return home, a long railroad journey. She was miserably lonesome. At this juncture she dropped in to say good-bye to me, not to make a professional call. Casually I learned that "yes, her back and legs had ached during the 'cold'," now some weeks past. I felt her pulse, and it was pounding along with marked effort somewhere about 104 when it should have been 74. It took a whole week of complete rest in bed in the Hospital to get that heart into a normal condition. And very grateful should its owner be that it returned to normal at all after the strain she had put upon it. Had she undertaken the railroad journey there are grave doubts as to whether she would ever have reached the end alive. And yet she had had such a mild attack of influenza that she scarcely recognized the fact that she was sufficiently ill to stay in bed.

WHO GOES THERE?

BY

ROBERT W. CHAMBERS

ILLUSTRATED BY DAN SAYRE GROESBECK

CHAPTER XVIII. *(Continued)*

GUILD, tall, broad-shouldered, erect, stood by the window looking out between the gently blowing sash-curtains, and fastening his waistcoat.

And, standing so, he said: "Harry, this is no place for Mrs. Courland and her daughter. They ought to go to Luxembourg City, or across the line into Holland. As a matter of fact they really ought to go back to America."

"I think so, too," nodded Darrel. "I think we may persuade them to come back with us."

Without looking at his business partner and friend, Guild said: "I am not going back with you."

"What!"

"I can't. But you must go—rather soon, too. And you must try to persuade the Courlands to go with you."

"What are you planning to do?" demanded Darrel with the irritable impatience of a man who already has answered his own question.

"You can guess, I suppose?"

"Yes, confound it!—I can! I've been afraid you'd do some such fool thing. And I ask you, Kervyn, as a sane, sensible Yankee business man, *is* it necessary for you to gallop into this miserable free fight and wallow in it up to your neck? Is it? Is it necessary to propitiate your bally ancestors by pulling a gun on the Kaiser and striking an attitude?"

Guild laughed. "I'm afraid it's a matter of propitiating my own conscience, Harry. I'm afraid I'll have to strike an attitude and pull that gun."

"To the glory of the Gold Book and the Counts of Gueldres! *I know!* You're very quiet about such things, but I knew it was inside you all the time. Confound it! I was worried by your letter to me! I thought you'd already done something and had been caught."

"I hadn't been doing anything, but I *had* been caught."

"I knew it!"

"Naturally; or I shouldn't have written you a one-act melodrama instead of a letter. . . . Did you destroy the letter to my mother?"

"Yes, I did."

"That was right. I'll tell you about it some time. And now, before we go down, this is for your own instruction: I am going to try to get into touch with the Belgian army. How to do it I don't see very clearly, because there are some two million Germans between me and it. But that's what I shall try to do, Harry. So, during the day or two I remain here, persuade your friends, the Courlands, of the very real danger they run in remaining at Lesse. Because any of these peasants at any moment are likely to sally forth Uhlan sniping. And you know what German reprisals mean."

"Yes," said Darrel uneasily. He added with a boyish blush: "I am rather frightfully fond of Valentine Courland, too."

"Then talk to the Courlands. Something serious evidently has happened to their landlord. If he made himself personally obnoxious to the soldiery which destroyed Wiltz-la-Vallée, a detachment might be sent here anyway to destroy Lesse Lodge. You can't tell what the Teutonic military mind is hatching. I was playing chess when they were arranging a shooting party in my honour. Come on downstairs."

"Yes, in a minute. Kervyn, I don't think you quite got me—about Valentine Courland."

Guild looked around at him curiously.

"Is it the real thing, Harry?"

"Rather. With *me*, I mean."

"You're in *love?*"

"Rather! But Valentine raises the deuce with me. She won't listen, Kervyn. She sits on sentiment. She guys me. I don't think she likes anybody else, but I'm dead sure she doesn't care for me—that way."

Guild studied the pattern on the rug at his feet. After a while he said: "When a man's in love he doesn't seem to know it until it's too late."

"Rot! I knew it right away. Last winter when the Courlands were in New York I knew I was falling in love with her. It hurt, too, I can tell you. Why, Kervyn, after they sailed it hurt me so that I couldn't think of anything. I didn't eat properly. A man like you can't realize how it hurts to love a girl. But it's one incessant, omnipresent, and devilish gnawing—a sensation of emptiness indescribable filled with loud and irregular heart-throbs—a happy agony, a precious pain—"

"HARRY!"

"What?" asked that young man, startled.

"Do you realize you are almost shouting?"

"Was I? Well, I'm almost totally unbalanced and I don't know how long I can stand the treatment I'm getting. I've told her mother, and she laughs at me too. But I honestly think she likes me. What would you do, Kervyn, if you cared for a girl and you couldn't induce her to converse on the subject?"

Guild's features grew flushed and sombre. "I haven't the faintest idea what a man should do." he said. "The dignified thing would be for a man to drop the matter."

"I know. I've dropped it a hundred times a week. But she seems to be glad of it. And I can't endure that. So I re-open the subject, and she re-closes it and sits on the lid. I tell you, Kervyn, it's amounting to a living nightmare with me. I am so filled with tenderness and sentiment that I can't digest it unaided by the milk of human kindness——"

"Do you talk this way to her?" asked Guild, laughing. "If you compare unrequited love to acute indigestion no girl on earth is going to listen to you."

"I have to use some flights of imagination," said Darrel, sulkily. "A girl likes to hear anything when it's all dolled up with figures or speech. What the deuce are you laughing at? All right! Wait until you fall in love yourself. But you won't have time now; you'll enlist in some fool regiment and get your bally head knocked off! I thought I had troubles enough with Valentine, and now this business begins!"

He got up slowly, as though very lame.

"It's very terrible to me," he said, "to know that you feel bound to go into this mix-up. I was afraid of it as soon as I heard that war had been declared. It's been worrying me every minute since. But I suppose it's quite useless to argue with you?"

"Quite," said Guild pleasantly. "What's the matter with your leg?"

"Barked the shin. Listen! Is there any use reasoning with you?"

"No, Harry."

"Well, then," exclaimed Darrel in an irate voice, "I'll tell you frankly that you and your noble ancestors give me a horrible pain! I'm full of all kinds of pain and I'm sick of it!"

Guild threw back his blond head and laughed outright—a clear, untroubled laugh that rang pleasantly through the ancient hall they were traversing.

As they came out on the terrace where the ladies sat in the sun knitting, Valentine looked around at Guild.

"What a delightfully infectious laugh you have," she said. "Was it a very funny story? I can scarcely believe Mr. Darrel told it."

"But he did," said Guild, seating himself beside her on the edge of the stone terrace and glancing curiously at Karen, who wore a light gown and was looking distractingly pretty.

"Such an unpleasant thing has occurred," said Mrs. Courland in her quiet, gentle voice, turning to Darrel. "Our herdsman has just come in to tell Michaud that early this morning a body of German cavalry rode into the hill pastures and drove off the entire herd of cattle and the flock of sheep belonging to Monsieur Paillard."

THERE was a moment's silence; Darrel glanced at Guild, saying: "Was there any explanation offered for the requisition—any indemnity?"

"Nothing, apparently. Schultz, the herdsman, told Michaud that an Uhlan officer asked him if the cattle and sheep did not belong to the Paillard estate at Lesse. That was all. And the shepherd, Jean Pascal, tried to argue with the troopers about his sheep, but a cavalryman menaced him with his lance. The poor fellow is out in the winter fold, weeping like Bo-Peep, and Schultz is using very excited language. All our forest guards and wood-choppers are there. Michaud has gone to Trois Fontaines. They all seem so excited it has begun to disturb me a little."

"You see," said Valentine to Guild, "our hill pastures are almost on the frontier. We have been afraid they'd take our cattle."

He nodded.

"Do you suppose anything can be done about it?" asked Mrs. Courland. "I feel dreadfully that such a thing should happen at Lesse while we are in occupation."

"May I talk with your head gamekeeper?" asked Guild.

"Yes, indeed, if you will. He ought to return from Trois Fontaines before dark."

"I'll talk to him," said Guild briefly. Then his serious face cleared and he assumed a cheerfulness of manner totally at variance with his own secret convictions.

"Troops have got to eat," he said. "They're likely to do this sort of thing. But the policy of the Germans, when they make requisition for anything, seems to be to pay for it with vouchers of one sort or another. They are not robbers when unmolested, but they are devils when interfered with. Most troops are."

THE conversation became general; Darrel, sitting between Karen and Mrs. Courland, became exceedingly entertaining, to judge from Karen's quick laughter and the more subdued amusement of Katharyn Courland.

Darrel was explaining his lameness.

But the trouble with Darrel was that his modesty inclined him to be humorous at his own expense. Few women care for unattractive modesty; few endure it, none adore it. He was too modest to be attractive.

"I was sauntering along," he said, "minding my own business, when I came face to face with a wild boar. He was grey, and he was far bigger than I ever again desire to see. Before I could recover my breath his eyes got red and he began to make castanette music with his tusks, fox-trot time. And do you know what happened—in *your* forest, Mrs. Courland? I went up a tree, and I barked my shin in doing it. If you call that hospitality, my notions on the subject are all wrong."

"Didn't you have a gun?" asked Karen.

"I did. I admit it without a blush."

"Why didn't you use it?" asked Mrs. Courland.

"Use it? How? A gun doesn't help a man to climb a tree. It is in the way. I shall carry no more guns in your forest. A light extension ladder is all I require. And a book to pass away the time when treed."

They all laughed. "Really," asked Guild curiously, "why didn't you shoot?"

"First of all," said Darrel serenely, "I do not know how to fire off a gun. Do you want any further reasons?"

"You looked so picturesque," said Valentine scornfully, "I never dreamed you were such a dub! And you don't seem to care, either."

"I don't. I like to catch little fish. But my ferocity ends there. Kervyn, shall we try the trout for an hour this afternoon?"

Valentine turned up her dainty nose. "I shall take Mr. Guild myself. You'd better find a gamekeeper who'll teach you how to shoot off a gun." And to Guild: "I'll take you now if you like. It's only a little way to the Silverwiltz. Shall I get a rod and fly-book for you?"

Karen, watching her, saw the frank challenge in her pretty brown eyes, saw Guild's swift response to that gay defiance. It was only the light, irresponsible encounter of two young people who had liked each other at sight and who had already established a frank understanding.

So Valentine went into the house and returned presently switching a light fly-rod and a cast of flies; and Guild walked over and joined her.

To Karen he looked very tall and sunburned, and unfamiliar in his blue-serge lounging clothes—very perfectly groomed, very severe, and unapproachable; and so much older, so much more mature, so much wiser than she had thought him.

And, as her eyes followed him from where she was seated among the terrace flowers, she realized more than ever that she did not know what to say to him, what to do with him, or how to answer such a man.

HER face grew very serious; she was becoming more deeply impressed with the seriousness of what he had asked of her; of her own responsibility. And yet, as far as love was concerned, she could find no answer for him. Friendship, swift, devoted, almost passionate, she had given him—a friendship which had withstood the hard shocks of anger and distrust, and the more bewildering shock of his kiss.

She still cared for him, relied on him; wished for his companionship. But, beyond that, what had happened, followed by his sudden demand, had startled and confused her, and, so far, she did not know whether it was in her to respond. Love loomed before her, mighty and unknown, and the solemnity of its pledges and of its overwhelming obligations had assumed proportions which awed her nineteen years.

(CONTINUED ON PAGE 17.)

Who Goes There?

(CONTINUED FROM PAGE 16.)

In her heart always had towered a very lofty monument to the sacredness of love, fearsomely chaste, flameless, majestic. So pure, so immaculate was this solemn and supreme edifice she had already builded that the moment's thrill in his arms had seemed to violate it. For the girl had always believed a kiss to be in itself part of that vague, indefinite miracle of supreme surrender. And the knowledge and guilt of it still flushed her cheeks at intervals and meddled with her heart.

She had forgiven, had tried to readjust herself before her mystic altar. There was nothing else to do. And the awakened woman in her aided and taught her, inspiring, exciting her with a knowledge of her power.

Then, as she sat there looking at this man and at the brown-eyed girl beside him, suddenly she experienced a subtle sense of fear: fear of what? She did not know, did not ask herself. Not even the apprehension, the dread of parting with him had made her afraid; not even the certainty that he was going to join his regiment had aroused in her more than a sense of impending loneliness.

But something was waking it now—something that pierced her through and through: and she caught her breath sharply, like a child who has been startled.

For the first time in her life the sense of possession had been aroused in her, and with it the subtle instinct to defend what was her own.

She looked very intensely at the brown eyes of the young girl who stood laughing and gossiping there with the man she did not know how to answer—the man with whom she did not know what to do. But every instinct in her was alert to place upon this man the unmistakable sign of ownership. He was hers, no matter what she might do with him.

To Darrel, trying to converse with her, she replied smilingly, mechanically; but her small ears were ringing with the gay laughter of Valentine and the quick, smiling responses of Guild as they stood with their heads together over the contents of the fly-book, consulting, advising, and selecting the most likely and murderous lures.

Neither of them glanced in her direction; apparently they were most happily absorbed in this brand new friendship of theirs.

Very slowly and thoughtfully Karen's small head sank; and she sat gazing at the brilliant masses of salvia bloom clustering at her feet, silent, overwhelmed under the tremendous knowledge of what had come upon her here in the sunshine of a cloudless sky

"Au revoir!" called back Valentine airily; "We shall return before dusk with a dozen very large trout!"

Guild turned to make his adieux, hat in hand; caught Karen's eye, nodded pleasantly, and walked away across the lawn, with Valentine close beside him, still discussing, and fussing over the cast they had chosen for the trout's undoing.

CHAPTER XIX.

THE lamps had not yet been lighted in the big, comfortable living-room and late sunlight striped walls and ceilings with rose where Karen sat sewing, and Darrel, curled up in a vast armchair, frowned over a book. And well he might, for it was a treatise on German art.

His patience arriving at the vanishing point he started to hurl the book from him, then remembering that it was not his to hurl, slapped it shut.

Which caused Karen to lift her deep violet eyes inquiringly.

"Teutonic Kultur! I've got its number," he said. Which observation conveyed no meaning to Karen.

"German art," he explained. "It used to be merely ample, adipose, and digestible. Now the moderns have made it sinister and unclean. The ham-fist has become the mailed fist; the fat and trickling source of Teutonic inspiration has become polluted. There is no decadence more hideous than the brain cancer of a Hercules."

Karen followed him with intelligent interest. She said with hesitation: "The moderns, I think, are wandering outside immutable boundaries. Frontiers are eternal. If any mind believes the inclosed territory exhausted, there is nothing further to be found outside in the waste places—only chaos. And the mind must shift to another and totally different pasture—which also has its boundaries eternal and fixed."

"Right!" exclaimed Darrel. "No sculptor can find for sculpture any new mode of expression beyond the limits of the materials which have always existed; no painter can wander outside the range of black and white, or beyond the surface allotted him; the composer can express himself in music only within the limits of the audible scale; the writer is a prisoner to grammatical expression, walled always within the margins of the printed page. Outside, as you say, lies chaos, possibly madness. The moderns are roaming there. And some of them are announcing the discovery of German Kultur where they have barked their mental shins in outer darkness."

Karen smiled. "It is that way in music I think. The dissonance of mental disturbance warns sanity in almost every bar of modern music. It is that which is so appalling to me, Mr. Darrel—that in some modernism is visible and audible more and more the menace of mental and moral disintegration. And the wholesome shrink from it."

Darrel said: "Three insane 'thinkers' have led Germany to the brink where she now stands swaying. God help her, in the end, to convalescence—" he stared at the fading sunbeams on the wall, and staring, quoted:

"'Over broken oaths and
Through a sea of blood.'"

He looked up. "I'm sorry: I forget you are German."

"I forget that I am supposed to be, too. . . . But you have not offended me. I know war is senseless. I know that war will not always be the method used to settle disputes. There will be great changes beginning very soon in the world, I think."

"I believe so, too. It will begin by a recognition of the rights of smaller nations to self-government. It will be an area of respect for the weak. Government by consent is not enough; it must become government by request. And the scriptures shall remain no more sacred than the tiniest 'scrap of paper' in the archives of the numerically smallest independent community on earth.

"The era of physical vastness, of spheres of influence, of scope is dying. The supreme wickedness of the world is force. That must end for nations and for men. Only one conflict remains inevitable and eternal; the battle of minds, which can have no end."

FOR an American and an operator in real estate, Darrel's philosophy was harmlessly respectable if not very new. But he thought it both new and original, which pleased him intensely.

As for Karen, she had been thinking of Guild for the last few minutes. Her sewing lay in her lap, her curly head rested in the depths of her armchair. Sunlight had almost faded on the wall.

Through the window she could see the trees. The golden-green depths of the beech-wood were growing dusky. Against the terrace masses of salvia and geraniums glowed like coals on fire. The brown-eyed girl had been away with him a long while.

Mrs. Courland came in, looking more youthful and pretty than ever, and seated herself with her knitting. The very last ray from the sinking sun fell on her ruddy hair.

"Think you are right, Harry," she said quietly to Darrel. "I think we will sail when you do. The men on the place are becoming very much excited over this Uhlan raid on the cattle. I could hear them from my bedroom

Literature and Journalism

By Katherine Hale

The "Plan" in Our Work

TO-DAY I would rather do almost anything—"anything under the sun"—than write this column about Literature and Journalism.

This is quite literal, for the sun is shining, there are green blades among the gray grass, a robin is calling. I want to be digging in a little garden, or motoring over hard, March roads, or even cleaning the outside of a window provided it is a French window and my two feet are set on terra firma. Most of all I should love to be perambulating slowly down this sunny sidewalk with a certain maiden of two whose remarks about the unlverse are more interesting to me than any book I have ever read or ever hope to write.

But here is a desk piled with letters waiting to be answered; letters to this department from young men and old ladies, from university girls who want to be, and ought to be, reporters, and from typists who long to write essays "for the better grade of magazines." And all these correspondents are inquiring more or less eagerly, each in his own way, "how may I, hampered by circumstances, out of touch with writers, financially oppressed and working at another job, how can I even begin to get ready for the profession of literature, or journalism, which I want, with all my heart, to follow?"

SO I turn my eyes and ears from the challenge of spring and ponder a long time over these letters, and wonder how anyone still on the threshold of things, with, herself, many problems yet unsolved, can give the advice so ardently invited by these inquiries.

And I come to what seems to me the only solution. It is set forth in the title of this little talk—the "plan" in our work.

I don't believe that any successful life or career was ever easy. I am sure that, with perhaps a handful of exceptions, no one ever wrote for his or her living without the lash of an imperative urge, generally financial. I am certain that loneliness, the arch-foe of youth, has been the greatest spur to endeavour in all ages, and I am not sure that contact, personal contact, with writers, is the wisest stimulant.

A career of any kind must be created, formulated and finished in the vision of what one expects and intends to do, and according as the vision is clear and steadfast so will the accomplishment become.

The vision of what we *want* to do undoubtedly comes first; and it is because it so often remains the first and last factor in a mere dream—for dreams fade while a vision endures—that this article is written.

We can only fix the vision by the working medium of a "plan."

THIS sounds like the beginning of one of those thrift stories for which the American magazines are so justly famous. But perhaps it will not turn out so badly as it appears.

I am going to illustrate what I mean from the letter of a correspondent to this department who wrote me the other day, enclosing a little story that she had written, which shows more than usual ability. She says: "I am a school teacher in a rural district. There is no library near. There is no one to whom I can talk about the things that mean most to me. I am not very strong, and the long day at school wears me out. I come back to the farm house where I board and my bedroom is so cold that I have to sit with the family in the kitchen all evening to keep warm. With seven people all talking around me you can see that I have not much opportunity to think out the things I long to write. The story I send you was done during lunch hours at the school. I have to support my mother by my earnings and have not a cent for books of instruction in story-writing, or a typewriter, and I believe you say that it is necessary to submit manuscript typewritten to the magazines. But in spite of this I know I am going to write successful stories and I am saving up to buy a second-hand coal oil stove to put in my bedroom, so I can have the evenings to write."

Do you think there is any doubt of that girl's success? I don't.

You see, instinctively her mind seized on the first essential—time to work out her ideas. The second-hand coal oil stove is the first stroke in a "plan" that one feels will grow. If she had written "I am saving up to buy a second-hand typewriter" one might have doubts, in spite of the excellence of her manuscript. It would have looked as though she intended waiting for summer (her letter was written in February). But no, she was doing the first, most simple thing towards the culmination of her vision of a future of work. She will get her coal oil stove and then her typewriter and, bless her heart, I can see a stenographer of her own waiting for her in the dim distance when the force of her personality, depicted in even better stories than the one she sent me, shall have assailed the editors, not in vain.

THE "plan" in our work is really just a determined and systematic seizing and using of what opportunity we have—to progress. Over and over again the truth is borne in upon one that the only thing that counts is a chance to sharpen one's tools. Write a good story and there is no doubt in the world that you can sell it. But merchandising is another theme which demands an article by itself. Merchandising also means careful planning, but the first essential is to find out the best method towards perfection in the work you have chosen.

The last article in this series had to do with the work of the woman reporter. Many letters have been received since then from girls who say, "I long for just such a newspaper training as you describe, but I am living in a small village far from any newspaper centre. How can I be sure that I could find employment if I left home and went to a city in search of this kind of work?"

Well, the very question shows that you are not intended by nature for a newspaper reporter. If there is not enough of adventure in your make-up to take a gamble, to make the opportunity in some way for the privilege, the rare delight of such a gamble, then you were never intended to be the Slave of Surprising Circumstance: in other words a reporter.

A "PLAN" is a cosmic and deep-rooted thing, perhaps it is born in one. If one wanted to turn the word into a phrase it might be called "a dissatisfaction with things as they are," "a revolt against what might be, and is not," and so on. And this "plan," this desire sometimes slumbering but never dead, is lying all the time at the back of life waiting to be put into use by a steady will.

A "plan," coupled with a steady will may take you so far along the way of success that it will outrun your most eager hopes.

Madame Melba once said to me, in reply to an inquiry as to whether she found it difficult to get the time to study while on extended tours, "Difficult, yes. Sometimes almost impossibly difficult. But then that is my first consideration; the opportunity to work on my voice a little every day. And so on trains, ship-board, in hotels, tired to death often, yet every day, every day, I work. Not long at a time, but with all my mind. That is the secret of success."

Cooking the By-Products of the Meat Market

By Marion Harris Neil

AUTHOR OF "HOW TO COOK IN CASSEROLE DISHES."

Liver with Macaroni.

Baked Tongue.

For Oxtail Soup.

For Kidney a la Chateau.

By-products of the Meat Market.

Cheap Cuts of Meat if Properly Cooked Make Appetizing Dishes

Ox-Tail Soup.—Cut into small pieces one fresh ox-tail. Cut in the same way one carrot, one small turnip, one onion and one stalk of celery; place these in a saucepan with two tablespoonfuls of drippings. Mix well with a wooden spoon while cooking for ten minutes, or until they are a nice brown color; then add eight tablespoonfuls of well-washed barley, one tablespoonful of Worcestershire sauce, one-half tablespoonful of salt, one-half teaspoonful of pepper and three quarts of hot water, and mix together. As soon as the soup boils shift the pan so as to let it gently simmer for two hours, taking care to skim the fat from the surface of the soup while cooking. Serve hot in a soup tureen.

Baked Tongue.—Wash and trim one fresh beef tongue, roll it round, and keep it in shape with tape; then boil it the day before you wish to use it, so that it may become cold and firm. Put the tongue into a greased baking tin, dot with butter substitute, dust with salt and pepper and cook for one and one-half hours, basting frequently. When cold slice and serve decorated with parsley.

When choosing an ox-tongue select one with a smooth skin, as a very rough skin is a sign of age.

Liver With Macaroni.—Have a piece of liver weighing two or two and one-half pounds cut into pieces. Cook for five minutes with one chopped onion and two tablespoonfuls of drippings. Season with salt and pepper. Shake the pan all the time. Then add one cupful of white sauce and cook for three minutes. Stir in one tablespoonful of chopped parsley and serve hot in a border of hot cooked macaroni.

Liver should be fresh, firm textured, and free from smell, and from all specks or discoloration.

Kidneys a la Chateau.—Skin three sheep kidneys, cut them open and divide in two halves, take out the hard part, season with salt and pepper. Put four tablespoonfuls of butter substitute into a saucepan, make very hot, then put in the kidneys, and fry for a few minutes, they must cook quickly or they will be hard. Cut three tomatoes in halves, sprinkle them with salt, pepper and paprika, put them on a greased tin, with a little butter on each, and bake in the oven for ten minutes. Do not let them get too soft. Dish the tomatoes in a circle on a hot platter, place one kidney on each tomato, garnish with parsley and serve hot.

Fried Tripe With Sauce.—Cut two and one-half pounds of tripe into small dice. Fry until a light brown color in one-fourth cupful of butter substitute, one chopped onion, and one-half green pepper finely chopped.

Peel one tomato, cut it in pieces, and mix with one cupful of white sauce, season with salt and pepper and stir the tripe in this sauce and cook for twenty minutes. Then add one tablespoonful of chopped parsley and serve very hot.

Calf's Heart, Roasted.—Make a forcemeat with one cupful of fine bread crumbs, one-fourth pound of suet chopped small, one teaspoonful of chopped parsley, one-half teaspoonful of salt, one-fourth teaspoonful of pepper and mix together with one beaten egg or a little milk and place them in the heart. Tie the heart and roast, turning it frequently. Serve with thin slices of lemon and melted butter poured over it. It should cook for two and one-half hours.

Another Method.—Wash the heart, stuff with forcemeat and sew. Arrange one cupful each of sliced onions and carrots in the bottom of a fireproof baking dish, place the heart on this bed, sprinkle with salt and pepper, dredge with flour, and bake for two and one-half hours. Baste often with melted drippings. Remove from the pan and make a gravy, using three tablespoonfuls of the fat from the pan, add four tablespoonfuls of flour and two cupfuls of boiling water. Serve the gravy round the heart.

Calf's Brains a la Vinaigrette.—Wash three good-sized calf's brains, remove the skins and then wash again and drain well. Put them into a saucepan and cover with fresh water, one-fourth teaspoonful of salt, one-half cupful of vinegar, one carrot sliced, one chopped onion, one dozen whole white peppers, a sprig of thyme and one bay leaf. Cook for fifteen minutes and drain thoroughly. Cut each brain in half and serve very hot on a folded napkin on a dish with the vinaigrette sauce poured into a hot sauceboat.

Calf's Head.—The butcher should first prepare the head for use. Wash it thoroughly and remove the brains, which may be kept for frying, or they may be added later. Cover the head with cold water, take off the scum as the head begins to heat, and cook it gently for two and one-half hours. Remove from the fire, let it cool, and remove all the bones. Lay the boned head in a saucepan, replace the brains if you wish to cook them, and simmer gently for one hour in its own gravy. If it is necessary, thicken the gravy with a little flour or cornstarch and lay forcemeat balls round the dish in which the head is served. Add salt and pepper to taste and two chopped sage leaves. Serve hot.

Lamb's Fry.—Wash one or one and one-half pounds of lamb's fry thoroughly, put it into a saucepan of cold water and then allow to simmer for five minutes, lift out the fry on to a soft towel, and divide into suitable pieces. Then dip into a batter made with one beaten egg, one tablespoonful of milk, a little salt and pepper, and enough flour to make it the consistency of good thick cream. Have ready a frying pan containing eight tablespoonfuls of melted butter substitute, put in the fry and cook a light brown color, remove the fry, dust a little flour into the frying pan, allow this to brown, add one-half cupful of water and salt and pepper to taste, boil for eight minutes, strain over the fry and serve. Decorate the dish with parsley and cut lemon.

Sweetbreads Fried.—Soak four sweetbreads in cold water for two or three hours, dry them thoroughly on a clean towel, put them into a saucepan of fast boiling water and cook for twelve minutes, remove and drop into cold water for five or six minutes. Place between two plates and press until quite cold, then cut each sweetbread in two, brush over with beaten egg, roll them in some fine bread crumbs seasoned with salt, pepper and paprika, and fry in smoking hot fat until a light brown color. Drain on kitchen paper and dish in a ring, garnish with cut lemon, cooked peas or small cooked potatoes in the centre, and a rich brown gravy round the base of the dish. Serve hot.

Patties of Calf's Head.—Roll out some pastry, then cut it out with a two inch cutter into rounds, lay them on a greased baking tin. Beat up one egg, and brush over the patties with it. Take a smaller cutter, dip it in hot water, and mark the top of each with it. Bake in a hot oven for about fifteen minutes. Lift out the piece marked with the smaller cutter (this will form the lid), scoop out some of the inside, and fill with the following mixture: Cut some cooked calf's head and one tablespoonful of cooked ham into small dice, put it into a small saucepan, add one tablespoonful of chopped parsley, seasoning of salt and pepper, dilute with hot white sauce to a nice consistency, add one beaten egg, cook over the fire until it thickens, but do not allow the mixture to boil. When the cases are filled, put on the lids, dish up on a napkin, and garnish with parsley and serve at once.

Calf's Feet en Fricassée.—Wash two calf's feet, scald them, bone the upper part, and take out the shank-bone. Cut in half, and put them to soak for two and one-half hours. Then blanch and drain well and put the feet into a saucepan with one-half onion peeled, one-half carrot, three whole peppers and one teaspoonful of salt and simmer gently until quite tender. As soon as they are sufficiently cooked, take them up, drain, and remove all the bones. Press lightly until cold. Take three cupfuls of the liquor, the feet were cooked in, put it into a clean saucepan, and add one onion and one carrot sliced, two cupfuls of white stock, and bring slowly to the boil. Melt four tablespoonfuls of butter substitute in a small saucepan, stir in six tablespoonfuls of flour, and mix to a smooth paste, then add the boiling stock and stir until smooth. Cut up the feet into nice even-sized pieces, place them in the sauce, and cook gently for thirty minutes, add salt to taste and when ready to serve, add one-half cupful of cream, bring to the boil, but do not let it actually boil. Dish up, and serve very hot.

Shapes of Ox-Tongue.—Cut up one-half pound of cooked tongue and two ounces of cooked veal, put into a bowl, and pound well together, then add one-half cupful of thick white sauce, salt and pepper to taste, and rub through a sieve. Then add one-half cupful of whipped cream and eight tablespoonfuls of liquid aspic jelly. Rinse some little molds with cold water, fill them with the above mixture, and put on ice to set. Prepare a salad of lettuce mixed with mayonnaise dressing and arrange this in the centre of a dish. Turn out the little molds round the salad and decorate with chopped aspic jelly. Serve cold.

Greasy sputterings and drippings!

Try Gold Dust—if you would keep your Kitchen Range greaseless. For Gold Dust leaves only spotless freshness.

Eat Good Green Things for That Tired Feeling of Spring

By Marion Harris Neil
AUTHOR OF "SALADS, SANDWICHES AND CHAFING DISH RECIPES."

Change the Diet in the Month of May

MAY is the approved month for squaring up accounts with Mother Nature and the world at large. If you have been over-eating, cut down and change your diet; overworking, cease for a little and take breath; too closely housed, get out into the fields, following the needle of your nature that points toward the country.

Was there ever such a month as this month of May? Each year we ask ourselves the question and there is never a real answer, for beauty confronts us on every side, and perhaps there is no comparison to beauty.

May—"fayre Maye," whose name from the Latin *Maguis,* the same as the sanscrit *Mah,* meaning the growing or shooting month—leads the housewife to recall that the special dainties of the season are in the main derived from the "green things growing all around." In England Rogation week was frequently known as *grass*-week by reason of the foods of the time, which, according to old church calendars, "shall consist principally of salads, eggs and green sauce." They understood hygienic living, those old church fathers and we can do no better than to follow the examples set by them.

From time immemorial, "greens" of various sorts have been held in high esteem for purifying the blood of humors engendered by the winter's usual diet of fatty foods, hot breads, rich puddings and forcemeats of various kinds.

Among the wholesome Spring green vegetables the onion stands first:

Eat onions in May,
And all the year after, physicians may play,

runs the old couplet; and after that, spinach, cress and asparagus, each of which has medicinal claims to recognition. Asparagus is supposed to calm the action of the heart, act as a preventive of calculi, and stimulate the kidneys.

Cress was believed by the ancients to excel as a mental stimulant and system invigorator, this universal opinion becoming crystallized into the proverb, "Eat more cress and learn wit."

Everyone knows that as a complexion beautifier, owing to the large amount of sulphur it contains, the onion has no equal. Everyone knows that it soothes the nerves, gives tone to the stomach, cures the earache, loosens a cold, quiets a cough, and stimulates the kidneys to remove waste products.

For the "good for nothing" Spring feeling, onions raw, eaten early, often and late, will be found effective. As an appetizer there is nothing to excel young home grown onions, sliced thin, lightly salted and placed between slices of buttered bread.

The list of edible greens is much more varied than the housewife usually supposes. Besides the popular and wholesome spinach, Brussels sprouts, kale, lettuce, cress and dandelion, there are sorrel, mustard greens, chicory, beets, cowslips, radish and milkweed.

Hop sprouts are popular in England for greens, though not generally familiar to housewives in this country. They are cooked like asparagus.

Coming at a time of the year when one is tired of tubers, the dandelion should prove a boon to all thrifty housekeepers. As a pot-herb, the young dandelions can not be excelled, whether cooked alone or with sorrel or with bacon. Later the leaves become bitter, and must either be boiled in two waters or foregone. Dandelion "greens" are best when picked after a rain or in the early hours of the morning. They are very easily prepared for the table.

Gather one-half peck of dandelion leaves; pick them over carefully, wash them in several waters, and drain thoroughly. Simmer them for thirty minutes in a saucepan of boiling water. Drain well, cover again with boiling water, to which has been added one teaspoonful each of salt and sugar. Let the mixture simmer for twenty minutes. When the leaves are tender, turn them into a colander and drain. Cut them through with a knife, and season with pepper and melted drippings.

Dandelion Salad.—Wash thoroughly one quart of dandelions, arrange them in a salad bowl with a seasoning of salt and pepper. Cut in dice shaped pieces three ounces of bacon and fry them crisp, then add them to the dandelions. Put two tablespoonfuls of vinegar in with a little of the bacon fat, heat and pour over the salad.

Or chop cooked dandelions fine, mix with thinly sliced hard-cooked eggs, and serve with French dressing. Or mix fresh dandelions with chopped onion and pour over French dressing made with bacon fat instead of oil.

Watercress Surprise.—To one bunch of fresh watercress, washed and picked over carefully, add one can of chopped pineapple, strained juice of half a lemon, a dash of powdered sugar, and seasoning of salt and paprika. Just before serving add one cupful of thick mayonnaise mixed with one-half cupful of whipped evaporated milk.

Spinach Timbale. — Cook enough spinach when passed through a wire sieve to fill a cup. Add to it four tablespoonfuls of butter substitute, one-half cupful of milk or cream, the yolks of two eggs, and one-half teaspoonful each of salt and paprika. Pour into a greased mold, cover with a greased paper, and steam steadily for one hour. Turn out on to a hot dish and serve garnished with cooked peas and diced cooked carrot and turnip.

Asparagus with Cheese. — Remove the loose leaves from one bunch of asparagus, scrape the stems, cut the ends so as to have them all the same length, put them into a bowl of cold water, wash them carefully and quickly; tie them in small bundles, taking care that the heads are all of equal size. Put the asparagus into boiling salted water, sufficient to cover them in a saucepan large enough to hold the vegetable and cook for twenty minutes. Care must be taken not to break the heads. Grease a vegetable dish, place on it a layer of asparagus, sprinkle with grated cheese, then add some more asparagus, and then more cheese; continue in this way until the asparagus is all used up.

Melt four tablespoonfuls of butter, cook it until of a nut brown color, pour this over the asparagus heads, and serve very hot.

Baked Beets.—Wash several beets thoroughly, but be careful not to break the skin or even to cut away any of the fibers. Place on a baking tin, and bake in a very moderate oven from five to eight hours. When done, they can be served hot with butter, pepper and salt, or served cold, cut in thin slices. Beets cooked in this way are very wholesome, and are rich and sweet in flavor though less bright in color than when boiled.

Braised Lettuce.—Choose six lettuces with firm hearts, and as much the same size as possible; wash them in water, cut the stalks, trim off the outside leaves, and wash again in fresh water; parboil them in boiling salted water, and drain well. Line a small stewpan with thin slices of fat bacon; on that put a layer of sliced carrot and onion, and season with salt and pepper; lay the lettuces on this, cover with a few thin slices of fat bacon, add two cupfuls of stock or water, and cover with the lid of the pan. Bring to boiling point, then put it in the oven, and cook slowly for one and one-half hours. When the lettuces are cooked, drain, and place them on a hot dish. Strain the liquor into a clean saucepan, and cook for five minutes, then add one teaspoonful of meat extract and one tablespoonful of butter. Make very hot, but do not boil, and pour over the lettuces. Serve hot.

Radish Salad.—Mix thinly sliced radishes with small pieces of tart apple, marinate in French dressing, drain well, and mix with mayonnaise dressing. Serve on crisp lettuce leaves.

How to Use the Grateful and Pleasant Lemon

By Marion Harris Neil
AUTHOR OF "ECONOMICAL COOKING."

The Lemon Should Have a Larger Place in Our Culinary Schedules

WITHOUT the lemon, cookery would fare badly; of all the fruits this earth can produce this one is the most important in the preparation of dishes both sweet and savory.

Citrons, limes, oranges, and others of this same perfumed species, have all their culinary value, but not one of them can be converted into a substitute of the pure lemon.

Lemon juice aids the cook in a hundred ways, at all times and all seasons. Her kitchen would be badly equipped did it ever lack the lemon. The juice enhances the flavor and brings out the characteristics of most other fruits. It mingles well with most dishes. It is used in every kind of cookery, for sweets and savories alike, never coming amiss, never failing the culinary operator.

Salad dishes need it; salad dressings require it; cold meat is given coolness, zest, delicacy, by its companionship as a garnish; apples are improved by its presence in pudding, pie, or any confection made of them; even the sour rhubarb is enhanced in every way by lemon juice which may enter safely also into most syrups and preserves.

There is gum in the lemon, which is sugar in a sour form. But as some amount of sulphur is present, one of the most powerful acids is formed in the ripening process, and this is sulphuric acid, that brings breaking up and change wherever it comes.

Lemon juice is a very mixed matter. It is full of warring elements, so to speak. Its acids and alkalies are in constant working order, changing and altering the liquid portion. The skins, too, are no less complex, with their bitter attributes and their oils.

The zest of a lemon is really its flavoring oils, therefore in very thinly peeling off the yellow part this is secured. Lump sugar will absorb the oil through the process of like going to like. The sugar is carbon, so is the oil. If the sugar carbon be rubbed on the skin, the oil is attracted and absorbed. Such sugar flavors the lemon juice exquisitely in lemonade or lemon ice water. The rubbing ruptures the oil sacs.

Lemon juice is a febrifuge, valuable in feverish states of the system. There are minute amounts of phosphoric acid and of chlorine in the juice, which is really a natural medicine to-day, even as it was ages since in old time India and China.

Lemon Squash.—Squeeze the juice of one lemon into a tumbler, add one tablespoonful of sugar, some broken pieces of ice and then fill the tumbler with soda water, mix thoroughly, strain into another tumbler, and serve immediately.

Lemon Syrup.—Peel the rind from one lemon very thinly, taking care not to remove any of the white part, or the syrup will be bitter. Put the rind into a saucepan with three cupfuls of cold water, and allow to simmer for fifteen minutes; then add the strained juice of the lemon, and simmer for fifteen minutes longer; strain through a cloth, return to the saucepan, add two pounds of lump sugar and one-half ounce of citric acid, and simmer for a few minutes. Let it get cold, then bottle it.

Lemon Whey.—Put one cupful of milk and two tablespoonfuls of sugar into a saucepan, and bring to the boil. Add the strained juice of one lemon, cook over the fire until it curdles. then strain, and use. Excellent for invalids.

Lemon Sauce.—Boil one-fourth cupful of brown sugar and one-half cupful of water for fifteen minutes, add the grated rinds and strained juice of two lemons and boil for eight minutes and strain.

Lemon Tartlets.—Put one-fourth cupfuls of butter into a saucepan, add one cupful of sugar, add the grated rind of one lemon and the strained juice of two lemons. Beat three eggs well, and then pour into the saucepan with the other ingredients. Stir them over a gentle heat until the sugar is dissolved and the mixture begins to thicken. Care must be taken to keep it well stirred, and not to have too great a heat under, as it burns very easily. Roll out some pastry, cut it into rounds with a round cutter, and line some tartlet pans with them. Three-parts fill with the lemon mixture, put them into a hot oven, and bake for fifteen to twenty minutes. Take them out of the oven, remove from the tins, and serve either hot or cold.

This lemon mixture can be put into small jars, and covered down, in which case it will keep for some time.

Lemon Soufflé.—Grease a timbale or soufflé mold, tie a band of greased paper round the outside, coming two inches above the top. This prevents the pudding running over while cooking. Melt two tablespoonfuls of butter in a saucepan, stir in four tablespoonfuls of flour, add one-half cupful of milk, boil until it thickens and becomes a smooth paste and leaves the sides of the saucepan. Grate the rind from one lemon, take the pan off the fire, stir in the lemon rind and two tablespoonfuls of sugar, let it cool, and then beat in the yolks of three eggs one at a time. Beat the whites of the eggs to a stiff froth, and mix them in lightly. Pour this mixture into the prepared mold, and steam slowly for forty minutes. Turn out on to a hot dish and serve at once with sweet sauce or hot milk.

Lemon Sponge.—Melt one and one-half tablespoonfuls of gelatine in one cupful of water over the fire, then add the grated rind of one lemon. Strain the juice of the lemon into a bowl, add one-fourth cupful of sugar and one white of egg, strain the melted gelatine on to it, and whisk all together until quite stiff. Dish up in a pile on a glass dish, or it can be put into a wet mold and turned out when required.

Lemon Cream Dressing.—Mix one-half cupful of cold, thick white sauce with one-half teaspoonful of onion juice, the strained juice of one-half lemon, salt, pepper and paprika to taste, one tablespoonful of oil and just a pinch of white sugar, then whisk with a fork until the whole is light and fluffy and pour over the salad.

Lemon Pie.—Moisten one tablespoonful of cornstarch with three tablespoonfuls of cold milk, pour into a saucepan with one cupful of water bring to boiling point, and boil for five minutes. Add one teaspoonful of butter, the grated rind and strained juice of one lemon, and one-half cupful of sugar. Bake between two crusts and serve hot or cold.

Lemon Pick-Me-Up.—This is excellent for anyone who is shivering, limp and depressed.

Put the juice of one lemon into a tumbler, nearly fill it up with boiling water, and add eight drops of ginger extract. Stir well and drink hot.

Lemon Nectar.—Pour one cupful of water into a saucepan, then add two cupfuls of sugar, bring to boiling point, and boil for fifteen minutes; take from the fire, and when cool add the strained juice of four lemons and four cupfuls of grape or loganberry juice. Let stand in a cool place for three hours. Serve with ice or soda water and pieces of plain cake.

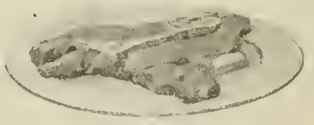
Lemon Candy.—Dissolve three cupfuls of sugar in one cupful of water, add one teaspoonful of vinegar, and when it boils, add a pinch of cream of tartar and allow to boil until it forms a soft ball when tested in cold water, or until it reaches 240° F. by the candy thermometer; then pour in one cupful of thick cream and cook to 254° F., or until it forms a hard ball when tried in cold water. Then pour on to a buttered slab. When cool, add two tablespoonfuls of lemon juice and pull until white, then cut into neat strips.

There's a
Bright Side
To This Food Question

Some foods have doubled and trebled in cost. But Quaker Oats—the food of foods—still costs a little price.

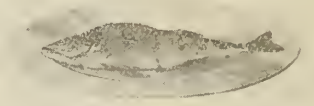
You get little meat for a dime nowadays. But you can serve 20 *dishes* of Quaker Oats for a dime.

The average cost of meat and fish foods is at least 50 cents per 1000 calories. That is ten times Quaker Oats' cost for the same energy value.



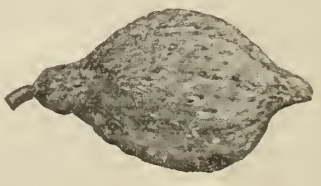
Yet Quaker Oats is vastly better food. It is almost a complete food. It is considered the ideal food, especially for young folks.

As a body-builder, as a vim-producer, oats have an age-old fame.

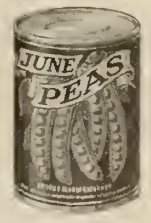


Compare your foods by calories, the energy unit. Know what your money buys. At this writing this is what you pay for some necessary foods:

Cost Per 1000 Calories	
Quaker Oats	5½ cents
Round Steak	41 "
Veal Cutlets	57 "
Salt Codfish	78 "
Canned Peas	54 "
Hubbard Squash	75 "



Ten Quaker Oats breakfasts can be served for the cost of one meat breakfast of same energy value. Yet think what delicious breakfasts Quaker Oats supply.



57 Cents
Per 1000 Calories

50 Cents
Per 1000 Calories

75 Cents

Make Sweeping Dustless as well as easy

CORN broom sweeping not only doubles work but it endangers health. Clouds of dust and dirt settle on furniture and draperies. Then follow weary hours of dusting and cleaning.

This disease-bearing dust can easily be removed by sweeping the Bissell way—a Bissell Carpet Sweeper for daily use and the Bissell Vacuum Sweeper for less frequent cleaning. Each is unrivaled for its purpose. Saves time and carpets, too.

BISSELL

Carpet Sweeper and Vacuum Sweeper

Don't compromise with dust and dirt. Don't be a slave to the drudgery of old-fashioned sweeping. Add the other model to your present Bissell and complete the "set."

"Cyco" Ball Bearing Carpet Sweepers from $4.50 to $6.75. Vacuum Sweepers, $11.50 to $15.50—depending upon style and locality. At all good stores. Send for booklet, "The Care of Rugs and Carpets."

Around the Hearth

By Jennie Allen Moore

"If I were hanged on the highest hill,
Mother o' mine, O mother o' mine!
I know whose love would follow me still,
Mother o' mine, O mother o' mine!

"If I were drowned in the deepest sea,
Mother o' mine, O mother o' mine!
I know whose tears would come down to me,
Mother o' mine, O mother o' mine!

"If I were damned of body and soul,
Mother o' mine, O mother o' mine!
I know whose prayers would make me whole,
Mother o' mine, O mother o' mine!"

—Rudyard Kipling.

MOTHERS OF OURS.

THE month of May brings with it Mothers' Day, recognized now in every country. The Journal readers need scarcely be told how it originated—how Miss Anna Jarvis, of Philadelphia, in commemorating the anniversary of her mother's death, by concentrating her thoughts on all that her beloved mother had meant to her during her life time, conceived the idea of a Mothers' Day.

She realized that others had also felt the loss of a mother, and her idea grew until it blossomed into the beautiful thought of remembering a living mother with a long procrastinated letter, or a little kindness by gift, or office of ministry, that would bring cheer and happiness to a mother's heart.

Then she thought out the special day for the celebration, also the outward expression of its recognition by wearing a carnation—red or pink for the mother on earth, and white for the one who had "crossed the bar."

From a small beginning in her own city in 1908, it has spread over the state, through the whole of the United States, into Canada, across the ocean, and is now a world-wide institution.

* * * * * * *

LAST May on Mothers' Sunday, I listened to a sermon which I shall never forget. Allow me to digress while I paint a word picture that arises in connection with that sermon, and which helped to make it impressive.

The men of the church marched in a body and occupied the centre pews. The choir had male voices only, with appropriate solos, and carnations were in evidence everywhere—paper ones principally, which could only be known as artificial by touch or smell. (This little explanation is offered as a suggestion only, because in small places the real flowers would be hard to obtain. Also it gives the young girls a chance to raise funds for their church society by making and selling the paper carnations.)

But to return, I wish I could give you that grand address as I heard it, and I also wish I had taken pad and pencil to take notes. But even though I could copy the remarks in their completeness I could not give you on paper the moral force of a convincing voice, and the extreme efficacy of the speaker whose every word carried weight.

My memory will be called upon to supply me with the fundamental truths inspired that day. Therefore as you read, remember that I have borrowed largely from the theme of that memorable sermon, using many of the illustrations as well, believing them to be well worth passing on.

"You are tied to your mother's apron strings," is a twit of ridicule to the child, and a sarcastic fling at the young man or woman who dares to adhere to mother's wishes. It may hurt or sting, but at the same time it is the grandest tether in all the wide world, and never be ashamed to own that you respect the ties that bind you.

We all remember that our mothers wore aprons. We can see her in the morning as she dons it—and it may have been a large garment that covered her form from neck to feet, or a very small dainty article of apparel. It may have been made by her own hands, or it may have been purchased ready-made. Perhaps it was of cheap calico, or more expensive material. That did not matter, it was her insignia of office, and she wore it becomingly, as we remember.

Many a time our heads have been buried in that apron as we poured out our childish grief in tears at mother's knee. Often as we have stood at the door or gate beside mother, has she enveloped our little bare heads in its folds to ward off the biting wind.

* * * * * * *

A YOUNG man asked another this riddle: "What is the longest line in the world?" The answer was—"Why the C.P.R. because it stretches from coast to coast."

The other retorted: "No; the clothes line because it reaches from pole to pole."

The minister added, "And if mother's apron hangs on that line, it encircles the earth, for the strings reach to the uttermost corners of creation."

Yes; the apron strings are long. They cannot be measured. They reach from the cradle to the grave. They wind and entwine around all the meandering paths of life. Their elasticity cannot be estimated. They follow into the remotest regions; they yield to the most untoward conditions; they bind hearts that are severed by distance; and are always reaching away and beyond any mortal conception of space.

There is the most enduring material in the making of those strings. There is no wear nor tear in their fibre. There is the pure gold of mother's truth and honor, the silver of her care and patience, the yielding qualities of brass in the maternal nature, and the firm anchor of her religion.

There are many strands interwoven in those apron strings that render them tenable. They hold when all else fails. There is mother's smile. How very early in life the little one learns to know mother's smile! Looking up at her face as the infant lies in her arms it watches for the smile of loving tenderness it is wont to receive.

Then as a little child, how eagerly the approving smile of mother is looked for, as they help in their little way to carry in wood or water, or assist in setting the table. It helps to make the work easy and pleasant.

Can any one forget their mother's lullaby song? We thought our mother's singing a most wonderful thing. I know I did. She was a beautiful singer and had a voice I coveted when I began to sing the same old songs to my babies.

One recollection I have of trying to rock my little one to sleep without his usual lullaby. Some terribly sad news had come to me, and I was sorely stricken. It was necessary that I should go to the scene of the blow, and I tried to hush my little man to sleep while the tears rained down my cheeks. He gazed in wonder, but insisted, "Sing, Mamma," and would not close his eyes until I mastered my emotion sufficiently to sing to him his usual lullaby. Only mother's song could bring the desired result.

* * * * * * *

THEN mother's kiss—that token we all loved. None so sweet and tender, as she held us closely in her arms, and imprinted upon our lips the first kiss of affection. The last thing at night and the first in the morning was this emblem of her sacred joy in her motherhood. As we hastened away to school with her goodbye kiss, we felt encouraged to face our studies, and our memories are rife with the pleasure we took in receiving that loving caress.

Princess Alice, the beloved daughter of our good old Queen Victoria, gave her life by responding to the request of her little child dying of diphtheria, who called, "Kiss me, mother." She knew the danger, but risked it because the great mother heart could not resist the pleading of her little one. She contracted the dread disease, and succumbed to its ravages. There was heroism in that fatal kiss of a loving mother.

Will the lesson taught us in our tender years ever be forgotten?
Who taught my infant lips to pray,
To love God's holy word and day,
And walk in wisdom's pleasant way?
My Mother.

What a blessed privilege is this of a mother! The innocent prattling child stands at her knee with eager questions, which are hers to answer. "Mamma, did God take Baby up to Heaven?" "Well, what did they put him in the ground for?" "What are angels wings made of?" "Who will mind little brother up in God's house?"

Alas for the rebuffs, and the senseless replies too often given! Anything to turn the inquiring mind aside and evade the replies that would give satisfaction, and help to unfold the flower of a budding mind.

Mothers, your work is akin to that of God in moulding and training the plastic young minds entrusted to your care.

* * * * * * *

THE mother love begins with the first throb of the little life, and never ceases until death. She lavishes her affection long before any response can be given, and spares not herself in her constant ministration. I came across this little tribute in my reading lately:

"Mother does not care much what becomes of her, if only her dreams come true in these—her children. She stays at home, and at work, and grows pale, and her loving sacrifice is all too often thoughtlessly accepted. But sometimes after many days, and in a far country, one rises up and calls her blessed and comes home, and then she knows her reward even before God calls her, and tells her she did well."

We are speaking of the *real* mother—those born with the divine instinct—not the sort who hand over their children to the care of nurses and maids. We are not considering that class of mother—so called. Theirs is the loss, because they know not the joys of maternal love that draws forth all that is grand and noble, pure and true, in a woman's soul.

The mother of our theme is the one who climbs the scaffold, and follows into the gutter, who knows no limit. She is the kind that leaves the door unlocked and the light in the window for years perhaps, so that the wandering child may find a pass-port and a welcome into the old home.

"Hast thou sounded the depths of yonder sea,
And counted the sands that under it be?
Hast thou measured the height of heaven above?
Then mayst thou mete out a mother's love.

* * * * * * *

WHERE does a mother's influence end? Silently but deeply it works, permeating into the lives of her family. Long after her voice is silent, her wise counsels are repeated, descending with the generations.

A very fine young man of my acquaintance who paid the supreme

(CONTINUED ON PAGE 40.)

Keeping the Kitchen Cool in Summer

By LOUISE GUNTON ROYSTON

TO provide sufficient ventilation for the kitchen in Summer, the windows should be of good size, with the upper part reaching close to the ceiling. It is also well to have windows on more than one side of the room if possible. The placing of a window above the sink is one of the best means for providing comfort in a Summer kitchen. In order to have the pantry window raised, and at the same time securely fastened against intruders, open the window two inches and drill a hole through the top of the lower sash near the casing and into the upper sash, though not quite through the latter. Into this hole insert a large nail that will reach well into the upper sash, leaving the head of the nail even with the sash. By this method the air in the pantry can be kept fresh and sweet. Sometimes a door in the kitchen may have the upper part fitted with a movable sash to take the place of a window, under which are placed convenient shelves and nearby a box fitted with under shelves on which to place pots and kettles.

If possible, fly screens should be arranged so that the whole of the window is covered, necessitating full length screens, hinged and opening out like a door, fitted with some sort of snap catches at two points in their length. In this way it is possible to open or close the outside shutters at will, while the windows can be down at the top for a foot or more, insuring a constant passage of heated air outward. Lacking full-length screens, it is a very simple matter to tack wire gauze across the upper part of the window frame for a sufficient depth to admit of the upper sash being well pulled down. Least expensive of all, of course, would be to cover the entire window frame with wire gauze, or even with plain black mosquito netting.

A plant of mignonette placed on the kitchen window sill will help to keep flies away. For some unknown reason they do not like the odor of the flower.

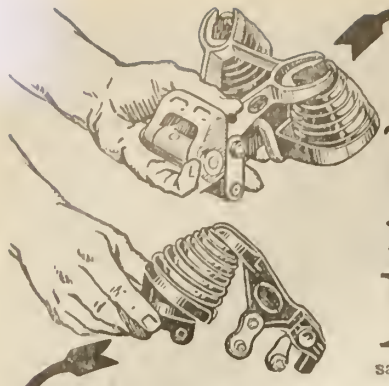
A kitchen window may be given protection from the sun in the absence of shutters or awnings in the following manner: Make a frame from light strips of wood at the top of the window by nailing an end of a 12-inch strip at each side of the casing and fastening a crosspiece between them at the outer end. To the ground underneath stake the end of a piece of wire netting and carry it up to the frame above. Over this train vines. The common lima bean vine has foliage that is both beautiful and dense. It is an advantage not to have the vines directly against the window. The foot of space between allows the breeze to circulate freely. The kind of shading to be provided for kitchen windows will depend upon the absence or presence of shutters or awnings. A dark green or dark blue linen shade will be necessary for a window without shutters or awnings, and if the roller is hung on brackets that are fastened on the extreme upper part of the casement, instead of in sockets that are placed between the casing, a quick ventilation can be secured.

WOMEN POLICE TO REMAIN.

WITH regard to the permanency of women police, of England, whose continued office, now that the war is over, someone has had the temerity to question, Miss Damer Dawson, their chief and champion, has the following to say:

"We mean to do precisely what policemen have done for women and children in pre-war days, only we hope to do it a great deal better. In some parts of the country we are getting a firm grip. Gloucestershire, for instance, is served by a full staff of women police, including detectives and linguists. Women police are sworn in at Gloucester and at Oxford, Walsall, Carlisle, Tunbridge Wells, Colchester and Cheltenham. The other day a member of the Metropolitan Force entered the Oxford Police Station, and was astonished when the woman sergeant said that she was the officer in charge. His errand concerned the escort of a woman prisoner, but he demanded to see a male officer. He was obliged to submit to the prisoner being accompanied by a policewoman."

Overland
TRADE MARK REG.



"Public Opinion"

The practical utility of the Overland Model 90, shown here, has attracted the attention of entire communities and created a sentiment of approval that is constantly increasing. In awakening public appreciation to the economical value of the automobile in general, the Overland has played an important part. Thousands of these dependable cars are today serving Canadian owners efficiently and economically. Many of these cars are Model 90, a car of such attractive appearance and sterling performance that owners everywhere praise its economy and practical value. Public appreciation thus won and expressed is your safe guide in buying a car.

What a Playground Means to a Community

By BETTY O'HARA

Editor of The Girls' Carry-On Column

PLAYGROUNDS to most of us seem to be one of the developments of the last couple of years; in fact some of us hear very little about them even now, but in the crowded centres of industry where children are cramped and crowded into small spaces with not a vestige of green grass or even a flower to substitute the glaring heat of the city pavements, it has become a common topic for public men to argue over when searching for the best means of utilizing the public funds. As early as 1908 Boston organized its first playground and since that time in the large cities of the United States and Canada the demand for these public amusement parks has been continually on the increase.

"It is a waste of money," some people argue. "If children must play let them find their own amusement, for they never seem to be at a loss when they have to shift for themselves in that respect." In answer let me draw your attention to England's experience shortly after the war started. When, owing to conditions, some schools and all playgrounds were neglected, children were turned loose in the streets or put to hard work; expenses for schools and playgrounds were reduced. As a result during the year 1915 juvenile delinquency throughout England showed an average increase of 34 per cent. In the city of Manchester the increase was 56 per cent. Which would we rather keep up,—a playground or a Juvenile Court?—not taking into consideration the effect of such a proceeding as the Juvenile Court experience on the child himself; and his future prospects as a citizen. Yet each in its own way strives to teach the child his relation to his fellow beings. Then as to the cost of a playground in dollars and cents. Those who have studied the subject closely tell us that the average cost and upkeep for a city playground is about 4c. per child. Not much I should say toward the protection of your property, the banishing of the Juvenile Court and the future of your nation.

NOR should this be an improvement for cities alone, but in any small town or village, the school teacher and school board should join together in one gigantic effort to instal this means of pleasure for every child in its vicinity Small concerts and socials, and now that gardening time is here, the raising and selling of vegetables can generally raise money for this purpose. The sum of thirty-five dollars with a little outside help will accomplish wonders for a playground in the schoolyard.

A SAND bin, half a dozen swings, a horizontal bar, and a hundred yard running track along the fence, then a baseball diamond, a tether ball equipment and a basket ball court turns a country schoolyard into a land of dreams, for very small cost. For a child of any age, boy and girl alike, with an ambitious teacher having the children's interest at heart who makes a study of child's games, the possibilities are unbounded.

One school principal who was weary of listening to complaints of broken windows and other childish misdemeanors surrounding the schoolyard, gave entertainments with the help of the children to buy playground equipment. Three hundred dollars was raised and both teacher and pupils turned in and made ready the playground. Now he hears no more complaints of broken windows or recess squabbles; punctuality and the number in attendance have improved, and the happy children are ten weeks ahead of the students of last year.

Toronto is about the best example of Canadian activities along this line.

With a population of 550,000, they have twelve playgrounds and four recreation centres and a staff of 47 men and 53 women. The total attendance for one year was 778,000, with a children's attendance of 621,466. And for one year at the free moving picture shows provided every Saturday afternoon for children and in the evening for adults, they had a total attendance of 16,157 for the parents alone this shows that the efforts are not only welcomed by the children but also keenly appreciated by the older folk as well.

TORONTO however is not the only city convinced that such a plan is for the betterment of the community, but the whole of Canada is behind the scheme. And the fact that the supervisors must be those who are trained for the purpose has opened for the girls of this country a vast field of endeavor.

For the girl who would make a success of this vocation for women, creative ability and resource must be two of her outstanding qualities. She must make a study of child nature and of the games which will awake in them at once a sense of fair play, and make for the development of mind and body simultaneously; for it is as much a subject of deep thought as the study of languages or mathematics. She who would qualify for this as a life's work must have a love for children which is not easily destroyed. She must love them sometimes with dirty faces, she must love them if they have one toe unceremoniously poking out of a patched boot, or just as often with no boots at all. She must have a knack of comforting a bumped head or a smashed finger and the authority to teach the children of the street that might is not right, that the older and bigger children should not push the tiny tots away from their play, but that it is their privilege to help and protect them.

HERS is a work whose tact must even overshadow that of the school teacher. In the school room discipline reigns supreme. If the young miscreants transgress the law, there punishment can be meted out, but for the playground the supervisor has no such recourse. There is no punishment for the playground. she must dispense law and order by some other means.

She must be able to organize games for the child of seven, and have that finesse which tells her that a fifteen-year-old boy would have nothing in common with "Here we come gathering nuts in May," or "London Bridge is falling down." For this lad of fifteen an obstacle race or a good game of baseball will satisfy his precarious taste. She will be a "peach of a pitcher" and be able to make a dashing "home run," if she would not elicit that scathing remark with which the male sex are ever proud to display their superiority, "You can't expect it, she's only a girl."

On bright, sunshiny days the children troop to the playgrounds. Some are faithful devotees at the see-saws which stand in stately rows at the far end of the lot, while others, thinking the up-and-down movement rather monotonous, find their ambition realized when they can go higher than the boy across the way, in the swings, which are so constructed as to allow for any competition of this kind without taking vengeance on its occupant and tipping him overboard.

ONE of the most popular pieces of apparatus in the whole playground is the slide, where the children walk up a spiral staircase and slide down highly polished hardwood. The fact that they are slowly but surely wearing out Sunday trousers or the only school dress they own seems to bother them not at all. The merry-go-round which most resembles a clothes reel with seats for the smaller ones is a regular picnic, for it seems just like going to a really truly circus and you do not have to look with longing eyes while the other children have the rides, for five cents is really a fortune when father is out of work, that is why the merry-go-round is always filled to its utmost capacity, and when there is not another bit of room to be had there is always a pail and shovel handy and with wonderfully clean sand the disappointed ones can always build castles in Spain to their hearts' content.

Of course there are rainy days too, when the swings are deserted and the merry-go-round ceases to spin. It is

Concerning Books

That are Worth While---and Some Others

BY OWEN E. McGILLICUDDY

Love Songs, by Sara Teasdale. Published by The Macmillan Co. of Canada. Price, $1.25.

HERE is a volume of genuine poetry which has the singing quality all true lyrics should possess. There are no long poems, nor is there any attempt at free verse included in it, but if one wishes to have words sing their thoughts into tired and weary minds, there is no book published in recent years by any American poet which will give the same degree of satisfaction as does "Love Songs."

We quote one poem which seems to serve as an excellent criterion for the rest of the volume:

OTHER MEN.

"When I talk with other men,
I always think of you—
Your words are keener than their words,
And they are gentler, too.

"When I look at other men
I wish your face were there,
With its gray eyes and dark skin
And tossed black hair.

"When I think of other men,
Dreaming alone by day,
The thought of you, like a strong wind,
Blows the dreams away."

Uncensored Celebrities, by E. T. Raymond. Published by J. M. Dent & Company. Price, $2.25.

THIS volume is a collection of some thirty-six character sketches of men prominent in British public life at the present time. The sketches were published originally in "Everyman's Weekly," and they deal with such men as David Lloyd George, Mr. Asquith, Mr. Balfour, Lord Milner, Lord Northcliffe, Mr. Winston Churchill, Mr. Bonar Law and Sir Edward Carson.

Mr. Raymond demonstrates in these character studies that not only is he well-informed in regard to his subjects, but that he also has wide political knowledge and writes with a wit that is out of the common. In a brief preface the author states that the war has created new standards and that the sketches are designed to assist the process of re-valuation.

"They are not meant for the hero worshipper," he writes, "The Hero as Politician, always rare, is not discoverable just now by the present writer. 'The Man' of the newspaper articles has still to appear, though he has been regularly announced every three months or so. For the most part one can only say of political things that they have got themselves transacted somehow. But while, like the angry ape, certain politicians have played 'fantastic tricks before high heaven,' others have emerged with credit from the supreme test, and still others have meant exceedingly well.

"In his task of classification the author has paid scant attention to party labels, and has always preferred the wider to the narrower loyalty. The most important question to be asked of any public man at this time, 'Is he a good Englishman?' cannot be resolved by purely intellectual tests. Judge Jeffreys used to say that he could 'smell' a certain kind of person 'a mile off.' The present writer can claim no such delicacy of perception; yet he is not ashamed to admit that in some doubtful cases he has relied chiefly on his nose."

Mr. Raymond has aimed to be impartial in his treatment of the various political characters and he vents a rare causticity on Premier Lloyd George, Mr. Asquith, Mr. Bottomley, and Mr. Walter Long. Writing of Premier Lloyd George, Mr. Raymond says, "He has a quite unusual capacity for getting to the heart of any matter to which his attention is specifically directed; his judgment is shrewd; his courage high; his driving power remarkable. But the very intensity of his nature forbids calm envisagement of things as a whole. He has little faculty for exercising a general command and his talent for discovering talent, though considerable is not always allowed full play; the claims of private partiality, political affinity, or convenience, etc., are often given undue weight. Thus he is often badly served and does not discover the fact till too late and too often fails to correct what is wrong even after it is manifest.

"In other words," continues Mr. Raymond, "Mr. Lloyd George's ministry is like an orchestra composed of performers of very unequal merit under a conductor who only occasionally troubles to conduct, being engaged in writing the music, looking after the stage carpentry, advertising the performance, and even selling the tickets. Mr. George has had to keep a watchful eye on interests for which the public cares nothing, but the management of which is essential to the maintenance of his position. He has had to work with many tools he would not have chosen, and like other tailors he has had to cut his coat to his cloth. The garment is still in the stage of threads, thrumbs, and chalk marks; It is y t too early to say what will be the final result. We wait in a spirit of increasing hope, tempered, perhaps, with some little concern, lest at a critical moment audacity should degenerate into recklessness, or that the instinct which dictated the right course in 1914 should falter in face of things almost as vital and far more complex."

These character sketches are brilliant word pictures of the men who are busy at the present time shaping Britain's future. The whole book is brilliantly written and will give the reader a closer knowledge of the guiding intellects in the Old Land than might be gathered in any other way. The book is one to be bought and read and then kept on a handy shelf to read again.

The Book of Elizabethan Verse. Chosen and Edited by William Stanley Braithwaite. Published by Frederick D. Goodchild. Price, $2.00.

HERE is an anthology of Elizabethan verse such as all true lovers of poetry have been yearning and searching for during many years. Mr. Braithwaite has made a painstaking study of the many poets of the period and while many old favorites are recognized a great number of poems which have hitherto not appeared between covers in recent years are also included.

Such poets as Francis Bacon, Sir Robert Eyton, Francis Beaumont, Nicholas Breton, Thomas Campian, Thomas Carewe, Richard Crashaw, John Donne, Michael Drayton, John Fletcher, William Shakespeare, Ben Johnson, Christopher Marlow, Sir Walter Raleigh, Edmund Spencer, and Sir Philip Sidney, with some forty-five others, give a representative number of lyrics such as this period has never before had credited to it in one volume. The anthology is one which every true lover of poesy should have on the most accessible shelf in his or her library.

Yashka, by Maria Botchkareva. Published by Frederick D. Goodchild. Price, $2.00.

THIS book records the life story of Maria Botchkareva who commanded the Russian women's Battalion of Death, and has been referred

Beware of Substitutes

The Ranee's Bracelet

(CONTINUED FROM PAGE 12.)

gloom, stopping and raising a hooded head among the flowers, as his instinct told him that the woman standing so near was one of those "who have never learned to hate."

It was her custom to make a round of the Moti Bagh and its grounds each evening, blessing each inmate in the quietness of her soul. So she passed through the garden and across a grass plot to the school-house, with its class-rooms and boarding hall where forty young Hindoo girls ate their rice and spread their sleeping mats. Then round to the rear of the compound, to where the vegetables looked poetical in the dark, and beside them was the cottage refuge for the few outcast women they sheltered. Alice could hear the dry cough of the bazaar girl who was dying there of consumption as she stood praying for the peace of all within.

THERE were no idlers at the Moti Bagh. Beside boarding school and refuge there was the dispensary by the high gateway in the east wall, where Marion was busy, with Kitty and Chunia Lal, the Hindoo apothecary, preparing medicines for the patients who would come to them in the morning.

Alice stood still in the gate arch, looking out across the great plain which seemed to move with a mysterious wavy motion in the dusk, for the wheat was in the ear, and for miles it covered the country like a sea, the villages, with their thatched roofs and groves of trees, rising like islands among it. On the other side of the Moti Bagh was the native bazaar and city of Beelampore, built at the foot of the outstanding rock on which the Rajah's palace towered. And beyond it again was the European quarter.

Marion came out silently, putting her arm round Alice, just as a horseman rode past. He saw the faces of the two women in the moonlight, and with a startled exclamation pulled up his horse so suddenly that the big, spirited animal reared and plunged. Alice had a moment's glimpse of a young man's face—a white man, whose eyes looked at her almost as if he thought she was his enemy. Then recovering himself, and his horse, he dashed away, riding at furious speed, while Alice said, in mild surprise, "Whoever can he be, Marion?"

She looked at the girl doctor as she spoke, and had a second surprise, for Marion's face was pink in the moonlight. "He is Donald Grant, the Government engineer at Beelampore, Allie. I did not know he was here. I am sorry, for once he asked me to marry him, and I said I would and then I didn't."

"HE looked at me as if he blamed me for it," remarked Alice, "though I had never heard of him till now."

"He was born out here," said Marion briefly. "His mother was a far-off cousin of ours, so he was sent home to us when he was seven. I was three then, and I grew up with him and my brothers, loving them all alike, till I was seventeen, and he was going back to India. He made me see then that he was not my brother, and never could be, and I—I was bewildered at it all. I suppose I did love him a little, for I said I would marry him when he came back, in four years. Then I went on helping Dad—you know he was a doctor—and I got so interested in his work that I forgot my lover, or that woman doctors were unheard-of things. Well, I did study medicine, in defiance of all old ideas, and in the end dignified Edinburgh College gave me a qualified degree. But before that Donald was back, demanding I should give up everything for him. And, Allie, I couldn't. I told him so, and he said I was treating him disgracefully. That's all the story. I took my degree, fell in love with you, Allie, and because Christians did not want my medical treatments I came out here to inflict myself on the poor heathen."

AWAY across the plain Donald rode furiously, vowing to himself, as he had vowed continually for three lonesome years, that he would never "grovel" at the feet of a woman who was so lost to all the proper feelings of her sex that she preferred a career to a husband (Donald thought according to the thinking of the Victorian age he lived in). Yet he knew that the only thing that kept him from "grovelling" before Marion and telling her that she could have all the careers and missions she liked, if only she would accept her lover as well, was the assurance that Marion did not want him at all.

Among men Donald had the name of being a masterful man, who rather enjoyed beating his way through opposition, but he lost all his fighting qualities when it came to wooing the only lady he had ever taken an interest in. As Marion told Alice, he had spoken angrily when she cast him off for a career, but he had written, apologizing for his anger later, and Marion had written in answer: "Of course, I am not angry with you; but I feel that I am made for higher things than love and marriage, so please do not waste your time and mine in coming to see me. Neither you nor any man can ever have any part in my life, for I am going to India with Alice Ross, to help a little in elevating my sisters there."

"SHE'S as bad as Tennyson's 'Princess,'" Donald thought gloomily; "and I'd make as big a fool of myself as her prince did, if only I could get the least bit nearer to her, but I can't; hang it all."

And up in her ivory tower the Ranee sat thinking of the upheaval of nations. There were strange plots brewing in India that February night, 1857, and in the chaos they should bring Marion was fated to meet with Donald again.

All March the roses bloomed in the garden of the Moti Bagh, but the hot winds of April ended the day of the English flowers, and the garden grew into a scene of Oriental splendor as the amaltas tree—the Indian laburnum—hung out its long, golden pendants of blossoms, while gaining their flaming red from the fierce heats of noon; the scarlet of the pomegranate flowers blazed out on their trees.

And there was war in India—the great Mutiny. At Beelampore they heard that the rebels had seized Delhi. There were ghastly stories of the indiscriminate slaughter of white men, women and children—then they heard nothing at all. Beelampore was ominously quiet, and the English residents had gathered at the Moti Bagh, whose massive brick walls could defy the attacks of any enemies unprovided with artillery. So the windows of the mission home were blocked up with sandbags, and the early sunbeams one hot morning in July flashed on the rifle barrel of the man keeping watch on the roof.

DONALD was not among the men at the Moti Bagh. He had started for home on leave just before the trouble began. Marion told herself that she was glad he was safe. He was not lying in the school-house as her brother Alan was, wounded perhaps unto death. He was captain in a native regiment, and his own men had stayed true. They had fought against the rebels, and when he fell eight of them, with their havildar, brought him and five-year-old Roy, his motherless little son, to the Moti Bagh, where the school was now a hospital.

Marion had watched all night by him, and now, as the dawn came fiercely hot from the heart of the East, she walked wearily through the garden to her room, and rest—if she could rest in the Indian heat. Round her the neglected garden had grown into a jungle of flowers, and the air was heavy with the mingled scents of tuberoses, jessamine and the sweet white kamini. She looked at them, unwontedly despondent, and wondering if her life was nearly spent and whether she had spent it in the wisest way in driving love away from her.

There was a sudden noise behind the house—the noise of a mob shouting of death to the foreigners, as they fired the refuge cottage, then pressed on to the school-house. The havildar was on guard there with his Sepoys. They were preparing to fire on the advancing mob when Marion was among them, crying: "Wait, brothers; do not kill, or we all who are here will be killed. Wait!"

THEY were in a class-room, from whence they looked into the long hall where Alan lay as one dead, with

NEW PERFECTION
OIL COOK STOVES

Keeps Kitchens Livable—
Cooks Everything Correctly

There's no smell or smoke from unburned gases—no stifling, sweltering kitchen heat—when you cook with a New Perfection Oil Cookstove. And everything gets just the right heat—low for simmering preserves—high for a crisp brown crust on bread or roasts—medium for frying or long cooking—*heats for all purposes.*

The Long Blue Chimney Burner insures perfect combustion. Gives clean, smokeless and odorless heat at all flame heights. Turns every drop of oil into usable heat. At highest flame—the high white-tipped flame—it is the fastest cooking kerosene burner.

With a New Perfection you can save minutes preparing a meal or boiling a pot of tea or coffee. No time lost generating the flame—reaches full intensity in less than a minute. Doesn't touch pots to blacken them. Instantly set and stays where set. Like gas—no waiting. Saves work—no kindling wood, coal or ashes to handle—no dirt. Is making 3,000,000 kitchens livable. Burns safe and always available Imperial Royalite Coal Oil.

Burner parts are brass and so constructed that overheating is avoided. They last for years. Wicks last for months. Equipped with metal carriers and ready trimmed, they are easily renewed.

For best results use a quick heating, heat retaining, even cooking New Perfection Oven—through its glass doors you can keep close watch on your cooking.

Ask your dealer to demonstrate the all season New Perfection Oil Cookstove.

If you can't see a demonstration—write for our booklet.

For best results use Imperial Royalite Coal Oil—absolutely uniform. Every drop goes into useful heat.

Through the Looking Glass

By VAIN JANE

The Second Milestone on Our Journey into the Realm of Beauty.

NO doubt it is the example of Old Mother Nature busy washing up her muddy world with April showers and drying it with bright spring sunshine, that awakens in the feminine heart at this time of year a passion for renovation, a desire to track to its lair every smallest speck of dust for the purpose of extermination, and a longing to be surrounded by new and shining things. You have felt that way in the spring, haven't you, dear ladies? Have you ever rushed to the telephone and called urgently for the window cleaners some day in April when the existence of double windows has suddenly seemed intolerable to you? Have you ever yourself for lack of someone else to do it, delved into the tool box and found a screw driver, with the fixed intention of removing the storm doors within the next half-hour or knowing the reason why? Have you ever hated with grim bitterness the rug on the living-room floor, where the spring sunshine lies on the worn part and positively magnifies the pattern that you once thought suitable but now despise? Have you ever dressed for the street and suddenly, through the looking glass, discovered that you simply couldn't endure your old clothes any longer? Of course you have done these things. or else you are the most unfeminine person in the world.

But the worst shock of all comes when one day in spring we stop to take stock of our personal qualifications and to determine just what the winter's toll has been. In the exaggerated mood in which spring finds us, we are liable to make ourselves believe that all our assets have been turned to liabilities. Consider our hair, for instance. By the clear daylight which shines upon our looking-glass we discover that it has a faded, drab appearance—that the ends are broken and a fine dandruff besprinkles the line of parting. Perhaps it looks dry and crackly—perhaps it has the sticky appearance given by too much oil. At any rate it has a neglected, shabby look and our heart sinks with the thought that this, which was once a proud possession, is no longer anything but a crowning humiliation.

BUT "take heart of grace," my friend, as one of the old operas advises, the case is not so hopeless after all, and hair experts will tell you that even a little attention in the spring of the year will give results which you will enjoy for months to come. The hair is very receptive to care and repays fully the time we spend in beautifying it.

One thing it especially needs in the spring is a reliable tonic, persistently and consistently applied. By consistently, I mean, daily, and not just on occasions or when the spirit moves one. A very good tonic may be made from the following formula:

Pilocarpin nitrate	1 gram
Resorcin	25 grams
Water	500 grams

This should be massaged into the scalp each night before retiring, using the tips of the fingers for the purpose and rubbing gently and firmly so that the scalp is loosened on the head. A tight scalp is known to be an unhealthy sign and the utmost endeavor should be made to keep it flexible.

The hair should afterwards be brushed, and though you might think it a trifling thing, still it is very important that it be brushed in the right way and not carelessly as a great many people have the habit of doing. In the first place it is important that no dragging or pulling at the roots should be allowed, for which reason all tangles should be removed with a wide-toothed comb before brushing. Incidentally, a certain amount of premature greyness is due to this very dragging, and that isn't a thing which anybody willingly courts. The hair should be parted straight from the middle of the forehead to the nape of the neck, in half, as it were, and brushed first on one side and then on the other with slow, regular strokes of the brush, this being put firmly through the roots to the scalp—but without banging, another mischievous action not infrequently performed. If the hair is too long for the brush to pass easily down its length it should be brushed in half, the long tresses held firmly together with the left hand halfway down, and brushed from the scalp downward first, and then on to the ends. It has been said that every head of hair should have at least twenty-four strokes of the brush each night and this is a good computation, for, though to brush it steadily for ten minutes is a good thing, it is rather a counsel of perfection to many people.

THE matter of how and when to shampoo the hair is quite as important as the daily care we give it—indeed, one largely depends on the other, for hair which is consistently cared for does not need as frequent washing as that which is attended to spasmodically. For instance you may hear some person say:

"I simply must wash my head every ten days, or it is a sight and perfectly impossible to dress. How other people are able to let theirs go for weeks at a time is a mystery to me."

"But do you brush your hair thoroughly every night?" you might inquire, to which she is pretty sure to answer:

"Oh. that is such a bore and I am always so tired when I am going to bed! Besides, I think brushing makes it oily."

Certainly it makes it oily, when the poor scalp has been made unhealthy by all-to-frequent ablutions. The circulation of the scalp must have stimulation, otherwise bad conditions will result. And constant washing which relaxes the pores, especially when only hot water minus the closing cold douche is employed, impoverishes the scalp and does it no good. The hair and scalp may be kept reasonably clean and free from dust by a little brushing every night—say five minutes given to this, which even the busiest person in the world can spare. Then, perhaps at the end of three or even four weeks, the hair should be washed with a reliable shampoo powder or preparation for the purpose, (not a drying soap, at any rate) the water squeezed out of it with warm towels and finished off with the application of heat as quickly as possible.

NOW that the war is over and we may with a clear conscience, allow ourselves some few little luxuries, I should say that it would be a good idea to look over our stock of accessories for the care of the hair and renew any which seem to have "had their day." For instance, the bristles of the brush which we bought two years ago are getting somewhat thin at the edge and don't take the same grip on the hair as they used to in their days of newness. In fact, we need a new brush, one that will do the work thoroughly. If we have a hairdresser, perhaps we had better consult her in the choice of a brush, for this is no unimportant matter and "any brush at all" will not do. For instance, if our hair is of a delicate, brittle quality, we need a brush with softer bristles than our sisters of the thick and coarser locks. At the same time the bristles need not be so long as they will require. Then again, I would suggest that we have two kinds of brushes—one of the ornamental kind which matches our toilet accessories and looks well upon the polished surface of the dressing table,—a monogrammed brush, perhaps, in silver or ivory, the aristocrat of the toilet family—and another, a "service" brush which we keep hidden away in the dresser drawer because while it is good as gold, it is not beautiful enough to be exposed. Very often a brush of excellent quality comes with dark bristles and a plain wooden back—the kind the careful hairdresser uses for she knows that it will stand frequent washing and is long in endurance.

Vain Jane

Neuritis and Nervous Diseases

Are quickly and surely relieved by the

BRANSTON VIOLET RAY GENERATOR

The wonderfully vitalizing and healing power of electricity exerted by the Violet Rays of The Branston Generator have been experienced by thousands of prominent Canadians.

A prominent medical doctor, whose letter we have on file in our office, writes us as follows:

"My neuritis of the lower end of the spine, with which I have been ill for nine months, has been very much improved through the use of your Branston Violet Ray Generator. I feel very grateful for the beneficial results of your generator."

A—— T——, M.D.

The Branston Generator successfully treats any disease of the blood or nerves.

A personal demonstration will be given free by calling at our offices.

Please send me your free book, "Health Rays."

Brown Sugar in the New Cookery

OUR Grandmothers used Brown Sugar for the delicious, old-fashioned sweets, but the usefulness of brown sugar is by no means limited to old-time cookery. It is as great a favorite in the scientific cooking school as it ever was in the old-time kitchen.

Lantic

Old-Fashioned Brown Sugar

which is just like the brown sugar Grandmother used to use, gives character and flavor to simple, substantial sweets. Very plain cakes and desserts lack zest and piquancy when made with white sugar. *Lantic Brown Sugar* is not only economical in itself, but it makes the plainest cookery more appetising, and is specially adapted to a time when food-saving is universally practised by conscientious housewives.

Lantic Old-Fashioned Brown Sugar is not only delicious for baking, but for many kinds of pickles and preserves, and for the simple sweets necessary to the health of children, and far more wholesome and economical if made at home from brown sugar than when bought ready-made. Send 2c stamp to-day for our booklet "*Grandmother's Recipes*," telling how to make all these good things. We will appreciate it if you will send us a good brown sugar recipe which you have tried and like.

Ask your grocer for a few pounds of Lantic Brilliant Yellow Sugar, and when you get it, put it in a stone crock with a moist cloth under the lid. This will keep the sugar fresh and moist and the flavor will be retained.

The Puzzle for May

By TOM WOOD.

Within **Circle No. 1** are seven little pictures. Name and arrange these correctly, and you will find that the initials spell the name of one of the famous liners which have conveyed thousands of our soldier lads over the seas, while the finals will give you the name of the water crossed.

Circle No. 2 contains six little pictures. When correctly named and placed, the initials and finals spell the names of two trees indigenous to Canada.

No. 3—What is the correct name for the delicious little pink and white flower shown in this circle? It is found in almost every Province of the Dominion.

Two prizes will be awarded:

First—One dollar and a half

Second—One dollar

for the best solutions, judged according to neatness and accuracy. All may compete.

Address: Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto, Canada.

THE JOURNAL JUNIORS' CLUB

Conducted by Ethel Bain

Stories, articles and photographs by Canada's future writers

MY Dear HOME JOURNAL Children:

Such splendid letters have been received from our younger members for their March contest, and it was indeed interesting to learn how well our junior readers know the value and habits of the robin family. Much better than many a grown-up, I'm sure.

A suggestion to our photographers. The print sent in should, for preference, be made on glossy paper as this sharpens the picture and helps in reproduction.

Do you like to write poetry? If so, there is a chance for you to win a prize this month.

No, it does not matter, Dorothy M. Moffatt, if you exceed the word limit by ten or twenty words. but not more, because if we did not set a fixed number, the letters would be too long and the remaining prize contributions would be left out for want of space.

Have you started your garden and what plans have you made? Are you going to grow only flowers or will you help food production this year? The war is over, Yes, but remember half the world is crying for food. Hundreds of thousands of starving people in the countries ruined by the war are looking eagerly to us in Canada to help feed them. By growing vegetables, and selling those you do not use, you can become one of the world's food producers. A prize is offered this month for the best plans sent in by any girl or boy reader of the CANADIAN HOME JOURNAL.

Your sincere friend,

ETHEL BAIN.

PRIZE LIST FOR MARCH

1. "Birds from the South." Awarded to Martha Rose Andrews, age 16, R.R. No. 2 Park Hill, Ont.
2. "Camera Contest." Awarded to Ida Fullerton. Age 13, R.R. No. 1, Desboro, Ont.
3. "The Robin." Awarded to Andrew Waechter. Age 11, care Benjamin Waechter, R.R. No. 3, Walkerton, Ont.

HONORABLE MENTION

Beatrice Graves.

PRIZE LETTER

"Birds That Arrive from the South in March."—By Martha Rose Andrews, age 16, Park Hill, Ont.

We have now begun on the first of the spring months, the month in which we welcome back our birds. And what is there in this life, which brings greater joy to the hearts of all, than the arrival of our birds from the south?

They also seem to feel the pleasure in getting back to us once more, for their cheery little hearts seem to be overflowing with happiness, and their endless songs would make the saddest of people happy.

Our birds do not all appear at the same time. There is usually a spell of a few days, even a week, between the different kinds of birds. This depends on the weather, for some birds can endure more cold than others.

About the first of our spring birds to appear is the robin. The robin is considered a pretty bird and is about eight inches long. It is of a brown color with a red breast, and for this reason it is known as robin redbreast. The song of the robin is very cheery. The male robin is very kind to his mate, he sings over the nest while she is brooding, and when the young are hatched, he feeds them.

The next of our birds to appear is the kildeer. a bird which is found in the marsh. They are gray with white wings. They have no song but rather a shrill call.

Following the kildeer come the black birds. They are a rich glossy black. The black bird is a large bird, and is known to the farmer as a robber, as they sometimes steal corn. On account, of this, many of these birds are shot. I do not, however, think that it is proper to shoot these useful birds, as they destroy innumerable insects for the farmer during the growing season.

After the black birds come the gray birds. They are a small bird and are gray in color. They are sweet singers and are very industrious birds. The blue bird next appears with its sweet song. They are a bright blue in color, the male bird being of a brighter blue than the female. Their song is very sweet, although it does not contain many notes. They are very valuable as they destroy insects.

Cranes and sea gulls, also wild geese and wild ducks are also seen in March, but as a rule the other birds such as gold-finches, bobolinks, thrushes, doves, and meadow larks do not appear in this part of the country until April. But our old friends the robin, black bird, blue bird, gray bird and kildeer usually arrive from the South in March.

Prize Photograph, taken by Ida Fullerton, aged 13, Desboro, Ont.

PRIZE LETTER

"The Robin."—By Andrew Waechter, age 11, Walkerton, Ont.

There is no time in the year that I feel happier than the day when I hear the first robin of spring. The robin is well named when it is called the harbinger of spring.

Ever since I was a baby there has always been a robin lay its eggs, every spring, just beside our house, in an apple tree, and I can always see and watch it from our kitchen window. When good old Robin Red-breast calls, I know it is time to put away skates and sleigh, and a glad rush of feeling comes over me as I think it will soon be green grass, flowers and fishing rod time again.

The robin is a very interesting bird as well as a joy bringer. It builds a very snug nest of wool, feathers, straw, little twigs and mud, and in it lays four pretty little blue-green eggs. The average number of young raised by a robin is four, and there are usually two broods each season.

The robin is of great value to the farmer. Its greatest merit is that in the early part of the season it feeds itself and its young almost entirely on cut-worms and on the large white grub. the larvae of the May beetle.

Of all our insect enemies the underground cutworm is about the most destructive, for in feeding it just comes above the ground and cuts off the entire plant, and our only remedy is to rely upon the ground diggers among the birds that are fitted for digging out the insects and devouring them The robin has proved by experiment to be the most conspicuous of these.

When the small fruit ripens, however, the robins show a decided partiality for it, especially cherries and strawberries, but can you blame them? I cannot, because I like them too; and a scare-crow will keep the robins away, but I am afraid it takes more than that to keep me away.

HONORABLE MENTION

"The Robin."—By Eric D. S. Hamilton, age 7, 68 Macpherson Ave., Toronto

The robin is ten inches long. He has a reddish-brown breast and brown wings with a white spot under his tail and white around his eye. The beak is dark yellow.

Mrs. Robin is not the same. She has a gray head and much paler breast.

The robin makes a coarse, rough straw and mud nest, and in that nest are four or five green-blue eggs.

The robin's song is "cheerily-cheerup, cheerily-cheerup."

The robin is a northern bird. The sparrow hops but the robin runs very fast. The robin goes as far south as the United States.

At the Forks of the Credit, up in an apple tree there was a robin's nest and I went and got the nest, and in about two weeks there was another nest, and in another day there was a green-blue egg, and the next day there were two eggs. The next day there were three, the next day four and the next day five, but the next day there were not six but only five, and Mrs. Robin was on the nest. Without meaning to, I frightened her away from the nest and I saw that she still had five eggs, and the next day I went and two eggs were hatched. Next day I went again. There was nothing and the nest was all pulled down. Do you know who pulled it down? Chatterer, the red squirrel, did.

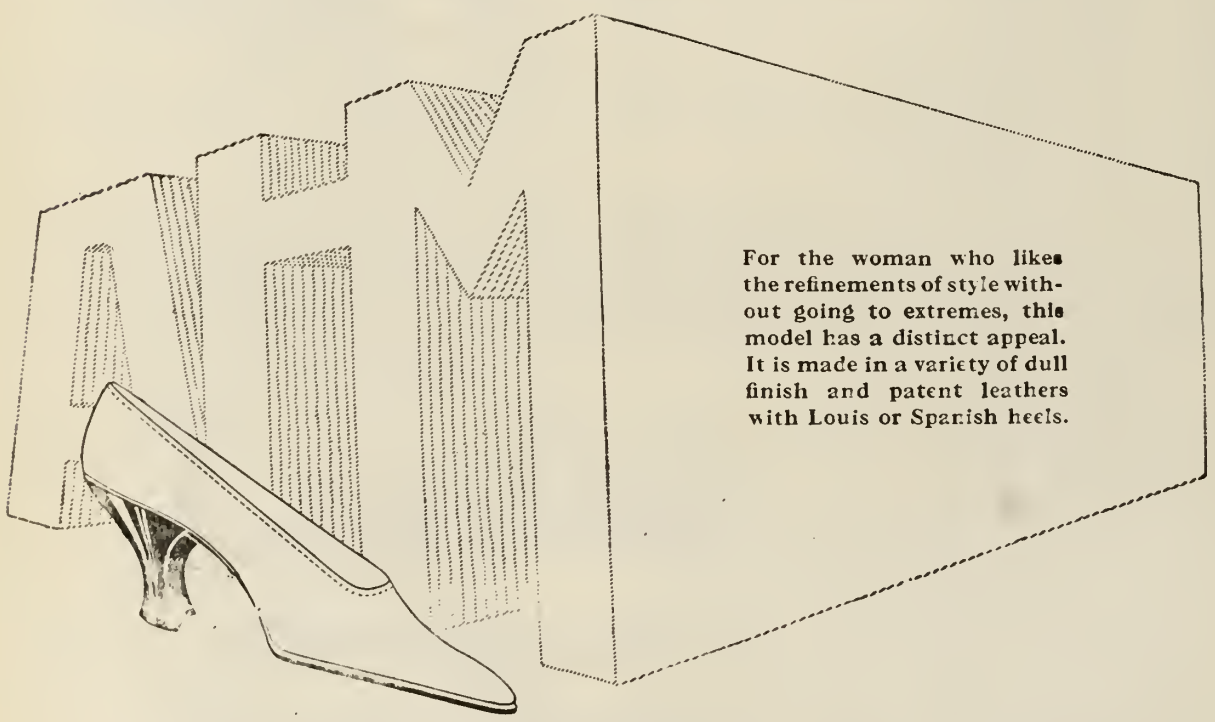
CONTESTS FOR MAY



1. Original Poetry. Not more than four verses. Open to girls and boys up to 16 years. Any subject.
2. Not more than 500 words. Subject: "Plans for My Garden." Boys and girls up to 16 years.
3. Camera contest for boys and girls up to 16 years. Any subject.
4. Prize for neatest and most carefully made scrap book for a convalescent soldier. Boys and girls up to 16 years.

All entries must be in by May 26th.

Write on one side of the paper only.

Name, age and address must be written on each contribution.

For the woman who likes the refinements of style without going to extremes, this model has a distinct appeal. It is made in a variety of dull finish and patent leathers with Louis or Spanish heels.

When a Dollar Buys More than a Dollar's Worth

WHEN your dealer advises you to buy a pair of shoes which cost a dollar more, he probably knows what he is talking about. He knows that every shoe in his stock represents good value for the money, but he also knows that some represent better value ***per dollar*** than others. A dollar added to the cost of a shoe will sometimes buy much more than a dollar's worth of service.

If you will go to a reliable dealer and be guided by his advice, you will seldom fail to get value for your money. And if you will see that the manufacturer's trade mark is on the shoes you buy, you may feel doubly confident. For the manufacturer's business reputation is behind it.

Send for our booklet "How to Buy Shoes." You will find it helpful. It is sent with our compliments to any address in Canada upon request to our head office at Montreal.

The Ranee's Bracelet

(CONTINUED FROM PAGE 26.)

Kitty kneeling beside him, holding Roy in her arms. At the far end of the room the enemy crowded—a leaderless mob, drunk with religious frenzy and hemp drug. They were hesitating, for between them and their destined victims stood a man in green robes and turban and long hair. Unarmed, he stood there, stretching out his hands as he said in the high-pitched, monotonous voice of the Moslem faker: "Have ye not heard of the woe and the curse, from our Lord Mohammed, given through the lips of his seers, on them who slay women and small children in the name of the Faith?" He went on with a string of Moslem curses, so awful and comprehensive that the mob backed a little, until one of them cried: "Kill every male among the infidels."

"The man here is dead already," said the faker instantly. "Will ye not let the women and child go to their friends?"

"She can go," was the harsh reply. "But before she takes the child she must uncover its body and show us that it is not a male."

Kitty held Roy tighter. His hair was in long yellow curls, and he wore the lace-trimmed garment of a little girl who had died. The faker pointed at him with a long brown finger, as he cried: "The fear of you is upon the woman, and she does not understand that she must show you the child to save it. But observe its hair and robe, for they show that it is a woman-child."

"I AM a man," Roy began, indignantly, but Kitty covered his mouth before the mob heard, though a big man lurched to the front of the mob, levelling his rifle at Kitty as he cried: "Let the woman uncover her child now, or I fire."

The faker's right hand went into the folds of his robe, but Marion was beside him instantly, standing before Kitty, and he only cried: "Would you wound a healer of wounds? Would you slay a saver of life?" And from behind the mob another voice shouted threateningly: "Let the man who would hurt the Miss Doctor remember that in this life he shall meet the wrath of the Ranee of Beelampore, and in the next the curse of which the holy man has spoken."

"Be quick!" said the faker sharply to Marion, and together they raised Alan, and with Kitty and Roy, started across the garden; the loyal Sepoys followed, and before the mob recovered from their indecision all were safe in the Moti Bagh.

There Marion turned to the faker. "Donald," she said softly. "I thought you were safe at the coast."

"I came back," he said briefly, "through the enemy's armies. Fortunately, they were not as keen as you to see through my disguise."

"I think I should know you anywhere, Donald," said Marion, with a note of invitation in the way she spoke his name. And the next moment Donald held his proud princess in his arms. For a little while these two stood together in the sanctuary of their love, shut out from all thought of a world of war round them; then men called to them, for the high, pale flames were rising from the school, threatening the Moti Bagh with fire, and from behind the compound wall rifle bullets were seeking for a weak spot in the defences.

Donald sprang away to the other men, and Marion went to arrange a place for her patients, feeling for the first time a dread of death, now that life seemed so good to live.

THE slow days of the siege went on. At first there were many attempts to storm the house where the flag of England waved so defiantly, but the handful of men there—Sepoy and white—used their rifles so well that the enemy fell back, leaving many dead among the crushed oleanders. So at last they made no more attacks, but waited sullen and savage beyond the wall, while within the garden nature hid all signs of battle in the dense growth of tropical bloom. The big babool tree had hung out its dainty tassels, and the lemon and pomegranate trees filled the air with their fragrance.

In the house the besieged husbanded their scanty stores of rice, split peas, sugar and charcoal, and endured the terrific heat as best they might, until a moonlit August night, when a

Crochet Corners for Yokes

When making a square crocheted yoke for nightgown, if three-cornered pieces are crocheted (about two inches each way) in each of the inside corners, the ribbon will not tear the yoke. —MISS A. ARMSTRONG, Fergus, Ont.

A Useful Mirror for Skirts

A mirror attached to the inside of the closet door near the floor will be found useful in dressing or dressmaking. The glass measures about eight by fourteen inches, and rests on two curtain rod hooks, screwed into the door about four inches from the bottom. The upper edge of the glass can be securely fastened by a tack. Much depends upon the angle at which the mirror reflects—the longer the hooks the better the results when the glass is in place.

Door Key Always Handy

Don't waste time hunting for a door key at the bottom of your handbag. Stitch a black silk cord to the top of the bag and have it long enough to reach to the bottom. At the lower end of the cord make a knot; fasten a safety pin to the knot and pin it through the top of the key. When the key is wanted, simply pull up the cord. By following this method the key will never be mislaid. If preferred, a small key ring may be used instead of the safety pin.

Home Made Ice Box

To make an ice box for less than one dollar: Line an old trunk with carpet paper, then with zinc from old washing boards, using the frames for a grate. Bore a hole in the corner for a spout, solder over seams to hide tacks; keep inner lining dry, and make smooth. Nail trunk to four posts to make it high enough and leave room underneath for a pan to catch water.—I. M. M.

Spring Cleaning Hint

Upholstered chairs and sofas can be cleaned indoors without filling the house with dust if the following plan is tried: Take an old bed sheet. Dip in warm (not hot) water, and wring as dry as possible. Spread over the chair or sofa and beat. The dust will stick to the cloth instead of flying about, and the furniture will be cleaned with little trouble. Be sure to have the cloth damp, not wet.

To Remove Water Spots

Take a piece of the same material as that spotted and dampen it in lukewarm water. Place over water spots on right side and press with a moderately warm iron. Press until both pressing cloth and material are dry. The spots will have disappeared.

For Baked Potatoes

Baked potatoes will always be mealy if before putting them in the oven to bake you snip off a small piece from each end. This has been tried many times, and has never been known to fail.—ESTHER JAMES, Macdonald, Man.

To Protect the Hands

When peeling fruit or vegetables, put a slit in a small cork and fit it to the back of your paring knife. This will save your fingers.

Kitchen Equipment

Don't wait until you can build a new kitchen or make over the old one, but get the most out of what you have. A little readjustment, the installing of such simple devices as dish-driers and drainers, and so on, will help things along mightily. There is a difference between accepting things as they are and putting what you have to the best uses; one is unintelligent resignation, the other may be real efficiency. All the patent devices on the market will not make yours a livable and workable kitchen if you do not use your brains in their disposition.

Worth Remembering

When starting on a long automobile trip, fold a bungalow apron over the top of the lunch basket. It is then handy to slip on just before spreading the lunch. It is surprising how this protects one's clothes, and reduces the amount necessary for the trip.

Mending Pans, Kettles, Etc.

Small, round holes often come in baking and roasting pans, kettles, etc. To mend these get one of the small, copper rivets which are used in mending harness and may be bought at any hardware store. Place the rivet in the hole with the flat side underneath, allowing the other end to project through. Then place the pan on something hard and, with a hammer, pound the projecting end flat. This will stop the hole perfectly, and at practically no cost. If knobs to pot and pan lids come off, put a screw through the hole left, head downwards, and thread a cork upon the projecting screw. This will never get hot and will last a long time.—J. M. M.

BABY'S OWN SOAP

For Nursery Use

you cannot take chances on Soap. Four generations of Canadians have enjoyed the creamy, fragrant skin healing lather of Baby's Own Soap—the Standard in Canada for nursery use, on account of its known purity.

Baby's Own is Best for Baby—Best for You.

Eat more Candy

"CANDIES are among the attractive and useful forms in which sugar is used as a food."—*Canada Lancet.*

Have you eaten your share of candy to-day?

There is a certain amount due to you, you know—for your system requires it to supply bodily needs.

Eminent authorities on food state that about 4 ounces of sugar are required by an adult every twenty-four hours.

Besides sugar, candy contains nuts, fruits, corn syrup, chocolate, some fats such as butter, and flavoring. All these ingredients are recognized as useful foods and essential to the maintenance of good health.

Candy has established itself as a wonderful food product. It is no longer considered a luxury. Men and women everywhere have found it to be an excellent food.

Because of its food value, candy was classified as a necessity for both soldiers and sailors.

While at the Front, General Pershing cabled: "Send candy if you have to omit oatmeal."

There are times each day when you feel the need for something to tone you up and restore your vigor—try candy.

Eat candy in rational quantities and nothing but good can result.

Serve Candy as a Dessert.
It is a Splendid Food.

THE CONFECTIONERY AND CHOCOLATE INDUSTRIES OF CANADA

The Ranee's Bracelet

(CONTINUED FROM PAGE 32.)

figure came out from the shadows of the babool trees, with its face veiled but its breasts uncovered that the sentry might see it was a woman, and not fire. So she was allowed to come up to a window, where she handed in a letter, addressed in English to Marion. Then drawing her veil closer round her, she calmly sat down on the ground to wait for an answer.

"Dear Dr. Marion," the Ranee had written. "In the cool season you came to my house to bring life, and now in the summer heat death is near to you. I gave you a bracelet as a pledge of honor that I would save your life, if it was ever endangered, and now you must let me save you, as your death would cover me with shame. The Rajah is vacillating—one day he is for one side and the next for the other. So men who hate your people have borrowed cannon in his name. Tomorrow, in his name, they will break down your house, and the blood of your friends will commit him to the cause you call the Mutiny. Only you must not die, as it would hurt my honor. You must leave the Moti Bagh with my messenger. I am waiting for you myself just beyond the garden. And I know you are so true a woman yourself that you can always recognize truth in others. You know you can trust—Rajmahli Singh."

BUT it was only a letter that went back with the old woman messenger. "Dear Madame," Marion wrote. "I trust you perfectly. Only my honor would not let me leave the Moti Bagh without the consent of Captain Davidson, my brother, and because he does not know you, he would not give it. And I don't want to escape, because since you saw me I have become the promised wife of a man—and I think I understand the spirit of your women who choose the flames of suttee rather than live widowed. So you see your honor is clean from the shame of not saving me, as I decline to be saved. Yet with all my heart I thank you. Your friend, Marion Davidson."

After the messenger had gone with her answer, Marion showed the Ranee's letter to Donald and her brother, now a gaunt convalescent, who lay on a string bed under an awning on the roof, with a rifle beside him. His face darkened as he read the letter: "She must think you foolish to imagine you would trust her," he said.

Marion did not argue the question. "Is it true about the guns?" she asked.

"They have been busy mounting them beyond the east gate," he answered, "out of the range of our rifles."

Donald drew Marion aside. "Tomorrow morning will see the end of the Moti Bagh," he said. "Marion, I know you trust the Ranee, and I have considerable confidence in your judgment. Let me help you to leave the house and get to her to-night?"

She laughed softly. "I have already refused her offer, Donald. I don't want to escape—alone."

ALL the people of the Moti Bagh were gathered on the roof now—the men all armed and ready and the women beside them—everyone knowing that when the enemy's guns had crushed in the walls, and he stormed the ruins, he would find no one to take prisoner. Marion sat with Donald till the moon went down, and there was a stir in the air that told the dawn was near. Then she stood up and sang:

"God save our gracious Queen,
Long live our noble Queen;
God save the Queen."

Except the sick, everyone on the roof was standing, and singing. And so they waited—for dawn and death.

The Ranee, too, was watching for the dawn; standing on the roof of the white tower that from the plain, a hundred feet below, looked like a shaft of carved ivory. She wore her richest robes and all her jewels, and in her arms was the baby boy Marion's skill had saved. The other women of the Rajah's household stood round richly dressed, and resigned with Oriental philosophy to obey the woman who was the queen of the zenana.

Then came the swift dawn of the East, and instantly the Ranee was standing on the broad edge of the parapet round the tower roof, holding out the child towards the east, as she chanted the wild song of the suttee, calling on the women behind her to

(CONTINUED ON PAGE 36.)

Music in the Schools

How the Province of Saskatchewan Has Set the Pace for Other Sections of Canada

By HECTOR CHARLESWORTH

NOT long ago the writer had the privilege of being present at a gathering which included musical educationists of many of the important cities of Eastern Canada, and was, like many of the Easterners in the assemblage, surprised to learn that the Province of Saskatchewan had taken the lead in practical work of diffusing music through the medium of the public schools. Of course we have more or less music in our schools, but hitherto there has been no really systematic attempt in this country to deal with the subject on a comprehensive and practical basis. In the East we are apt to learn more of Western demands in connection with the tariff, and Western political movements, than of enlightened reforms like this, which indicate that Western ideas of progress are not merely material.

The interest in music which characterizes the prairie provinces has indeed been the theme of much flattering comment among musicians who have given concerts in that part of Canada; and some years ago I heard the late Lord Grey comment enthusiastically on the fine quality of singing he had heard at a musical festival he attended in Edmonton, during his term as Governor-General. It was perhaps, to be expected, therefore, that the wide-awake West should take the lead in the matter of practical measures for the improvement of musical education.

So well does the Saskatchewan system commend itself to Easterners that an agitation has been launched, backed by a body of prominent gentlemen who have organized a "Music in the Home League," and which has as one of its most active supporters, Dr. A. S. Vogt, the celebrated head of the Toronto Conservatory of Music, to have it adopted by the Ontario Department of Education. The excellence of this legislation in the view of musical educators is that it goes to the heart of the question and provides the machinery for a widespread development of musical taste and knowledge, through the important medium of the schools.

THE deficiency of musical education in most parts of Canada has lain in the fact that so far as the schools are concerned, it has been scattered and isolated, attaining fairly good development at some points and little, if any, at others. But a still more important limitation is that where it does exist it begins and ends with the public schools.

For instance, it is probable that no better singing by children is to be found anywhere than in certain public schools of my own city of Toronto. But so soon as the child of thirteen or fourteen enters the High Schools or Collegiate Institutes all instruction in music ceases. That is the prevailing system elsewhere also. In connection with the University of Toronto and McGill University, Montreal, there exist musical faculties which hold examinations and grant certificates, but the intervening gap between the primary schools and the universities is a blank so far as music is concerned. This means in practice, that so soon as a child reaches an age when he can form an intelligent appreciation of music it vanishes from the curriculum of his studies. There have also been complaints from various quarters that music is almost non-existent in the rural schools; and this condition may be largely attributed to the fact that musical knowledge counts for nothing in connection with the granting of teachers' certificates. It does not assist the prospective teacher in obtaining the license which entitles him, or more frequently her, to teach, and except in rare instances it is not an aid toward obtaining an engagement.

The present system, or lack of system, in Ontario and most other provinces, except Saskatchewan, operates detrimentally in another sense; because the multiplicity of subjects taught in the High Schools, puts such a strain on the young student that he is obliged to give up music study even at home, in the most formative period of his life. Many of these subjects are comparatively useless for practical purposes and are prescribed for cultural effect, in other words, the training of the mind. Music certainly answers this requirement and can be made a source of pleasure and of use in later years.

THE Government and Legislature of Saskatchewan seem to have found remedies for these drawbacks. Under their Education Act as revised last year, it is provided that music shall be an optional study in the High Schools of that province; and under their system musical education, obtained elsewhere, may entitle the student to credit marks in connection with the granting of teachers' certificates. The candidate for a second class teacher's certificate, who presents official evidence of having obtained a certificate in Piano or Theory, may be exempted from examination in either Algebra, or any one of the following subjects, Agriculture, Household Science, Latin, French, German or Greek. The candidate for a first-class teacher's certificate has a similar option in connection with the subjects of Algebra or Trigonometry. It will be seen that there is no desire to sacrifice any really useful subject for the sake of music. For my own part I should be inclined to make Household Science a compulsory part of every girl's education; but the general principle which places music on an equality with the subjects named is absolutely right. By the Saskatchewan authorities, music is also included in the list of subjects for which specialists' certificates may be granted. In order that the teaching of music may not end with the public schools, a simple course in the elements of musical theory is provided for the High School curriculum, as an optional subject; which undoubtedly provides a most interesting aid to advancement in the pupil who is able to take music lessons at home.

IT will thus be seen that under the Saskatchewan system the student who proposes to become a teacher can continue to study music without fear of losing ground in the effort to obtain the credit marks that are necessary, before a teacher's certificate can be obtained. A still more important advantage, is that the number of teachers capable of giving intelligent instruction in music to classes in rural schools, should be very materially increased within the next few years.

Though the system is a novel one so far as Canada is concerned, it is not new in the United States. In some States education in this respect is more backward than our own, but in others the development of music in the High Schools and as a part of the teacher's qualifications has brought splendid results. In connection with these institutions school orchestras and choral societies have been developed which add materially to the charm and interest of life for young people, and help to make education in a general sense attractive.

OF course the whole issue depends on whether the public men of other provinces will take the same view as do our Western friends, of the importance of music in relation to life. Though many of us regard the case for music as a factor in education to be beyond the range of controversy, it is quite possible that there are many who do not take the same view, and many more who are so indifferent on the subject that they do not deem it a matter worthy of the attention of legislators. The gathering to which I made allusion at the outset of this article had as its chief speaker Dr. Hollis Dann, Dean of the Medical Faculty of Cornell University. Outside his duties in connection with that institution he is a very active factor in promoting music in the schools, and is Chairman of the Music Council of the leading educational body of the State of New York. He is also the author of several manuals of teaching in connection with his propaganda, and he dealt at considerable length on the very methods of dealing with the problem that had

A Matter of Good Taste

"I Made It Myself"

The little ones are so fond of these delicious puddings they don't think mother makes enough of them. So whenever she is willing they make one themselves. Mother lets them, quite often too, because she knows they're good for growing children. And she also knows that father has the habit of helping himself liberally whenever he gets the chance.

Let your family enjoy these wholesome puddings. Get a selection from your grocer. Tapioca, custard and chocolate, 15c. a package.

The Ranee's Bracelet

(CONTINUED FROM PAGE 34.)

escape by death from the shame of a pledge that could not be kept. "Here I wait," she cried, "till the great guns speak. Then we leap to our death together."

And that was why—though they never knew the reason—the astounded men on the roof of the Moti Bagh saw the guns deliberately dismounted and run over the edge of a seventy-foot wall. Only Marion whispered to the man who held her in his arms: "I know it is the Ranee's doing. She may not like the English, but she is determined to redeem the pledge of her bracelet."

"AND still you do not think the pledge of the bracelet has been kept?" A man was speaking to a woman on the roof of the white tower. She wore the plain white robes of a Hindoo widow, and she was very old, though the flash in her dark eyes showed that years had not broken the Ranee's imperious spirit. The elderly man with her wore the splendid dress of a reigning Hindoo prince—he was the child that the Ranee had threatened to leap to death with, nearly sixty years before.

"It is still binding on our honor," said the Ranee, very decidedly. "For see, after this that I have just told you—this palace secret of why the Rajah would not let the guns be fired—the others who hated the English drew away from us, and when the English recovered their power they increased our sovereignty, and gave us many other rewards. And as we were paid for what we had done, it followed that our debt of honor is still unpaid."

The Rajah looked from the tower across the plain—India in the winter months is a very pleasant flowery land—and he thought of the freezing mud in the Flanders trenches. Then he remembered his four sons. "And you judge, O mother," he said, "that all four should go with me?"

"Which of the four do you love so little that you would leave him behind, hurting his honor to avoid risking his life?"

So that is why Beelampore is emptied of young men to-day. With the Rajah and his four sons they went, to the trenches near Ypres that first terrible winter of the war, and then on to the deserts and hot marshes of the Euphrates valley. Many English are very friendly with the stately Hindoo prince, but not one of them knows what every child in Beelampore does—why he wears in the front of his turban, instead of a jewel of great price, just a thin band of silver—the Ranee's bracelet.

THE END.

IN THE MERRY MONTH OF MAY.

By Ethel Bain

IT was a glorious sunshiny morning in May, and the sun was turning the newly awakened dandelions into shining buttons of gold, whilst the wind, still with a touch of the northern ice fields in its breath, played at hide-and-seek among the leaves and rustled through the undergrowth.

A burst of rippling, frolicsome music came up from the meadows and Bushy the red squirrel, out in search of breakfast paused for a moment. "Must be a lark," he said to himself. "There it goes," he chattered, as a bird suddenly shot into the air. "No it isn't," he went on. "It's a bobolink." He had caught sight of the buff colored patch in the middle of the songster's back. Moving but the tips of his wings and still singing his mad song—a melody full of the strangest twists that would defy any musician to capture, the bobolink flew up and down and then quickly dropped to earth and was lost to sight amongst the grasses.

Now Bushy Squirrel felt sure that he could find the bobolink's nest, but even he had to hunt for quite a while before he discovered it, so cleverly had Mrs. Bobolink disguised the heap of twigs and leaves with loose grass.

"Good morning," he chattered as he appeared at the edge of the nest.

"Bushy Squirrel, how dare you disturb me," Mrs. Bobolink exclaimed, and her mate rushed angrily at the visitor.

"I don't want to eat you," said the squirrel.

"Who knows? I've heard that you steal eggs."

"I do—sometimes, but I did not come to steal. I heard your song," went on the squirrel, turning to the bobolink, "and, well, I just felt that I'd like to know you. Why do you always nest in a meadow? Aren't you afraid when the hay is cut that you'll be hurt?"

"No," laughed the bobolink, "because, you see, by the time the hay is ready for cutting, we have finished our nesting season and also our work in the meadow is over."

"Why, what work do you do?"

"The farmer knows or he wouldn't have such a fine field of clover. If you watch this clover, as it grows day by day, you would see that there are hundreds and hundreds of caterpillars feeding on it. These we devour and thus save the crop from being destroyed. Then there are myriads of insects on the ground, which attack the roots of the clover and grass.

Who Goes There?

(CONTINUED FROM PAGE 17.)

window out by the winter fold, and they were talking loudly as well as recklessly."

"There's no telling what these forest people may do," admitted Darrel. "I am immensely relieved to know that you and Valentine are to sail when I do. As for Kervyn Guild—" he made a hopeless gesture—"his mind is made up and that always settles it with him."

"He won't return with you?"

"No. He's joining the Belgians."

"Really!"

"Yes. You see his people were Belgian some generations back. It's a matter of honour with him and argument is wasted. But it hits me pretty hard."

"I can understand. He is a most delightful man."

"He is as straight and square as he is delightful. His mother is charming; his younger brother is everything you'd expect him to be after knowing Kervyn. Theirs is a very united family, but, do you know I am as certain as I am of anything that his mother absolutely approves of what he is about to do. She is that sort. It may kill her, but she'll die smiling."

Mrs. Courland's serious, sweet eyes rested on him, solemn with sympathy for the mother she had never met.

"The horrid thing about it all," continued Darrel, "is that Kervyn is one man in a million;—and in a more terrible sense, that is all he can be in this frightful and endless slaughter which they no longer even pretend to call one battle or many.

"He's a drop in an ocean, only another cipher in the trenches where hell's hail rains day and night, day and night, beating out lives without distinction, without the intelligence of choice—just raining, raining, and beating out life! . . . I can scarcely endure the thought of Kervyn ending that way—such a man—my friend——"

His voice seemed hoarse and he got up abruptly and walked to the window.

ASHES of roses lingered in the west; the forest was calm; not a leaf stirred in the lilac-tinted dusk.

Karen, who had been listening, stirred in the depths of her chair and clasped her fingers over her sewing.

Mrs. Courland said quietly:

"It is pleasant for any woman to have known such a man as Mr. Guild."

"Yes," said Karen.

"If the charm of his personality so impresses us who have known him only a very little while, I am thinking what those who are near and dear to him must feel."

"I, too," said Karen, faintly.

"Yet she loves him best who would not have it otherwise it seems."

A man came to light the lamps. And a little while after they were lighted Mrs. Courland quietly looked up from her knitting. One swift, clear glance she gave; saw in the young girl's eyes what she had already divined must be there. Then bent again above her ivory needles. After a while she sighed, very lightly.

"They're late," remarked Darrel from the window.

"They are probably strolling up the drive; Valentine knows enough not to get lost," said her mother.

After a few moments Karen said: "Would my playing disturb you?"

"No, dear. Please!"

So Karen rose and walked to the piano. Presently Darrel turned and seated himself to listen to the deathless sanity of Beethoven flowing from the keys under a young girl's slender fingers.

She was still seated there when Valentine came in, and turned her head from the keyboard, stilling the soft chords.

"We had such a good time," said Valentine. "We caught half a dozen trout, and then I took him to the Pulpit where we sat down and remained very quiet; and just at sunset three boar came out to feed on the oak mast; and he said that one of them was worth shooting!"

"You evidently *have* had a good time," said Darrel, smiling. "What happened to Guild. Did the boar tree *him*?"

"I think he'd be more likely to tree the boar," remarked the girl. And to her mother she said: "He went on toward the winter fold to talk to Michaud who has just returned from Trois Fontaines. There were a lot of men there, ours and a number of strangers. So I left him to talk to Michaud. What have you all been doing this afternoon?" turning to Karen, and from her, involuntarily to Darrel.

"Miss Girard and I have conversed philosophically and satisfactorily concerning everything on earth," he said. "I wish my conversations with you were half as satisfactory."

VALENTINE laughed, but there was a slight flush on her cheeks, and again she glanced at Karen, whose lovely profile was visible where she bent in silence above the keyboard.

"Your mother," remarked Darrel, "has decided to sail with me. Would you condescend to join us, Valentine?"

"Mother, are you really going back when Harry sails?"

"Yes. I don't quite like the attitude of the men here. And Harry thinks there is likely to be trouble between them and the Germans across the border."

The girl looked thoughtfully at her mother, then at Darrel, rather anxiously.

"Mother," she said, "I think it is a good idea to get Harry out of the country. He is very bad-tempered and if the Germans come here and are impudent to us he'll certainly get himself shot!"

"I! I haven't the courage of a caterpillar!" protested Darrel.

"You're the worst fibber in the Ardennes! You *did* kill that grey boar this morning! What do you mean by telling us that you went up a tree! Maxl, the garde-de-chasse at the Silverwiltz gate, heard your shot and came up. And you told him to dress the boar and send a cart for it. Which he did!—you senseless prevaricator!"

"Oh, my!" said Darrel meekly.

"And you're wearing a bandage below your knee where the boar bit you when you gave him the coup-de-grace! Maxl washed and bound it for you! What a liar you are, Harry! Does it hurt?"

"To be a liar?"

"No! Where you were tusked?"

"Maxl was stringing you, fair maid," he said lightly.

"He wasn't! You walk lame!"

"Laziness and gout account for that débutante slouch of mine. But, of course, if you care to hold my hand——"

The girl looked at him, vexed, yet laughing:

"I don't *want* people who do not know you to think you really are the dub you pretend to be! Do you wish Miss Girard to believe it?"

"Truth is mighty and must——"

"I know more about you than you think I do, Harry. Mr. Guild portrayed for me a few instances of your 'mouse'-like courage. And I don't wish you to lose your temper and be shot if the Uhlans ride into Lesse and insult us all! Therefore I approve of our sailing for home. And the sooner the better!"

"You frighten me," he said; "I think I'll ask Jean to pack my things now." And he got up, limping, and started for the door.

"Mother," she said, "that boar's tusks may poison him. Won't you make him let us bandage it properly;"

"I think you had better, Harry," said Mrs. Courland, rising.

"Oh, no; it's all right——"

"Harry!" That was all Valentine said. But he stopped short.

"Take his other arm, mother," said the girl with decision.

She looked over her shoulder at Karen; the two young girls exchanged a smile; then Valentine marched off with her colossal liar.

CHAPTER XX

MICHAUD, head forester, had taken off his grey felt hat respectfully when Valentine introduced him to Guild, there in the lantern light of the winter sheep fold. A dozen or more men standing near by in shadowy groups had silently uncovered at the same time. Two wise-looking sheep dogs, squatted on their haunches, looked at him.

Then the girl had left Guild there and returned to the house.

"I should like to have a few moments' quiet conversation with you," said Guild; and the stalwart, white-haired forester stepped quietly aside with him, following the younger man until they were out of earshot of those gathered by the barred gate of the fold.

"You are Belgian?" inquired Guild pleasantly.

"*De Trois Fontaines, monsieur.*"

It was a characteristic reply. A Belgian does not call himself a Belgian. Always designates his nationality by naming his birthplace—as though the world must know that it is in Belgium.

"And those people over there by the sheep fold?" asked Guild.

"Our men—some of them—from Ixl, from the Black Erenz and the White, from Lesse—one from Liege. And there is one, a stranger."

"From where?"

"Moresnet."

"Has he any political opinions?"

"He says his heart is with us. It is mostly that way in Moresnet."

"In Moresnet ten per cent. of the people are Germans in sympathy," remarked Guild. "What is this man? A miner?"

"A charcoal burner."

"Does he seem honest?"

"Yes, Monsieur," said the honest forester, simply.

Guild laid one hand on the man's broad shoulder:

"Michaud," he said quietly, "I know I am among friends if you say I am. I mean friends to Belgium."

THE dark eyes of the tall forester seemed to emit a sudden sparkle in the dusk.

"Monsieur is American?"

"Yes. My grandfather was Belgian."

"Monsieur is a friend?"

"Michaud, my name, in America is Guild. My name in Belgium is Kervyn Gueldres. Judge, then, whether I am a friend to your country and your king."

"Gueldres!" whispered the forester, rigid. "Kervyn of Gueldres, Comte d'Yvoir, Hastiere——"

"It is so written on the rolls of the Guides."

"Monsieur le Comte has served!"

"Two years with the colours. I am here to report for duty. Do you feel safe to trust me now, Michaud, my friend?"

The tall, straight forester uncovered. "Trust a Gueldres! My God!"

"Put on your hat," said Guild, bluntly, "I am American when I deal with men!"

"Monsieur le Comte——"

"'Monsieur' will do. Give me your hand! That is as it should be. We understand each other I think. Now tell me very clearly exactly what happened this morning on the hill meadows of the Paillard estate."

"Monsieur le——"

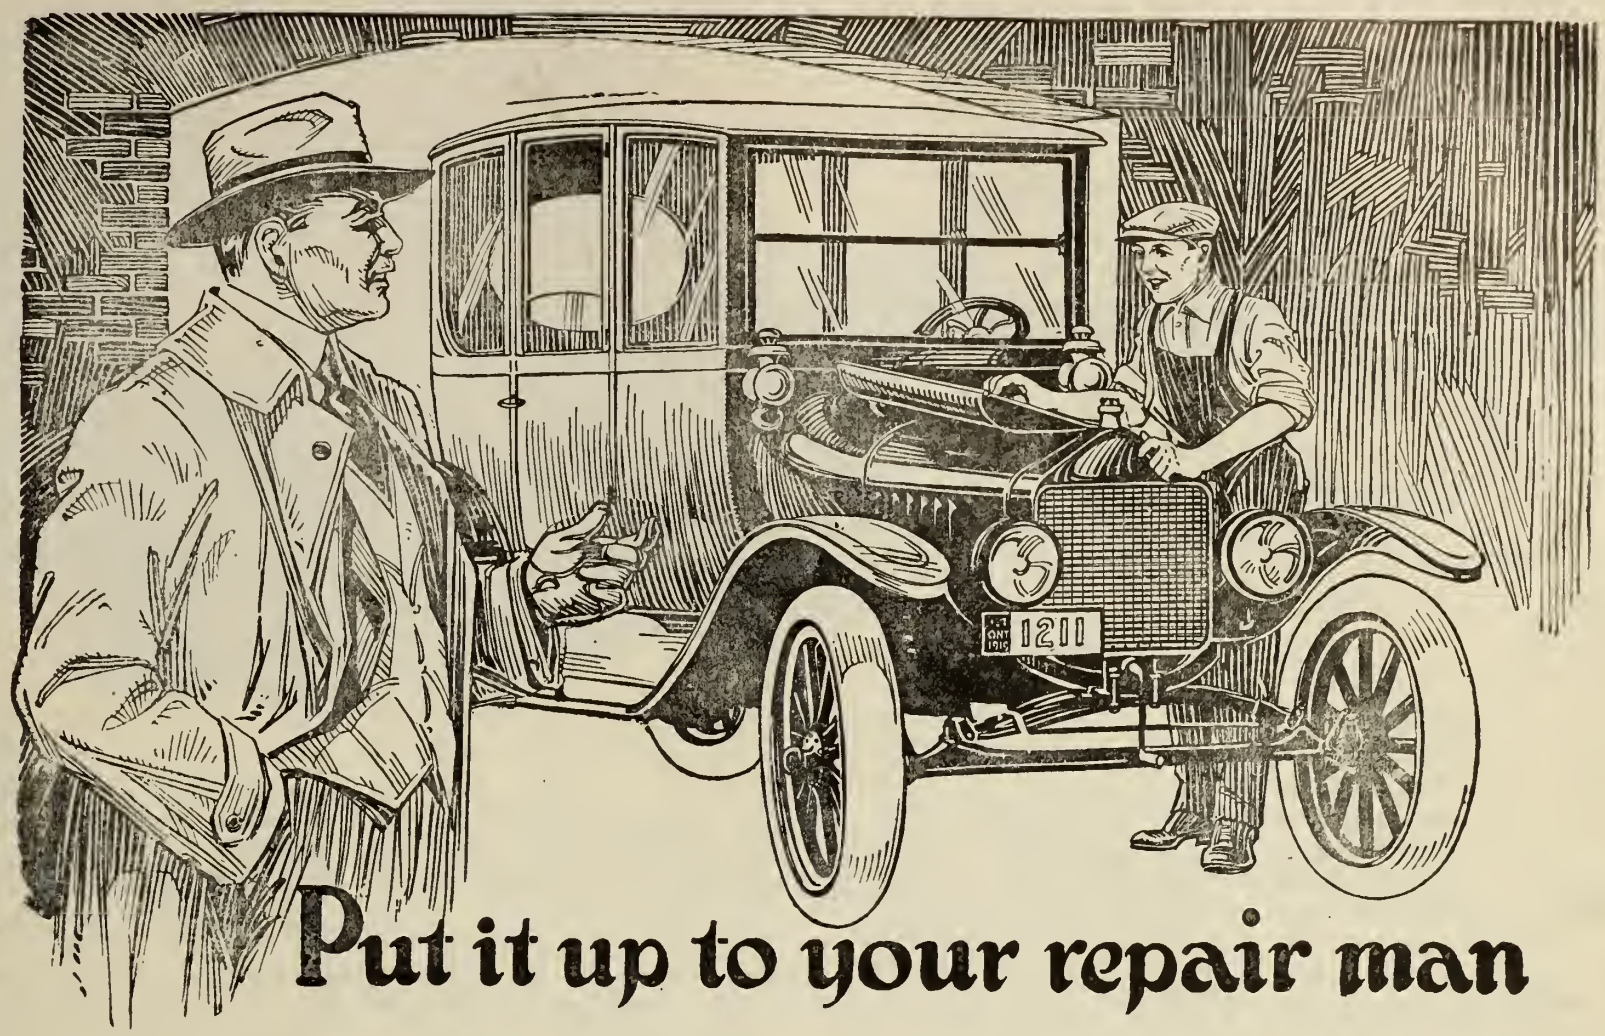
"Please remember!"

"Pardon! Monsieur Guild, the Grey Uhlans rode over the border and laughed at the gendarme on duty. Straight they made for our hill meadows, riding at ease and putting their horses to the hedges. Schultz, our herdsman, saw them trotting like wolves of the Black Erenz, ran to the wooden fence to close the gate, but their lances rattling on the pickets frightened him.

"They herded the cattle while their officers sat looking on by the summer fold.

"'Do not these cattle and sheep belong to the Paillard estate?' asks one of the officers of Schultz. And, 'Very well then!' says he; 'we are liquidating an old account with Monsieur Paillard!'

"And with that a company of the Grey Ones canters away across the valley and up the slope beyond where our shepherd, Jean Pascal, is sitting with his two dogs.



"'You, there!' they call out to him. 'Send out your dogs and herd your sheep!' And, when he only gapes at them, one of their riders wheels on him, twirling his lance and shoves him with the counter-balance.

"SO they make him drive his flock for them across the valley, and then over the border—all the way on foot, Monsieur; and then they tell him to loiter no more but to go about his business.

"That is what has happened on our hill pasture. He, the lad, Pascal, is over there with his dogs"—pointing toward the fold—"almost crazed with grief and shame. And, Schultz, he wishes us to organize as a franc-corps. Me? I don't know what to do—what with Monsieur Paillard away, and the forests in my care. Were it not for my responsibility—— "

"I know, Michaud. But what could an isolated franc-corps do? Far better to join your class if you can—when your responsibility here permits. Those young men, there, should try to do the same."

(CONTINUED ON PAGE 40.)

Put it up to your repair man

Make it strong.

The garage man cannot evade your demand for Genuine Ford Parts.

He *knows* that only genuine parts will give you satisfactory service.

If he wants to give you real Ford service;

If he will agree to play fair with Ford Owners;

He can get a complete stock of Genuine Ford Parts.

Nothing has caused Ford Owners more trouble, annoying breakdowns and expense than the use of "spurious" or imitation repair parts.

They are not made up to the Ford standard. They weaken the car.

They often injure other parts of the car.

The owner of a Ford could not be expected to accept repairs made with such inferior parts.

And there is now no *need* to accept them.

Genuine Ford Parts are on sale everywhere.

They have become a staple line of merchandise stocked by reliable automobile and repair men in every locality.

Nearly 3,000 repair stations in Canada are equipped to replace any part of your Ford promptly with a Genuine Ford Part.

If your repair man will not supply you, there is a garage around the corner displaying the Ford service sign.

That means a garage pledged to fair play with Ford owners.

To stand out for fair service is the surest way for the Ford owner to get it in *every* garage.

Look for the Ford Service Sign.

Who Goes There?

(CONTINUED FROM PAGE 38.)

"MONSIEUR is right! Even the classes of 1915, '16, and '17 have been called. I have reminded them. But this outrage on the hill pastures has inflamed them and made hot-heads of everybody. They wish to take their guns and hunt Grey Uhlans. They don't know what they are proposing. I saw something of that in '70. Why the Prussians hung or shot every franc-tireur they caught; and invariably the nearest village was burned. And I say to them that even if Monsieur Paillard is dead, as many are beginning to believe, his death does not alter our responsibility. Why should we bring reprisals upon his roof, his fields, his forests? No, that is not honest conduct. But if we are now really convinced of his death, as soon as Madame Courland leaves, let us turn over the estate to the proper authorities in Luxembourg. Then will each and all of us be free to join the colours when summoned—if God will only show us how to do it."

"Madame Courland and mademoiselle ought to go to-morrow," said Guild. "One or another of your hot-heads over there might get us into trouble this very night."

"The man from Moresnet talks loudest. I have tried to reason with him," said Michaud. "Would you come to the fold with me?"

They walked together toward the lantern light; the men standing there turned toward them and ceased their excited conversation.

"Friends," said old Michaud simply, "this gentleman's name is Kervyn of Gueldres. I think that is sufficient for any Belgian, or for any man from the Grand Duchy?"

Off came every hat.

"Cover yourselves," continued Michaud calmly. "Monsieur, who has become an American, desires to be known as Monsieur Guild without further mark of respect. This also is sufficient for us all, I suppose. Thou! Jean Pascal, cease thy complaints and stand straight and wipe thy tears. By God, I think there are other considerations in Lesse Forest than the loss of thy sheep and of Schultz's cattle!"

"M-my sheep are gone!" blubbered the boy, "I was too cowardly to defend them——"

"Be quiet," said Guild. "It was not a question of your courage! You did wisely. Show equal wisdom now."

"But I shall go after Uhlans now with my fusil-de-chasse! Ah, the cowards of Germans! Ah, the brigands——"

"Cowards! Assassins!" muttered the other. "Grey wolves run when a man goes after them——"

"You are wrong," said Guild quietly. "Germans are no cowards. If they were there would be no credit for us in fighting them. Don't make any mistake you men of the Ardennes; their soldiers are as brave as any soldiers. And where you belong is with your colours, with your classes, and in uniform. That's where I also belong; that's where I am going if I can find out how to go. Perhaps one of you can guide me. Think it over. Keep cool, and listen to Michaud, who is older and wiser than all of us."

THERE was a profound silence. Then a voice from the darkness, very distinct:

"I have seen red. It is necessary for me to bleed an Uhlan!"

Guild walked toward the sound of the voice: "Who are you?" he demanded.

"*Moi, je suis de Moresnet!*"

"Then you'd better go back to the zinc mines of Moresnet, my friend. No Uhlans will trouble you down there."

And, aside to Michaud: "Look out for that young man from Moresnet. He's too hotly a Belgian to suit my taste."

"Monsieur, he is a talker," said Michaud with a shrug.

"My friend, be careful that he is nothing more dangerous."

"Ah, sacre bleu!" exclaimed the forester, reddening to his white temples—"if any of that species had the temerity to come among us!——"

"Michaud, they might even be among the King's own entourage. . . .No doubt that fellow is merely, as you say, a talker. But—he should not be left to wander about the woods *alone*. And, tell me, is there anybody else you know of who might do something rash to-night along the boundary?"

"Monsieur—there are two or three poor devils who escaped the firing squads at Yslemont. They live in our forest, hiding. Our people feed them."

Guild said in a troubled voice: "Such charity is an obligation. But nevertheless it is a peril and a menace to us all."

"Were this estate my own," said the sturdy forester, "I would shelter them as long as they desired to remain. But I am responsible to Monsieur Paillard, and to his tenant, Madame Courland. Therefore I have asked these poor refugees to continue on to Diekirch or to Luxembourg where the sight of an Uhlan's schapska will be no temptation to them."

"You are right, Michaud." He held out his hand; the forester grasped it. "To-morrow we should talk further. Our duty is to join the colours, not to prowl through the woods assassinating Uhlans. Good night! In the morning then?"

"At Monsieur's service."

"And both of us at the service of the bravest man in Europe—Albert, the King!"

Off came their hats. And, as they stood there in silence under the stars, from far away across the misty sea of trees came the sound of a gun-shot.

"One of your men?" asked Guild sharply.

"I don't know, Monsieur. Big boar feed late. A poacher perhaps. Perhaps a garde-de-chasse at Trois Fontaines."

"I hope nothing worse."

"I pray God not."

They continued to listen for a while, but no other sound broke the starry silence. And finally Guild turned away with a slight gesture, and walked slowly back to the Lodge.

Lights from the tall windows made brilliant patches and patterns across terrace and grass and flowers; the front door was open and the pleasant ruddy lamp-light streamed out.

VALENTINE passing and mounting the stairs caught sight of him and waved her hand in friendly salute.

"We're sterilizing Harry's shins—mother and I. The foolish boy was rather badly tusked."

"Is he all right?"

"Perfectly, and bored to death by our fussing."

She ran on up the stairs, paused again: "We're not dressing for dinner," she called down to him, and vanished.

Guild said, "All right!" glanced at the hall clock, and sauntered on into the big living-room so unmistakably American in its brightness and comfort.

But it was not until he had dropped back into the friendly embrace of a stuffed arm-chair that he was aware of Karen curled up in the depths of another, sewing.

"I didn't know you were here," he said coolly. 'Have you had an agreeable afternoon?"

"Yes, thank you."

"It's a very charming place."

"Yes."

"I think the Courlands are delightful."

"Very."

"Miss Courland and I had a wonderful walk. We had no trouble in taking all the trout we needed for dinner, and then we went to a rock called The Pulpit, where we lay very still and talked only in whispers until three wild boar came out to feed."

Karen lifted her eyes from her sewing. They seemed unusually dark to him, almost purple.

"After that," he went on, "we walked back along the main ride to a carrefour where the drive crosses; and so back here. That accounts for my afternoon." He added, smiling carelessly: "May I ask you to account for yours?"

"Yes, please."

'Very well, then I do ask it."

She bent over her sewing again: "I have been idle. The sun was agreeable. I went for a little stroll alone and found an old wall and a pool and a rose garden."

"And then?"

"The rose garden is very lovely. I sat there sewing and—thinking——"

"About what?"

"About—you—mostly."

He said steadily enough: "Were your thoughts pleasant?"

"Partly."

"Only partly?"

"Yes. . . . I remembered that you are joining your regiment."

"But that should not be an unpleasant thought for you, Karen."

"No. I would have it so, of course. It could not be otherwise under the circumstances."

"It could not be otherwise," he said pleasantly; but his grey eyes never left the pale, sweet profile bent above the leisurely moving needle.

"I understand."

"I know you understand *that*—at least, Karen."

"Yes. Other matters, too—a little better than I did—this morning."

"What matters?" he asked casually. But his heart was threatening to meddle with his voice; and he set his lips sternly and touched his short mustache with careless fingers.

Karen bent still lower over her sewing. The light was perfectly good however.

"What," he asked again, "are the

sacrifice in the last days of the great war, was staying with a relative of his in a large city. One evening they went the rounds of the theatres in a reportorial way, as his friend was in journalistic work. It was a new experience, and the boy enjoyed it, but on the next invitation he declined.

"It's all right, you know," he said, "but, somehow, I think mother would rather I didn't go." She was miles away, and need never have known, but her influence was alive in him. When the little incident was related to her afterward, it afforded her no small consolation to know that her son honored what he believed were her wishes.

What millions of mothers' letters must have been carried overseas during the past four years and more! What messages of love and hope went across in those letters, mingled with faith in the boy and confidence in his integrity! In one newspaper I read the report of a bullet having struck a young man, but a bunch of letters from his mother carried in the left pocket, saved his life.

Many of us have a sacred drawer, and tied up with ribbon are mother's letters. We take them out sometimes and read her loving words. They were so sincere, and rang so true to her ideals—precious relics of mother.

Her prayers were sweet incense poured out in our behalf. They held us back from straying. They never lost their power even when we were far away. The yearning note followed on, and connected the soul of mother and child. Even the sinful soul has been reclaimed by memories of prayers which have proven to be immortal. The quotations of Scripture verse are especially indelible as the years testify to their veracity.

And so we pay our tribute to the mothers who are with us, and to those who have passed "within the veil." We can all be thankful that God implanted in mothers His own nature of love. His wisdom and forbearance in dealing with our failings, and His great consolations. "As one whom his mother comforteth so will I comfort you."

What a Playground Means to a Community

(CONTINUED FROM PAGE 24.)

then that the supervisor gathers her ducklings under the roof of the rainy-day play house. For the larger children folk dancing or dramatic work are practiced, or sometimes dumbbells or club swinging. The older girls often take up their bead or basket work, while for the little ones such wonderful stories unfold which make the characters of fairyland so enchanting and realistic that the rain is entirely forgotten.

THEN as to the course itself. It has an advantage that few vocational courses possess, for the girl who wishes to make a study of playground work can do so, and at the same time keep up with any other employment she may wish, in the daytime giving one evening a week and

You Can Reduce Tire Bills For the Family Car

As treasurer of The Family, its financial gains are to your credit—its financial losses should be your concern. If you will make the question of tires for the family car your business, we believe:

—that you will save money by the keen selection of tires on a cost-per-mile basis.

—that you will quickly come to Goodyear Cord Tires as equipment for your car.

The ages-old training of women to select **value** in purchases has put them right on the tire question. They are not blinded by low first-cost. They know the value of great resources in buying raw materials and in manufacturing. They know that motorists of the world would not buy more Goodyear Tires than any other brand did not Goodyears render greater actual value.

We believe that you have only to test a Goodyear Cord Tire on one wheel of your car to become at once one of our enthusiastic friends.

Features of construction found only in Goodyear Cord Tires make them go very much farther, lowering their final cost.

Add to this economy the undoubted style of the Goodyear All-Weather Tread; the supple buoyancy of this Cord Tire, saving the car and the passengers; the gasoline economy.

You will find it a profitable investment to spend a few minutes talking to the nearest Goodyear Service Station Dealer.

The Goodyear Tire & Rubber Co. of Canada, Limited.

The Work of Canadian Women's Institutes and Affiliated Societies Broadens

THE FEDERATED WOMEN'S INSTITUTES OF CANADA.

At a meeting held in Winnipeg in February, when the Women's Institutes of the Dominion were federated into a National Institute, the following similar organizations came into the Federation: The Home Makers' Clubs of Saskatchewan, the Home Makers' Clubs and the Cereles de Fermieres of Quebec, and the Home Economics Societies of Manitoba. This Federation unites approximately 100,000 women, and thus becomes the largest women's organization in Canada. The organization is strictly non-partisan and non-sectarian. Its motto is "For Home and Country."

Several important resolutions were passed. The following are given, not as being more important than the others, but as those which will be laid before the Federal Parliament now in session:

1. That whereas the present method of granting decrees of divorce is both costly and inconvenient; and whereas it is desirable that we should have uniformity of laws relating to the annulment of the marriage contract;

Be it resolved that the Federal Government be petitioned to establish divorce courts in each of the provinces, such courts to be governed by Federal enactments.

2. That the Standing Committees on Legislation do take steps to lay before the Federal Government the extreme desirability of their placing on the Statutes as enactments, the recent Orders-in-Council concerning Registration and anti-loafing.

3. That the Committee on Legislation do petition the Federal Government to grant the right to women to enter the House of Commons as members thereof.

4. That whereas at a sparsely attended meeting of the Senate, and without proper consideration, the amendment to the Criminal Code raising the age of consent, was vetoed by the Senate, we would respectfully urge that with further consideration, this legislation be placed upon the Statutes of Canada.

Among the general resolutions were the following which are of common interest:

1. That greater emphasis be placed in the schools upon the instilling into the children those ideals which pertain to and promote true citizenship and loyalty to the Canadian nation, and the whole British Empire.

2. That the Union Jack be placed in a prominent position in all schools in Canada; that it be saluted with the words "For God and My Country," and that this resolution be put before the Standing Committee on Education.

Speaking of the National Federation of Women's Institutes, a Vancouver editor has said: "In the National Federation of Women's Institutes there has arisen a mighty force for good, whose influence knows no bounds. Indeed, we may say with assurance that with the inception of such an organization, Canada has arrived at a turning point in the history of her onward progress and that henceforth no amount of crooked work or of profiteering schemes on the part of party politicians and their confederates, the big interests, will be able to stay our country from achieving a higher and nobler civilization."

The Winnipeg "Free Press" says: "It is too soon to adopt the role of prophet and forthwith tell what a mighty force this organization is going to wield in the affairs of this Dominion. It can only wield that force if the whole is vitalized by the interests of the Provincial Organizations. . . . Does this mean that the federation will become a political force? It certainly does but not in the partisan sense. Politics in the ordinary sense of the term would be a deplorable thing to get into such an organization,—indeed, it would be the beginning of the end. But politics in the broad sense of study of national problems must be taken up by these organizations if they are to keep abreast of the times, which is their hope of life. This is politics as it should be. After study and investigation the members can do their own choosing as to party. Here's good luck to the Federation of Women's Institutes of Canada."

Extracts from Reports of Superintendent, Geo. A. Putnam, as presented at the Provincial Women's Institute Convention, held at Toronto, February 4th, 5th and 6th.

After expressing deep gratitude at the conclusion of hostilities, and a reference to the splendid patriotic work of the members, Mr. Putnam said:

"The field of regular Institute activity at the last pre-war convention in the fall of 1913 was very broad; to-day it is much broader, for we have not only the problems of five years ago, but added responsibilities. In reviewing the programmes of pre-war days, it is surprising the large proportion of the long list of topics for discussion, addresses, demonstrations, and exhibits, which bear directly or indirectly upon the problem of the child, and to-day the child problem of the nation has been added to by additional problems,—the land settlement plans, the re-adjustment to industry plans, the social problems, the church problems, etc., of the returned soldier. Many of the good men who left us as men have come back as children in so far as re-establishment and re-education are concerned, and those who went away as boys have come back as men, and what different men to what they would otherwise have been, and what ideals they have for the betterment of civil and industrial conditions!

"You have an unlimited field of activity from which to choose, and it is no small responsibility for the officers of a branch institute to determine the line of activity for the coming months and it must be left largely with the officers or special committees to determine, not what *might be introduced*, but what portion of the great variety of possible work *will occupy their attention* in the immediate future.

"And if it is a great responsibility for the individual branch to determine upon the programme of action the responsibility becomes all the greater for the district officers and for those who have general direction of the work. We have always aimed to base our advice and determine our course of action so far as departmental activities are concerned, only after a careful survey of conditions and in the light of the experience and advice of local and district officers and lecturers and demonstrators representing the department. The responsibility is greater than ever and we realize that with the expansion of the work, which is assured, the necessity for an advisory council truly representative of the Institutes as a whole is greater than ever, and I trust that you will take action in forming such a representative council or committee with which departmental officials may consult and advise from time to time; and there is much which the individual member of such a council may do to stimulate a greater interest in the work in general and in her own section of the province in particular. We want the best they have to offer, and we will try to give the best we have ourselves.

"We have met to review very briefly the activities of the past and to consider more fully the responsibilities which rest upon you as representative of the womanhood of the rural districts. Our deliberations at the last four conventions have been almost entirely of war work and those features which had become of added importance because of the war—health problems, food values, efficiency in methods of work, etc. Now, we face new conditions and a period of very rapid development and much re-adjustment.

"The high motives which inspired the women and girls of the Institutes at the outbreak of war to forego the advantages of regular Institute programmes, in which you were so much interested and which were so dear to you, and devote your energies and resources to patriotic effort, is the same spirit which will lead you to accept the new responsibilities, and shall I say the greater responsibilities which present themselves to you as leaders in an organization which will be looked to in an ever increasing degree for guidanee in community undertakings and those activities (and there are many of them) which must be left to combined action rather than individual effort. Many problems of the whole people are already presenting themselves and will continue to develop as re-adjustment, reconstruction and re-establishment progress. The Women's Institutes have beeome known and have gained the well deserved place which they hold in public opinion, through being thoroughly practical and ready to do the duty next them,—always ready to accept responsibility.

"The Institutes have not always stopped to ask whether or not the thing which needed attention rightfully belonged to their province, but if the need existed, they were liberal in their interpretation of responsibility and a means of meeting it was sought. If the task was beyond their powers they used their influence to get responsible persons to act rather than to rest in inactive criticism and shirk responsibility, even though some mistakes may be made and some criticism offered. Let us in formulating plans at this convention keep the one fact before us, that the Institutes have been and are for the whole people; a sort of clearing house where community problems, and, if necessary, the individual need, can receive that consideration which will result in effective action.

"The responsibilities and resultant efficiency on the part of the Institute members can be fully experienced only away from the centres of popuation. When the general manager, the purchasing agent, the governess, the laundress, the baker, the cook, the general utility woman are combined in the one personality, and combined efficiently, the results are beyond what practical experience in the city or a class room instruction can offer. Coming successfully through the experience of 'manager-laborer' as nearly all women have in the rural districts produces a womanhood of the keenest and sanest judgment and highest efficiency.

"All successful undertakings even in peace times are directly or indirectly attributable to the efforts of women, for what can man do without the care that is only possible through efficiency in the opposite sex? The farm without the efficient home-maker is not a paying enterprise or a happy place of abode, and the success of the merchant, the artisan and the professional man depends to a large extent upon the comforts and efficiency found in the home.

"With this efficiency acknowledged, it is inconsistent to undertake community effort in which the whole people are interested without the combined deliberations and active co-operation of both men and women. Men are coming to more highly appreciate women, and women are coming to value more fully than ever the business ability of men as they become more closely associated and interdependent in public undertakings. I believe the great hope in the educational problem in Ontario is in the fact that the women are going to have more to do with the schools from this day on.

"Our schools, our libraries, our community centres, our churches, our hospitals, our charitable institutions, our houses of refuge, health campaigns, and other efforts of the people for the people will show more efficiency when we have the united effort of all interested, both men and women.

"The Institutes have gained their enviable position not through insistent resolutions, unreasonable demands and agitation, but by establishing confidence through keenness of judgment, saneness of suggestion and a readiness to do their part in a spirit of sacrifice.

"While the Department of Agriculture has a responsibility to perform and while there are certain things that must be done through the central office, don't forget that while the success of the Institute depends, in part, upon Departmental action and Departmental support, the real success depends on what comes from the people themselves."

After setting forth the gradual development of the work and the growing importanee of its activities, the speaker dealt with Medical School Inspection, stating that, "An examination merely for the purpose of informing them that their children are ailing is of little value in itself. To be of real value it must be followed by treatment of the ailing ones; and in a health campaign to be of greatest value the aim should be to prevent illness rather than wait until treatment is necessary. During the year 1917-18, 14,067 children were examined in 289 schools of the Province and the approximate percentage of defects were as follows:

Impaired vision	19%
Defective teeth	68%
Defective hearing	10%
Defective tonsils	33%

"An alarming condition! If you went to the Government and reported that the live stock of the country were affected as seriously as has been demonstrated in the case of the children, and asked them to spend $75,000 to combat disease and defects, it would not take them long to get the money. Are not the children more valuable than live stock?

"Thirteen thousand girls and women have during the past six years taken advantage of the very liberal offer to give free courses of two weeks each in Home Nursing and First Aid, Domestic Science and Sewing.

"The Institutes cannot surely fully appreciate the very liberal offer which yet stands good to the women of the Institute. I do not recall any centre where the members of a demonstration-lecture class do not fully realize the superior value of this systematic instruction as compared to any other form of effort in Institute work. It gives sufficient definite information upon one line of work to be of lasting value, and places the members of the class in a position to make further study and experiment. Even though the instruction were not of great value, the opportunity of bringing together from day to day for a period of two weeks the young girls in a rural district where new friendships are formed, new ideas imbibed and new ideals set up, the time and expense would be justified.

(CONTINUED ON PAGE 43)

Canadian Women's Institutes

(CONTINUED FROM PAGE 42.)

"All Departments of the Government undertaking work in the rural districts are anxious to link up with the Women's Institutes and I am confident that no community which has its best interests at heart, and is fully acquainted with the advantages to be derived through a local Women's Institute, will fail to organize. There are many groups of girls and women who have been brought together to undertake patriotic work, but who are now looking for something attractive and of value to occupy their energy and time and afford a means of more closely cementing the bond which has been established through common effort. The splendid programme presented through the Women's Institute should prove attractive to these people. Notify the Department of any such group or Club and we shall be pleased to forward literature and direct or assist in organizing.

"We hear a great deal about the necessity for greater social advantage in the rural districts, the place of the consolidated school, provision for amusement and entertainment, including games on a larger and more systematic scale, a system of Medical School Inspection for the rural districts, etc. Governments do not usually go beyond expressed public opinion (and we have the means of expressing very good public opinion in and through the Women's Institutes) In introducing legislation and providing funds for the purpose of bettering those facilities which are dependent to a greater or lesser degree upon Government support. A judicious use of the facilities already at hand and united action on the part of the persons vitally concerned is to be expected before Government action may be looked for. How many public schools in the rural districts and the towns and villages are utilized for the whole people to the extent which would naturally be looked for before greater facilities will be provided? Why the schoolhouse should be occupied only during study hour and the parlor for visitors' day only, has never yet been satisfactorily explained. The school and the parlor should be the living room, one for the community and the other for the family. It is not always possible to utilize the school in this way. Why not build a Community Hall if there is no public building available for use as a community home? Utilize what you have to best advantage and you may expect to get better facilities for carrying out your plans, either through local effort or Government assistance, or possibly both. If you make an effort to utilize what you have and you are struggling under great disadvantages, and the Government hears about it, I have no doubt that some assistance will be given.

"If you are to attract and hold the worthy men who have come back from the field of battle to take up civilian life again, it can only be through an earnest effort to provide attractive and helpful entertainment, amusement and instruction, to take the place of the close comradeship and the unceasing activity which have characterized the life of the soldier. The isolation of working alone in the fields and in the barns will be more lonely than ever for him, and his evenings and Sundays must be made interesting.

"Ontario with her 899 branches, and some twenty Girls' Clubs or Junior Women's Institutes, and over thirty thousand members (30,096) has more branches and a larger membership than the rest of the Dominion put together, and the prospects were never brighter for extension of the work to new centres and an increase in membership. Let us get together, for an aggressive campaign of expansion; the need was never greater or the programme more attractive. You can approach your friends and neighbors with every confidence.

"You are an important section, the mother, of organizations which have grown to large proportions and which are destined to play an important part in local and national affairs in the years to come. Let us study the situation, respond to the call,—and cooperate with other organizations and the Governments in building better than we have heretofore. Let us introduce the doctrine of prevention rather than correction or cure; and give our children every chance and encouragement to become worthy citizens of a progressive, prosperous honourable Canada."

Many Institutes Being Organized

A great many applications have been received for speakers to attend special meetings with a view of organizing Institutes. Most of these meetings are asked for by groups of women and girls who have been devoting their attention to patriotic effort and are now ready for something of a real, practical and helpful nature such as the Women's Institute has to offer.

A great many enquiries are coming to hand regarding Institute organization and the programme for the coming year, and the prospects are that the number of branches will be very greatly increased during the present spring and coming fall.

In the June issue of this Journal announcement will be made as to the service which the Institutes' branch will be able to render the various local branches. No rural community can well afford to be without an organization through which they can receive assistance only in groups and not as individuals.

A few of the Institutes recently organized are: North Crowland, Mt. St. Louis, Glenora, Harwood, Dorchester, Underwood, Williamsburg, Glen Eden, Crediton, Farquhar, Hurondale, Phillipsville, and a number of Girls' Institutes.

The Mt. St. Louis secretary writes, under date April 4th, "Our first meeting was a great success, according to my way of thinking. We had two splendid papers, one on 'Meat Substitutes,' and one on 'Home Nursing.' At our May meeting we are to discuss Gardening."

A Letter of Thanks

The following letter from the Field Secretary of the Navy League of Canada was received by Mr. Putnam, Superintendent of Ontario Institutes, a short time ago:

"I am desired by the Executive of the Navy League of Canada, Ontario Division, to express their very sincere appreciation to the women of your Association for the very splendid manner in which they came to the help of the Navy League in the matter of securing Christmas parcels and Naval comforts for the sailors. It was a great effort and the result was of a magnificent character, bringing satisfaction to all who had any small part to play, and, if you will kindly convey to the women whom you have the honor to represent, our sense of appreciation, our executive will be much obliged."

Conference of Ontario Lecturers

The Conference of Lecturers was held on April 22, 23 and 24, when the following subjects were fully considered:

"Provincial and National Federation"; "The Returned Soldier and Reconstruction"; "Rural Hygiene"; "What to teach about Parenthood and how to teach it"; "Ideal Features of a Modern Rural School"; "Laws Relating to Women and Children"; "Community Halls"; "Travelling Libraries"; "Medical School Inspection, including Follow-up Work, and Clinics"; "Agriculture as Education"; "Equipment for Playgrounds"; "Education for the New World after the War"; "Complete Education of the Girl"; "The Consolidated School Problem as Related to Ontario"; "Home and School Club Work as it affects the School and the Community Life of either Rural or City Districts"; "Mothers' Pensions"; "The Labor Situation"; "The Housing Problem"; "National War Savings"; "Social Hygiene"; "Standard Efficiency Tests"; "The School as a Community Centre."

This most attractive list of subjects insures a great fund of most interesting and practical information for our Institutes, and everything points to a most successful series of Institute meetings during the early summer. The topics receiving emphasis at this conference are, as will be noted, of vital importance at the present time.

Assistance to be Given in Financing the Building of Community Halls

A goodly number of Women's Institutes have already on hand funds as the foundation for the erection of community halls, and these especially will welcome the announcement made by the Hon. Geo. S. Henry, on March 24th, of a Bill to be brought before the Ontario Legislature, by which provision is made for giving assistance, not exceeding $2,000 in any case, toward the erection of community halls. If an Institute expends, say, one thousand dollars it will be entitled to a grant of $250 from the Government. This effort must be in cooperation with the Municipal Corporation of the township concerned. A township council may by a By-law provide for the establishment of a community hall and athletic field in accordance with the provisions of this Act.

There will be some slight changes in this bill, but not likely anything of an important character.

Provision is being made to send two copies of this Act to each secretary as soon as it has received its final reading.

How the Institute Hall at Garden Hill Was Built

In reply to an inquiry regarding the Institute hall of the Garden Hill Branch in East Durham, the secretary writes:

"We began to build our hall the year before the war, were given a free site, purchased an old barn for $50 for rough lumber, and purchased all our new lumber in a near-by town. Our hall is a frame building, 30x50 feet, finished outside with matched lumber and inside with varnished pine. There is a platform the entire width of the hall, 10 feet wide, with dressing rooms at the back. At the time of building, it cost us about $1,000 and could not now be built for double that money. The men of the country around gave their help for any teaming required, without charge.

"Before beginning to build, we raised in subscriptions nearly $750 and borrowed the balance. Last year, in spite of all patriotic and Red Cross work, we paid our last instalment on the hall and it is now free of debt.

"Besides this, we purchased chairs and seats sufficient to furnish the building."

What a Few Institutes Have Done and are Planning to Do

In the four months ending with March, the Comber Women's Institute, with Mrs. I. Ainslie as President, has shipped 170 pairs of socks, valued at $2.15 each, and 159 refugee garments valued at $1.39 each. A barrel of fruit valued at $15.00 was sent to the Byron Hospital.

The Consecon Branch held a reception in March for the returned boys in that district. This Institute is furnishing a room in the county hospital.

A number of near-by Institutes were invited to meet with other women's organizations in Hamilton to discuss the butter problem.

The Grimsby Institute is co-operating with other local organizations in furnishing a room for the Veterans. Other Institutes are planning similar work.

Fenelon Falls Institute has made a contribution of $60 to the local library.

The Stoney Creek Branch sent 100 quarts of fruit to the Hamilton Sanatorium.

The Welland Institute has offered its co-operation to the town council for some project of benefit to the town. Two suggestions made by the Institute were the providing of a park and the erection of a concert hall.

The Pickering Institute has made a gift of $25 to the Hostel in Toronto for the orphans of soldiers.

At a recent meeting of the Newmarket Institute, a most interesting paper on "Interior Decoration" was given.

Several Institutes near Renfrew are co-operating in furnishing a rest room in Renfrew. The room with light and heat has been secured free through the courtesy of the town council.

The membership of the Lindsay Institute is increasing so, that a suitable hall must be provided, and a committee is to look into the matter.

The Girls' Institute at Orillia had the good fortune to be addressed by Dr. Mary Roberts on "India and her Women." This Branch is planning for a course in Home Nursing and First Aid.

(CONTINUED ON PAGE 44.)

Girls! Lots of Beautiful Hair

35 cent bottle of "Danderine" makes hair thick, glossy and wavy

Removes all dandruff, stops itching scalp and falling hair

To be possessed of a head of heavy, beautiful hair; soft, lustrous, fluffy, wavy and free from dandruff is merely a matter of using a little Danderine.

It is easy and inexpensive to have nice soft hair and lots of it. Just get a 35 cent bottle of Knowlton's Danderine now—all drug stores recommend it—apply a little as directed and within ten minutes there will be an appearance of abundance, freshness, fluffiness, and an incomparable gloss and luster, and try as you will you cannot find a trace of dandruff or falling hair.

If you want to prove how pretty and soft your hair really is, moisten a cloth with a little Danderine and carefully draw it through your hair—taking one small strand at a time. your hair will be soft, glossy and beautiful in just a few moments—a delightful surprise awaits every one who tries this.

Try a 35 cent bottle at drug stores or toilet counters.

By Royal Appointment

Acceptable Gifts

NOW THAT PEACE has come you will want to give something to your friends at home, abroad, or at the Front, that will give lasting pleasure—won't you?

½ Lb. Prunes
1 Cupful Water
Rind of Half a Lemon Grated
1 Inch of Cinnamon Stick
¼ Cupful Sugar
1½ Tablespoonful Gelatin
1 Cupful Fruit Juice
Shredded Almonds
Chopped Nut-meats

WASH the prunes, cover them with water and allow to soak for thirty minutes; then put them both into a saucepan, add the grated lemon rind, the cinnamon stick, and the sugar. Cook until tender, strain off the liquid, and rub the prunes through a sieve. Crack a few of the stones, blanch the kernels, and add them to the pulp. Put the liquid from the prunes into a pan, add the gelatin, and the fruit juice and dissolve over the fire. Strain this into the pulp and stir occasionally until nearly cold. Rinse out a jelly mold with cold water and decorate with shredded almonds; fill up with the prune jelly, and set aside in a cool place until firm. Decorate with a few chopped nut-meats.

Pictorial Review

Whenever a recipe calls for "Gelatine"– it means

KNOX
SPARKLING
GELATINE

Plain, for general use, easily prepared

Including pure lemon flavor for quick use.

HOUSEWIVES everywhere use Knox Sparkling Gelatine because of its 4-to-1 economy, each package making four pints of jelly or four times that of flavored packages.

Every woman should read the Knox Knowledge Books—"Dainty Desserts" and "Food Economy." They are an education. Sent free if you give your grocer's name and address.

KNOX GELATINE,

Canadian Women's Institutes

(CONTINUED FROM PAGE 43.)

A witty remark was the answer to roll call at the Crowland Institute, with Mrs. E. T. Metler as President. This Institute is interested in Red Cross, Belgian Relief and Children's Shelter work.

Mrs. John Bourka, President of the Mattawa Institute, reports that this Society is a small band of earnest workers who have sent a large quantity of goods and money to the Red Cross and other societies.

The Streetsville Institute, with Mrs. J. S. Chambers as President, held two clinics, one in July when 44 school children were operated on for adenoids and diseased tonsils, the second a dental clinic when 70 public school pupils had their teeth treated.

The magnificent sum of $3,579.33 was raised by the Woodville Institute in money and supplies for war relief during the last three years. Mrs. J. Campbell is the President.

The Monteith Institute led by the President, Mrs. John Lothian, held a social afternoon for mothers, and others whose home duties prevented them from attending the regular meetings of the Institutes.

Each of the fifteen soldiers who will return to Poplar will be presented with a pair of socks by the Institute. Refugee work is also being carried on, reports the President, Mrs. J. L. Baker.

The Slate River Institute, with Mrs. G. B. Smith, President, has just forwarded a box of bedding to the French relief, valued at $45.00.

The Stratton Institute, with Miss Lena Dormer, President, is holding Cake Sales to raise money. This Institute holds receptions to welcome home the soldiers.

"We are still knitting, and sending parcels of socks overseas to some of the boys who will not return for some time, in addition to our usual Institute work," writes Mrs. W. B. Bourn, President of Colbeck and Monticello Institute.

Mrs. F. J. Fawcett, Secretary of Gravenhurst Institute, reports as follows: "To erect a memorial to the local heroes who have fallen in the great fight for liberty and democracy is the task which the Gravenhurst Institute has set for itself, and to this end, has approached the Town Council for a site."

The Listowel Institute, with Mrs. Alex. Ferguson, President, has been engaged in Belgian and French relief work, and is now undertaking to furnish a ward in the new Hospital recently presented to the town.

"Our individual part in the world's great Peace Conference," was the subject studied at a recent meeting of the Dryden Institute. Mrs. R. Weigle, President.

Great interest is being taken in gardening by the members of the Rodney Institute. Several have secured the seed from the Department and are planning to have large gardens. Mrs. M. Bisnett is President of this Institute.

Mrs. Wm. Honess, President of the Louise Institute, reports that this Society has contributed $25.00 to the Children's Aid in Owen Sound.

The Bognor Institute, with Mrs. Wm. T. Moffatt, President, gave a donation to the Walter's Falls Agricultural Society. A bale of clothing was sent to the Belgian Relief Society, and 70 pairs of socks to the Serbians.

"The South Horton Institute is continuing patriotic work and helping hospital and children's aid," reports the President, Mrs. D. Barr.

The President of the Rodney Institute, Mrs. A. Bisnett, reports that such excellent results were obtained from the government seeds received by the members of their Institute, that greater activity is planned for the coming year. Mrs. Bisnett expresses a desire for greater sociability among the different societies.

Warsaw Institute led by the President, Mrs. David Miller, is planning to fittingly receive the returned soldiers and carry on Belgian relief work.

Very practical indeed is the aim of the Berwick Institute. "How to be Thrifty Housewives," is the question asked by Mrs. W. J. Stark.

Tutela Institute, under the able leadership of Mrs. Hird, has provided special aid to "flu" sufferers, and is now interested in helping to find suitable homes for orphans.

Mrs. James Moore, President of the Solina Institute, reports that they sent 10 women's dresses, 25 pairs of socks and 25 sheets to the Belgians.

"Stratton Institute is preparing social evenings for the returned soldiers," reports the President, Mrs. Draycott.

Mrs. R. O. Morrow, President of the Hilton Branch, reports that they have purchased a beautiful Union Jack for the school, and as an Institute they have decided to extend a welcome to all soldiers' wives coming to Canada for the first time.

One hundred and fourteen dollars and fifty cents was realized by the Drayton Institute by an entertainment entitled the "Spinsters' Convention," given by the young girls. "Since the New Year this branch has donated $100 to Belgian relief, $100 to French relief, and $100 to Red Cross," reports the President, Mrs. R. Wigle, and the Secretary, Mrs. H. Davidson

The Cornwall Centre Institute, Mrs. L. A. Groves, President; Leamington, Mrs. Geo. R. Fox, President; and Stony Creek, Mrs. A. E. Walker, President, are all actively engaged in work for the relief of Refugees.

The Beaverton Institute, with Mrs. A. Burton as President, has made some worth while resolutions, as follows: They have decided to again have a programme and to have each member in turn preside and take charge of a meeting. They have also found daylight saving a detriment in their community. At Christmas time this Institute filled 100 stockings for the school children and assisted the school teacher in preparing an entertainment. They hope soon to have medical and dental inspection of the school. Twenty dollars was sent to the Children's Shelter at Ottawa and a box of warm clothing.

Ivanhoe Institute led by the President, Mrs. John Clements, held a very enjoyable "At Home" at the home of Miss Tanner. Matters pertaining to the school are being investigated by this Institute.

With a membership of 22 and situated "in the bush," the Barnhart Institute with Mrs. J. Shaffer as President, conducted a successful auction sale at which they realized $102. The sale was held in the evening in order that the gentlemen might attend. The members donated fancy work, socks, shirts, etc., which were sold. Prizes were given for the best display of vegetables and roots, which were afterwards sold by auction. A short programme and lunch brought the interesting affair to a close.

The New England Institute led by the President, Mrs. Wm. Wylie, and Haliburton, under the direction of the President, Mrs. G. Potts, are doing excellent relief work.

Manitoba

Miss Gertrude E. Patterson, Secretary of the Home Economics Society, reports excellent work done in this Society, which is now celebrating its third birthday. They have sent 54 boxes overseas, donated $73.50 to the Red Cross and sent 100 pairs of socks to the front.

The Home Economics Society members are interested in the questions "Why Women Should Vote" and "What Constitutes Happiness." This Society is looking after the young people, assisting in the children's aid and protection, and the boys' and girls' club. Mrs. H. Houchin is the President.

The Home Economics Society under the guidance of Mrs. Hammel, their President, are endeavoring to interest the community in the beautifying of home surroundings. To secure rest room accommodation is also one of the aims of this Society.

To raise funds for the support of a rest room with matron, for short courses from Ex. Dept. Agricultural College, and for a lending library, are the worthy ambitions of the Rivers Home Economics Society, whose President is Mrs. R. W. Sargent. At present this Society is helping in the boys' and girls' Fair work, and trying to propagate a community spirit with more consideration for others.

Making Palmolive 3,000 Years Ago

THIS task fell to the user in the days of ancient Egypt. Palm and Olive oils were blended into a combination that would today seem crude. But this first Palmolive was the greatest toilet luxury this old time civilization knew.

Today these same rare oils, Nature's perfect cleansers, impart their magic qualities to a modern luxury. Their combination in Palmolive Soap has made the name famous, and the soap the most popular measured by actual sales value.

The smooth, creamy Palmolive lather, profuse and fragrant; the wholesome, attractive natural color; the mild yet soothing, cleansing qualities, are due to Palm and Olive oils.

Although 3,000 years have passed since their discovery, the world has found nothing better.

Palmolive Soap heads a line of finest toilet specialties, guaranteed satisfactory by the famous name. Palmolive Shampoo is liquid Palmolive, indispensable for proper shampooing.

Palmolive Shaving Cream contains the same rare oils—is both lather and lotion.

Help the Y.M.C.A. Finish Work for Soldiers

CANADIAN Y.M.C.A.

Help the "Y" to Construct the Manhood that will Reconstruct Canada

CANADIAN Y.M.C.A.

The Y.M.C.A. will keep its chain of Red Triangle Service unbroken till the end

All the world now knows that the Red Triangle of the Y.M.C.A. was the "Sign of Friendship" to thousands of your brothers, sons, nephews, cousins and neighbors' boys in the last four and a half years. Wherever the Canadian Soldiers went, the "Good old 'Y' " went, too. And now it is coming back home with them!

For the support which has made possible the war work of the Y.M.C.A., we thank you. Your money has been well expended. We have rendered full account.

We ask now your continued sympathy and support for Red Triangle Service for our soldiers during Demobilization, and for Y.M.C.A. work for Canada generally during the Reconstruction period. The Annual Red Triangle campaign will be held throughout Canada May 5th to 9th, 1919. The objective is $1,100,000.

For what purpose is the money required? We will tell you.

For Our Men Returning

For the soldiers and their dependents, returning from Overseas, we have provided as follows:—

1. A Red Triangle man on board every ship when it leaves Great Britain, with a full equipment of games, gramophones and records, magic lantern, literature and writing materials, where possible, also a piano or an organ. Lectures, concerts, sing songs, instruction re Government repatriation plans, and Sunday services.
2. Red Triangle comforts and facilities for the men on arrival at Halifax, St. John, Quebec, and Montreal, including coffee stalls with free drinks, free eatables, cigarettes, candies, etc.
3. Red Triangle men on every troop train to provide regularly free drinks, eatables and cigarettes, organize games, and sing songs and furnish information.
4. Red Triangle free canteen service, information bureau, etc., at each of the 22 Dispersal centres in Canada.
5. Red Triangle Clubs in the principal cities of Canada in the shape of large Y.M.C.A. hostels to furnish bed and board at low rates and to be a rendezvous for soldiers.
6. Seventy-five secretaries to superintend Red Triangle service in Military Hospitals, Camps, and Barracks throughout Canada.
7. Tickets entitling soldiers to full Y.M.C.A. privileges for six months at any local Y.M.C.A. furnished.

In addition to our work for the returning soldiers, we have to maintain the Red Triangle service to the full for the soldiers in Siberia, as well as the work of special secretaries in Northern Russia, Palestine and Poland.

Canadian Y.M.C.A. Red Triangle Campaign $1,100,000 May 5th to 9th Canada-Wide Appeal

For Canada's Manhood

The Reconstruction program of the *Y.M.C.A.* includes the following vitally important developments:—

1. An increased service to 300,000 teen-age boys in the Dominion—the development of Canadian Standard Efficiency Training; Bible Study groups; summer camps; conferences; service for High School boys, for working boys, in the towns and cities; for boys on the farm and for boys everywhere who have lacked opportunity for mental, moral, physical or social development.
2. Inauguration of Y.M.C.A. work in the country, and the smaller towns and villages lacking Association buildings and equipment, on a plan of county organizations. This will include the establishment of Red Triangle centres for social, recreational and educational work among boys and men in co-operation with the churches.
3. The promotion of Y.M.C.A. work among Canada's army of workers in industrial plants, both in Y.M.C.A. buildings and in the factory buildings, organizing the social spirit among the industrial workers of our cities by meetings, entertainments, games and sports.
4. The establishment of the Red Triangle in isolated districts where lumbermen, miners and other workers hold the front trenches of industry.
5. Besides these main fields of increased activity for 1919 we have to provide for enlarged work among railway men, college students and for our campaign to encourage physical and sex education. Under all our work we place the fundamental foundation of manly Christianity.

Please Note:

We are not asking for money to carry on our work Overseas with the Army in Great Britain, France or Belgium. That work will continue at its maximum for some months, financially provided for by the liquidation of our assets Overseas, and will not cease until the last man has sailed for home.

We Ask the Support of the People of Canada

For the sake of our victorious soldiers and dependents, and the happiness of their home-coming; for the sake of our future citizens, our teen-age boys; for the sake of rural life in Canada; for the sake of the social betterment of the toilers in factory and workshop; for the sake of lonely men and boys in our mines and forests; for the sake of Christian Society and Canadian Manhood—we appeal to you. Give us your contribution, little or big. Be as generous as you can.

Hand your contribution to the canvasser when he calls, or if you live where it is difficult for him to call, send it by check, money order or registered letter to the National Treasurer, Red Triangle Campaign, 120 Bay Street, Toronto.

Y.W.C.A.

For the wives and children Overseas dependent upon Canadian soldiers, a sum of $175,000 from the Red Triangle Fund will be set aside to cover the work of the Dominion Council of the Y.W.C.A., which is co-operating with us in caring for the soldiers' women folk and their little ones on the long journey from Liverpool to their homes in Canada.

National Council of Young Men's Christian Associations of Canada

The Red Triangle Campaign is being conducted under the distinguished patronage of His Excellency, the Duke of Devonshire, K.G., G.C.M.G., G.C.V.O., P.C.

Hon. Campaign Chairman:	Campaign Chairman:	Campaign Treasurer:	Campaign Director:
John W. Ross, Montreal.	G. Herbert Wood, Toronto.	Thomas Bradshaw, Toronto.	Chas. W. Bishop, Toronto.

The name *Gossard* in your corset is your guarantee of

health

depending on a hygienically correct support to abdominal and back muscles, that leaves no chance of undue pressure at the waistline. A healthy body is a correctly poised body; Gossard Corsets induce correct posture, correct breathing and protect the organs of nutrition.

comfort

assured by the exact science of Gossard designing for every type of figure.

style

only to be found in a correctly poised body, induced by a correctly designed and fitted corset.

GOSSARD CORSETS

The Original-Unequalled Front Lacing Corsets

are hygienically correct.

Health should be the first consideration in the purchase of your corset. Only by a thorough appreciation of this fundamental fact can any woman guard herself against those bodily ailments that are often the result of improper corsetry. The woman who buys her corset largely for appearance, without proper regard for its hygienic qualities, is nearer the hospital every time she puts it on.

There are many reasons why you should wear Gossards besides the obvious one that they are a gratifying acquisition to the daintiest wardrobe. The real value in these inimitable corsets cannot be measured in terms of cloth, boning and lace. They must be measured in terms of health, comfort and style.

During the war abnormal conditions made the material question a serious one for every manufacturer. The tremendous demand for Gossards grew from day to day, adding to our manufacturing problems. Our huge factories, working at capacity, could not meet the situation. A tribute, indeed, to Gossard supremacy!

Our best efforts at production are still taxed by the demand that is growing larger day by day as women come to a fuller appreciation of what Gossards accomplished in sustaining womanhood through the World War. But now, happily, the war is over and our raw material and labor problems are of the past.

With this year we will produce Gossards of quality excelling even our high standards of past years, and attain a perfection never before reached in corset manufacture.

THE MEN SERVING ABROAD

ARE STILL BADLY IN NEED OF

SMOKES

The demand for cigarettes for the boys who are still "over there" is just as great at the present time as it was during hostilities. So keep the boys well supplied with their favorite cigarettes during the long months of waiting before they return to their homes.

SWEET CAPORAL CIGARETTES

Bringing Home the Bride

How Canada Welcomes Her Returning Soldiers and Their Brides

By Elizabeth Becker

IN the sunshine of peace, our soldiers return to their native land, the dark clouds of warfare lifted—the cloud under which they left our shores and embarked on the great adventure. But the *boys* do not come back. They are gone forever. In their place come men, men who have proven their manhood, whose spurs, spiritual and military, have been won in desperate conflict. Many who left in a state of single unblessedness, married the first year of the war, and are returning with wives and children; others are bringing their brides who make the adventure into matrimony and Canada on the same trip. This return in dual or triple form, calls for a reception differing from that accorded to mere man accustomed to the rigours of camp life, but the great-hearted men and women of St. John, New Brunswick, know just how to express the feeling of Canada for those who return and for those who are new members of our large family.

Saint John, Not Saint Peter, at the Door.

BY virtue of the geographical location of St. John, its citizens have become Canada's official welcomers of our returned soldiers, and right royally does the old city down by the sea, open wide its doors and extend the warm hand of welcome, and to home-sick men, who have been yearning for a glimpse of their native land through years of the horrors of war, this seems indeed the very Gate of Heaven.

To some of the wives coming from Overseas, the prospect was not one of unalloyed bliss, for mischievous pens and tongues had set a mental wave in motion, that made the English, Scotch and Irish brides fear that some of the Canadian homes might have preferred Canadian brides for their soldier sons. However, their reception by the women and the men of St. John banished all such fears. As one of the brides confided to a member of the Reception Committee, "We were told in England that Canadian women would greet us with bad eggs, but instead we have been treated like royalty." Canada recognizes in these young women from the British Isles, those whose kindness in hours of loneliness have won the hearts of our boys, the kind of women who, with few exceptions, are the type of citizen of whom Canada will be justly proud.

In the Receiving Line.

THE Soldiers' Reception Committee of men and women has done valiant service ever since the beginning of the war, in meeting boats and trains early and late, and distributing comforts. With the prospect of thousands of women and children coming in addition to the soldiers, when the Armistice was declared, it was felt that only by thorough organization could the situation be met. A citizens' welcome Committee was formed of nationally organized societies, such as the Young Women's Christian Association, the Red Cross, the I.O.D.E., the W.C.T.U., Protestants of all denominations, and Roman Catholic societies, all working together harmoniously, sub-dividing the work in such a manner that every detail that may add to the comfort of the guests is attended to. Having secured permission from the Dominion Government, the Dominion Council of the Y.W.C.A. extended the work of its Travellers' Aid Department, to meet this emergency, by placing two efficient National workers, Miss Perry and Miss Woods, in charge of a Reception and Rest Room for those returning, especially the women and children.

Rest Rooms.

A SPACIOUS room in the Immigration Building was prepared by the Military authorities. The Y.W.C.A. Hostess Houses of Ontario shipped their no longer needed furniture, and with the splendid local assistance, the rooms were arranged. Bright, airy and warm, they are a perfect haven of rest for the weary women and children, who on one occasion numbered nine hundred—over three hundred being children. Though the accommodation was supposed to be adequate for four hundred, the larger party was satisfactorily handled.

One side of the long room has a row of dainty white cots, which soon are filled with travel worn occupants. Opening off this large reception room is a smaller room, filled with beds for those who are ill, and off this, a nursery and lavatory, where unlimited supplies of hot and cold water, towels and soap, turn out "new women and babies for old." Adjoining this is the Red Cross dispensary, with a trained nurse in charge, where supplies and medicines and everything a baby sick or well could possibly want, are given out.

Back of this is the kitchen, and connecting with the Reception Room is a serving table where under the direction of one of the Y.W.C.A. workers, the local V.A.D.'s serve hot drinks, sandwiches and cakes.

When the boat docks, the only ones allowed to go on board are Miss Perry, the Y.W.C.A. Secretary, and Mrs. Lawrence, the Red Cross Secretary.

Off the boat, up the long stairs and "Welcome Home" says the great streamer at the head. Along through the Immigration offices all must pass, and many have a long wait. The welcome is repeated by voice and handclasp of the ladies of the Reception Committee, who keep the babies and the bundles, so that Mother can attend to her papers with a free hand and a free mind. This done all move on to the Rest Room, which with its dainty curtains, easy chairs, bright chintz cushions, piano, reading and writing tables, is most inviting to the sea-sick travellers. Outside the Rest Room, are the Y.W.C.A., the Salvation Army, and the Knights of Columbus booths, which cater to the needs internal and external of the soldier. The military Information Bureau and the C.P.R. offices do a land office business in answering questions, and the Patriotic Fund Booth aids the soldier or his dependent financially if necessary.

The Next Stage.

RESTED and refreshed, the next step in the long journey must be arranged. The local assistants and the Y.W.C.A. secretaries are everywhere, ascertaining destinations, seeing that babies, bundles, bags and boxes are collected, for the first train to pull out. The Red Cross superintendent see that a nurse, with full equipment of supplies, and loads of extra blankets, is on every train. This is one of the greatest of comforts to those with small children. This goes on all day, welcoming the coming, and speeding the departing guest, until the last train load disappears, possibly at eight or nine o'clock at night, if, as sometimes happens, several thousands arrive the same day.

Then come the clearing away of the wreckage, cleaning of the rooms, stocking the dispensary and the pantries, changing the beds, and getting all ready for the next boat load.

As quite frequently happens, there are cases of illness on board and these are at once taken to a special hospital

(CONTINUED ON PAGE 54.)

Concerning Books That are Worth While

(CONTINUED FROM PAGE 25.)

to during ecent years as the Slavic Joan of Arc.

In it she gives a vivid account of Bolshevism in action. But apart from any propaganda value which the book possesses, it must be accepted as a great human story of a dauntless spirit who has undergone all the hardships which Russians have had to go through during the last four years.

Maria Botchkareva tells a story which for individual hardship has rarely been equalled. She strips bare the most intimate phases of her private tragedy as a child, young girl, and wife in her self-forgetful service of "Mother Russia." But even the frank details of her martyrdom at the hands of many men shrink to insignificance in the face of her inimitable four years' service at the front during the war,—and its cruel aftermath. From the day of her enlistment this indomitable woman—lovingly called "Yashka" by her comrades in arms—lived the life of a Russian soldier, fought, ate, and slept in the promiscuousness of a common camp and yet by the magic of her personality maintained the respect and devotion of her comrades.

The book is a literal revelation of a woman's soul, of her most intimate hopes and fears, and must be accepted as a noble sacrifice for the cause of humanity. She makes an earnest appeal to the free peoples of the world to help Russia find herself in return for the millions of lives the "Great Bear" has already given to the cause of civilization.

"Yashka" is a wonderful, inspiring book which will prove interesting and worth-while either as a story, as a biography, or as an interpretation of the present difficulties of modern Russia.

Sinister House, by Leland Hall. Published by Thos. Allen. Price, $1.50.

FOR those who like a work of fiction which mystifies and develops a curdling of blood, "Sinister House" will prove to be one of rare interest. It is the story of a man and woman passionately in love, but haunted by the sinister spirit of the man's former wife. The scene is located in an old house which was used as a residence by the dead wife, and was unknowingly chosen by the second one.

As a haunting mystery for adults the book will have many admirers, but will not prove good mental food for children.

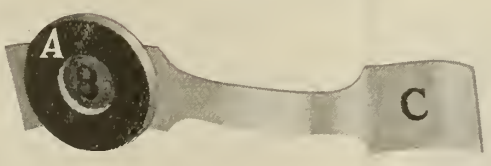
Re-Education, by George Edward Barton, I.A.A. Published by T. Allen & Company. Price, $1.25.

IN this volume, Dr. Barton makes an analysis of the institutional system throughout the United States and Canada, and that he has done the work successfully is proven by the fact that many universities have chosen his book as the accredited text book in their social service courses.

In his preface the author states that he has endeavored to point out some of the fundamental weaknesses or fallacies in the present methods of dealing with education, sin, and sanity and disease.

The book deals with such chapter subjects as "The Size of the Dependent Population," "The Immigration Problem," "The Failure of Hygiene in Industry," "The Cost of Living," "How Much Can Any Man Do," and "Vocational Guidance." It is a book which should be secured and pondered over by every serious student of sociology and economics.

Songs of Men: An Anthology by Robert Frothingham. Published by T. Allen & Company. Price, $1.25.



THIS volume of short lyrics is advertised as being "a book for every woman to give to some man, and a book for some women to own themselves." It is the opinion of the editor of this department that this book will give undoubted pleasure to all men and women who take enjoyment in the life of the great outdoors. The lyrics which have been selected are of that rollicking, red-blooded type which have been popularized so much in recent years by such writers as Kipling, Service, and Masefield. Men who never read poetry in their

Do You Remember
The Old Corn Doctor?

Copyrighted B & B, 1919.

How Blue-jay Acts

A is a thin, soft, protecting ring which stops the pain by relieving the pressure.

B is the B & B wax centered on the corn to gently undermine it.

C is rubber adhesive. It wraps around the toe and makes the plaster snug and comfortable.

He stood on the street in the olden days and offered a "magic corn cure."

It was harsh and it caused soreness, but it did not end the corn. Nearly everybody had corns in those days.

That same method, harsh and inefficient, is offered you in countless forms to-day.

Grandmother's Way

Another method, older still, was to pare and pad a corn. That was grandmother's way.

Folks did not know the danger, for they did not know of germs.

But they knew its uselessness. The corns remained. Paring brought but brief relief. Pads made the foot unsightly.

Ten-year-old corns by the millions existed in those days.

Then Came Blue-jay

Then scientific men in the Bauer & Black laboratories invented the Blue-jay plaster. It was based on research, on knowledge, on many a clinical test.

People began to use it. They found that a jiffy applied it. They found it snug and comfortable.

They found that the pain stopped instantly, and it never came back. They found that the corn completely disappeared, and usually in 48 hours. Only one corn in ten needed a second application.

These users told others, and now millions use Blue-jay. They apply it as soon as a corn appears. Now at least one-half the people never suffer corns.

You can, like them, keep free from corns forever in this easy, simple way. One test will prove this, and to-night. In these scientific days it is folly to have corns.

Concerning Books

(CONTINUED FROM PAGE 53.)

lives would probably appreciate this little volume for the appeal it has to the average man who appreciates nature's elements much more than he does the inside enjoyments of a library.

Shops and Houses, by Frank Swinnerton. Published by McClelland and Stewart. Price, $1.50.

WHILE this novel is not the equal of "Nocturne," Mr. Swinnerton has written a story which lays bare the small town snobbishness which obtains in certain communities in the Old Land.

The story has to deal with a black sheep of one of the "first families" who returns to the old community and sets himself up as a grocer. Of course, the solution out of the tangled skein of social affairs is found through the medium of a charming romance. The portrayal of the characters of Louis Vachantors, of Dorothy, and of Veronica,—yes, and of the town gossip, Miss Lampe,—are excellently done. Altogether the book is worth reading and while it may not be accepted as the equal of "Nocturne," it is a big advance on the author's former works of fiction.

Little Journeys Towards Paris, 1914-1918, as written by that confirmed tourist, W. Hohenzollern, satirically translated by Simeon Strunsky. Published by Frederick D. Goodchild. Price, 75 cents.

FOR sheer satire this work of Simeon Strunsky's is one of the most delightful which has appeared since the beginning of the war. The book is a supposed diary as kept by one, Wm. Hohenzollern, who sets out for Paris, but repeatedly loses himself on the way.

In a brief preface Mr. Strunsky outlines the purpose of his book as follows:

"There are two very good reasons why the translator has undertaken the task of introducing Col Hohenzollern's little volume to the English-speaking public.

"1. The author's knowledge of his subject is unrivaled. It is enough to say that he has spent nearly four years traversing the distance from the German frontier to the terminus of the Nach Paris line. He has not only covered the ground minutely, but has frequently retraced his steps, though modestly refraining from mentioning the fact in his daily communiques.

"2. All other guide books to Paris exhibit a certain sameness, arising from the fact that they are written by tourists who started out for Paris and got there. Col. Hohenzollern's book, on the contrary, has all the freshness of an unspoiled ideal. It breathes the spirit so admirably conveyed in the familiar Pomeranian proverb, 'Not yet but soon.' Col. Hohenzollern does not burden the reader with a mass of superfluous detail. Thus, in his account of Paris, and its environs, he leaves ever so much to the imagination.

"To the young and frivolous, Col. Hohenzollern's tours may seem somewhat leisurely. Let them go their way. The present guide-book is intended for those to whom time and expense are no object.

"Such travelers will be more than amply repaid for the moderate price of this volume. Under the guidance of Col. Hohenzollern, who is himself under the special guidance of Gott (so aptly described by Mr. Trietschke as 'the Thos. Cook and Son of the Imperial German family'), the tourist may reasonably expect to get to Paris in time for the International Exposition of 1975, perhaps."

The book is one which will be looked upon as a little masterpiece of satire, and stands out in a class apart from other volumes which have been issued during the progress of the war.

Bringing Home the Bride

(CONTINUED FROM PAGE 52.)

where expenses are met, when necessary, by the Patriotic Fund. Funerals are also taken charge of by this organization. During the recent epidemic of influenza, all the accommodation was overtaxed, and an old hospital building was re-opened and equipped, proving a great boon to disabled travellers.

The Godmother.

THIS fine piece of National service, warmly welcoming our own men, and those whom they bring with them, does not begin or end here. Its source was in the sending to England as soon as hostilities ceased, of the Y.W.C.A. National Immigration Secretary Mrs. Burrington-Ham, who went to the authorities to secure space in which to open a Bureau for the information of soldiers' dependents coming over. After many difficulties and delays this was accomplished and Mrs. Burrington-Ham's assistance was of the greatest value to the women. "The Godmother" as they appreciatively called her, succeeded in placing upon each boat bringing a number of women and children, a Ship Secretary, who looks after their needs in every possible way, aiding the sick, cheering the well, carrying babies, and when time and *mal de mer* permit, giving talks on conditions in different parts of Canada, that newcomers may not be utterly at sea when they land. Motherless children coming with their fathers are her especial charge, until placed with friends. The end of this work,—but then we cannot speak of the end of the infinite, but rather the follow-up of the port service,—consists in writing to the Y.W.C.A. secretaries in each town or city to which the newcomers go, and asking that they locate them as soon as possible, call upon them, put them in touch with a Church of their denomination, and do all possible to make this new land a home land to these welcome members of the nation's family. Letters of appreciation from East and West, pay tribute to this great interest taken by the Canadian women.

This long chain of welcome from England to the Pacific demonstrates in magnified form, the work that has been carried on for years by the Y.W.C.A. Immigration and Travellers' Aid Departments. Its scope and fitness are such as appeal to the imagination of many who cannot be there in person, but who can by financial support strengthen the hands of the workers. The coming big drive of the Y.M.C.A. and Y.W.C.A. gives to all an opportunity of assisting in this great work.

If we truly value the sacrifice of our men in the tragic days just past, if we realize the difficulty of those returning to the different struggle of the wage earning civilian, and if we realize even dimly the tremendous crisis we are facing, let us as loyal Canadian men and women, leave nothing undone to continue individually this magnificent work in every community to which our men and women come, that we may make them one with us for a greater and nobler Canada.

Cheap Houses for Soldier Farms

The Federal Settlement Board will Build Homes for Veterans at from $300 to $775

PLANS have been completed by the Federal Soldier Settlement Board for supplying standard houses to soldier settlers in the Prairie Provinces.

Four types are contemplated, ranging in price from $300 to $775, beginning with a moderately convenient and comfortable two-roomed house suited to the needs of a bachelor settler, which can be erected for $300. This house is 17′ 10″ x 14′, and is so constructed that as the home needs of the farmer increase he can add to it without waste of material used in the original construction. This house is called type "A".

Type "B" is merely an extension of "A", one room being added and basement excavated. This building, which has dimensions of 24′ x 14′, when completed will cost approximately $590.

Type "C" is "B" with a portion of the roof lifted and an upstairs bedroom added. Total cost, $700.

Type "D" is the same as "C" with the remainder of "B" roof lifted and two extra upstairs bedrooms added. The cost complete of "D" is approximately $775. This type of house will give the farmer living-room, kitchen and parlor downstairs and three bedrooms upstairs. If, in the course of time, he requires a still more pretentious home, plans are being prepared by the Board for a wing, which will give him a much more commodious and comfortable structure.

Cheap and Commodious.

Great care has been given by the Board's architect to combine cheapness of construction with utility. The plans and specifications were submitted to a number of the leading pioneer women of the West, whose suggestions were incorporated. The proposed houses have been endorsed by these women. When a settler is ready to go on his land, he has the opportunity of selecting the type of house he requires and he is given full particulars as to cost and the amount of lumber required for construction. As previously announced, the settler may buy from any of 1,200 lumber dealers in the West at greatly reduced prices. The settler may erect his own house, or he may ask the Board to do it for him. In any case construction will be under the supervision of the Board's architect.

The plans have been made to meet the needs of settlers who may require a small and inexpensive house in the beginning. If at some future time he wishes to enlarge to "B" or "C" types, there is no loss of material. Everything in connection with the construction has been standardized with this idea in view. Plans and specifications of the four standardized houses will be supplied to soldier settlers at any time.

Built in Eight Days.

From three to eight days, according to the type, will be required to complete one of these houses, if building materials are on the ground. In the case of grouped farms, where a number of settlers may propose to locate together and build together, there will be material reduction in cost of construction.

The Board also plans to erect standard stables and implement sheds at the lowest possible cost to the settler. A settler may get along with a small stable, say 24′ x 12′, sufficient for the housing of two cattle and four horses, erected at a cost of approximately $200. The plans are so drawn that these buildings can be enlarged without loss of material.

With regard to Eastern Canada and British Columbia, where different conditions are found, the architect of the Board is planning suitable types for different locations.

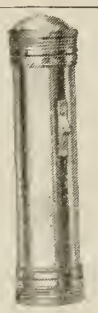
Music in the Schools

(CONTINUED FROM PAGE 35.)

already been adopted in Saskatchewan. The closing part of his address dealt with the relation of this movement to social life.

After the entry of the United States into the war, Dr. Dann joined the army as instructor in the largest artillery camp in his own land; and he testified from personal experience to the important part singing played in maintaining the morale of men. The main discovery he made, however, was the immense difficulty of arousing the natural musical sense of men in whom it had been allowed to remain dormant in youth. In a camp which contained soldiers from every state of the Union, he was soon able to discern by the way the men responded to his efforts in the matter of instruction, the sections from which they came. With those who had had some contact with music during school days, general education and bearing seemed to be better. Lack of musical sense was usually accompanied by ignorance in other matters.

Dr. Dann pointed out that real home life is accompanied by music from the first lullaby to the funeral hymn; while its necessity as a part of church life was recognized. The large employers of labor in the United States are also recognizing its importance and are introducing it into the great department stores and industrial plants. Music is indeed a possible preventive of crime; for, said, Dr. Dann, it is a known fact that 90 per cent. of crimes on this continent are committed in leisure hours, and chiefly by young men. Therefore, he argued, we must teach our boys how to employ their leisure hours, and must not forget that action and conduct are influenced more by feelings than by reasoning powers. Music has important uses in this respect. Moreover, in view of the enormous sums that are to-day spent on music, running on this continent to more than two hundred millions of dollars annually, the musical vocation has become a fertile field of success and livelihood. Its study sharpens the wit and the intelligence of the pupil, not to speak of the improvement in his tastes and modes of enjoyment that all such study brings. To learn to perform on an instrument involves a manual training, not to be underrated. In brief, music trains the hand, the head and the heart.



Entering into our private and public life through so many channels, there seems no good reason why it should not get into our legislative deliberations, and it is to be hoped that readers of this article will duly impress this fact on their legislative representatives.

Canadian Women's Institutes

(CONTINUED FROM PAGE 44.)

The Flee Island H. E. Society is looking after soldiers' comforts and hospital supplies. They are especially considering the question of training and educating the children for future welfare. Mrs. J. A. Graham is President.

The Lyleton Home Economics Society, with Mrs. Cheney, President, is interested in recreation for the community and providing library advantages. A child is being supported in France by this Society.

The Brandon H.E.S., with Mrs. Geo. Brochie as President, listened to two splendid addresses on February 15th. The speakers were Mr. S. E. Clement, M.P.P., and Superintendent A. White. The subjects were "The Dower Law" and "The Thrift Campaign."

Child Welfare, and special community relief work will be undertaken by the Swan Lake H.E. Society, with Mrs. J. McDonald, President, during the present year.

SASKATCHEWAN

Red Cross and Refugee relief work have been successfully carried on by Douglastown Homemakers' Club, in addition to assistance given to the Alameda Rest Room. Mrs. R. J. Smith is the President of this Club, and Mrs. Chambers, Secretary.

Mrs. A. G. Hawkes, President of the Whitewood Society, reports that they are still working for the returned soldiers' fund.

NEW BRUNSWICK

The Torbolton Women's Institute members are all working for Red Cross and at the January meeting made three life members of Red Cross, all mothers of soldier boys who have been overseas, practically since the beginning of the war. At this meeting a paper was given on Labor Saving Devices in the Home, and a button hole contest conducted for the girls. Mrs. Robt. Buckham is President of this Society.

QUEBEC

The Clarendon Homemakers' Club led by the President, Mrs. Wilson, has sent boxes overseas valued at $282.35, and to the Red Cross 6 pyjama suits, 17 wash cloths, 116 personal property bags, 3 pairs slumber socks and 10 pairs of socks.

Mrs. David Todd, President of the Argenteuil Homemakers' Clubs, reports that they are interested in anything pertaining to home or farm life and are interested at present in relief work.

PRINCE EDWARD ISLAND

Mrs. S. J. Rose, President of the Lakeview Institute, reports that 70 pairs of socks have been knitted for the soldiers. Contributions have been sent to Belgian relief and Salvation Army in addition to their local work for the school.

NOVA SCOTIA

The Port Maitland Institute is building and furnishing an annex to the local hall to be used as a kitchen. This Institute, under the leadership of Mrs. L. E. Porter, raised an average of $10 per member during the past year. Mrs. J. F. Southern is the President of this Society.

Mrs. F. Colllll, President of the Hantsport Institute, reports that in January a successful Fair was held, money prizes being given to the children to encourage them in school work and home gardening. This Institute is also helping the Boy Scouts and doing field comfort work.

The Martock and Windsor Forks Institute, Mrs. Levi Daniels, President, has decided to arrange for a better health system in their schools, also to take advantage of the McGill library.

East Leicester Institute reports that their January meeting was Children's Day, and the school was then entertained.

The Scotsburn Institute is doing refugee work and assisting to pay off the debt of the local hall. Mrs. R. Y. Stewart is the President of this Society.

"Milliville Institute is helping in the public work of the district," reports the President, Mrs. Adam Fleck.

Kempt Institute is holding school exhibitions and overseeing sanitation of the school. Mrs. W. N. Freeman is the President.

Mrs. W. N. Freeman, President of the Kempt Institute, reports that this Society is trying to get a public hall built, and to do other community work.

Twenty dollars was donated to the Social Service Council by the Hantsport Institute. A welcome for every returning soldier is arranged for by this Society in addition to their usual work. Mrs. F. A. Coffill is President.

"We have decided to start a library from donations of books by the members, and later enlarge it," writes Mrs. L. Daniels, President of the Windsor Institute.

The Tatamagouche Institute, with Mrs. D. A. Cunningham, President, was able to raise sufficient money to have the Town Hall repaired. During last year this Society held twelve meetings, with an average attendance of 25, 53 on the roll. A large amount of Red Cross work was done, and many donations made.

Mrs. Arthur J. Hebt, President of the Lunenburg Institute, reports that this Society has been doing much to better conditions in the community. Prizes are being offered for the School and County Fair, and an anti-tuberculosis movement is on foot.

Scotch Village Institute, with Mrs. George Smith, President, is interested in encouraging the making of gardens by the children. This Society also welcomes the returning soldiers.

Perhaps in these qualities lies the secret of her success, for the truly great are always simple at heart.

BRITISH COLUMBIA

Mrs. Hale, Secretary of the Tillicum Institute, reports progress in the work of this Society. The members are heartily interested in Child Welfare, school lunches, and baby clinics, and they hope to have community canning. They have a Red Cross Committee and hope soon to form a Navy League Committee. Mrs. Lowery is President.

The February meeting of the Silver Creek Institute was devoted to a discussion on "Personal Appearance—its relation to self-respect, and vanity. How to improve it." Tho members are assisting the Boys' and Girls' Club in giving a Box Social with musical and literary programme. Funds for library books. Mrs. B. Brown is President, and Mrs. J. R. Tweeddale, Secretary.

The Upper Sumas Institute, with Mrs. York, President, has started the study of "Civics" and "Betterment of Health," and is aiming to make the meetings social centres.

The Kaslo Institute held an interesting meeting on February 28th, when they presented to the retiring President, Mrs. Millington, a broach. The presentation was made by Mrs. Archer, wife of the Mayor. The new President is Mrs. Caldwell, with Miss McKenzie as Vice-President.

Three demonstrations were given at the Rutland Institute during last year in March, June and October: on "Beauty Culture," "Canned and Dried Fruit, Vegetables and Chicken" and "Battenberg Lace." Five essays were given on the following topics: Woman's part in Food Production and Conservation; Work of the Scottish Red Cross in Serbia; The Place of the Institute in the Community; Common Sense in Conservation; and Economies in the Home. Mrs. Campbell-Brown gave an address at the December meeting on "Opportunities and Obligations of our New Citizenship"; $667.88 was raised in addition to work sent to Red Cross valued at $384.50. The officers elected for 1919 were: Mrs. Stonehouse, President; Miss Zella Monford, Vice-President, and Mrs. S. Gray, Secretary-treasurer.

Mrs. E. Adair, President of the Haney Institute, reports that the members are taking a keen interest in the improvement of schools and are anxious to have women trustees. This Institute is considering the erection of a cottage hospital as a memorial to the soldiers who volunteered from that district.

A great effort is being made by the Garden City Institute, led by Mrs. Chambers, to have domestic science taught in the rural schools.

KASLO, B.C.

The annual meeting of the Kaslo and District Women's Institute was held in their rooms on Friday, 31st of January. There was a good attendance. After the reading and adoption of the minutes of the last year's annual meeting the president, Mrs. Millington, addressed the meeting.

Mrs. Millington declined re-nomination as president, the balloting providing the Institute with the following: Mrs. Caldwell, president; Miss McKenzie, vice-president; Mrs. Roberts, secretary-treasurer. Mrs. Millington was made honorary president.

Auditors appointed were Mr. Whellams and Mrs. Papworth. Mrs. Roberts was chosen as Government delegate to attend the Kootenay and Boundary annual convention.

President's Address.

Dear Co-workers,—

I must say how pleased I am that we are once more able to meet together after the trying period of nearly four months, through which we have passed since our last meeting.

Our deepest sympathy is extended to all who have been bereaved during the recent epidemic which has caused so much suffering and sorrow all over the continent; even in our own little corner of the globe we have felt its sad effects. Our hearts go out to the relatives of the late Mrs. Skillicorn and Mrs. Hall. Through their death we have lost two good members; although they did not attend the meetings often they were always ready and willing to help in any way they could, and they certainly will be missed.

We have great cause to be thankful that this terrible war of four and a half years is over with such a great victory to the allies and while welcoming home all our dear boys who are returning, let us not forget those whose loved ones can never return. It must indeed be a heart breaking time for them to see others coming back and to know they will never see their own again on this earth.

Otherwise, aside from events over which we had no control we had a very pleasant and successful year in the Institute.

You will see from the report how much money has been taken in and how it has been spent. You will notice there has been a large sum go to the Prisoners of War Fund, but now the war is over and there is no further need to spend it that way we can do more to help the Red Cross. You may think that now the war is over there is no need for further efforts in that line, but the Red Cross is asking you to continue for another year at least, as there are so many things needed in the hospitals. I would ask our members who have worked so nobly to keep on; whether sewing or knitting let us do our best for those who need it so badly. While speaking of hospitals I would like to say that I would be in favor of the Institute doing something for our local hospital. Mind, I don't say bind ourselves down to any hard and fast rule like we did with the Prisoners of War Fund, but just to give a donation occasionally direct to the board of management, or even buy some articles towards the equipment, that could be placed to the credit of the Women's Institute.

I would also like to propose that we put forth a strong effort to get a home of our own. The way we are at present is anything but satisfactory, and paying out rent is a waste of money.

Community work was much spoken of at the convention, and I think these two things would be a good piece of community work for our Institute to consider at an early date.

I very much regret that Mr. Scott, the Deputy Minister of Agriculture, had to resign through ill-health during the past year. In losing Mr. Scott we have lost a good friend, one who was always ready to do whatever he could for the Institutes throughout British Columbia, and we trust his well earned rest will be most beneficial to his health.

We also regret the resignation of Mrs. Johnson, from the Advisory Board. We hope the time is not far distant when she will again be able to take an active part in Institute work.

As you all know the convention was considered a great success, and I take this opportunity of thanking you one and all, who helped in any way whatever, for your kind support and help at that time and during the two years I have been working with you as your president. I ask for a continuation of the same kind of support for my successor. As I have said so many times, a president or some one to take the lead of any organization is always a necessity, but they can do nothing alone. The co-operation and help of each and every member is very essential to make a success of any undertaking, therefore in closing I ask of you not to forget this and I trust you will endeavor to make 1919 a record year.

ELIZABETH MILLINGTON,
President.

Secretary's Report.

Madame President, Lady Directors, and members of the Kaslo and District Women's Institute,—

In giving a report of our year's work, it gives me pleasure to inform you that we closed the year with a membership of eighty-seven. The average attendance was twenty-six. In May, thirty-four, and in June, thirty-two, being the best months. Miss McKenzie, Mrs. Patey and the Misses Roberts attended all meetings held, and Mrs. Millington, Mrs. Chandler and Mrs. Roberts missed one meeting.

We held nine regular meetings, and nine directors' meetings. Seven papers were read, two readings, three recitations and three addresses given. No regular meetings were held in October, November or December because of influenza regulations.

We started the year with a balance of $19.69, and ended with a balance of $15.90.

We kept two Prisoners of War, paid $10.00 per month for nine months. We also sent $5.00 to Navy League, and $10.00 to Red Cross Drive.

Women's Institute members canned over one hundred and seventy quarts of fruit for Balfour Sanitarium, also sent $10.00 at New Year's to be used to buy comforts for the bed patients.

Work done for the Red Cross,—thirty-one dressing gowns, one hundred and seventy-seven pyjamas, three hundred and seventy-five pairs of socks.

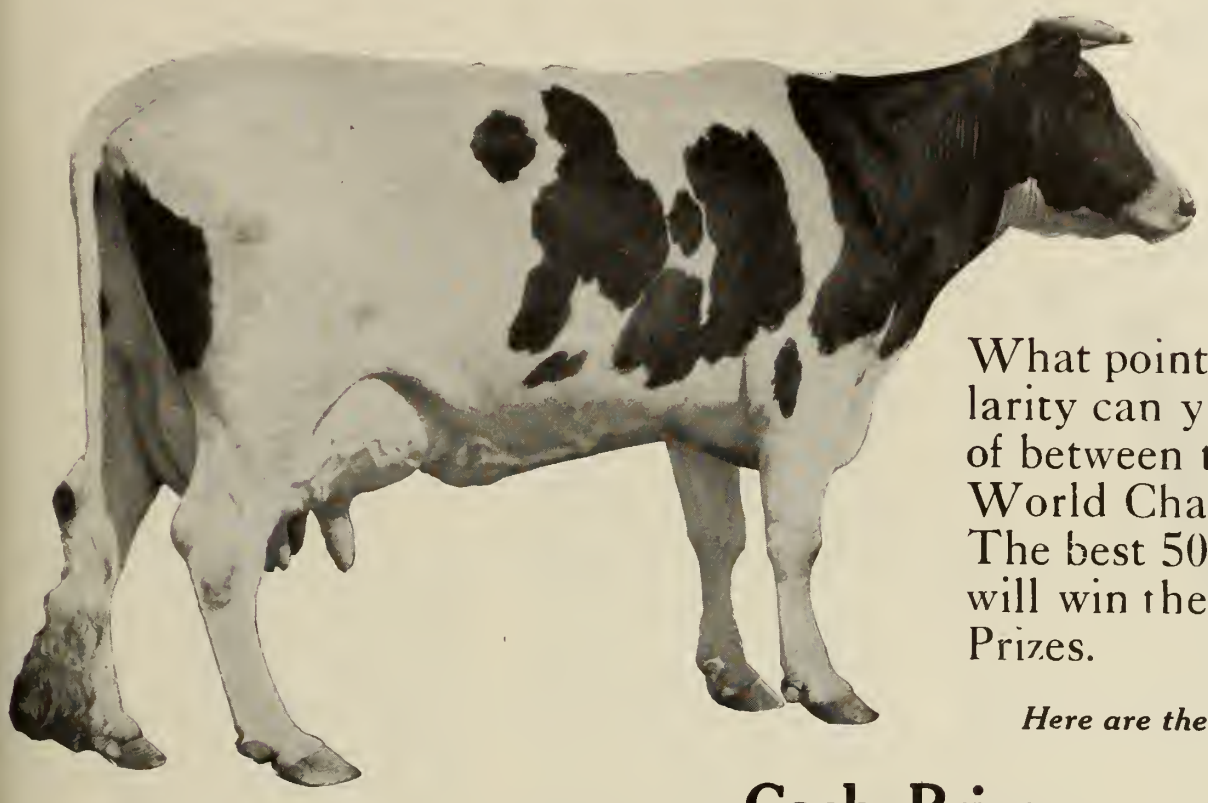
In May we held a sale of home baking, ice cream, etc., which realized $84.25. This was the only sale we had for the year.

In January, the Lake of the Woods Milling Company made arrangements with one of the storekeepers, and members were enabled to get flour and feed at reduced prices.

In May, the Farmers' Institute proposed sending for a car of feed; $216.85 was taken in from Women's Institute members for orders of feed, but had to be refunded as the Farmers' Institute did not send for the car.

In June, the Women's Institute sent for half a ton of rice and three hundred pounds of beans for members.

In January, Miss Hamilton's paper on "Cruelty to Animals" was read, and Mrs. Archer gave a reading. In February Rev. M. C. Campbell gave a paper, Mrs. Whittaker a recitation and Mrs. Roberts a paper on "Economy in the Home." In March, Mrs. Millington read an article on "Pruning," Mrs. McQueen gave a reading, also a recitation. On April 23rd a social was held at which over seventy members and friends met to bid farewell to Mrs. Keenan, an old Women's Institute member, who was leaving Kaslo to make her home at the coast. An address was read and Mrs. Millington presented Mrs. Keenan with a handsome broach, set with pearls and amethysts, a joint present from her many friends.



At the regular meeting in April, Mrs. Patey gave a paper on Gardening. In May, Mr. J. Keen, M.P.P., gave an address on Guardianship of Children and Minimum Wage for Women. Mrs. Norman gave a talk on Canning. In June the Monthly meeting took the form of a Picnic on the beach, all members' children were treated to ice cream; sports were held and prizes given. Members and their children had a splendid time.

On July 13th we had a very successful Flower Show. The sections open to adults were well stocked with entries, but the most notable exhibits were the wild flowers shown by children under sixteen years. In this division there were seventeen entries. Several of the contestants had as many as seventy-one varieties; $7.50 was given in money prizes, besides the Government prizes.

(CONTINUED ON PAGE 59.)

50 CASH PRIZES

You May Easily Win—Costs Nothing to Try

What points of similarity can you think of between these two World Champions? The best 50 answers will win the 50 Cash Prizes.

Here are the Prizes:

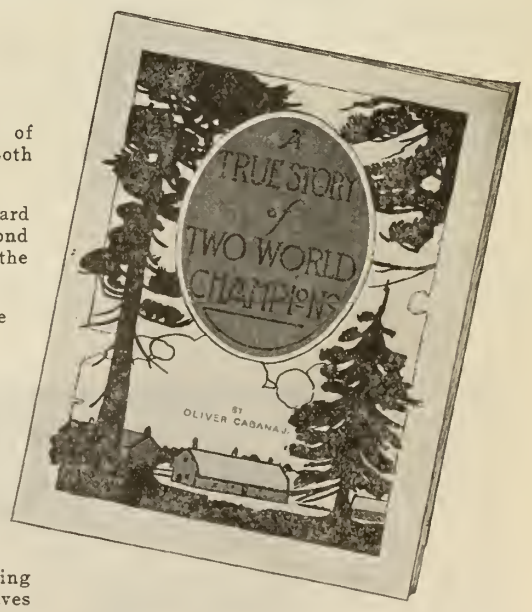
Cash Prizes

1st Prize	$500.00	4th Prize	$50.00	21st to 35th Prizes (each)	$5.00
2nd Prize	300.00	5th Prize	25.00	36th to 45th Prizes (each)	2.50
3rd Prize	100.00	6th to 20th Prizes (each)	10.00	46th to 50th Prizes (each)	1.00

TO enter this contest, you ought to read our intensely interesting booklet, which we will send you, FREE, and which tells, in detail, just how these great world records were made and this great success attained. No one, anxious for success in life, should fail to read it. It also gives you many pointers of help in this contest, because it tells of the connection between Segis Fayne Johanna, the $150,000 official Champion Cow of the world, "The Liquid Veneer Cow," and

LIQUID VENEER

Read and study this ad. and the story carefully, and then send us a list of NOT MORE THAN EIGHT points of similarity that you can think of between these two World Champions. For instance, "Both are World Champions," "Both are owned by the same people," "Both are doing great Patriotic Work."



After the close of the contest on June 1st, 1919, the judges will carefully consider all suggestions, and will award the first prize to the contestant from whom, in their opinion, the best list of suggestions has been received, the second prize to the contestant from whom the next best list has been received, etc. All contestants will be notified who the winners are as soon as possible after the close of the contest.

FREE, to every contestant, a large and beautiful colored reproduction of a wonderful painting of Segis Fayne Johanna, suitable for framing. It is a work of art, and will be sent whether you win a cash prize or not.

A complete set of Rules and List of Prizes will be sent with your copy of the story.

And don't forget these facts about Liquid Veneer. It is entirely different from any furniture polish known; it is more than a mere polish; it transforms the furniture and woodwork of the mustiest, dullest room in the world into one of polished cleanliness, sanitation and beauty; it leaves a perfectly dry surface, free from oil and grease, making old furniture and woodwork look just like new; it feeds and nourishes the varnish of pianos, furniture and woodwork and makes the finish last very much longer, improving its appearance all the time instead of forming incrustations; it actually repairs the damage done by oil, wax or other similar polishes.

This is great work, and is all accomplished by simply moistening a piece of cheesecloth with Liquid Veneer and using it in your daily dusting. Remember, Liquid Veneer is not a varnish and leaves no film or coating. A 50c bottle often saves $50 that might otherwise be spent in refinishing. Wonderful for your piano, Victrola, furniture, woodwork, floors, fixtures, tile, linoleum, brass and nickel.

Clip the Coupon Now Before You Forget. This opportunity will not be presented again in this magazine, so "strike while the iron is hot." You may easily win a cash prize, and it costs nothing to try. Send on your entry NOW.

BUFFALO SPECIALTY CO., 380 Ellicott St., Buffalo, N.Y.

(CONTINUED FROM PAGE 36.)

These added to the caterpillars are our daily bread. Our work is over when the hay is cut and then we assemble in flocks and go to the marshes. There we eat the wild rice, but as soon as the first frost comes we leave for the sunny south."

"You're awfully like a sparrow," remarked the squirrel to Mrs. Bobolink.

"I am a bit sparrowy-looking, but you know we belong to the blackbird family."

"This is my wedding suit," cried the bobolink proudly. "In the autumn I change my color until I'm dressed just like my wife, because then we both blend in with the dead leaves and grass and are in little danger of being shot."

"Camouflage," murmured the squirrel.

Just for one moment did Mrs. Bobolink allow the visitor to see the eggs from which her babies would soon emerge. There they were, four of them, white and thickly spotted and clouded with brown.

"You see, I didn't know you were so useful," chattered the squirrel as Mrs. Bobolink hopped back to her nest. "It seems to me that you birds don't leave anything unguarded."

"We don't," replied the bobolink. "Look over there," went on the male bird as he perched on a stout weed stalk. "Look at that rose-breasted grosbeak. He's busy."

"What is he doing?"

"You'd better go over and ask him."

"I will—" and without waiting to say good-bye, the red squirrel scampered away through the grass until he came to the foot of the wild apple tree. Clouds of snowy petals descended in a constant shower. "Hi! Stop, stop!" screamed the squirrel.

"Why?" asked a choked voice from above.

"You're spoiling the tree."

"Never," the grosbeak laughed as he ceased his work to talk.

"Well, I think you are," retorted the squirrel.

The bird twittered merrily, then cried, "I'm afraid you don't understand, friend Bushy. You see it's this way. I'm a tree pruner."

"A tree pruner?"

"Yes," went on the rose-breasted grosbeak. "A tree pruner, and a pruner is one that snips off a bud here and there, and then the remaining buds grow stronger and larger. Nature has many ways of pruning her trees. Insects kill some of the buds, but birds do nearly all this work. We even help the farmers in their orchards; somehow most of them don't seem to realise that we are really doing good when we snip off a bud or a newly formed fruit. The remaining fruit is always finer, but we are never given any credit for the work we have done. It's the same with the leaves of a tree. A few leaf-eating caterpillars do not hurt a tree, but the caterpillars become a pest by increasing so quickly. This happens in districts where birds are scarce, for most birds, if annoyed by stone throwing boys and pet cats, will leave that place. They are wise enough to know that there is danger in staying, but there, go away, I'm wasting my time and I must finish this tree."

So the squirrel scampered away, but the sun was high in the heavens before he reached his home tree. So many old friends had arrived overnight from southern lands. He stopped to chatter with the dainty grey catbirds. Oh, yes! They had had a lovely winter in Panama, but would he mind coming back later? They were so busy deciding just which part of the tangled brier they would build their nests in. The scarlet tanager bird passed overhead with a friendly greeting. He and his mate were off to the deepest part of the woods, for once there, he knew that he could hide his vivid coat and feel secure. Like the bobolink, he too had donned his wedding suit, and the startling splash of color nearly upset the tiny ruby-thoated humming bird that was darting hither and thither. The living jewel was getting impatient. His lady love was now a day late, for, as was the custom, the male ruby-throats had travelled in advance. The flame colored oriole whistled cheerfully from the depths of a blossom-covered cherry tree, his voice vying with that of the crested flycatcher, who, mischievous as the blue jay, was amusing himself by chasing the smaller birds. Every few minutes he startled the feathered folk with a loud, piercing call that sounded like "What!" With his tousled head he was never tidy, for his crest of feathers was always standing on end. No wonder the baby flycatcher's hair sticks up, for it is a well known fact that the crested flycatcher always places a piece of snakeskin in his nest. A queer habit and nobody has ever solved the mystery of it.

Bushy, the red squirrel, resting outside his door, heard a clear business-like voice calling "Chebec." Over and over it was repeated and it took the sharp eyed squirrel many minutes before he saw the small bird on the tree top. Dressed in Quaker grey, with vest a shade paler, the least flycatcher with its slightly forked tail darted viciously at a passing insect, then disappeared. Only the "Chebec, Chebec" was heard. The squirrel curled himself up for a nap, but before his eyes closed he thought over all he had learned that morning. "Tree pruners," he murmured and the next moment he was asleep.

What a Playground Means to a Community

(CONTINUED FROM PAGE 40.)

Saturday afternoon to the study of playground work.

In return, for the girl who takes up this work, a substantial salary awaits, and as a result of her work a statement of Judge Wagner of one of the Juvenile Courts, speaks for itself. "At present there are 200 boys and girls in the hands of the Juvenile Court under probation. Ninety or ninety-five per cent. of this number we got during July and August when the playgrounds are closed, for while they are open, few hearings are held. The reason for this is that during that period of the year this organization takes care of the boys."

QUESTIONS AND ANSWERS.

In one of your articles you spoke about bee-keeping as a means for a girl to earn money at home. As I am interested could you give me the information required for a beginner. I just love raising poultry but I have no bees as yet.

PRESCOTT.

I am sending you the titles of some books you will find very interesting along that line and also the names of a couple of magazines to help you. I am sure these will give you the information you desire much better than I could. I am also sending you the name of a college which specializes in that work. Hope you have every success with them.

To whom should my brother apply about his artificial leg. It seems to be giving him some trouble of late.

ANXIOUS.

Apply to the Soldiers' Civil Re-establishment Bureau, 185 Spadina Ave., Toronto.

Could you tell me if there is going to be another course given at Hart House?

WINOHAM.

Yes there will be a course given in both Massage and Muscle Function Training. The dates of these courses have not been finally fixed as yet

I would like to take up the study of nursing, but as I am a working girl, I would only be able to give my spare hours to the work. Could I take my training in that way?

GRETTA B.

I would not advise you to think of nursing unless you can spend three years in a hospital and receive the proper training. Since this is impossible why not turn your attention to something else? Did you ever think of taking up the work of playground supervisor? The lectures are given Wednesday nights and Saturday afternoons; in this way you will be able to keep on with your daily work and train at the same time.

Would you kindly give me the

(CONTINUED ON PAGE 60.)

Canadian Women's Institutes

(CONTINUED FROM PAGE 56.)

In August, Mrs. Keen read a paper on "The Progression of B.C. Laws Affecting Women in Provincial and Municipal Affairs."

Early in the year we had a China Shower, which brought in two dozen cups and saucers, cream and sugar sets, plates, also spoons, a kettle and a table cloth. Each month a tea was given by three members, proceeds for Prisoners of War Fund.

In October the Annual Kootenay and Boundary Convention was held at Kaslo and was a grand success. All who attended the sessions felt a desire to do a great deal better in the coming year. Owing to the precautions taken in closing the town and forbidding all meetings, to prevent the spread of Spanish influenza, we were unable to hold any regular meetings, so our good resolves and plans for community work did not materialize.

We hope that the incoming officers will be able to do better than we have done, and that we all may put forth our best efforts for Home and Country. We trust that the work of our Institute may progress during the year 1919 as it has done in the past.

In closing I wish to thank you all for your kindness. I have found it a pleasure to work with you all and have enjoyed the work. Respectfully submitted,

CATHERINE ROBERTS,
Secretary-Treasurer.

SUMMER SERIES OF ONTARIO INSTITUTE MEETINGS.

The following list of Women's Institute meetings for late May and early June has been submitted to the Institutes concerned and the majority have approved of the dates suggested. The Institute members are requested to keep these meetings in mind and make sure as to the date for their respective meetings. Very few changes will likely be made in the dates as announced.

Lists for the whole of June will appear in the June issue of this Journal.

DIVISION 1.

Lincoln.—Jordan, May 26; Louth, May 27; Grantham, May 28; Virgil, May 29; Niagara-on-the-Lake, May 30; Queenston, May 31. **Welland.**—Stamford, June 2; Willoughby, June 3; Bowen Road, June 4; Ridgeway, June 5; Crowland, June 6; Chippawa, June 7.

DIVISION 2.

South Wentworth.—West Hamilton, May 20; Bartonville, May 21; Winona, May 22; Tapleytown, May 23. **North Brant.**—St. George, May 26; Glen Morris, May 27; Blue Lake, May 28; Paris, May 29; Moyle and Tranquillity, May 30; Tutela, June 2; Grandview, June 3; Alford and Park Road, June 4; Echo Place, June 5; Cainsville, June 6.

DIVISION 3.

Haldimand.—Caledonia, May 26; York, May 27; Canboro, May 28; Cayuga, May 29; Nelles' Corners, May 30; Selkirk, May 31; Jarvis, June 2; Hagersville, June 3; Springvale, June 4. **North Norfolk.**—Townsend, June 5; Waterford, June 6; Boston, June 7.

DIVISION 4.

South Essex.—Essex, May 19; Cottam, May 20; Leamington, May 21; Harrow, May 22; Malden, May 23. **West Elgin.**—Glachan, May 26. **East Kent.**—Bothwell, May 27; Croton, May 28; Wabash, May 29; Kent Bridge, May 30; Botany, May 31; Morpeth, June 2; Palmyra, June 3; Highgate, June 4. **West Elgin.**—Rodney, June 5; West Lorne, June 6; Wallacetown, June 7.

DIVISION 5.

West Kent.—Harwich East, May 26; Harwich Centre, May 27; Guilds, May 28; Cedar Springs, May 29; Sydenham River, May 30; Bear Line, May 31; Dover, June 2; Irwin, June 3; South Raleigh, June 4; Port Alma, June 5; Wheatley, June 6. **West Lambton.**—Pleasant Valley, June 7.

DIVISION 6.

West Middlesex.—Delaware, May 26; Mount Brydges, May 27; Glen Oak, May 28; Appin, May 29; Middlemiss, May 30; Wardsville, May 31; Newbury, June 2; Napier, June 3; Kerwood, June 4; Strathroy, June 5. **East Middlesex.**—Salem, June 6; Dorchester, June 7.

DIVISION 7.

South Wentworth.—Upper Hamilton, May 21; Ancaster, May 22; Stoney Creek, May 23. **Halton.**—Burlington, May 26; Trafalgar, May 27; Omagh, May 28; Palermo, May 29; Esquesing, May 30; Georgetown, May 31; Ballinafad, June 2; Burlington, June 3; Acton, June 4; Nassagaweya, June 5. **Centre Wellington.**—Ennotville, June 6; Speedside, June 7.

Division 8.

West York.—Lambton Mills, May 27; Islington, May 28; Richview, May 29; Thistletown, May 30; Woodbridge, June 2; Edgeley, June 3; Vellore, June 4; Maple, June 5; Kleinburg, June 6. **Peel.**—Port Credit, June 7.

DIVISION 9.

North Waterloo.—Winterbourne, May 27; West Montrose, May 28; Linwood, May 29; Wellesley, May 30. **South Waterloo.**—Galt, May 31; Avr, June 2; Haysville, June 3; New Dundee, June 4; Central Dumfries, June 5; Branchton, June 6. **South Brant.**—Mount Vernon, June 7.

DIVISION 10.

Union.—Clifford May 21; Drew, May 22; Teviotdale, May 23. **West Wellington.**—Drayton, May 27; Glen Allan, May 28; Moorefield, May 29; Rothsay, May 30; Palmerston, May 31. **South Grey.**—Ayton, June 2; Holstein, June 3; Dromore, June 4; Zion, June 5; Durham, June 6.

DIVISION 11.

Centre Bruce.—Kincardine, May 26. **West Bruce.**—Tiverton, May 27; Port Elgin, May 28; Arkwright, May 29; Tara, May 30; Allenford, May 31. **Centre Bruce.**—Williscroft, June 2; Paisley, June 3; Narva, June 4. **South Bruce.**—Walkerton, June 5; Belmore, June 6; Teeswater, June 7.

DIVISION 12.

Centre Grey.—Proton Station, May 27; Hopeville, May 28; Priceville, May 29; Ceylon, May 30; Badjeros, May 31; Eugenia, June 2; Vandeleur, June 3; Kimberley, June 4; Cherry Grove, June 5; Williamsford, June 6; Rocklyn, June 7.

DIVISION 13.

West Simcoe.—Avening, May 27; Creemore, May 28; Maple Valley, May 29; Singhampton, May 30; Duntroon, May 31; Batteau, June 2; Stayner, June 3; Sunnidale, June 4; New Lowell, June 5. **South Simcoe.**—Barrie, June 6; Ivy, June 7.

DIVISION 14.

South Simcoe.—Coulson's Hill, May 26; Churchill, May 27; Stroud, May 28. **Centre Simcoe.**—Dalston, May 29. **East Simcoe.**—Edgar, May 30; Mitchell Square, May 31; Guthrie, June 2; Oro Station, June 3; Crown Hill, June 4; Orillia, June 5; Harvie Settlement, June 6; Foxmead, June 7.

DIVISION 15.

East York.—Richmond Hill, May 20; Victoria Square, May 21; Thornhill, May 22; East Toronto, May 23; Scarboro Junction, May 26; Lakeview, May 27; West Hill, May 28; Highland Creek, May 29; Agincourt, May 30; Unionville, May 31; Markham, June 2; Stouffville, June 3. **South Ontario.**—Greenbank, June 4; Brougham, June 5; Claremont, June 6; Shirley, June 7.

DIVISION 16.

East Northumberland.—Brighton, May 27; Smithfield, May 28; Stockdale, May 29; Wooler, May 30; Codrington, May 31; Hilton, June 2; Dundonald, June 3; Castleton, June 4; Seymour West, June 5; Menie, June 6.

DIVISION 17.

West Victoria.—Lorneville, May 27; Woodville, May 28; Linden Valley, May 29; Cambray, May 30; Lindsay, May 31; West Ops, June 2; Little Britain, June 3; Janetville, June 4; Valentia, June 5; Manilla, June 7. **West Durham.**—Nestleton, June 6.

DIVISION 18.

Prince Edward.—Consecon, May 27; Hillier, May 28; Wellington, May 29; Meaford, May 30; Cherry Valley, May 31; East and West Lake, June 2; Bloomfield, June 3; Demorestville, June 4; Gilbert's Mills, June 5; Mountain View, June 6; Rednersville, June 7.

DIVISION 19.

East Hastings.—Thomasburg, May 27; Phillipstown, May 28; Bethany, May 29; Melrose, May 30; Shannonville, May 31. **Addington.**—Enterprise, June 2. **Lennox.**—Maple Leaf, June 3; Adolphustown, June 4; Conway, June 5; Collins' Bay, June 7. **Amherst Island.**—Stella, June 6.

DIVISION 20.

South Lanark.—Perth, May 27; Maberley, May 28; McDonald's Corners, May 29; Elphin, May 30; Lavant Station, May 31; Poland, June 2; Watson's Corners, June 3; Middleville, June 4; Lanark, June 5; Drummond Centre, June 6; Innisville, June 7.

DIVISION 21.

Stormont.—Cornwall, May 27; Berwick, May 28; Moose Creek, June 4. **Glengarry.**—Williamstown, May 29; Glen Brook, May 30; Martintown, May 31; Apple Hill, June 2; Maxville, June 3. **Carleton.**—Kars, June 5; Manotick, June 6; Stittsville, June 9.

DIVISION 22.

North Ontario.—Altona, May 27; Goodwood, May 28; Sandford, May 29; Sunderland, May 30; Gamebridge, May 31; Brechin, June 2. **Centre Muskoka.**—Ufford, June 3; Raymond, June 4; Port Sydney, June 5; Allansville, June 6; Silverdale, June 7.

West Parry Sound.—Carling, June 2; Orrville, June 3. **North Parry Sound.**—Trout Creek, June 4; Golden Valley, June 6; Loring, June 7.

DIVISION 24.

East Manitoulin.—Little Current, May 26; Howland, May 27; Shequindah, May 28; Bass Creek, May 29; Green Bay, May 30; Tehkummah, June 2; South Baymouth, June 3; Big Lake June 4; Rockville, June 5; Mindemoya, June 6; Carnarvon, June 7.

DIVISION 25.

Thunder Bay.—Dorion, June 3; Port Arthur, June 4; Fort William, June 5; McIntyre, June 6; South Neebing, June 7.

Who Goes There?

(CONTINUED FROM PAGE 40.)

matters which you now understand better than you did this morning?"

"Matters—concerning—love."

He laughed: "Do you think you understand love?"

"A little better than I did."

"In what way? You are not in love, are you, Karen?"

"I think—a—little."

"With whom?"

No answer.

"Not with *me?*"

"Yes." She turned swiftly in the depths of her chair to confront him as he sprang to his feet.

"Wait!" she managed to say; and remained silent, one slim hand against her breast. And, after a moment: "Would you not come any nearer, please."

"Karen——"

"Not now, please. . . . Sit there where you were. . . . I can tell you better—all I know—about it."

SHE bent again over her needle, sewing half blindly, the hurrying pulses making her hand unsteady. And, after he was seated she turned her head partly around for a moment, looking at him with a fascinated and almost breathless curiosity.

"If I tell you will you come no nearer; will you?"

"No. Tell me."

She sewed for a while at random, not conscious what her fingers were doing, striving to think clearly in the menace of these new emotions, the power of which she was divining now, realizing more deeply every second.

"I'll try to tell you," she said: "I didn't know anything—about myself—this morning. What we had been to each other I considered friendship. Remember it was my first friendship with a man. And—I thought it *was* that."

After a silence: "Was it anything deeper?" he asked.

"Yes, deeper. . . . You frightened me at first. . . . I was hurt. . . . But not ashamed or angry. And I did not understand why. . . . Until you spoke and said—what you said."

"That I love you?"

"Yes. . . . After that things grew slowly clearer to me. I don't know what I said to you—half the things I said on my way back—only that I made you angry—and I continued, knowing that you were angry and that I—I was almost laughing—I don't know why—only that I needed time to try to think. . . . You can't understand, can you?"

"I think so."

She looked up, then bowed her head once more.

"That is all," she said under her breath.

"Nothing more, Karen?"

"Only that—after you had gone away this afternoon I began to be a little in love."

"Will it grow?"

"I think so."

"May I tell you that I love you?"

"Yes, please."

HIS clasped hands tightened on his knees; he said in a low unsteady voice: "All my heart is yours, Karen—all there is in me of love and loyalty, honour and devotion, is yours. Into my mind there is no thought that comes which is not devoted to you or influenced by my adoration of you. I love you—every word you utter, every breath you draw, every thought you think I love. The most wonderful thing in the world would be that you should love me; the greatest miracle that you might marry me. Dare I hope for you, Karen?"

"Yes—please."

"That you will grow to really love me?"

(To be continued.)

There is danger in tender gums

TO preserve healthy teeth the ordinary tooth-paste is futile. You must first care for the gums, on which tooth health depends.

How many people think of this? Yet four out of five people over forty suffer from gum-decay, or Pyorrhea (Riggs' Disease).

At first the gums become tender, though actual gum-shrinkage is imperceptible. But in time receding gums will surely loosen your teeth, and then only a dentist can save them. The tender, bleeding gums of Pyorrhea also act as so many doorways for disease germs to enter the system—infecting joints or tonsils—or causing other ailments.

Forhan's (For the Gums) prevents Pyorrhea, if used in time and used consistently. This means that it prevents gum-shrinkage, gum-tenderness, gum-bleeding. So, automatically, Forhan's prevents tooth loosening.

Brush your teeth with it. It scientifically cleans the teeth—keeps them white and clean.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for treatment.

Cure for Burned Fingers

(CONTINUED FROM PAGE 10.)

proclaiming vitality and a tendency to welcome life eagerly, joyously.

They climbed up close to the grim Citadel walls, and there, while the moon sailed grandly over the broad St. Lawrence, Billy told her of his life—his hopes and his disappointments. He told her whimsically how he was nearly helpless without his thick-lensed glasses. A bitter note crept into his voice as he recounted his attempts to get into one branch after another of the service and how he had been scornfully refused by all on account of his myopic eyes.

"Poor boy," she whispered in quick sympathy.

They sat very still for a long time awed to silence by the glory of the summer night. When the crowd on the terrace below them began to melt away Hazel sprang up.

"It's time for good little girls to turn in," she said, slowly commencing the descent. "Come."

Reluctantly Billy rose and in silence they made their way down the sharp incline. They stopped for a moment on the Terrace, leaning on the railing and looking out along the gleaming moon-path on the water.

"It's going to be hard to lose you, little girl," said Billy huskily.

She caught her breath; then laughed gaily: "There's to-morrow."

"Yes, there's to-morrow," he repeated softly as she disappeared through the doorway.

The next day, however, turned out to be entirely unsatisfactory. On the train Hazel discovered a friend of her mother's who was also going to Metis. It naturally was impossible to ignore her, and poor Billy was rather left in the cold. It was not until they were nearing their destination that he had a few moments alone with her.

"How long are you going to stay at Metis?" he asked eagerly.

"Just overnight."

"What!"

Billy's dismay turned his exclamation into a veritable explosion. Hazel looked up into his crestfallen countenance and burst into a peal of laughter.

"I'm not going far," she said, little imps of mischief dancing in her eyes.

"But—but—I can't follow you round all over the country," wailed Billy.

"Who asked you to?" she asked succinctly.

"Well, whether I'm asked or not I'm going with you to-morrow. I simply won't lose you so soon. That's final."

"You'll have to travel on a stuffy local train."

"As though I cared about that," he cried, exulting in her tacit permission.

BILLY was so intensely interested in the fascinating present that he forgot the future during his brief stay at the beach. So it was not until he boarded the local train with Hazel the next afternoon at Little Metis Station that he found time to inquire regarding their next destination.

"I'm going to Campbellton for a few days to visit Cora Allison," she told him. "Then on to Halifax for a month or so—and then home." She looked at him quizzically for a moment. "And what are your plans?"

"Oh, Lord," he groaned. "I haven't any. I simply know what I'd like to do. You see, this is a business trip, and it was understood that I was not to take a holiday until I had secured an order from Mr. Stafford. He is a most elusive individual, and I can't seem to locate him."

He sat in glum silence for a few moments absent-mindedly tearing into little pieces some pink and crimson Pullman-car checks that he had found in his pockets. He was beginning to realize that it was going to be no joke to say good-bye to the girl beside him. Love had come quickly; but it was very real, very earnest. He continued to tear viciously at the little slips of paper until he had accumulated a large handful of bright-colored scraps. A sudden puff of wind through the open window opposite whirled them into the air. They fluttered about gaily and settled on the girl's hat, in her hair, on her blouse.

"Here comes the bride," hummed Billy.

"Oh, what fun," whispered Hazel excitedly. "I just dare you to convince this crowd that we're on our honeymoon. I'm some actress, remember."

"You're on," chuckled Billy. "I'm some actor myself."

HE glanced hastily at the other occupants of the car. They were mostly habitants who would probably ride for a few miles only and then would be replaced by others exactly like them. Seated across the aisle from him was an elderly gentleman, evidently someone of consequence, who, although he kept his eyes decorously on his newspaper, showed by his expression that he was interested in the young couple.

"Sure you're comfortable, dear?" asked Billy solicitously, leaning toward Hazel.

"Quite, dear," she answered with a bright little smile and a fleeting uplifting of the eyes as she snuggled her shoulder a bit closer to his.

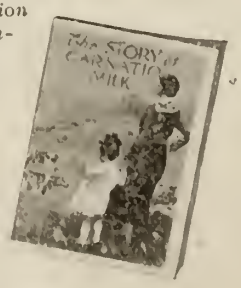
You Will Appreciate *this* Pure Milk



ONCE you have learned the convenience of Carnation Milk with its many uses, you will never go back to the ordinary milk supply. As cream for coffee, tea, cereals or whipping (chilled, of course). As pure, fresh, whole milk for drinking and other milk uses (add water). As thin milk for cooking (add more water).

Once you have known the convenience of always having Carnation Milk on hand—Carnation keeps, and you can order by the case (48 cans tall 16-oz. size)—once you have known the economy of Carnation. It keeps for several days after opening. It's absolutely safe.

Carnation Milk is just fresh, whole milk of unusual richness, evaporated to the consistency of cream and sterilized. You get the richness you want by adding water.

Made in Canada by
Carnation Milk Products Co., Limited
Aylmer, Ont.
Seattle and Chicago, U.S.A.
Condenseries at Aylmer and Springfield, Ontario.
Canada Food Board Licenses 14-96, 14-97.

WHAT could be easier than to order several cans of Carnation Milk with your groceries? Directions on every can. Then write us for "The Story of Carnation Milk" which also contains 100 choice recipes. Address, Aylmer, Ont. for FREE copy.

particulars of the Y.W.C.A. course, as I wish to take it up.

BELLEVILLE.

I am sending you a pamphlet about the Y.W.C.A. course. It gives a list of the lectures, an account of the expenses and all the information you will wish.

I wish to keep a Belgian Orphan, could you tell me how to proceed?

R. A., GUELPH.

The department which looked after the interests of the Belgian orphans individually has been discontinued, and any money now given for that purpose should be sent to the Belgian Consul-General, Ottawa, Ont. You would not be able to keep one particular orphan now as heretofore. All work must now be done collectively.

My daughter wishes to take up the Social Service Work mentioned in one of your former journals. She has not had a high school education, do you think that would matter?

A. E. F., MYRTLE.

I should think she would find the work very difficult if she has not had any high school education, whatever, of course that is a matter which the Social Service Department itself must decide, I am sending you the address. Your daughter must be able to pay her own expenses while taking the course.

Could you please tell me who is responsible for the amount of pension issued to the soldier?—H. T., Galt.

The doctor who examines the soldier for discharge determines the amount of pension according to the man's disability.

How much are soldiers allowed who wish to go on farms?—A SOLDIER'S WIFE.

They are allowed $5,000 for the purchase of land. Soldiers are asked to pay 10% of purchase price of land. In cases of men who have had successful farming experience in Canada, 10% may be dispensed with and a grant up to $5,000 may be had. The interest on the amount owing is to be at 5% and all is to be repayable on an amortization plan by twenty-five annual instalments.

Two thousand dollars for implements and stock. Repayable in four annual instalments commencing in third year

One thousand dollars for permanent improvements, repayable on same terms as balance owing on land.

Sharing Dad With Judy

(CONTINUED FROM PAGE 7.)

and Nan heard her father say—"always undemonstrative child—shyday or two to wear off."

A great hot choking lump rose in her throat and she knew it would be impossible for her to swallow any food. So she swallowed her scruples and told a deliberate lie, to the effect that she had eaten her tea early in the afternoon and was not hungry. They did not urge her and presently she had to run far into the garden to escape the sounds of their happy laughter.

Determined to hate her step-mother, to find corroboration of her definitely-formed opinion, Nan, during the days which followed, twisted every word and deed until they seemed to prove the truth of her contentions. Take for example the matter of a peace offering. She had expected some costly trinket or dresses, at least, which could be exhibited to the village. But Judy brought her nothing! And she was rich, too! Nan was too young for deep self-analysis, and yet away down inside her she knew that had her father's wife come laden with conciliatory gifts they would have been accepted with more contempt than gratitude. At the same time, it was easy to construe this oversight into an act of stinginess which made hatred justifiable.

NAN did not know, of course, that her father had touched upon this very matter, and had suggested that friendly overtures might be more effective when supported by material assistance. But Judy with her keener insight had protested with an earnestness almost pathetic.

"But, Lawrence, dear," she cried, "I want to win the child's love, not buy it. Presents can come later."

So could kisses, apparently, and many other things. She never placed herself in a position which gave Nan the chance for a rebuff; she never asked for companionship nor forced her own company. She demanded no obedience and gave no favors. She was wholly hateful—hateful!

There were, however, a few compensations. Nan's importance in the community increased. It gave her immense satisfaction to realize that when she passed down the quiet, straggly street every neighbor made a point of being on the verandah or in the yard and none ever failed to make solicitous enquiries of her.

"Well, Nan," they would say, "and how's everything at your house?"

And she, taking refuge behind a delightfully mysterious borrowed phrase, would call:

"Oh, thank you, as well as can be expected."

RECEIVING many more invitations now than in Granny's day, the child took a wicked, melancholy pleasure in refusing them, for she loved to catch the expressions which said plainer than words, "Poor child, who but a step-mother could be responsible for such curtailment of innocent pleasure!" And as there was no tale of ill-treatment and unhappiness to tell, she naturally told none, thereby earning for herself the reputation of being a "loyal little soul, if there ever was one."

She displayed quite suddenly a passionate fondness for her oldest clothes, parading about the village in dresses dragged from bundles in the attic. At home, however, she never appeared in these. One day, her father catching her in the grotesque masquerade, gave her a severe scolding. But Judy interceded.

"It is evident, dear," she said, smiling, "that you do not understand the feminine heart, does he, Nan? We have our peacock moods, but we have others, when an old and faded frock is irresistible. Nan has a cupboard full of pretty dresses, and when she likes, no doubt she will become a peacock again and dazzle us. In the meantime, you must not be annoyed because she proves constant to the older ones. You will see me in many of mine."

As soon as their backs were turned, Nan stamped her foot with fury. She was robbed even of the satisfaction of feeling neglected; she was made to look ridiculous in the eyes of her father. Probably in some diabolically clever way, Judy would acquaint the whole village of the fact that like all imposters, her step-child had been imposing on no one but herself!

BUT the bitterest dose of all was the time when Judy actually shielded her from her own father. Such a thing was past human endurance—from a step-mother.

"You are starving me, good wife," laughed Johnson across the table heaped with good things. "How can I exist without any of those toothsome cookies which lend appetizing variety to angel cake, devil cake and all the intermediate stages of spiritual bakings?"

Judy blushed with pleasure. "Baby," she said. "One can't entertain neighbors and make cookies at the same time. The operation is delicate. However, I promise them for to-night, no matter what happens."

"Good!"

Dad smacked his lips like a greedy boy and commanded Nan to watch the preparations even if she could not render First Aid: "You must learn the trick, too, daughter," he said, "for I can keep two chefs busy where it comes to Judy's cookies."

He had gone to town and Nan into the kitchen, But she sat in a far corner and neither watched nor helped. She pretended to be absorbed in a book, Judy sang happily and ignored her.

The oven was full and savoury odors hung about the room. The cookies were just beginning to brown and the critical moment approached when they must be snatched like a hrand from the burning. Then the telephone rang. Judy frowned.

"Nan," she asked, "would you rather answer the phone—it may be your Dad—or watch the cookies?"

Nan chose the latter exultantly. She listened to Judy's hurried admonitions —"If I am more than two minutes, turn off the gas and open the door"—and watched her run from the kitchen. Then turning on the cock to its fullest extent, she went back to her corner and tho book.

PRESENTLY the character of the odors changed. A rift of smoke crept out of the oven door. It became denser. Nan turned off the gas and opened the door, just as Judy returned.

"I am afraid I waited too long," said the child, looking at a mass of charred dough frizzling in the pan.

Judy did not speak for a moment. Then she said very gently. "Yes, dear, I am afraid you have."

"But aren't you going to make some more?" asked Nan rather alarmed at seeing her put the things away. The intention behind her act had been to annoy Judy, not to deprive Dad.

"No, not to-day. Dad will have to do without his cookies. I never double my work if I can help it."

Nan spent a miserable afternoon, anticipating a scene at the tea table. But there was none as far as she was concerned. Dad asked for his cookies and Judy said, "I had an accident, Lawrence. They were burned. We will have some another time."

Dad was awfully disappointed and a little annoyed. He began to tease Judy about the sin of absent-mindedness. And when his words grew more caustic than he, perhaps, realized, she flushed painfully, but offered no explanation or excuse. Nan gulped her food in silence, her eyes on her plate. Judy had stood between her and a merited scolding, she had laid an obligation upon her; worse,

WALTHAM

THE WORLD'S WATCH OVER TIME

Select a WALTHAM for Presentation

Colonial "A"
Extremely thin at no sacrifice of accuracy

IT is impossible to conceive of a watch more completely dependable than a high-grade Waltham.

Select it not only for its rich beauty, but also for its intrinsic merit as the best buyable device for time-measurement.

The perfect mechanism of the high-grade Waltham Watch is the world's standard of accuracy. In it you have a really wonderful combination of delicacy with strength.

The Waltham "Colonial A" — a model which is thin without sacrifice of accuracy—is an ideal watch for presentation to gentlemen.

For ladies the selection should be the Waltham Convertible Bracelet Watch, the case of which has a disappearing eye that enables the watch to be worn in any way that changing fashion may suggest.

Both are gifts certain to be prized as beautiful personal ornaments and as time-pieces that will give a life-time of reliable service.

Waltham Watch Company, Limited, Montreal
Makers and Distributors of Waltham Products in Canada
Factories: Montreal, Canada; Waltham, U.S.A.

MONARCH · KNIT SWEATER · COATS

Black and white illustration but faintly suggests the soft rich hues, the exquisite harmony of colors, and the silky texture of long fibre Australian yarns which make the new Monarch - Knit Sweater Coats so irresistible. Besides its wide variety, the new spring range is notable for its fresh and exclusive styles, as well as for certain refinements of finish and design hitherto lacking in garments of this kind. Such things really have to be seen to be appreciated.

The Monarch Knitting Company, Limited
Dunnville, Ontario, Canada
Also manufacturers of Monarch Floss and Monarch Down and Monarch-Knit Hosiery for Men, Women and Children

Do We Live After Death?

(CONTINUED FROM PAGE 9.)

tremendous noises, like someone beating a table with a stick. We had, of course, taken every precaution, and we could not explain the noises, but at the same time we could not swear that some ingenious practical joke had not been played upon us. There the matter ended for the time. Some years afterward, however, I met a member of the family who occupied the house, and he told me that after our visit the bones of a child, evidently long buried, had been dug up in the garden. One must admit that this was very remarkable. Haunted houses are rare, and houses with buried human beings in their gardens are also, we will hope, rare. That they should have both united in one house is surely some argument for the truth of the phenomena. It is interesting to remember that in the case of the Fox family there was also a record of human bones and evidence of murder being found in the cellar. I have little doubt that if the Wesley family could have got upon speaking terms with their persecutors, they would also have come upon some motive for the persecution. It almost seems as if a life cut suddenly and violently short had some store of unspent vitality which could still manifest itself in a strange, mischievous fashion.

FROM this period until the time of the war I continued in the leisure hours of a very busy life to devote attention to this subject. I had experience of one series of seances with very amazing results, including several materializations seen in dim light. As the medium was detected in trickery shortly afterward, I wiped these off entirely as evidence. At the same time, I think that the presumption is very clear, that in the case of some mediums, like Eusapia Palladino, they may be guilty of trickery when their powers fail them, and yet at other times have very genuine gifts. Eusapia was twice convicted of very clumsy and foolish fraud, whereas she several times sustained long examinations under every possible test condition at the hands of scientific committees which contained some of the best names of France, Italy and England. However, I personally prefer to cut my experience with a discredited medium out of my record, and I think that all physical phenomena produced in the dark must necessarily lose much of their value unless they are accompanied by evidential messages as well. It is the custom of our critics to assume that if you cut out the mediums who got into trouble you would have to cut out nearly all your evidence. That is not so at all. Up to the time of this incident I had never sat with a professional medium at all, and yet I had certainly accumulated some evidence. The greatest medium of all, Mr. D. D. Home, showed his phenomena in broad daylight, and was ready to submit to every test, and no charge of trickery was ever substantiated against him. So it was with many others. It is only fair to state in addition that when a public medium is a fair mark for notoriety hunters, for amateur detectives and for sensational reporters, and when he is dealing with obscure elusive phenomena and has to defend himself before juries and judges who, as a rule, know nothing about the conditions which influence the phenomena, it would be wonderful if a man could get through without an occasional scandal. At the same time, the whole system of paying by results, which is practically the present system, since if a medium never gets results he would soon get no payments, is a vicious one. It is only when the professional medium can be guaranteed an annuity which will be independent of results that we can eliminate the strong temptation to substitute pretended phenomena when the real ones are wanting.

I HAVE now traced my own process of conversion up to the time of the war. I hope the reader will admit that it was deliberate and showed no traces of that credulity with which our opponents charge us. But I was culpably slow, I think, in throwing any small influence I may possess into the scale of truth. I might have drifted on for my whole life as a psychical researcher, showing a sympathetic, but more or less dilettante attitude toward the whole subject, as if we were arguing about some impersonal thing, such as the existence of Atlantis or the Baconian controversy. But the war came, and when the war came it brought earnestness into all our souls and made us look more closely at our own beliefs and reassess their values. In the presence of an agonized world, hearing every day of the deaths of the flower of our race in the first promise of their unfulfilled youth, seeing around one the wives and mothers who had no clear conception whither their loved ones had gone, I seemed suddenly to see that this subject with which I had so long dallied was not merely a study of a force outside the rules of science, but that it was really something tremendous, a breaking down of the walls between two worlds, a direct undeniable message from beyond, a call of hope and of guidance to the human race at the time of its deepest affliction. The objective side of it ceased to interest me, for having made up my mind that it was true there was an end of the matter. The religious side of it I saw to be of infinitely greater importance, and it is of this which I will presently speak. The telephone bell is in itself a very childish affair, but it may be the signal for a very vital message. It seemed to me that all these phenomena, large and small, had been the telephone bells which said to the human race: "Rouse yourselves! Stand by! Be at attention! Here are signs for you. They will lead up to the message which God wishes to send." It was the message, not the signs which really counted. A new revelation seemed to me to be in course of delivery to the human race, though how far it is still in what I may call the John-the-Baptist stage, and how far some greater fulness and clearness may be expected hereafter, is more than I or any man can say. My point is, that the physical phenomena which have been proved up to the hilt for all who care to examine the evidence, are really of no account, and that their real value consists in the fact that they support and give objective reality to an immense body of teaching which must deeply modify our previous religious views, and must, when properly understood and digested, make religion a very real thing, no longer a matter of faith, but a matter of actual experience and fact. It is to this side of the question which I will now turn, merely adding to my previous remarks about personal experiences that since the war I have had some very exceptional opportunities of confirming all the views which I had already formed as to the truth of the general facts upon which spiritualism is founded. The movement must also gain great additional solidity from the wonderful literature which has sprung up around it during the last few years. If no other spiritual books were in existence than five which have appeared in the last year—I allude to Professor Lodge's "Raymond," Arthur Hill's "Psychical Investigations," Professor Crawford's "Reality of Psychical Phenomena," Professor Barrett's "Threshold of the Unseen," and Gerald Balfour's "Ear of Dionysius"—those five alone would, in my opinion, be sufficient to establish the facts for any reasonable inquirer.

BEFORE going into this question of a new religious revelation, how it is reached, and what it consists of, I would say a word upon one other subject. There have always been two lines of attack by our opponents. The one is that our facts are not true. This I have dealt with. The other is that we are upon forbidden ground and should come off it and leave it alone. As I started from a position of materialism, this objection has never had any meaning for me, but for those who seriously think that ancient texts should regulate our modern conduct, I would submit one or two considerations. The chief is that God has given us no power at all which is under no circumstances to be used. The fact that we possess it is in itself proof that it is our bounden duty to study and to develop it. It is true that this, like every other power, may be abused if we lose our general sense of proportion and of reason. But I repeat that its mere possession is a strong reason why it is lawful that it be used.

It must also be remembered that this cry of illicit knowledge, backed very often by more or less appropriate texts, has been used against every advance of human knowledge. It was used against the new astronomy, and Galileo had actually to recant. It was used

(CONTINUED ON PAGE 63.)

Post Poison Proceedings

(CONTINUED FROM PAGE 15.)

Stories like the foregoing and many with fatal endings could be told endlessly by physicians, all pointing the same lesson, viz: that the after treatment of any infectious disease should be as careful and thoughtful as that during its acute stage. More especially is this the case in such diseases as doctors draw the attention of their patients to, with instructions to stay in bed, and go easily, until such time as they are pronounced "well" by the doctor himself.

A good tonic, plenty of light, nutritious, and easily digested food, fresh air, sunshine, and careful attention to keeping free all the avenues of elimination will hasten recovery.

PEOPLE who in the face of all that has been taught, published, and suffered, to-day, in regard to such diseases as influenza, pneumonia, diphtheria, etc., deliberately close their ears to the warnings and instructions that they are given, are guilty of nothing short of crime. One says their sufferings are their own fault, and are deservedly borne. That may be so, but it is not a wise doctrine to hold, it is injurious to the holder. Besides no one suffers alone. Others both directly and indirectly are injured by the sickness of any one member of a community. And other people are assuredly inconvenienced.

Therefore it should be taught not only in the home but in the school and church that it is the simple duty of every person and every community to see to it that they do not add one iota to the sum total of illness in the world to-day. And if by ill chance sickness come upon them it is likewise their bounden duty to get rid of it as fast as possible, and to endeavour by every means in their power to prevent the spread of infection to others.

To do this is surely good business. On a somewhat higher plane it works for the good of the community, and therefore of the individuals comprising it. And on the highest plane of all it is but another reading of the Golden Rule, another demonstration of the "love that worketh no ill to his neighbor."

Literature and Journalism

(CONTINUED FROM PAGE 18.)

Often I think we have to change our "plan." Work will divert from one channel to another. Many a man thinks he is a poet when he ought to be writing sermons. A woman thinks she is a reporter when she is really a preacher. Many novelists would better write melodrama for moving pictures than books intended for thinking people. But if the motive power lies behind in the conviction "This one thing I can do, and try it out I will," and if this resolve is aided and abetted by a practical education along the line of work chosen, then nothing can stop one.

INTO your "plan" must come an infinite patience. Even the practical education may seem impossible to obtain at first. Most successful writers have had to work at some other trade to obtain their education. Philip Gibbs says he "has had to come down a long ladder" to get where he wanted, to "a place among the people" where he could get to know real life and write about it. Do you think it has been easy?

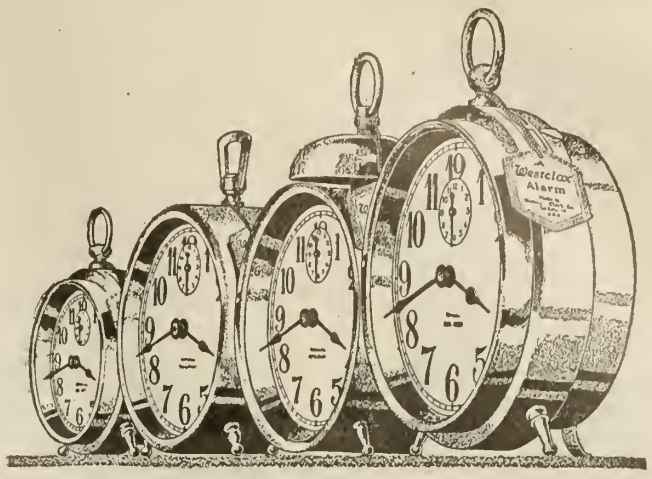
The only thing that is easy is the actual doing of the work. The practice for the work, the placing of the work, these are the difficulties. And if the difficulties did not exist there would be no artists in any line. The rapture is in the doing of the thing as well as ever we can. Not as well as we honestly believe we can, but as well as the rules of the game, the technique of the work—whatever it is, a story, a song, a poem, a picture—declare to be the case.

I know it is hard to "get in"—especially in magazine work. But don't blame editors if your work is rejected, blame yourself for not getting the standpoint of the editor and his or her magazine. Study the magazine with which you hope to succeed, and from the trend of its publications learn the sort of thing it is likely to want. Then spare yourself the discouragement of refusal if your work is dissimilar. Somewhere there is another magazine whose ideas are more sympathetic with your own.

But this has to do with merchandising, and that is another story.

Do We Live After Death?

(CONTINUED FROM PAGE 62.)



against Galvani and electricity. It was used against Darwin, who would certainly have been burned had he lived a few centuries before. It was even used against Simpson's use of chloroform in child-birth on the ground that the Bible declared "in pain shall ye bring them forth." Surely a plea which has been made so often, and so often abandoned, cannot be regarded very seriously.

To these, however, to whom the theological aspect is still a stumbling block I would recommend the reading of two short books, each of them by a clergyman. The one is the Rev. Fielding Ould's "Is Spiritualism of the Devil?" purchasable for twopence; the other is the Rev. Arthur Chambers' "Our Self After Death." If, after reading these two books, their objections are still alive, I should recommend them not to touch the subject at all, for there is no particular reason why they should. I may add that when I first began to make public my views, one of the first letters of congratulation which I received was from the late Archdeacon Wilberforce, who told me that he had long recognized the truth of all that I asserted.

I can now turn with some relief to a more impersonal view of this great subject. I have spoken of a body of fresh doctrine. Whence does this come? It comes in the main through automatic writing where the hand of the human medium is controlled, either by an alleged dead human being, as in the case of Miss Julia Ames, or by an alleged angel, as in the case of Mr. Stainton Moses. These written communications are supplemented by a vast number of trance utterances, and by the verbal messages of spirits, given through the lips of mediums. Sometimes it has even come by direct voices, as in the numerous cases detailed by Admiral Usborne Moore in his book, "The Voices." Occasionally, it has come through the family circle and table-tilting, as, for example, in the two cases I have previously detailed within my own experience. Sometimes, as in a case recorded by Mrs. de Morgan, it has come through the hand of a child.

OF course, we are at once confronted with the obvious objection—how do we know that these messages are really from beyond? How do we know that the medium is not consciously writing or if that be improbable, that he or she is unconsciously writing them by his or her own higher self? This is a perfectly just criticism, and it is one which we must rigorously apply in every case, since if the whole world is to become full of minor prophets, each of them stating his own views of the religious state with no proof save his own assertion, we should, indeed, be back in the dark ages of implicit faith. The answer must be that we require signs which we can test before we accept assertions which we cannot test. In old days they demanded a sign from a prophet, and it was a perfectly reasonable request and still holds good. If a person comes to me with an account of life in some further world, and has no credentials save his own assertion, I would rather have it in my waste-paper-basket than on my study table. Life is too short to weigh the merits of such productions. But

Westclox

IT'S the way you *start* your day that counts. A leisurely, untroubled get-away in the morning usually means a day of many things well done.

That's what a good alarm clock does for you. Millions of men thank their Westclox alarms for smoother-running, more resultful days. They get off to business feeling *right*.

That's because each Westclox does *its* job right. It's built so it will. All Westclox have the same construction that won Big Ben's success.

Wheels turn on needle-fine pivots of polished steel. Friction is lessened. The clock runs easier; lasts longer. Westclox, on the dial and tag, means that kind of a clock.

Western Clock Co. - *makers of Westclox*

Do We Live After Death?

(CONTINUED FROM PAGE 63)

if, as in the case of Stainton Moses, with his "Spirit Teachings," the doctrines which are said to come from beyond are accompanied with a great number of abnormal gifts—and Stainton Moses was one of the greatest mediums in all ways that England has ever produced—then I look upon the matter in a more serious light. Again, if Miss Julia Ames can tell Mr. Stead things in her own earth life of which he could not have cognizance, and if those things are shown, when tested to be true, then one is more inclined to think that those things which cannot be tested are true also. Or once again, if Raymond can tell us of a photograph no copy of which had reached England, and which proved to be exactly as he described it, and if he can give us, through the lips of strangers, all sorts of details of his home life, which his own relatives had to verify before they found them to be true, is it unreasonable to suppose that he is fairly accurate in his description of his own experiences and state of life at the very moment at which he is communicating? Or when Mr. Arthur Hill receives messages from folk of whom he never heard, and afterwards verifies that they are true in every detail, is it not a fair inference that they are speaking truths also when they give any light upon their present condition? The cases are manifold, and I mention only a few of them, but my point is, that the whole system from the lowest physical phenomenon of a table-rap, up to the most inspired utterance of a prophet, is one complete whole, each link attached to the next one, and that when the humbler end of that chain was placed in the hand of humanity, it was in order that they might by diligence and reason, feel their way up it until they reached the revelation which waited in the end. Do not sneer at the humble beginnings, the heaving table or the flying tambourine, however much such phenomena may have been abused or simulated, but remember that a falling apple taught us gravity, a boiling kettle brought us the steam engine, and the twitching leg of a frog opened up the train of thought and experiment which gave us electricity. So the lowly manifestations of Hydesville have ripened into results which have engaged the finest group of intellects in this country during the last twenty years, and which are destined, in my opinion, to bring about by far the greatest development of human experience which the world has ever seen.

IT has been asserted by men for whose opinion I have a deep regard—notably by Sir William Barratt—that Psychical Research is quite distinct from religion. Certainly it is so, in the sense that a man might be a very good psychical researcher, but a very bad man. But the results of psychical research, the deductions which we may draw, and the lessons we may learn, teach us of the continued life of the soul, of the nature of that life, and of how it is influenced by our conduct here. If this is distinct from religion, I must confess that I do not understand the distinction. To me it is religion—the very essence of it. The question which faces us then, is how does this religion bear upon the older organized religions and philosophies which have influenced the actions of men.

The answer is, that to only one of these religions or philosophies is this new revelation absolutely fatal. That is to my own old creed of Materialism. I do not say this in any spirit of hostility to Materialists, who so far as they are an organized body, are, I think, as earnest and moral as any other class. But the fact is manifest that if spirit can live without matter, then the foundation of Materialism is gone, and the whole bleak and barren erection crashes to the ground.

As to other creeds, it must be admitted that an acceptance of the teaching brought to us from beyond would deeply modify conventional Christianity. But these modifications would be rather in the direction of explanation and development than of contradiction. It would set right grave misunderstandings which have always offended the reason of every thoughtful man, but it would also confirm many vital dogmas. Most vital of all, it would confirm and make absolutely certain the fact of life after death, the base of all religion. It would confirm the unhappy results of sin, though it would show that those results are never permanent. It would confirm the existence of higher beings, whom we have called angels, and of an ever-ascending hierarchy above us, in which the Christ spirit finds its place, culminating in heights of the infinite with which we associate the idea of all-power or of God. It would confirm the idea of heaven and of a temporary penal state which corresponds to purgatory, rather than to hell. Thus this new revelation, on some of the most vital points, is not destructive of the old beliefs, and it should be hailed by really earnest men of all creeds as a most powerful ally rather than as a dangerous devil-begotten enemy.

I have stated, however, that our increased knowledge drawn from psychic research must, in my opinion, deeply modify Christianity. How will it do this, and in what direction?

First of all I would say this, which must be obvious to many, however much they deplore it. Christianity must change or must perish. That is the law of life—that things must adapt themselves or perish. Christianity has deferred the change very long, she has deferred it until her churches are half empty, until women are her chief supporters, and until both the learned part of the community on one side, and the poorest class on the other, both in town and country, are largely alienated from her. Let us try and trace the reason for this. It is apparent in all sects, and comes, therefore, from some deep common cause.

TOO much seemed to be made of Christ's death. It is no uncommon thing to die for an idea. Every religion has equally had its martyrs. Men die continually for their convictions. Thousands of our lads have done it in France. Therefore the death of Christ, beautiful as it is in the Gospel narrative, has seemed to assume an undue importance, as though it were an isolated phenomenon for a man to die in pursuit of a reform. In my opinion, far too much stress has been laid upon Christ's death, and far too little upon his life. That was where the true grandeur and the true lesson lay. It was a life which even in those mangled records shows us no trait which is not beautiful—a life full of easy tolerance for others, of kindly charity, of broad-minded moderation, of gentle courage, always progressive and open to new ideas, and yet never bitter to those ideas which he was really supplanting. Especially one loves his readiness to get at the spirit of religion, sweeping aside the texts and the forms. Never had anyone such a robust common sense, or such a sympathy for weakness. It was this most wonderful and uncommon life, and not His death, which is the true centre of the Christian religion.

Now, let us look at the light which we get from the spirit guides upon this question of Christianity. Opinion is not absolutely uniform over yonder, any more than it is here; but reading a number of messages upon this subject they amount to this. There are many higher spirits with our departed. They vary in degree. Call them "angels," and you are in touch with old religious thought. High above all these is the greatest spirit of whom they have cognizance—not God, since God is so infinite that he is not within their ken—but one who is nearer God and to that extent represents God. This is the Christ Spirit. His special care is the earth. He came down upon it at a time of great earthly depravity—a time when the world was almost as wicked as it is now, in order to give the people the example and teaching of an ideal life. Then He returned to His own high station, having left an example which is still occasionally followed. That is the story of Christ as spirits have described it. I see nothing here of Atonement or Redemption. But I see a perfectly feasible and reasonable scheme, which I, for one, could readily believe. But if a high spirit came once may it not come again? Why not? Did all God's dealings with man end in Palestine two thousand years ago? We could do with a high spirit in London now. But would his fate be very different from the old one? There would be no crucifixions, since we live in a softer age; but I am sure that some Pontius Pilate in a police-court would be sorely puzzled as to whether he should be indicted under the Blasphemy Act, as unsettling the old religion, or should be imprisoned under the Vagrancy Act as a prophet and a medium.

If such a view of Christianity were generally accepted and if it were enforced by assurance and demonstration from the New Revelation which is, as I believe, coming to us from the other side, then I think we should have a creed which might unite the churches, which might be reconciled to Science, which might defy all attacks, and which might carry the Christian Faith on for an indefinite period. Reason and Faith would at last be reconciled, a nightmare would be lifted from our minds, and spiritual peace would prevail. I confess that I do not see such results coming as a sudden conquest or a violent revolution. Rather will it come as a peaceful penetration as some crude ideas such as the Eternal Hell idea, have already gently faded away within our own lifetime. It is, however, when the human soul is ploughed and harrowed by suffering that the seeds of truth may be planted, and so some future spiritual harvest will surely rise from the days in which we live.

NOW, leaving this large and possibly contentious subject of the modifications which such new revelations would produce in Christianity, let us try to follow what occurs to man after death. The evidence on this point is fairly full and consistent. Messages from the dead have been received in many lands at various times, mixed up with a good deal about this world, which we could verify. When messages come thus, it is only fair, I think, to suppose that if what we can test is true then what we cannot test is true also. When in addition we find a very great uniformity in the messages and an agreement as to details which are not at all in accordance with any pre-existing scheme of thought, then I think the presumption of truth is very strong. It is difficult to think that some fifteen or twenty messages of which I have personal notes, all agree, and yet are all wrong, nor is it easy to suppose that spirits can tell the truth about our world but untruth about their own.

The message upon these points seems to me to be infinitely reassuring, whether we regard our own fate or that of our friends. The departed all agree that passing is usually both easy and painless, and followed by an enormous reaction of peace and ease. The individual finds himself in a spirit body, which is the exact counterpart of his old one, save that all disease, weakness, or deformity has passed from it. This body is standing or floating beside the old body, and conscious both of it and of the surrounding people. At this moment the dead man is nearer to matter than he will ever be again, and hence it is that at that moment the greater part of those cases occur where his thoughts having turned to someone in the distance, the spirit body went with the thoughts and was manifest to the person. Out of some two hundred and fifty cases carefully examined by Mr. Gurney, I think that one hundred and thirty-four of such apparitions were actually at this moment of dissolution, when one could imagine that the new spirit body was possibly so far material as to be more visible to a sympathetic human eye than it would later become.

These cases, however, are very rare in comparison with the total number of deaths. In most cases I imagine that the dead man is much too preoccupied with his own amazing experience to have much thought for others. He soon finds, to his surprise, that though he endeavors to communicate with those whom he sees, his ethereal voice and his ethereal touch are equally unable to make any impression upon those human organs which are only attuned to coarser stimuli. It is a fair subject for speculation, whether a fuller knowledge of those sight rays which we know to exist on either side of the spectrum, or of those sounds which we can prove by the vibrations of a diaphragm to exist although they are too high for mortal ear, may not bring us some further psychical knowledge. Setting that

Hand in Hand with the Centuries

(CONTINUED FROM PAGE 11.)

In passing, an interesting point in connection with Hudson's Bay is that round about the year 1746, it was known in Great Britain as the "Southern Ocean of America."

The various attempts to discover a "North-west Passage" into the Pacific marks many an epoch in this history. The first failure alone laid the foundation for the establishment of a rival company.

One of these searches for the "Passage" resulted in the finding of the North Magnetic Pole, on the west side of Boothia Peninsula, by Capt. John Ross, who went in by Baffin Bay and through Lancaster Sound, thence by Prince Regent's Inlet into an open sea called after the patron of this expedition, Gulf of Boothia. He spent four winters in the Arctic regions.

It was during his second winter (1831) that he determined to be the discoverer of the point where the magnetic needle stands vertically, as showing the centre of terrestrial magnetism for the Northern Hemisphere. To quote the words of the explorer:—

"The land at this place is very low near the coast, but it rises into ridges of fifty or sixty feet high about a mile inland. We could have wished that a place so important had possessed more of mark or note. . . . But Nature had here erected no monument to denote the spot which she had chosen as the centre of one of her great and dark powers; and where we could do little ourselves toward this end, it was our business to submit and be content in noting mathematical numbers and signs, as with things of far more importance in the terrestrial system, what we could ill distinguish in any other manner.

"The necessary observations were immediately commenced, and they were continued throughout this (June 1st) and the greater part of the following day. . . . The amount of dip, as indicated by my dipping needle, was 89° 59', being thus within one minute of the vertical; while the proximity at least of this pole, if not its actual existence where we stood, was further confirmed by the action, or, rather, total inaction, of several horizontal needles then in my possession. . . . There was not one which showed the slightest effort to move from the position in which it was placed.

"AS soon as I had satisfied my own mind on this subject, I made known to the party this gratifying result of all our joint labors; and it was then that, amidst mutual congratulations, we fixed the British flag on the spot and took possession of the North Magnetic Pole and its adjoining territory in the name of Great Britain and King William the Fourth.

"We had abundance of material for building in the fragments of limestone that covered the beach; and we therefore erected a cairn of some magnitude, under which we buried a cannister containing a record of the interesting fact. . . . Had it been a pyramid as large as that of Cheops, I am not quite sure that it would have done more to satisfy our ambition under the feelings of that exciting day."

This pole, as a matter of fact, is almost directly north of Winnipeg, and within less than twenty degrees of it.

For thirty-eight years the North-West Company and the Hudson's Bay Company fought for supremacy in Canada. The history of all these miniature, yet deadly-in-earnest battles, would fill many books teeming with romantic adventure, all of which would be true, and not the concoction of some man's fertile brain.

When, in 1821, the two great companies united, their histories merged, and as a consequence brought in the marvellous adventures of Sir Alexander Mackenzie, whose name rings through Canadian history as well.

When one thinks of this man, who over a century ago won through to the Pacific Ocean by sheer determination and in spite of all odds, one's hat is surely off to him. His voyages, as they are called, are full of thrills and fill entire books in their telling. Canadians in general know all too little about him. He it was who finally made the North-west Passage, but by land. The story of this voyage is thrilling. To begin with, as one writer says: "The trip proposed was so difficult that the bravest shrank from it."

He left Fort Chipewyan on May 9th, 1793, for his notable voyage, and in spite of discontent among his men, kept on his way. The breaking of canoes and building of new ones, running rapids, reascending streams, running the gauntlet among amazed tribes of Indians, urging on his often discouraged and sometimes mutinous men, seemed to make no impression upon Mackenzie, who with his Highland blood up, was determined to accomplish his purpose and see the Pacific Ocean.

AT last, when the broad waters of the earth's largest ocean lay before him, he mixed up some vermilion in melted grease, and on the south-east face of a huge rock upon which they had spent the night, painted in bold letters: "Alexander Mackenzie, from Canada, by land, the 22nd of July, 1793."

Following Mackenzie were the other two wonder-men, Simon Fraser and David Thompson, who, braving all hardships and in many instances bitter discouragements, fought their way through and reached the Pacific slope.

Fort William and the Kaministiquia River are historical partners. Had the latter not been placed where it is, the former would probably not have happened. As it is, Fort William dates back to 1797, when Roderick Mackenzie, a cousin of Sir Alexander Mackenzie, hearing of the river, took an Indian with him and went in search of its possibilities. The North-West Company built a fort there in 1800, and gave it its name in honor of Hon. William McGillivray.

The old and the new North-West Company, the X. Y. Company, Astor Fur Company, South-West Company, Pacific Fur Company and Russian Fur Company are some of the rivals that are woven in and out of the history of the Hudson's Bay Company. Most of them fought vigorously, but in the end they all came under the one name, that of the Hudson's Bay Company, in 1821.

George Simpson, for forty years governor for the company in Canada, also helped to weave its history in with that of Canada. During the time of the rebellion the entire staff of the company was very loyal to Britain, and the then young Queen, Victoria, in 1839, bestowed a knighthood upon the leader of the fur traders, and made him Sir George Simpson.

In his day, it was posts like Fort Victoria, on the Pacific Coast; Fort Simpson, on the Mackenzie River; Fort Garry, in the Red River settlement, and York Factory, on Hudson Bay, which kept taut the strong bonds of the Hudson's Bay Company, a sentiment which in itself was a wonderful thing.

It was then that splendid newsy letters were written telling of all the happenings of the various posts and supplying the lack of newspapers, since printer's ink had not been spilt over that country as yet.

An interesting point in the combined histories of Canada and the Hudson's Bay Company is that the North-West Company, which became part of the original company, introduced a small canal half a mile long at Sault Ste. Marie, and on which was built a lock. Built at the beginning of the nineteenth century, this waterway, such a valuable asset to the furthering of the fur trading business, was a splendid proof of the skill, energy and pluck of the men of those days.

To this company must be given a great deal of credit for the settling of large colonies of people in Canada, and perhaps more especially in the western part. From the very first, one of its policies was the bringing out of hardy, trusty, pioneer-hearted people, and getting them to settle in the wonderful new country. Very often special inducements were offered. Every governor that the company had, seemed to make it a matter of conscience to endeavor to get colonies of people settled, and a lively time some of them had keeping everybody happy and contented.

LABRADOR, the country of which we know so little, and apparently care less, probably because of its forbidding aspect, has also figured largely in the history of this company. McLean, in the company's employ, in giving an account of his being sent to Labrador in 1837, states that many Eskimos visited him at Ungava, they having crossed the Hudson's Strait on a raft apparently made out of pieces of driftwood which must have been picked up along the shore. This, he further stated,

(CONTINUED ON PAGE 68.)

What a Trained Memory Means to a Woman

Did you ever notice that women trust to their memories even more than men? That men trust more to notebooks? And forgetting is not confined to either sex.

A trained memory is both an asset and a comfort to a woman —in institute or church work, in music, in business, in society, and in every branch of housekeeping.

PELMANISM PROVES BOON TO THOUSANDS

The Pelman Mind and Memory Training System is described fully in booklets, which will be sent to you for the asking. Students in every walk of life are telling us of their satisfaction.

One lady student, for instance, writes: "I cannot let the last paper go in without adding a few lines of gratitude for the great help your course has brought into my life."

No Time from Regular Daily Work Required.

On the contrary, the mental efficiency you commence to acquire from the start means a distinct saving of time, which is thus set free for further work. ALL CORRESPONDENCE IS STRICTLY CONFIDENTIAL.

Clip this ad., write your name and address on the margin, and mail it. You will receive, without any obligation on your part, the Pelman Booklet on "Mind and Memory Training," also "Truth's" latest report, and a special offer of the Pelman Course at reduced summer rate.

Do the Week's Wash Without Fatigue

"1900" Cataract Electric.

The time that is spent over the wash tub every week is worse than wasted. The time is a dead loss, but much more serious is the waste of precious human energy.

You can take all the hard work out of the weekly wash, by using the "1900" Cataract Electric Washer. Simply connect it with any lamp socket, turn the switch and go about your other duties. Your clothes will be washed spotlessly clean in a surprisingly short time without any injury to the most delicate fabric.

The Cataract Washer is not only built to wash, but is built to last. The frame is all metal, and the tank is of pure sheet copper, plated on the inside, to prevent verdigris. It is equipped with a power wringer, having five-year-grade pure white rubber rollers.

Our liberal trial offer enables you to test the Cataract Machine before you actually buy it. Write us for details, or drop in and see the Cataract at our store.

Our line also includes an excellent water power washer, hand-operated washers, the Simplex ironer, lawn clothes reels, wash tub ejectors, etc.

H. H. MORRIS

Nineteen Hundred Washer Co.

"Here's How I Like Bowes PEANUT BUTTER"

"I think it makes the most delicious sandwiches I ever tasted. Nothing is required to give it zest; it, in itself, is so delightfully appetizing. Then, too, it is certainly very satisfying and economical."

A REAL FOOD

Send your name and address for new book of prize recipes now in course of preparation.

Gardening Discretion

(CONTINUED FROM PAGE 14.)

thrive well on either walls or rockeries, and also form an excellent edging for beds and borders, and especially so when interspersed with Lobelia, Alyssum, For-get-me-nots, Thrift, and Pansies. All varieties of the Arabis can readily be increased from cuttings, which should be inserted after the plants have flowered; the shoots which should be about 2 inches long, may be dibbled into shallow boxes of light sandy soil, or inserted in open ground in a shaded position, and covered with a hand light. They should be kept very moist.

The Auricula thrives well in either town or country gardens. Plants can be raised from seed or propagated by means of offsets. Seeds may be sown as soon as ripe or in spring, whilst offsets should be removed from the parent plant after the flowering season is over. If possible offsets should be obtained with a few roots attached at the base, and planted in pots or boxes of sandy soil placed in a frame until the young plants are well established. Polyanthuses are time-honored occupants of our gardens and one of the easiest spring flowers to grow, although the more general method of propagation is from seed, very special sorts which are required to be quite true to the parent plant, are best increased by division. Many beautiful varieties can be obtained by sowing a packet of seed of a really good strain in early spring. Polyanthus divisions should be planted rather deeply, and must be kept shaded and well watered until the roots have taken hold of the new soil.

The Vegetable Garden

DO not let your "War Garden" subside into a "Peace Desert," but start in now, commencing with the perennial vegetables, Rhubarb and Asparagus, which should be supplying you bountifully. In return give the Asparagus bed two dressings of salt, about 12 lbs. to 20 square feet, in the Fall; after the third year for Rhubarb, dig the roots up, part them with a spade, put in a layer of good manure, 6 inches at least, put the roots back in position, covering them over with the soil you took out, tramping it in well around the roots.

Begin cultivating as soon as you have anything in the ground—not deeply, but just a surface scratching, to eradicate the first crop of weeds, which will save you a lot of hard work later on. Begin sowing outside the first week in May; take a chance on a few hills of early Golden Bantam Corn, to be followed two weeks later with more Bantam, and Stowell's Evergreen, and then another sowing of the same, with the addition of Country Gentleman, also Black Mexican, if you are not particular as to color in what you eat. Get the hills ready for the Cucumbers, Squash, and Pumpkins, incorporating lots of manure and sowing seeds about May 20th. These may be located between rows or hills of corn. It is a good plan to mix Radish seed, Carrot and Parsnip seed when sowing; this plan saves time in thinning and ensures a good catch crop of Radishes off the same ground; the Radish being the first to come up, breaks the soil for the more fragile Carrots and Parsnips to force themselves through, it also marks out the row quicker so that you can get the hoe going sooner.

The Cabbage is too well known to need description. Forms of the cabbage family, such as Cauliflower, Broccoli, Kale, etc., supply the epicures of all countries with some of their greatest delicacies. I hope that this article will suggest some idea that may prove of practical value. As there are upwards of five hundred kinds of cabbages, it would be difficult to go into details, so we will confine our remarks to the varieties most suitable for an ordinary garden.

The seed, is the first question of importance. Everyone is aware that to get good results you must procure the best. I have found from several years' experience that our seedsmen are reliable, although years ago you could not rely upon them. I do not recommend sowing seed for the very early cabbages, as very few people have the facilities, but the plants can be bought at a reasonable price. For the late or main crop, by all means sow your own seed about the end or middle of May, either in a frame or in the open, providing you have a warm corner. Sow seeds thinly, about half an inch deep, in rows 4 inches apart; thin out the seedlings in the rows to 4 inches apart. After they have formed the second pair of leaves plant them into their allotted place. It is a well known fact that cabbage, if properly attended to, will grow on almost any kind of soil, but the best is a rich clay-loam. A stiff clay, which is frequently found in the gardens of new houses, where the clay from the cellars is incorporated with mortar, brick rubbish, and building material of all descriptions, is certainly not an ideal place for cabbages.

THE soil should be cleared at once of all rubbish, and some manure, and sand if possible, must be dug in. No matter how good the soil is, large quantities of rotten manure are very beneficial. In the event of being unable to procure manure, the next best thing to do is to get about fifty pounds of fertilizer (suitable for vegetables) from your seedsman, who has it bagged up ready for delivery. Fifty pounds is sufficient for a garden 25 feet wide by 60 feet long. Throw this on broadcast, after the soil has been dug, then comb it in with a rake before planting, giving each plant at least 18 inches of space each way. There are two insects which infest the cabbage most, and they are the cut-worm in the young plants, and the green caterpillar when plants get bigger. At the stage when the plants are just recovering from the shock of being torn from the seed-bed or box in which they were bought, growth is necessarily slow. This is when the cut-worm gets in his fine work by gnawing the stem through or partly so, causing the plant to wilt and die. A dusting of air-slaked lime mixed with equal parts of powdered sulphur, is a good remedy. Dust it on and around the plant. This also prevents attack from the cabbage maggot, which eats the roots. Half a pound of Pyrethrum powder, mixed with 2 pounds of common flour, and scattered on in the same manner, is also good. These two remedies are also excellent later on, when the cabbage has formed its head and the green caterpillar begins to get busy. A light dusting of either once a week will keep them in check.

Keep the seedlings moist, but not sodden, until they are transferred to the garden. Then use the hoe as frequently as possible, when ground is not wet. Give a good soaking once a week during dry weather, removing weeds, and stirring the soil until the cabbages have spread themselves out so that you cannot get the hoe in between them. Henderson's Summer Early is one of the best all-round cabbages for early, mid-season or late. I had splendid success last year with Glory for mid-season, and Danish Ball-head for late variety. Drumhead is a good Savoy. If you have space and desire to grow Cauliflowers and Brussels Sprouts—Snowball for the former and Sutton's Dwarf for the latter are best for gardens surrounded by unsightly board fences.

Have your celery bed prepared with lots of well-rotted manure, leaving it till May 15th, then put your young plants in 8 inches apart, and rows 18 inches apart, dibble the holes large enough for the rootlets to be in a downward position; make them comfortable on the start, feeding with liquid manure, using a tablespoonful of Nitrate of Soda to 2½ gallons of the liquid; as the plants grow, earth them up, taking care not to let any earth in between the stalks.

You who are fortunate enough to have a small greenhouse in which to raise the seedlings, do not let it remain idle all summer, but while the

(CONTINUED ON PAGE 68.)

Sharing Dad With Judy

(CONTINUED FROM PAGE 61.)

she was in possession of knowledge which gave her the whip hand. Could anybody be more hateful? And yet because it gave her keen satisfaction to know that Dad was mildly annoyed with Judy, Nan strangled the impulse to confess. Anyway, it was not really *all* her fault!

AS usual, she was invited to drive with them after tea, and as usual she refused on the plea of spending the evening with Amy. They could pick her up on their way home. She saw them start off in the smart little motor which by the way, belonged to Judy. she saw them stop and discuss some sort of attachment to prevent the gate from swinging to, and then in a sunlit whirl of dust they disappeared down the horse-shoe hill and out of view.

Nan followed slowly along the flower-bordered drive. At the gate she also paused. A soft breeze swayed it gently. Suppose the wind should blow hard enough to close it? Shutting her eyes to the probable damage this would inflict on the occupants of the car, or her father, at least, she forced herself to consider only the damage to the gate and motor. Owing to the sharp turn of the hill, it would be impossible for Judy to see her danger until too late to prevent a collision. The car would be smashed, the gate smashed, and perhaps Dad would not trust her to drive again. Oh, it would be humiliating!

She pushed the gate ever so lightly with her foot. The breeze finished what she had begun. The two springs clicked and the entrance to the drive was closed. "It was *really* the wind," said Nan as she ran quickly out of the back garden and into the road.

She had thought that her hate would have kept her from being frightened, but she was mistaken, so she sang loudly, shrilly. Hate, she observed was a peculiar thing. It never came to one when one needed it most. It had not drowned, stark dead, a teeny-weeny feeling of remorse over the matter of the cookies. It was not at all satisfactory in keeping her mind from the recollection of that closed gate. But, of course, this sentimentalism displayed weakness. It was right to hate all step-mothers. "Look at Snow White's," thought Nan in the midst of her song.

THE horn of a motor sounded. She climbed up the side of the road and waited for it to pass. But it stopped and her father called:

"Why, little daughter, you can't be wandering about the roads at night. I thought you were going to see Amy. Here, hop in!"

Nan demurred but her father was insistent. She climbed into the front seat and muttered a sullen good evening to Mrs. Cowan who sat in the back with Judy. She felt limp and very sick. Eveything was wrong—her father at the wheel, she beside him, the gate—The future yawned grim and terrible.

It was easy to guess what had happened. They had evidently met Mrs. Cowan and had invited her, on the spot, to drive. Judy, of course, was to blame. Her father would never have bothered, Nan knew. He wanted Judy all to himself.

It was easy to guess what would happen, when Dad, tearing up the steep incline, would crash into that locked gate, and she, Nan, would be the victim of her own handiwork. Shivering with fear she crouched lower in her seat and was glad, for once, to be ignored.

She tried to think of some way to give them a hint without committing herself. There was none, Better far to be injured, to be killed than to live forever, a despicable creature in Dad's eyes, in Granny's—even Judy's! She clenched her hands and her teeth, and resolved not to speak.

Twilight deepened and the trees blurred against the purply sky. Nan's faint hope that they might reach home before dark was lost in the coming night. It was quite dark when they turned back and only a matter of seconds, seemingly, before they stopped at Mrs. Cowan's gate. A few big drops of rain fell.

"Let's get home before the storm, Lawrence," said Judy. "Nan has no coat and must not get wet."

So they flew through the quiet village and commenced to climb the steep hill which would end in Death.

THE curve—she could see it dimly by the glare of the lamps—only a few yards more and then—

They were turning—only a second—

"Stop!" shrieked the child. "The gate——"

Something struck her across the head. Something beat the breath from her body. There was a frightful noise, and there were hot lashes over her arms. Then silence.

The voice was Granny's. Nan recognized it before she tried to peep through the wad of bandages which covered her face. With consciousness came vivid remembrance. She had no need to ask why Granny was there, or the nurse.

She lay very still and presently Granny left the room. Then in trying to move, something horrible stabbed her and she cried out. The big breath sent another torturing knife into her side. Immediately, the nurse bent over her. "You must not move," she said.

"Are—they—was anybody—killed?" Nan gasped.

"No, no, dearie. Don't worry. Your father was cut a little, but your step-mother was hardly injured at all."

Nan began to cry softly. Each sob cost her supreme torture but she could not stop. The nurse unable to soothe her said she would send Granny but Nan cried the harder.

"I DON'T want Granny," she managed to say. "I want my—mother. Tell her I want her to come here—alone."

Judy received the message in silence. Then after a moment she questioned: "Are you sure she said exactly that?" The nurse was quite sure.

Judy smiled perhaps a little tremulously, but still one could recognize a smile. She took something from her bureau drawer and went softly into Nan's room.

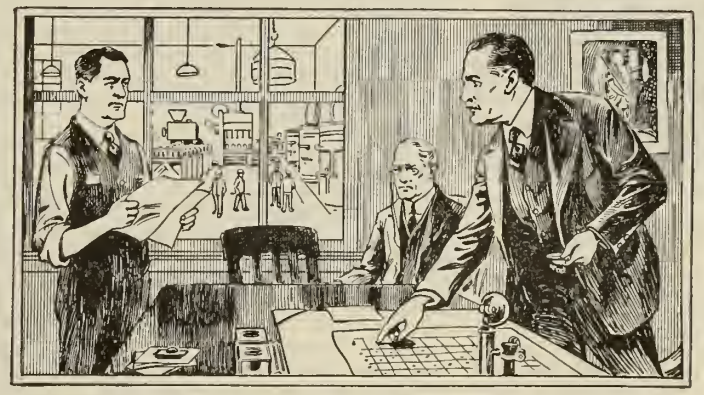
"You sent for me, Nan?"

"Judy," whispered the child, extending painfully stiff arms, ".I have to tell you something. Come close and listen—maybe I will die before you forgive me——"

"Hush," said Judy very tenderly. "You are not going to die. You will be well before you know it and we are going to be very happy—especially you and I, sharing Dad."

But Nan refused to spare herself. Her aching little body pillowed against the woman's heart and enwrapped

(CONTINUED ON PAGE 68.)



Cats Keep Rats and Mice Away.

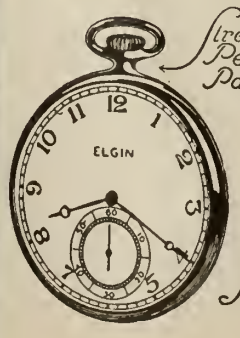
From Theodora Bailey, an inspector of the Women's Municipal League, Boston, whose duties take her "behind the scenes" in grocery stores and markets, to report upon the presence of rats and mice, and whether if a cat is kept on the premises it is allowed to walk over the foods, counters, etc., comes this testimony regarding the value of cats in stores:

"I find that most groceries and markets of the better class in the district I have been covering have cats, and it is gratifying to note the care that is given some of them. They are regularly fed in their own dishes, so there is apparently no temptation to be a nuisance by begging or stealing.

"It is an interesting fact to find that in places where the cats are well cared for there is no trouble from rats and mice. Whether the owners have abandoned the old exploded theory that to make a cat a good hunter it must be starved, or whether they never entertained it, I don't know, but however that may be, they use their own good sense and reason in practice, with a motive humane as well as economic."

Elgin—"The Spirit of Reconstruction"

A War Lesson



"NOW SIR—you've heard the President's criticism—here's the secret of how you can increase the output of your department—*this schedule*. The war has taught us one lesson which absolutely must be followed in this business—the necessity of timing all our operations by the Elgin."

In the Allied advance to victory we have seen mighty energies combined, and stupendous undertakings accomplished, by this simple expedient of *working to schedule*.

To the tick of the Elgin the efforts of Allied forces on land, sea and in the air were synchronized and united in one tremendous power—the power that brought success.

To-day our production problems demand that every energy be properly directed—that every tick of the Elgin shall register accomplishment—that we *work to schedule*.

Make the Elgin your guide. It will as accurately direct your efforts as it did the Allied forces.

Hand in Hand with the Centuries

(CONTINUED FROM PAGE 65.)

clearly upheld the idea that America's original population came from Asia by the Behring's Strait route.

Writing in January of 1842, McLean says: "At this period, I have neither seen, read nor heard of any locality under heaven that can offer a more cheerless abode to civilized man than Ungava."

A further idea of what life means to the Hudson's Bay employee in the far-off posts may be gathered from the description of Mr. George Bryce, M.A., LL.D.:

"Life on the shores of Hudson Bay is as unchangeable as the shores and scenery of the coast are monotonous. The swampy, treeless flats that surround the Bay simply change from the frozen, snow-clad expanse which stretches as far as the eye can see in winter, to the summer green of the unending grey willows and stunted shrubs that cover the swampy shores. For a few open months the green prevails, and then Nature for eight months assumes her winding sheet of icy snow.

"For two hundred and fifty years life has been unvarying on these wastes. . . . No log shanties give way in a generation to the settler's house, and then to the comfortable, well-built stone or brick dwelling. . . . The accounts of McLean, Rae, Ryerson and Ballantyne, of the middle of the nineteenth century are precisely those of Robson, Ellis or Hearne of the eighteenth century, or, indeed, practically those of the early years of the company in the seventeenth century.

"The ships sail from Gravesend, on the Thames, with the same ceremonies, with the visit and dinner of the committee of the directors, the 'great guns,' as the sailors call them, as they have done for two centuries and a quarter, from the days of Zachariah Gillam and Pierre Esprit Radisson. No more settlement is now seen on Hudson Bay than in the early time, unless it be in the dwellings of the Christianized and civilized swampy Crees and in the mission houses around which the Indians have gathered.

"IN Winter," Ballantyne says, speaking of his stay at York Factory, "days, if not weeks, passed without the arrival of a visitor, unless it were a post from the interior, or some Cree trader of the neighborhood, or some hungry Indian seeking food. The cold was the chief feature of remark and consideration. At times the spirit thermometer indicated 65 degrees below zero, and the uselessness of the mercury thermometer was then shown by a pot of quicksilver being made into bullets and remaining solid. Every precaution was taken to erect strong buildings, which had double doors, and yet in the very severe weather water contained in a vessel has been known to freeze in a room where a stove red hot was doing its best. It is worthy of note, however, that even in Arctic regions, a week or ten days is as long as such severe weather continues, and mild intervals come regularly.

"On the Bay the coming of spring is looked for with great expectation, and when it does come, about the middle of May, it sets in with a 'rush'; the sap rises in the shrubs and bushes, the buds burst out, the rivers are freed from ice, and, indeed, so rapid and complete is the change that it may be said there are only two seasons—summer and winter—in these latitudes.

"As summer progresses the fare of dried geese, thousands of which are stored away for winter use, of dried fish and the white ptarmigan and wood partridge that linger about the bushes and are shot for food, is superseded by the arrival of myriads of ducks and geese and the use of the fresh fish of the Bay. In many of the posts the food throughout the whole year is tirely flesh diet, and not a pound of farinaceous food is obtainable."

Lake Athabasca, the Mackenzie River, the Yukon, the Peace, Great Slave Lake and the Laird River, vast stretches of inland water, have always been the chief means of communication throughout the great West for the Hudson's Bay Company. Without them there could not have been much fur trading, as they proved to be the swiftest means of transportation.

Indeed, even with their aid, the distances to be covered are bewildering. One writer relates of having seen Bishop Bompas, who had left Fort Yukon to go to England. He had then been nine months on the journey to Winnipeg, which he had reached by York boat, dog train, snowshoe and wagon.

The company built its first steamer on these lonely northern waters at Fort Chipewyan in 1882, and named it the "Graham." Three years later, at Fort Smith, on the Slave River, a screw propeller was built. Later at Athabasca Landing the stern-wheeler "Athabasca" was launched for use on the Upper Athabasca River.

To this company must also be given much credit for the promotion of a great deal of the religious life of Canada. The French priests were the first to reach Rupert's Land, and accompanied Verendrye, though from all accounts they made no settlements in the territory. The first clergyman to arrive was Father Bourke, in 1811. The Scotch Church commenced its mission in 1820, under Rev. John West. The Church of England began its work in the Red River Settlement two years later, with Rev. William Cochrane. Under the Methodist Church, work was commenced by James Evans in 1840. Each of these churches was under deep obligations to the Hudson's Bay Company for assistance, protection and sympathy.

THE management of the company with the Indians has always been specially successful. For instance, there has never been an Indian war in Rupert's Land or the Indian territories—nothing beyond an occasional outbreak. In scores of forts and posts trade has been carried on with perfect confidence, and that when the nearest British garrison or soldier was thousands of miles away.

Considering the amazing amount of power given to this company, the marvel is that it ruled in such a successful manner so vast a territory. The wide distances, the hundred and one difficulties to be overcome, are almost impossible to realize to the mind of to-day. But through it all the hard-headed, clear-sighted, earnest men whom the company seemed particularly fortunate in securing, brought everything to a successful whole, and to-day its record stands as one of the very pillars of Canadian history.

With this wonderful past to its credit, the Hudson's Bay Company's operations are even more vast to-day than ever. It is the greatest mercantile enterprise of that greater Canada which is found west of Lake Superior. It is a strong land company, is still keeping up its traditions and conducting an enormous trade in furs. It owns vessels, and has a wonderful transportation system of its own. It exercises a fatherly care over almost all Indian tribes in Canada, and is the helper and assistant of the vast missionary movements which are scattered over the northern part of the Dominion. As said before, it is bound up part and parcel with Canada, and can indeed be called the first-born of its kind in the Western world.

Sharing Dad With Judy

(CONTINUED FROM PAGE 67.)

more comfortably by love than by bandages, she poured out her miserable confession, her genuine contrition.

"And the gate—" she moaned as she tried to take a breath.

"I guessed," said Judy. "And about the cookies; but I understood, dear little girl."

"How?" the child demanded.

A shadow which Nan did not see, passed across Judy's face.

"Because," she answered, "I had a step-mother, too. I did not love her—indeed, I learned to hate her for she was pretty much the kind of step-mother that Snow White had. Have you read about her?"

Nan moved her head a little and there was a long silence broken only by the child's painful breathing. Judy held her close. Then her arms loosened and stole around her neck.

"What are you putting on me?" asked Nan from behind her gauze and cotton.

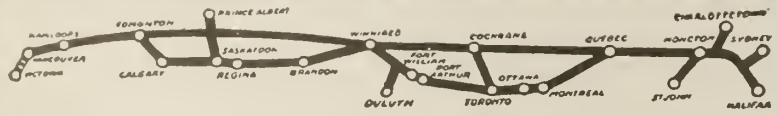
"A little gold locket. Inside there is a picture of my mother—my own mother, you understand. It was taken away from me for punishment by—er—the other one, you know. For years I hated her too much to ask for it, and she hated me too much to give it to me. Somehow, I thought I would like you to have it, and to wear it whenever you feel you—love me."

"Judy," whispered the little girl, "I will wear it all my life. I never hated you, Judy, I only tried to. It was because I couldn't that made me do those awful things. Could you find a place where there isn't any bandage and kiss me, Judy?"

THE END.

Gardening Discretion

(CONTINUED FROM PAGE 66.)



seedlings for the garden are being raised, also raise about half a dozen plants of the long "Telegraph" Cucumber, and about the same number of tomato plants, planting the Cucumbers on the south side, and the tomatoes opposite, tying them to wires which are strung along, about 6 or 8 inches from the glass, and when the tomatoes have reached the peak, pinch out the tops, so as to encourage more side growth. Train the tomatoes to four shoots or laterals, also pinching when they reach the peak. In watering, spray the foliage of cucumbers twice or three times a day during bright weather, but water the tomatoes at the roots only; keep soil stirred same as in garden.

Onions need lots of attention to bring them to exhibition size; remember you cannot stir the soil too often. Salt, soot and lime are good ingredients to mix into the soil between the rows, and use the liquid manure as often as you do for the celery trench, the salt, soot, and lime are not only a plant food, but an insecticide, driving onion maggots and other insects away.

It is important to protect cherries from birds, as soon as they show the least sign of commencing to color, or they will soon be eaten, so place a light cheese-cloth over the tree, and to keep them from attack of black-fly use a solution of Quassia chips.

Do not forget that strawberries, as well as anything else, require occasional waterings during very hot weather, and especially when they are growing in light, porous soil.

Do We Live After Death?

(CONTINUED FROM PAGE 64.)

aside, however, let us follow the fortunes of the departing spirit. He is presently aware that there are others in the room besides those who were there in life, and among these others, who seem to him as substantial as the living, there appear familiar faces, and he finds his hand grasped or his lips kissed by those whom he had loved and lost. Then in their company, and with the help and guidance of some more radiant being who has stood by and waited for the newcomer, he passes to his own surprise through all solid obstacles and out upon his new life.

THIS is a definite statement, and this is the story told by one after the other with a consistency which impels belief. You will observe that it is already very different from any old theology. The spirit is not a glorified angel or a goblin damned, but it is simply the person himself, containing all his strength and weakness, his wisdom and his folly, exactly as he has retained his personal appearance. We can well believe that the most frivolous and foolish would be awed into decency by so tremendous an experience, but impressions soon become blinded, the old nature may reassert itself in new surroundings, and the frivolous still survive as our seance rooms can testify.

And now, before entering upon his new life, the new spirit has a period of sleep which varies in its length, sometimes hardly existing at all, at others extending for weeks or months. Raymond said that his lasted for six days. That was the period also in a case of which I had some personal evidence. Mr. Myers, on the other hand, said that he had a very prolonged period of unconsciousness. I could imagine that the length is regulated by the amount of trouble or mental preoccupation of this life, the longer rest giving the better means of wiping this out. Probably the little child would need no such interval at all. This, of course, is pure speculation, but there is a considerable consensus of opinion as to the existence of a period of oblivion after the first impression of the new life and before entering upon its duties.

Having wakened from this sleep, the spirit is weak, as the child is weak after earth birth. Soon, however, strength returns and the new life begins. This seems to be the point where we may discuss heaven and hell. Hell, I may say, drops out altogether, as it has long dropped out of the thoughts of every reasonable man. This odious conception, so blasphemous in its view of the Creator, arose from the exaggerations of Oriental phrases, and may perhaps have been of service in a coarse age where men were frightened by fires, as wild beasts are scared by the travellers. Hell as a permanent place does not exist. But the idea of punishment, of purifying chastisement, in fact of Purgatory, is justified by the reports from the other side. Such punishment does not consist of gross bodily pain—there is no pain beyond—but it consists in the fact that the grossest souls are in lower spheres with a knowledge that their own deeds have placed them there, but also with the hope that expiation and the help of those above them will educate them and bring them level with the others. In this saving process the higher spirits find part of their employment. Miss Julia Ames in her beautiful posthumous book says in memorable words: "The greatest joy of Heaven is emptying Hell." Such a sentiment as that is certainly an advance in morality since the days when Gregory, a Father of the Church, and called a Saint, said that one of the joys of the Blessed was watching the torments of the damned.

SETTING aside those probationary spheres, which should perhaps rather be looked upon as a hospital for weakly souls than as a penal community, the reports from the other world are all agreed as to the pleasant conditions of life in the beyond. They agree that like goes to like, that all who love or who have interests in common are united, that life is full of interest and of occupation, and that they would by no means desire to return. All of this is surely tidings of great joy, and I repeat that it is not a vague faith or hope, but that it is supported by all the laws of evidence which agree that where many independent witnesses give a similar account, that account has a claim to be considered a true one. If it were an account of glorified souls purged instantly from all human weakness and of a constant ecstasy of adoration round the Throne of the All Powerful, it might well be suspected as being the mere reflection of that popular theology which all the mediums had equally received in their youth. It is, however, very different to any pre-existing system. It is also supported, as I have already pointed out, not merely by the consistency of the accounts, but by the fact that the accounts are the ultimate product of a long series of phenomena all of which have been attested as true by those who have carefully examined them.

We cannot look upon this coming world as a tidy Dutch garden of a place which is so exact that it can easily be described. It is probable that those messengers who come back to us are all more or less in one state of development and represent the same wave of life as it recedes from our shores. Communications usually come from those who have not long passed over, and tend to grow fainter, as one would expect. It is instructive in this respect to notice that Christ's reappearances to His disciples or to Paul, are said to have been within a very few years of his death, and that there is no claim among the early Christians to have seen Him later. Our seance rooms are, no doubt, only too full of Julius Caesars and Shakespeares; but the cases of spirits who give good proof of authenticity and yet have passed some time are not common. There is, in Mr. Dawson Roger's life, a very good case of a spirit who called himself Manton, and claimed to have been born at Lawrence Lydiard and buried at Stoke Newington in 1677. It was clearly shown afterward that there was such a man, and that he was Oliver Cromwell's chaplain. So far as my own reading goes, this is the oldest spirit who is on record as returning, and generally they are quite recent. One gets all one's views from the one generation, and we cannot take them as final, but only as partial. How spirits may see things in a different light as they progress in the other world is shown by Miss Julia Ames, who was deeply impressed at first by the necessity of forming a bureau of communication, but admitted after fifteen years that not one spirit in a million among the main body upon the farther side ever wanted to communicate with us at all since their own loved ones had come over. She had been misled by the fact that when she first passed over everyone she met was newly arrived like herself.

Thus the account we get may be partial, but still such as it is, it is very consistent and of extraordinary interest since it refers to our own destiny and that of those we love. All agree that life beyond is for a limited period, after which they pass on to yet other phases, but apparently there is more communication between these phases than there is between us and Spiritland. The lower cannot ascend, but the higher can descend at will. The life has a close analogy to that of this world at its best. It is pre-eminently a life of the mind, as this is of the body. Preoccupations of food, money, pain, etc., are of the body and are gone. Music, the arts, intellectual and spiritual knowledge and progress have increased. The people are clothed, as one would expect, since there is no reason why modesty should disappear with our new forms. These new forms are the absolute reproduction of the old ones at their best, the young growing up and the old reverting until all come to the normal. People live in communities, as one would expect if like attracts like, and the male spirit still finds his true mate. Since connections still endure, and those in the same state of development keep abreast, one would expect that nations are still roughly divided, though language is no longer a bar, since thought has become a medium of conversation.

These, roughly speaking, are the lines of the life beyond. All are agreed that no religion upon earth has any advantage over another, but that character and refinement are everything. At the same time all are also in agreement that all religions which inculcate prayer and an upward glance rather than eyes forever on the level, are good. In this sense, and in no other—as a help to spiritual life—every form may have a purpose for somebody. If to twirl a brass cylinder forces the Thibetan to admit that there is something higher than his mountains, and more precious than his yaks and his sour milk, then to that extent it is good. We must not be censorious in such matters.

There are many who protest that this world which is described to us is too material for their liking. It is not as they would desire it. Well, there are many things in this world which seem different to what we desire, but they exist none the less. But when we come to examine this charge of materialism and to try to construct some sort of system which would satisfy the idealists, it becomes a very difficult task. Are we to be mere wisps of gaseous happiness floating about in the empyrean? That seems to be the idea. But if there is no body like our own, and if there is no character like our own, then say what you will, we have become extinct. What is it to a mother if some impersonal glorified entity is shown to her? She will say, "That is not the son I lost; I want his yellow hair, his quick smile, his little moods that I know so well." That is what she wants; that, I believe, is what she will have; but she will not have them by any system which cuts us away from all that reminds us of matter and takes us to a vague region of floating emotions.

Dress the youngsters in Carhartt's Alloverś and let them romp to their hearts' content. Made of strong, durable galatea, they protect the kiddies' clothes and stockings and save mother endless work and worry. Roomy and neat, double stitched throughout, with pearl buttons firmly sewn on. Sold everywhere.

Cure for Burned Fingers

(CONTINUED FROM PAGE 60.)

Billy thrilled and winced at the same time. It was suddenly borne in upon him that he had been playing with fire and that it was already too late to guard against burned fingers. His expression changed and he sat staring straight ahead, gloomily thinking of to-morrow.

Hazel nudged him viciously. "For goodness sake, cheer up," she admonished in a whisper. "This is supposed to be a wedding-trip—not a funeral."

He laughed uncertainly and shook himself together. Hazel chattered gaily to cover the hiatus. She suddenly turned to him and said in her high, clear voice that had wonderful carrying powers:

"Oh, Billy, wasn't Uncle Henry a *perfect* dear? And it was *so* unexpected. It made everything just perfect."

"Yes," agreed Billy enthusiastically; "Uncle Henry's certainly a corker!" Then in a quick whisper: "By the way, what did he do?"

"How should I know?" whispered Hazel. "It sounds well, though. Look."

Billy glanced covertly at the old gentleman across the aisle. He had given over the pretense of reading and was frankly enjoying the boy and girl, a tender, reminiscent glow in his keen old eyes.

At Amqui the train stopped long enough to allow the passengers to get supper. Hazel tripped across the road to the hotel, her hand resting confidently on Billy's arm and the eager, joyous look in her eyes more than ever in evidence. As they sat down their elderly friend took his place directly across from them at the long table. The close proximity was slightly disconcerting, but Billy was enjoying the opportunity of adding a few artistic touches.

"Cream, dear?" he asked casually.

"Billy!" protested Hazel with an adorable pout. "You should know by *this* time that I don't take it."

Their auditor smiled quite openly.

"Do you know," said Billy reflectively, "I don't think I'll let you stay in Campbellton. You'd better come back to Quebec with me. I'd be too infernally lonely without you. It's too soon, sweetheart."

IT was the most audacious remark that he had made. Hazel gasped. Then the warm, rich color flowed up over throat and cheeks and brow. She stood it bravely for a long moment before covering her burning face with her hands. Her shoulders shook with suppressed laughter. The old gentleman was vastly appreciative; he fairly beamed at the blushing bride. Billy sat back in his chair grinning in diabolical enjoyment of her confusion.

"I—I think we'll have to hurry," said Hazel finally. Billy, still grinning, helped her to her feet, and together they hurried back to the waiting train.

"You were outrageous," protested Hazel. "I have to admit that I was absolutely and completely fussed."

"Yes," said Billy judicially; "you might as well admit it as the fact was quite self-evident."

"You're horrid!"

"Want to quit?" he jeered.

"Never! We've got to go on to the bitter end now—the bitter end being Campbellton where we can lose our patient watcher and I can revert to the peace and joys of spinsterhood."

"I'll hand it to you—you're some actress."

"And you're some actor," she reciprocated.

They stood on the rear platform of the train as it rushed down through the beautiful Matapedia Valley in the gathering twilight. Unconsciously they abandoned their play-acting and a silent mood took possession of them. They leaned over the tail-gate and watched the white mile-posts flash past and vanish in the distance. Billy put his arm about the girl's shoulders protectingly and drew her close.

"I know you are going to be busy to-night—but isn't there some way that I can see you to—to say good-bye?" he asked.

"I'll try to manage it," she said in a meek little voice.

The door behind them opened and their ubiquitous elderly friend came out of the car with an interested, benign smile on his face. In the restricted space of the small platform an extra person had the same effect as a whole roomful; conversation became impossible.

Cora Allison with three or four other girls was at the station in Campbellton to meet Hazel. Billy's heart sank as he saw his chances of being alone with her dwindling.

"Cora," said Hazel, with the utmost self-possession, after the introductions were over, "Mr. Brayling is coming up to call on us to-night."

Miss Allison gave him a very gracious welcome, and Billy went up to the house with the party. Later, when the good-byes were being said, he drew Hazel aside for a moment.

"I might as well stick around to-morrow," he said wistfully.

For once she did not laugh at him. "We are going on a picnic to-morrow morning," she informed him. "Just girls—unfortunately. When we get back I'll telephone you."

WITH this grain of comfort Billy went to his hotel to dream of journeys that had no abrupt endings. The next morning he came down into the office and was idly glancing over the register when an entry caught his eye. Immediately over his name was that John K. Stafford of Montreal.

"Where is Mr. Stafford?" he asked the clerk. "I must see him as soon as possible."

"He is just coming out of the dining-room," whispered the clerk. "There he is right behind you."

Billy turned, and for the moment his self-possession forsook him entirely. Standing directly before him with an amused, kindly smile on his ruddy face was the man whom he had last seen on the rear platform of the train the previous evening. With a desperate effort Billy regained his nerve. A winning smile—his invaluable ally—cleared the way for him.

"Mr. Stafford," he said, extending his hand, "this is very fortunate. I've been chasing you for the last three days. My name is Brayling—of National Machine Company. Will you give me a little time this morning?"

"I have had the pleasure of meeting Mr. Horace Brayling," said Mr. Stafford. "Your father?"

"My uncle," replied Billy. "And now—can I talk business with you?"

"So you have been mixing business with pleasure the last few days?" said Mr. Stafford, his eyes twinkling merrily.

"Yes sir; I have," said Billy unblushingly.

"I can give you half an hour. At ten I have a conference with some men from whom I am buying lumber for one of my industries, and at noon I must leave for Quebec."

There followed a half-hour of intense application—a poring over blueprints and quoting of figures—and ending in a triumphant moment as the new customer signed on the dotted line. When the business was concluded, Mr. Stafford rose and shook hands with the young man.

"Where is your charming wife, Mr. Brayling?" he asked genially.

Billy's face took on the hues of an impressionistic sunset. He writhed as his inquisitor chuckled good-naturedly. At last he stammered something to the effect that she was visiting an old school friend in town.

"The next time you're in Montreal bring her to see us," said the old gentleman kindly. "Mrs. Stafford will be delighted to welcome you both."

"Thank you, sir," gasped Billy. "We—we—that is—I—I shall certainly do so."

AS soon as Mr. Stafford had left, Billy dashed for the telegraph office and wired the house details of the most important contract of the season. It was with a sigh of relief that he appended the words: "am commencing holiday indefinite duration."

Hazel, true to her promise, telephoned him late in the afternoon.

"We are motoring out to Dalhousie to-night," she said. "There's a dance at the Inch Arran—and you're invited. Do you want to come?"

"Do I want to come!" shouted Billy in such stentorian tones that an appreciative "central" tittered audibly.

It was a wonderful night. The stars hung like jewels in the soft blue-black velvet of the sky. The moon rose in majesty and turned the waters of the bay to a mystery-laden silver flood. Billy and Hazel stepped through a low window onto the broad verandah and gasped in sheer delight at the beauty of the out-of-doors. They found a secluded corner and sat with eyes turned toward the brightening glory of sea and sky.

"I was in an exultant mood this afternoon," said Billy; "but it has passed now. The end is too near."

Hazel nodded and sat very still, her hands clasped.

"I was looking forward to telling you the sequel to our yesterday's trip," he continued. "It doesn't seem amusing now—somehow."

"AH, the sequel," she cried eagerly. "Tell me."

"It's merely that the old gentleman on the train proved to be Mr. Stafford, whom I have been seeking all week." Billy's voice sounded very flat—lifeless. "He gave me the contract that I was after—perhaps the personal element had something to do with it—his interest in me—in us. And he asked me to bring my charming wife to see Mrs. Stafford—and—and—well, I'm sorry, that's all!"

"It *is* rather dreadful," said Hazel. She sat staring straight before her. "It was such fun while it lasted. And now—it has all turned to ashes! we were actually dishonest; weren't we?" she asked, raising troubled eyes to his.

"Oh, it's not that!" he disclaimed hastily. "We were merely amusing ourselves with no ulterior motive. But—but——" his voice trailed off to silence.

For a long time they sat very quiet in the melancholy engendered by the perfect beauty round about them. The boy's thoughts dwelt on the incidents of the last few days. Although the girl at his side had burst into his life suddenly and their intimacy had been a rapid growth she had become inexpressibly dear to him—so dear, in fact, that it would be like losing a part of himself to leave her.

"I played with fire," he said huskily; "and my fingers got burned, little girl—very badly burned."

Hazel's eyes glistened with the hint of tears. She touched his arm with a swift, caressing little motion. She could not mistake the poignant anguish in his voice.

"Time is a cure for burned fingers," she whispered.

"Oh, time!" Billy rejected the thought impatiently.

From behind them came the crash of the orchestra as it ended a popular dance tune. There followed a scattered hand-clapping in a last appeal for an encore. It was growing late.

"Time!" said Billy bitterly. "A poor remedy for youth to apply!" He took her hands in his and held them tightly clasped. "There's only one cure and I'm afraid that's impossible. If the dreams of the last few days would only come true. If we could make them real." A sudden light of hope sprang into his eyes. He drew her closer. "Hazel, dear," he whispered; "is it possible? Will you make the dreams come true? Will you make it real, little girl?"

Slowly she drew her hands away and for a brief moment let him look deep into the glory of her shining eyes.

"I was wondering if you were going to think of that way," she said impishly as her slender arms crept about his neck.

THE END.

Next comes JULY, the

Summer Story Number

With Four Excellent Short Stories, each complete in one large installment

"Hot House Process," another of William Hugo Pabke's charming stories. Illustrated by Helene O'Carter.

"Just Pretend!" What dizzy heights are reached when grown-up children start the game of "just pretending." In "Hot House Process," two writers meet and "just pretend" that every minute of their acquaintance is a day. Merrily the "days" pass in brilliant repartee, till finally—but we must leave the writer to tell his own story.

How would you feel if you heard your family circle was to be broken by the entrance of a stranger—someone whom you thought was not just in your "social position"? Would you be apt to take strenuous measures and shatter someone else's "castles in the air"? Perhaps you would—perhaps you wouldn't. Read

"THE BOAST OF HERALDRY"

in the July issue and find out how Cameron Nelles Wilson skilfully meets the situation.

The Time to Improve Your School is in the Summer Holidays.

Dr. MacKenzie-Smith has prepared an article telling how your school should be equipped to most successfully meet the physical needs of the child. She will tell you how to place the windows, the best color for the blinds, the shade the walls should be, and a score of other valuable facts. Dr. MacKenzie-Smith has examined hundreds of rural schools. She knows whereof she speaks, for she has seen the results of improperly equipped schools in the impaired health of the children.

George Baldwin, F.R.H.S., will write under the heading, **"Are Your Children Proud of Their School Grounds?"** in the July issue, and will tell of many ways to beautify ugly school grounds. Photographs will illustrate this page.

"The Best Schoolroom of All—the Out-of-Doors."

Photographs of open-air schools, showing the small people studying, sleeping and eating, with the blue sky overhead, the grass for a floor and beautiful trees for walls. The strides some cities are taking in the care of their little helpless, tubercular children are truly remarkable, a subject in which every Canadian should be interested.

Many Canadian schools are an absolute disgrace, doing positive injury to the health of the children they are supposed to benefit.

In the Photogravure Section in July there will be reproduced a large portrait of Maior-General Mewburn, painted by Wyly Grier, continuing the series of masterpieces of Canadian art.

Who holds the Canadian tennis championship? Her picture is in this section; also the golf champion and those "at the top" in swimming and diving, and one of Canada's most famous lady riders.

"IN THE PARK" is the title of the July cover, painted for Canadian Home Journal by Carton Moorepark.

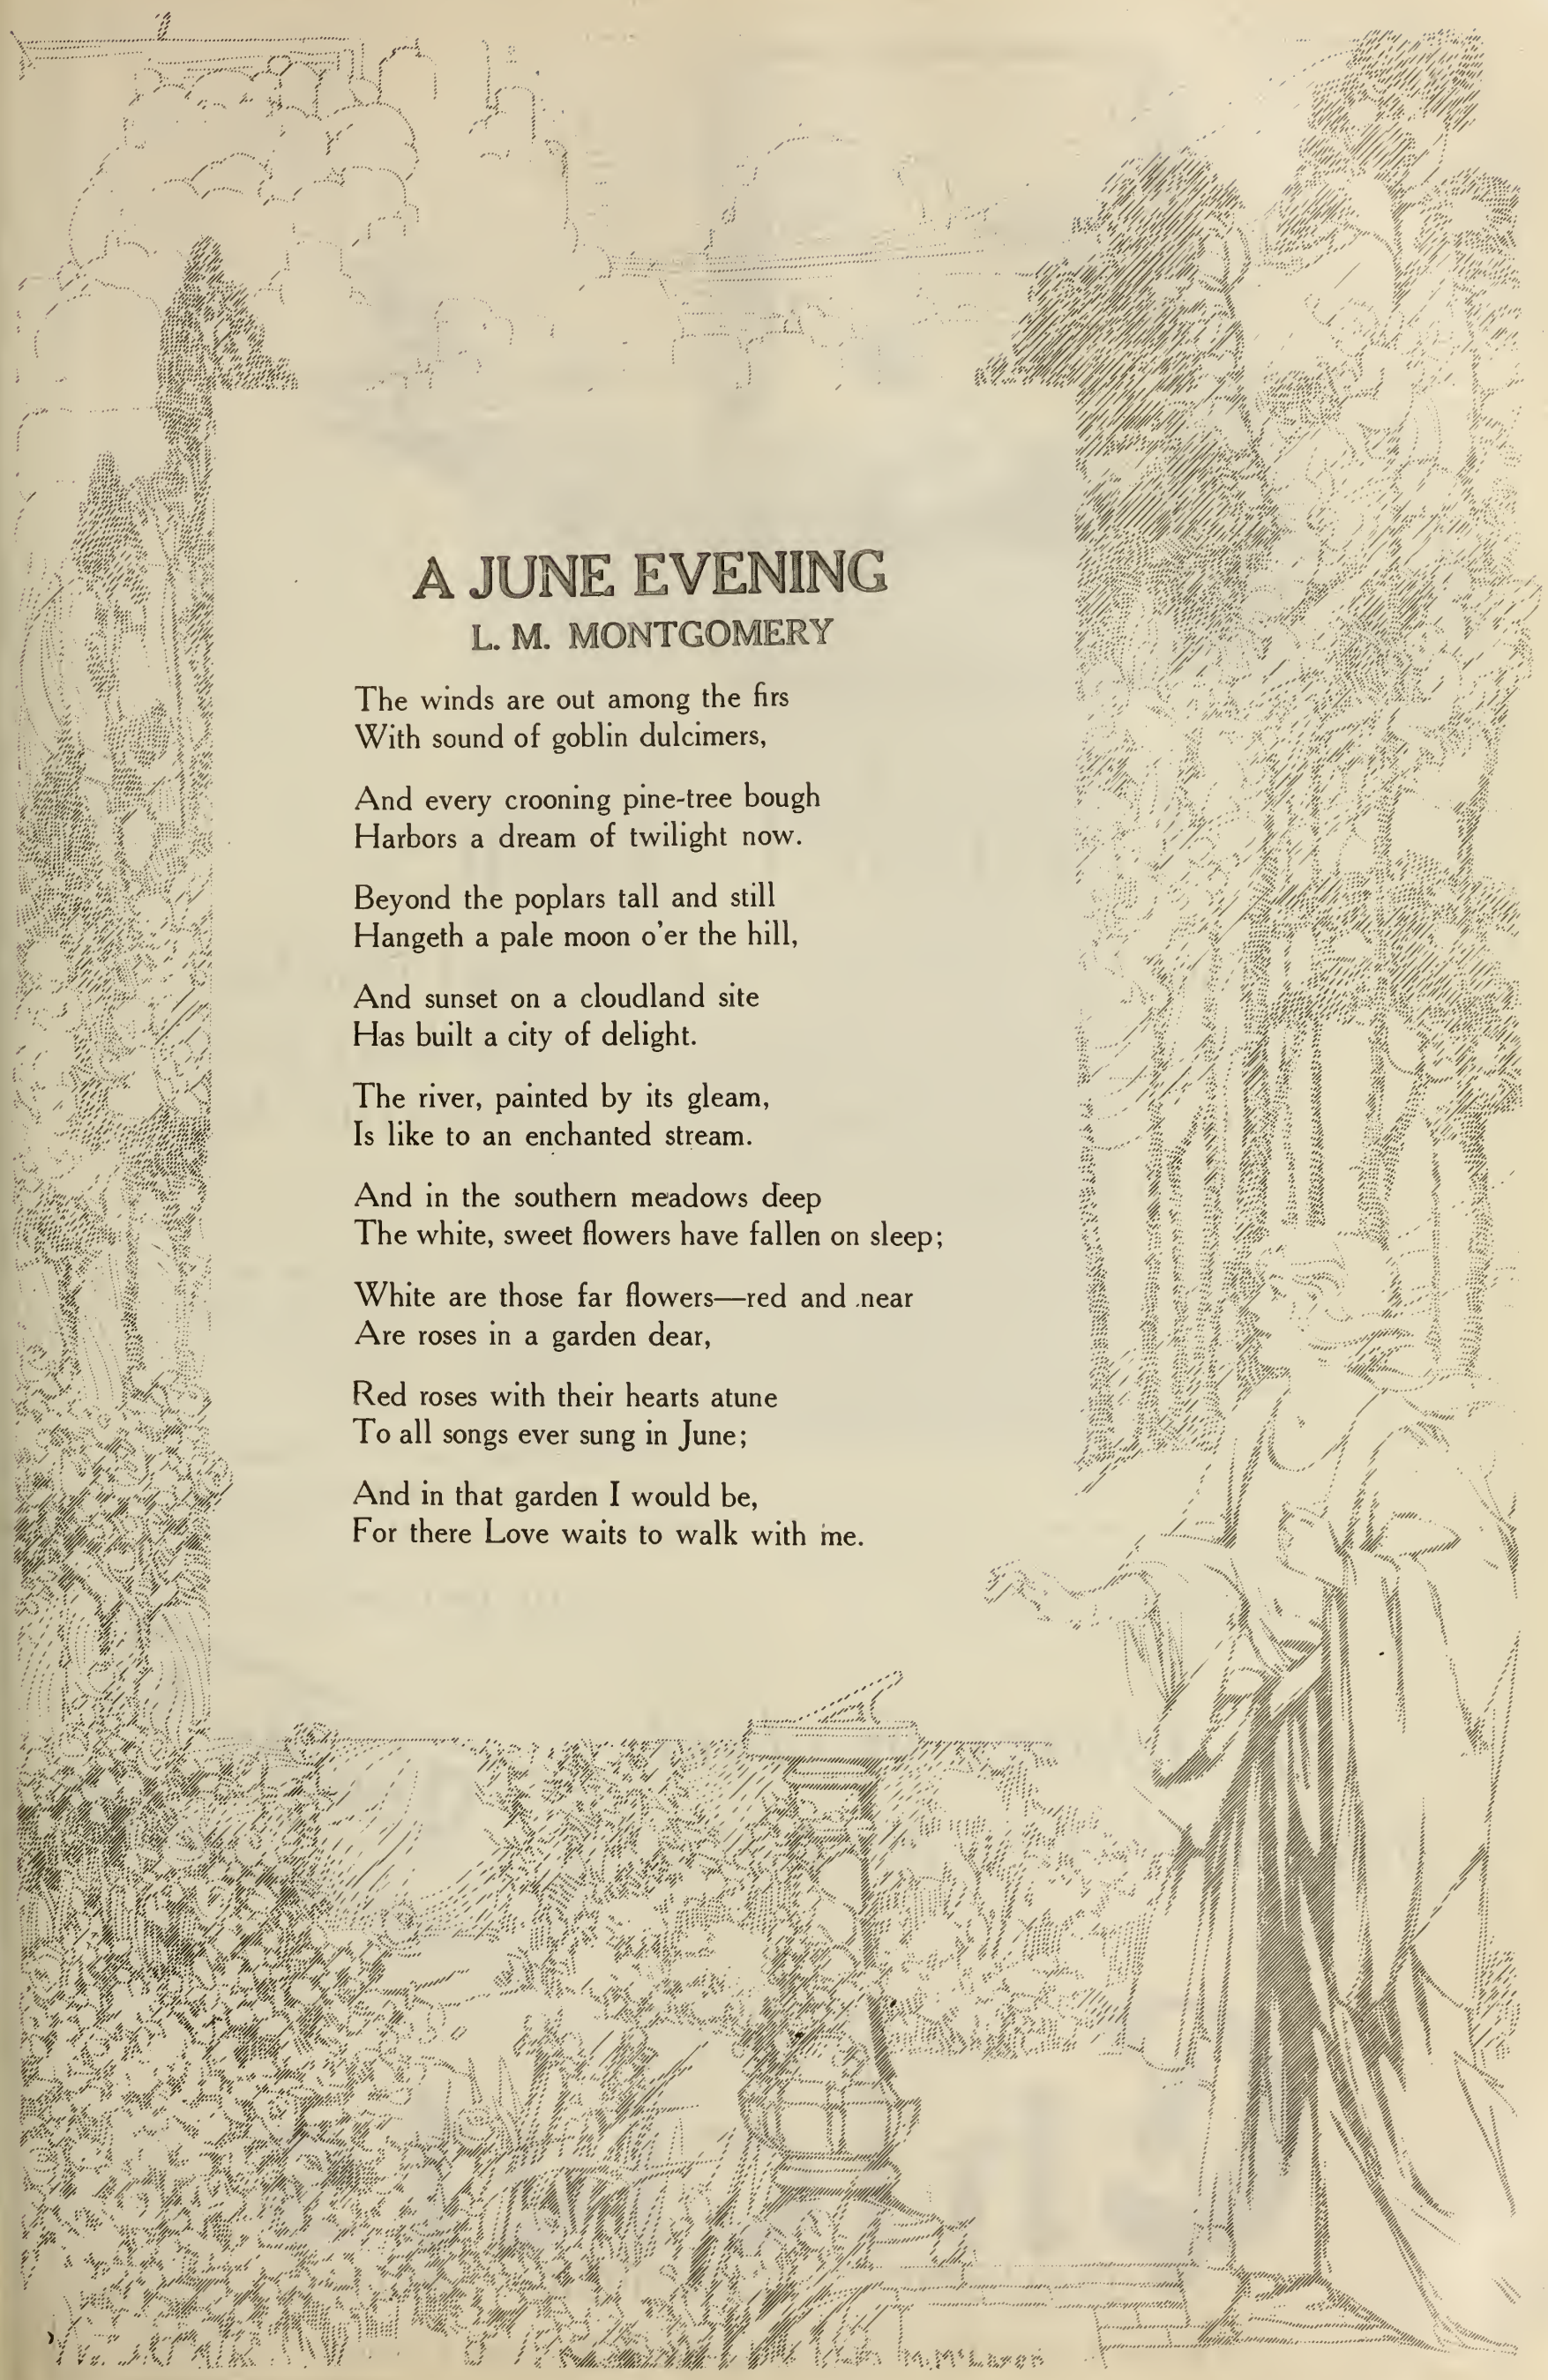
Peace—
More Neōlin Soles

WAR conditions forced thousands of people to accept shoes with soles other than Neōlin. We could not secure sufficient heavy steel machinery. Production was held up.

Now the war is over. Steel equipment has been increased. Our machinery is running full blast. There are enough Neōlin Soles for all kinds of shoes—for men, women and children—for dress shoes, work shoes, farm shoes, school shoes. Everybody can get Neōlin Soles now.

Everybody can have better shoes now. Neōlin Soles were developed to make shoes better. To make them wear longer; to make them more comfortable; to make them waterproof. Even the most stylish shoes become comfortable with flexible Neōlin Soles. Children do not go through Neōlin Soles so easily. Ask your retailer to show you his wide range of models on Neōlin Soles.

Neōlin Soles have been a great success. So they have imitators. But the methods and materials that make Neōlin Soles superior are known only to Goodyear—you can be sure of Neōlin Soles quality only when you see the trade mark "Neōlin" on the bottom of the sole.



Neōlin Soles—half-soles and full-soles—are nailed or sewn on all kinds of shoes by manufacturers, repairmen and at home.

The Goodyear Tire & Rubber Co.
***of* Canada, Limited**

This price ticket will mark for you the store where shoes with Neōlin Soles are in stock.

Neōlin Soles

A JUNE EVENING

L. M. MONTGOMERY

The winds are out among the firs
With sound of goblin dulcimers,

And every crooning pine-tree bough
Harbors a dream of twilight now.

Beyond the poplars tall and still
Hangeth a pale moon o'er the hill,

And sunset on a cloudland site
Has built a city of delight.

The river, painted by its gleam,
Is like to an enchanted stream.

And in the southern meadows deep
The white, sweet flowers have fallen on sleep;

White are those far flowers—red and near
Are roses in a garden dear,

Red roses with their hearts atune
To all songs ever sung in June;

And in that garden I would be,
For there Love waits to walk with me.

Chiclet Time

You can't separate holidays and Chiclets. Chiclets are as necessary to a holiday as is sunshine. A dozen times during the day you'll be glad you have Chiclets.

A holiday is a wonderful appetiser, and the picnic basket captures your heart. But it is, perhaps, a little too tempting. You'll feel more comfortable if you chew a Chiclet after the lunch.

If the road to the boat or station is long and dusty you'll find that a Chiclet helps there, too.

And when everything else palls on the palate, the dainty, *peppermint* candy-coating on Adams Chiclets is always "Really Delightful."

Chiclets are sold everywhere. Next time you see them displayed leave a nickel and get ten Chiclets.

CANADIAN HOME JOURNAL EDITORIAL

By Judge Murphy.

THE QUESTION OF WHO SHALL VOTE At the present moment a movement is hot-afoot in Canada to have the educational test applied to the franchise and the movement seems to gain ground in many quarters. Even the women who have just been enfranchised themselves, have "turned Turk" and are doing their utmost to disqualify thousands of male persons who have always had the right to vote, and many of whom actually assisted the women in the suffrage campaign.

In spite of the ancient principle that the rights of franchise are inalienable except to criminals and idiots, it is astonishing what an appeal this campaign for the application of the educational test makes to some of us. It sounds so well in theory, and makes so potent a plea to our sense of the proprieties that even the fairest-minded of us are apt to be ensnared by its fallaciousness.

In a vague undefined way most of us have an idea that the polling booth, like Elysium itself, is a place to which access should only be had by a sort of superior person who carries a linen handkerchief in one pocket and a copy of the "Atlantic Monthly" in the other; in a word, a place for the gentry and for fair ladies—preferably those who wear white spats and lorgnettes.

Judge Murphy, of Edmonton, Alta., President of the Federated Women's Institutes.

Why, surely, the vote is safe with us ("us" must here be considered as heavily underscored) but always we are mightily suspicious of the other fellow. "The Man with the Hoe" and the woman stitching on the shirt may have their places in the anthology of poetry, but seeing the hoe and the needle cut short their acquaintance with the pen and the primer, these can have no place at the polling booth. We'll disqualify every mother's son of them.

A washerwoman, who has bought and paid for her little house and garden out of her earnings has no right to say how it shall be taxed, or who shall tax it. Oh no! This is a privilege only for the woman who inherits her home, or holds it against her husband's creditors.

It is true that child-labor, food prices, and coal prices fall more heavily on the home of the washerwoman, but if she wants to vote then, for any sake, let her stop washing and go to school. The thing is plain as print.

Besides, the washerwoman doesn't know (how could she?) that when the nobles wrested the Magna Charta from John of England, hardly a one of them could write. Indeed, John was not in a position, himself, where he could say over-much about the educational test, so wisely held his tongue.

Ah yes! and we had almost forgotten to say it—only ladies with "charm" should vote. Mrs. Louise McKinney, Member of Parliament for Claresholm, Alberta, said the other day that it was strange how quickly the suffrage arguments had become obsolete. Our forgetting the charm argument amply verifies her statement.

As far as the country woman is concerned, there were her duties at home or her distance from school which, as a child, kept her from acquiring the education the Intellectuals would insist on her possessing.

When she came home from the Minneapolis Suffrage Convention, a while ago, my friend, Mrs. Nellie McClung, told me how one of the speakers had said a cow has been known to keep a woman at home all her life. Not the same cow, mind you, but the same woman.

Only the other day, in the Police Court at Edmonton, a girl of eighteen who had been born in Alberta, and who had always lived in an isolated district, told under oath that, until three months previously, when she was brought in to the Beulah Mission to give birth to her illegitimate child, she had not known anything concerning the Deity, had never seen a Bible, said a prayer, or been in a church or school.

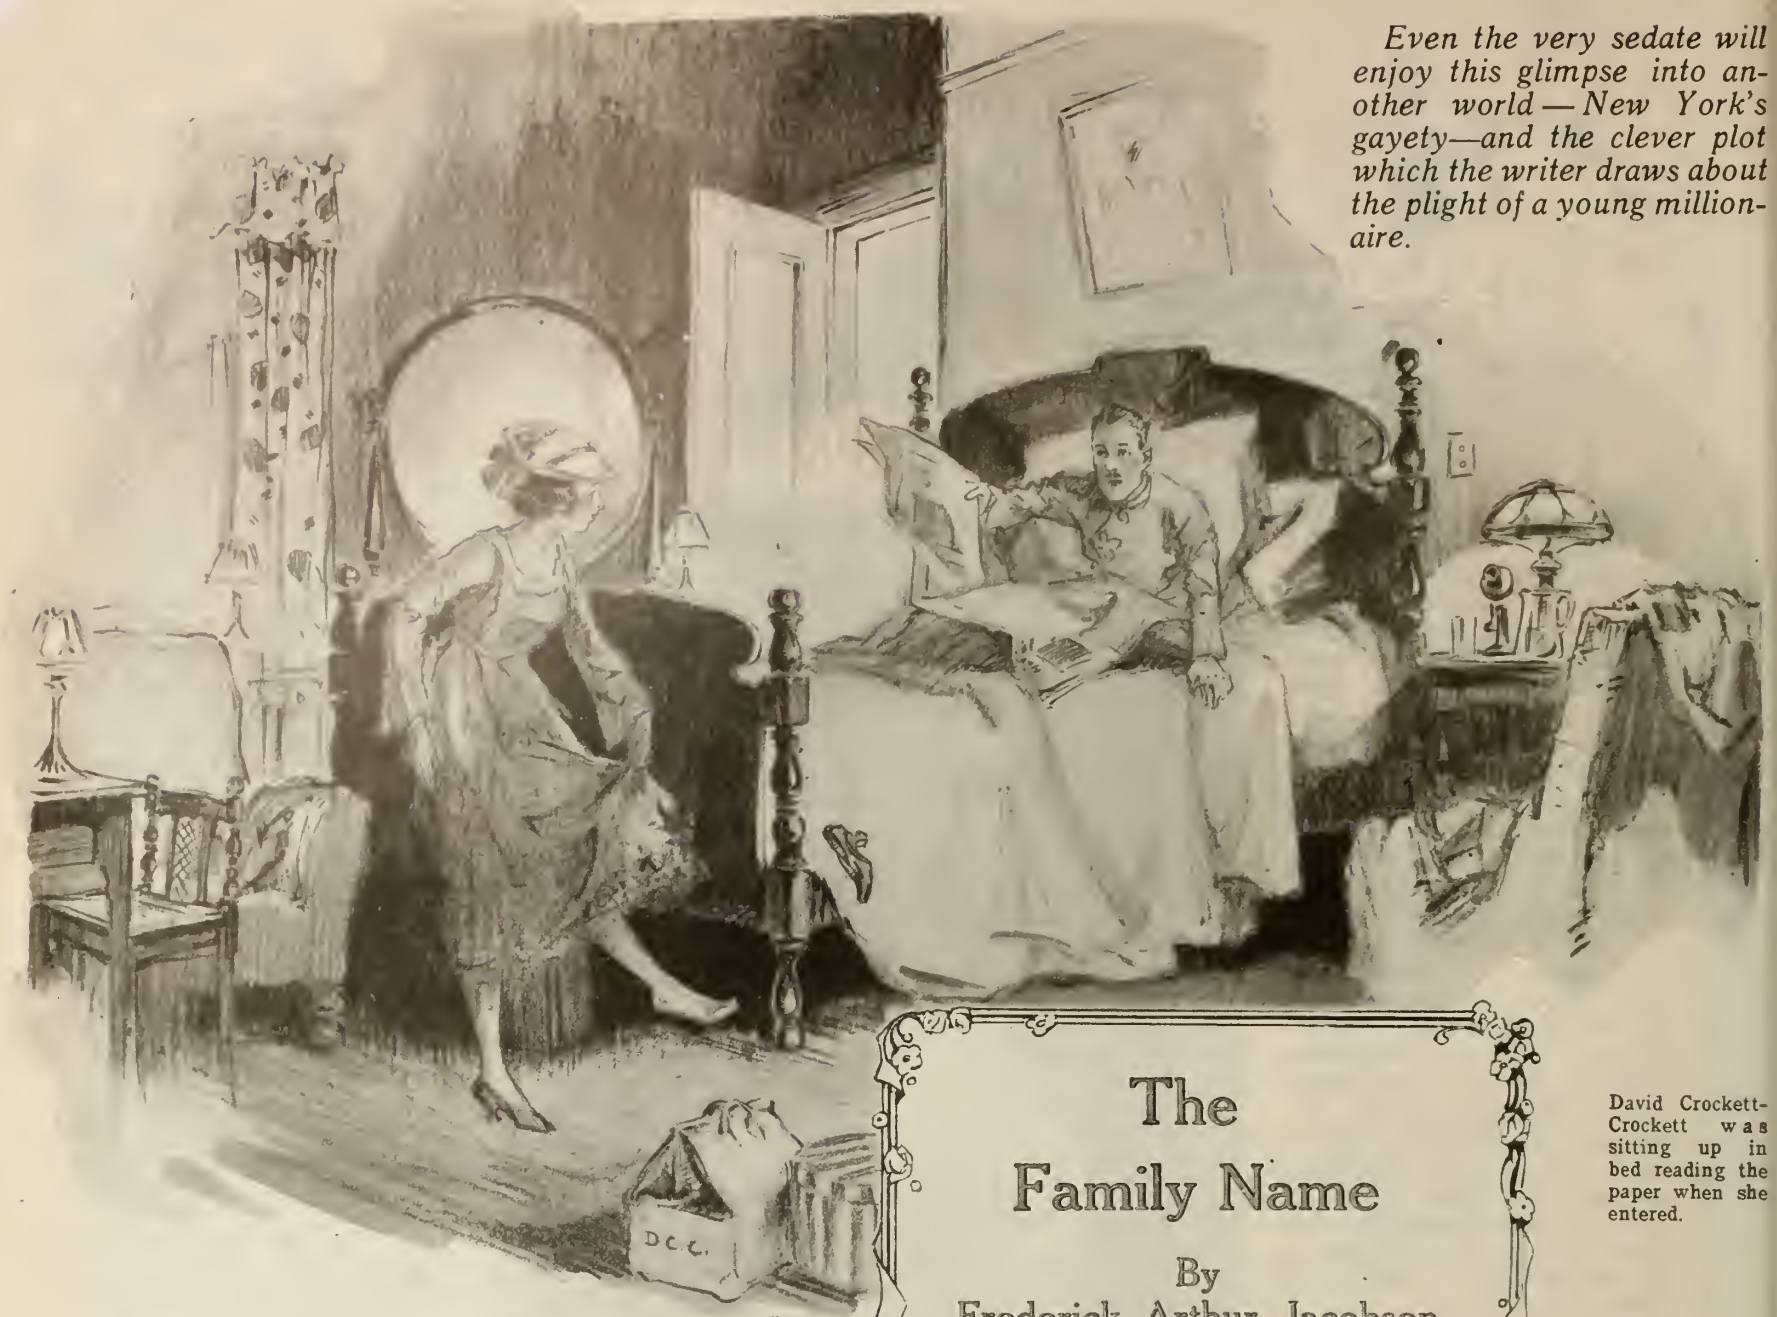
Yes, I am sure she ought to vote. Someone would have to explain the ballot to her and what the names thereon stood for. Maybe, after all, the wrong and soul-hurt we have wrought upon our fellows is to be healed outside of the churches and schools, and even outside what is generally known as "polite society."

This disfranchising men because they didn't get their due chance as lads, isn't playing the game squarely. Besides, as a mere argument it is wholly lacking in humor and imagination. Let us say, rather, that the laboring men should be disfranchised because they are lacking in physical stamina. More male children die than females; there are statistics to prove it.

Neither have they the requisite moral stamina. Why the prisons are full of men, and the gambling resorts are full of them, to say nothing of the livery barns where illicit liquor is sold. Indeed, in the words of Mr. H. Lauder, a Scotsman of highly convivial tendencies, they are "a' fu'," with something in the bottle for the morning.

(CONTINUED ON PAGE 52.)

OUR AIM



To publish a magazine which will be worthy of Canadian womanhood.

To at all times keep both editorial and advertising columns clean, wholesome and truthful.

To be a leader in thought, and a fearless speaker in all vital questions.

To, as far as possible, publish and reproduce the work of Canadians that our readers may become familiar with their own people, their own literature, and their own country, with its wonderful possibilities and glorious history.

Even the very sedate will enjoy this glimpse into another world — New York's gayety—and the clever plot which the writer draws about the plight of a young millionaire.

David Crockett-Crockett was sitting up in bed reading the paper when she entered.

The Family Name

By Frederick Arthur Jacobson

ILLUSTRATED BY E. J. DINSMORE

A LUXURIOUS suite in a very ornate New York hotel.

Silken window curtains swayed gently in a soft summer breeze. The velours furniture was covered by white linen slips and the heavy carpet had been replaced by cool matting. A white-tiled bath-room with glittering shower showed through a partly open door.

The latch clicked and a bell-boy in white duck and brass buttons entered carrying two immense kit-bags embellished with the initials D. C. C.

Behind him came a neatly, but very plainly dressed young woman of about eighteen. She was extremely pretty—what one might call a "small town girl," if it were not for the make-up, so professionally applied as to be practically invisible.

Close behind her came one who, from his resemblance to the kit-bags, might be "D. C. C." He was very English in appearance. Twenty-one or thereabout, but a budding moustache added several years to the general effect, which was pleasing.

He was extremely well-dressed. His straw hat was tilted back at the exact angle prescribed by Mr. Asquith, and his low shoes were plainly marked Eighteen Dollars.

In spite of the heat, he wore a high-cut waistcoat, with a thin platinum chain strung between the upper pockets. The waistcoat alone at this season would have proclaimed him a gentleman.

The bell-hop dropped the bags, laid the door key on the table, straightened two chairs which were a little out of alignment, and stood at attention.

"D. C. C."—or, to be exact, David Crockett-Crockett—took a leisurely survey of the room, swinging his stick on one finger, and finally arrived at the boy.

"That will be all," he said shortly.

The cold-eyed youth smiled maddeningly and shifted the bags a trifle to one side.

"No, wait a moment," continued "D. C. C.," turning to the girl and twisting his moustache nervously. "Will you have a drink of something cold?"

She shook her head.

"Well, get me a pitcher of ice-water."

"Yes, sir," and the boy vanished, beaming.

The girl, who had been standing at the window, turned as the door closed behind him and sank into one of the cool chairs with a sigh of content.

"D. C. C." laid his hat and stick on the bed and paced feverishly up and down the room.

"What next?" queried the girl, after a few moments pause.

"Have you got a quarter left?"

She fished in a diminutive purse, and produced a quarter and a fifty cent piece. He seized the quarter.

"Seventy-five cents, Dave. I——"

A knock at the door interrupted her, and the boy appeared with a tray of frosty, clinking glassware.

"D. C. C." hastily signed the cheque, slipped the quarter to the boy, and pushed him out of the room. "Now, we can talk until some other burglar needs a tip," he remarked, as he rambled around the room. He was a good-looking youth, with a pronounced "only son" expression.

"I wish you hadn't let me get myself into this mess, Dickie," he resumed.

She smiled and patted his hand as he passed her in his walk.

"Let's hear his letter again?"

AFTER some searching through pockets, David produced a folded letter-sheet, and read aloud, waving his glass for emphasis:

David Crockett-Crockett, Esq.,
——— University.

Sir,—For I can no longer call you son after what has occurred—(gee! the dad must have been boiling), this affair is a fitting culmination of your career of brainless escapades.

You have besmirched the name of Crockett-Crockett—(the girl in the chair giggled convulsively and David smiled)—by this insane marriage. I forbid you to enter my presence again, and any letters that you send will be returned unopened.

You are of age, and you have chosen your own road.

J. Randolph Crockett-Crockett.

"Well, that seems to settle it," she remarked, as he put the letter away again. "I gave up my career for you. What are you going to do?"

"Get a job, like a regular married man."

"At what?"

"Oh, anything. Give me a chance to think. Dickie. We'll get on all right. I know a lot of people."

"Well, this is a fine start. This hotel will only charge about nine dollars a second. I thought you had some money when we came down. Can't you make a touch somewhere?"

"Touch!" David shuddered slightly. "I'm borrowed up to the hilt. If dad had only been loose enough to slip me a hundred or so. He moved so fast I didn't have time to pack a trunk. 'Out you go,' he said, 'and out you stay. Never another penny from me.' "

THE girl laughed. "Well, Davy, we are both stung. I thought I was marrying some money, and I don't know what you thought."

David sat down heavily on the edge of the bed.

"What on earth did you come to the St. Gorgeous for?"

"Because I haven't any money, and the only place in the world where you can stay without money is a very swell hotel."

"What about your mother?"

"Mother? She's worse on the family bug than dad is. He *will* mix a little sometimes, but mother! Honest to goodness, she never saw *anyone* below the neck. She wouldn't bow to me now if we met on the street. If I can stall along a little while on the tips here, I can dig up a job *somewhere*. Where is your trunk?"

The girl twirled her new wedding ring for a moment before she answered: "It's in hock with the company. Stein let me draw a week in advance last Saturday, and when I left he held my trunk. I couldn't do anything. They jumped to Scranton last night. I might be able to get another job, but it's doubtful in the summer."

David held up his hand in protest. "Not if I can help it," he said. "I thought dad would give me a chance to introduce you, but the minute he heard the word 'actress' he blew clean out the window. Something will turn up; something always turns up."

She made a weird sign with her fingers crossed.

"Yes it does—not. Do you realize, dear boy, that I haven't a stitch of clothing except this suit I wore from the theatre? I haven't even a toothbrush. I have seen some funny sights, but this is new and original—a busted millionaire!"

The busted millionaire sprang to his feet, grabbed his hat and started for the door.

"You take a bath and get fixed up as well as you can," he said. "I'll be back in a little while."

AT the door he stopped suddenly and came back to her side. He bent over and kissed her. "You're a good scout, Dickie. Stick around a while and we will work it out all right. I'm going to hock my watch and buy an Ingersoll. I

(CONTINUED ON PAGE 85.)

The Whole Outdoors For A Stage

Rural Canada Needs More Play

A lesson from Mister Cupid, from the pageant "Diana" dance, with an outdoor stage.

Scenes from "The Taming of the Shrew" and "Much Ado About Nothing."

Every Canadian town and village can boast its woods or some specially attractive grounds, so let us "get up" a Shakespeare play from which we will profit educationally and the entire community will be united in a social way.

Forget Dull Care and Read This Humorous Summer Story.

Forty Love

By Leslie Horner

Illustrated by
E. J. Dinsmore

But for once Dorine paid no attention to him. She had eyes only for me.

SEATED at my desk I was engrossed in my morning's mail when I heard a furtive tap at the door.

Much annoyed, I called rather sharply, "Who's there?"

The door opened and Mrs. Kornigan's round red face appeared in the doorway. Mrs. Kornigan, I might remark, is my housekeeper and has special orders to leave me entirely alone during the important hour when I attend to my correspondence.

Another reason why I did not care to see her so soon after breakfast was that she was both awkward and ugly, and as I am exceedingly sensitive to ugliness in any form, the sight of her this time really interfered with my digestion.

I was therefore doubly annoyed to see her now. She probably perceived this for she took a step backward, laying her hand irresolutely on the door handle. If there is anything I cannot stand it is indecision, so I said very shortly:

"Speak up, Mrs. Kornigan; you know you are keeping me waiting."

Thus enjoined, Mrs. Kornigan cleared her throat.

"I'm sorry, Sir," she began, "but this is important. I have a friend who needs me—in fact who cannot do without me any longer, so I have come to give you a week's notice."

To say that this announcement startled me is to put it very mildly. I sprang from my seat.

"Good Heavens, Mrs. Kornigan!" I gasped, "if you go away what's going to become of me?"

She hesitated a moment, getting very red in the face, then, twisting a corner of her apron in an embarrassed sort of way, she began:

"Well, Sir, if you'll excuse the liberty, I was just going to make a suggestion."

She hesitated, still twisting the apron, but I remained silent watching her with knitted brows. I could form no idea as to her "suggestion."

"What I was going to say, Sir, was, why don't you get married? What you need" she added, encouraged by my silence, "is a wife to look after you—one who understands all your little needs just as I do."

For a moment I stood looking at her in perplexity

"Mrs. Kornigan," I said at last, "if you will stay I will double your salary. As for your friend, she cannot need you half as badly as I do."

But the woman only shook her head.

"Thank you, Sir, but I can't do it," she replied, "I have given my word and I can't go back on it."

HELPLESSLY I sank into my chair. I was faced now by a very real calamity.

Although having reached my fortieth year, I was not, as you would suppose, in the prime of manly vigor. I was indeed a martyr to dyspepsia, and suffered in many ways quite incomprehensible to the ordinary thick-skinned individual.

This was, of course, the chief reason why I needed a thoroughly dependable housekeeper like Mrs. Kornigan. And now Mrs. Kornigan would soon be a thing of the past. Well—why not take her advice and seek a wife? The more I considered this, the more I liked the idea. My mail remained neglected as I sat musing on my future.

Truly a clever, thoughtful, attentive wife would add greatly to my comfort. In many ways, such as cooking my meals, airing my bedding and mending my clothes she could be of great use to me—greater in some respects even than Mrs. Kornigan, for she could write my letters and take dictation. And while I am on this subject I might as well mention that I am a literary man and write for many hours a day on health by right living and kindred subjects. But writing tires me; I felt I should be glad to hand it over to someone else. A typewriter, too, would be very convenient, but I could not stand the sound of the clicking; I am so highly organized that a noise of the kind is most distressing. My wife could, however, use the typewriter in her own room.

Yes; there were indeed many ways in which a wife would be most acceptable to me. But then the question arose: whom would I choose? I did not expect nor did I wish, to find an intellectual equal, even if such a thing were possible. The type of woman who is forever usurping a man's place in any branch of life has always been most distasteful to me. I may be old fashioned, but my wife must be gentle, docile and sympathetic. She must make it the object of her life to minister to my wants and contribute to my comfort in ways which only a woman understands.

SHE must also have means, for I have not enough for two—conveniently—and most emphatically she must be good looking; my artistic eye could never bear the constant sight of a homely face or dumpy figure. In Mrs. Kornigan's case this is the one fly in the amber, but then, of course, a housekeeper is very different from a wife. For myself, I am undoubtedly good looking and my worst enemy could not call me dumpy.

I am indeed very tall and slender, as you can imagine when I say that, although measuring over six feet in height, I weigh only a hundred and thirty four pounds. Of course, this is not enough for health, but, as against that, bulk of any kind is so gross, material and commonplace that I cannot wish I weighed more.

My head is small and slants upward from the brow to the crown in what I consider quite a remarkable way. A disagreeable person told me once that this was the sign of the born egotist. Such absurdity! But I shall leave the reader to draw his own conclusions. My complexion is dark and, I must confess not very good, but that is, of course, a matter of health.

My nose is large which gives much character, and, (contrast is always desirable,) my chin tapers off to a very small and slender point. No large, aggressive, bulky chin could belong to a person of my hypersensitive temperament.

My eyes are large and prominent. This displays a very highly developed literary faculty. More than one jealous person has called them goggle eyes, but we all know the little saying about sour grapes.

I consider the way one stands and sits as great evidence of one's artistic qualities, or lack of them. For myself, I know I am always graceful. Being so tall and slender, this special quality is possible to me, whereas in the case of a short, podgy person it would be hopeless.

I am very fond of standing—at the same time leaning nonchalantly against the wall with an air of absolute relaxation and abandonment—one leg twined round the other, my hands usually behind my head. I know this attitude is very effective for I have frequently caught people watching me closely—even vulgarly staring.

BUT I must get on with my story. Now that you know something of my appearance and mental characteristics, you will realize that I would make a very desirable husband. Still I knew in this matter of choosing a wife I must be careful. It would be a terrible tragedy were I to select the wrong one.

To be sure that I was not leaving any out—to be sure, in fact, that I was giving each one an equal chance, I wrote down the names of all the young ladies of my acquaintance and then speedily began to weed them out. Most of them were impossible. They were too frivolous, too extravagant, and many of them too homely in appearance.

At last my list was narrowed down to two; I hesitated over these for several minutes. They both seemed equally desirable until I remembered that one was in somewhat poor circumstances; that of necessity debarred her at once.

I now had no alternative. The remaining young lady, Miss Dorine Crabtree, was a daughter of Simon Crabtree, who was a member of the same research society as myself. He was also manager of the Perfecto Whole Wheat Food Company, a position gained entirely through my influence, for I am a silent partner in the concern.

Dorine was, I thought, about twenty-five, and physically was certainly well favored. I knew she cooked well for I had tasted samples of her culinary art—judiciously—for I am very wary of any other cookery than Mrs. Kornigan's. She was also an excellent housekeeper.

NOW that I had made my choice, the question arose, when and how should I begin? There was certainly nothing to be gained by waiting. My best plan would probably be to ring up Miss Crabtree and ask if I could call. Knowing her father so well, this would be a very natural thing to do; also I had met Miss Crabtree several times. Anyway that is what the youth of the present day are accustomed to do, and if they could do it, why not I?

It was already half past seven so I went at once to the telephone. Her father answered my ring. He spoke very pleasantly, telling me that Dorine expected to be at home that evening and would be delighted to see me. So far, so good. Hanging up the receiver I started for the house.

As I drew near the gate I heard a shout of laughter and a girl's voice, which I correctly inferred to be Dorine's.

"Forty, love!" she called, "look out, Nick, or I'll beat you."

Entering the grounds I saw Dorine and a moon-faced youth busily engaged in a game of tennis. I have always thought tennis a very foolish game—so much work for so little result. But then, when we come to consider the class of brain possessed by the average young person, it is not surprising that they should seek diversion in these foolish ways.

Purposely I did not look in Dorine's direction, but walked straight up to the door. I was not

going to run the chance of being called out to sit on the damp grass to watch them knocking a silly ball from one to the other. No; when I do Dorine the honor of calling upon her, she must show her appreciation by entertaining me in the drawing room in a manner due to my age and dignity.

I had been waiting only a few minutes when Mr. Crabtree entered the room. He greeted me effusively.

"What! Waiting for Dorine?" he enquired. "she's out on the lawn, I'll tell her to come at once."

HE left the room hurriedly, and a moment later Dorine entered alone, swinging a tennis racket and with a very becoming flush on her cheeks.

"I heard you calling 'forty love' as I came in. May I ask what was your object in coupling together the words 'forty' and 'love'?"

As I said this I gave her a pleasant smile. I wanted her to find me a very agreeable companion.

"Oh, that," answered Dorine. "It's a term in tennis; it means forty to nothing."

"Nothing!" I exclaimed in surprise, "what a strange word to choose for expressing nothing. I hope that is not your interpretation of the word 'love.'"

Dorine laughed slightly.

"Oh, I don't know," she said indifferently. "I haven't thought about it."

She rose and walked to the other end of the room where she laid down her tennis racket. A queer thing to do. Did she always keep it in the drawing room? I wondered.

As she came back she said:

"I hear you are distinguishing yourself as an author, Mr. Morgan. Father was telling me you have been writing some articles for that health magazine he takes."

Much gratified I answered in the affirmative. We were just beginning what promised to be a very interesting conversation, dealing as it did with different aspects of modern hygiene, when I heard a most horrible sound close to the door.

INSTINCTIVELY I sprang to my feet and, with the quick forethought of a trained mind, I glanced at the open window, noting that, if necessary, I could leap from it to the ground outside. And it was just as well I looked, for, in another moment the door was pushed open and there entered the most horrible specimen of a dog that my eyes ever lighted upon.

A huge hound with slavering jaws and bloodshot eyes, it would have been enough to strike terror into the heart of a real warrior, and I lay claim to no war-like qualities.

Dorine, however, was quite unperturbed. She called the brute to her, stroked his horrible head and called him pet names. I meantime remained standing at a safe distance and close to the window.

On seeing my very natural distrust of the beast Dorine only laughed.

"Come and sit down. Mr. Morgan," she said, "Ponto is quite harmless—it is only his appearance that is against him."

Encouraged by these words and not wishing Dorine to think me afraid, I came back to my seat, and was preparing to sink gracefully into it, when Ponto, evidently seeing my dislike and resenting it, uttered a low growl, which I can compare to nothing else than a distant peal of thunder. He also opened his horrible dripping mouth and licked his chops—in anticipation of my life blood. I knew. This decided me. Life was sweet and I would take no more chances. With as much dignity as I could command under the circumstances. I extended my hand.

"I fear I must be going, Miss Dorine," I said firmly, "I have some letters to write."

"Oh, must you go? I'm so sorry," she said sweetly, but here she was interrupted by her father who entered dressed for the street.

"Make yourself at home, Mr. Morgan," he said hospitably. "Sorry I can't stay, but no doubt Dorine will entertain you better than I. What! Going already?" for I was slowly making my way toward the door, "Nonsense man! Why you've only just come. Wait till I get back and we'll have a chat over that new book of Mott's. Come, Ponto!"

THE dog, who had been fawning at his master's side, leaped after him with a bound and they both disappeared.

With a sigh of relief I sank back upon the cushions. Now that that unholy beast was gone I could stay awhile—and stay I certainly must if I would succeed in my plan.

After this we had a decidedly interesting evening. I talked to Dorine for nearly two hours telling her all about my hobby, the importance of right eating and living, and she listened with great attention.

When supper time came, she told me that she was not going to insult my intelligence by offering me such foolish and indigestible things as lobster salad, but that she had ordered the maid to bring me a bowl of hot bread and milk, which she was sure I would appreciate both for its healthful and its soporific qualities.

DORINE, I could see, was a thoroughly intelligent girl, and I soon began to flatter myself on my good judgment in selecting her from all the other girls of the town.

I felt that, short as our acquaintance had been, the time was ripe for a formal avowal, and now that this time had really come I must own I felt a little nervous.

My mind was contantly occupied with the thought, where should I do it? What would be the most suitable time and place? The first thing was to get her alone, where we would be free from interruption, and where, after she had accepted me, we would be free to—well—to do what is usually considered the proper thing at such a time.

After some consideration I decided to ask her to spend an afternoon with me in the country. Here we could find many secluded nooks where we could talk, or—yes, I must say it—*kiss* to our hearts' content.

I made this proposal to her over the telephone (naturally I did not mention the kissing) and she accepted. In very good spirits I returned to my desk, secure in the knowledge that in a few hours everything would be settled.

The next day I arrived at Dorine's punctually. While waiting in the drawing room I heard the deep baying of a hound—that brute, Ponto, of course. Springing to my feet, I seized a marble statuette off the table. If he flew at me I should at least fight for my life. But he did not come and presently I heard Dorine's light step on the stairs.

When she entered the room I had put back the statuette and, leaning gracefully against the mantelpiece, had assumed an air of easy nonchalance. I was not going to let her think that I feared anything—least of all her dog. Once we were married, however, that dog should promptly be done away with.

I was afraid, though, that she might want to take the beast with her to-day, but there was no sign of him, and presently I again heard his deep baying behind a closed door.

"Poor Ponto wants to come so much," she said smiling, "but I told him that he must wait a while until you come to know him better. Some day you will love him just as I do."

Yes, I would; when he was dead.

After a walk of half a block we took the street car. I had not ordered a taxi for I don't approve of motors. They go too fast and bump me about in a way that is most upsetting to my digestion; besides I consider them very extravagant.

After an hour's ride, including two transfers, we reached our destination, a very pretty spot at the foot of a hill.

As it was a little early for tea, we decided to take a walk. We talked on very interesting topics—chiefly regarding the edible brands of fungus, commonly called mushrooms, and the proper way in which to serve these very palatable articles of diet.

Regarding the main object of this trip I kept silent. I had decided to wait until after tea as I have heard that a meal is apt to put people in a better frame of mind—always providing, of course, that they are not, like myself, subject to indigestion.

Dorine was very anxious to light a fire and make some coffee, the materials for which she had brought with her. Although decidedly against this, for I don't drink coffee myself, I nevertheless did not like to cross her—at least not just now—too much hung in the balance.

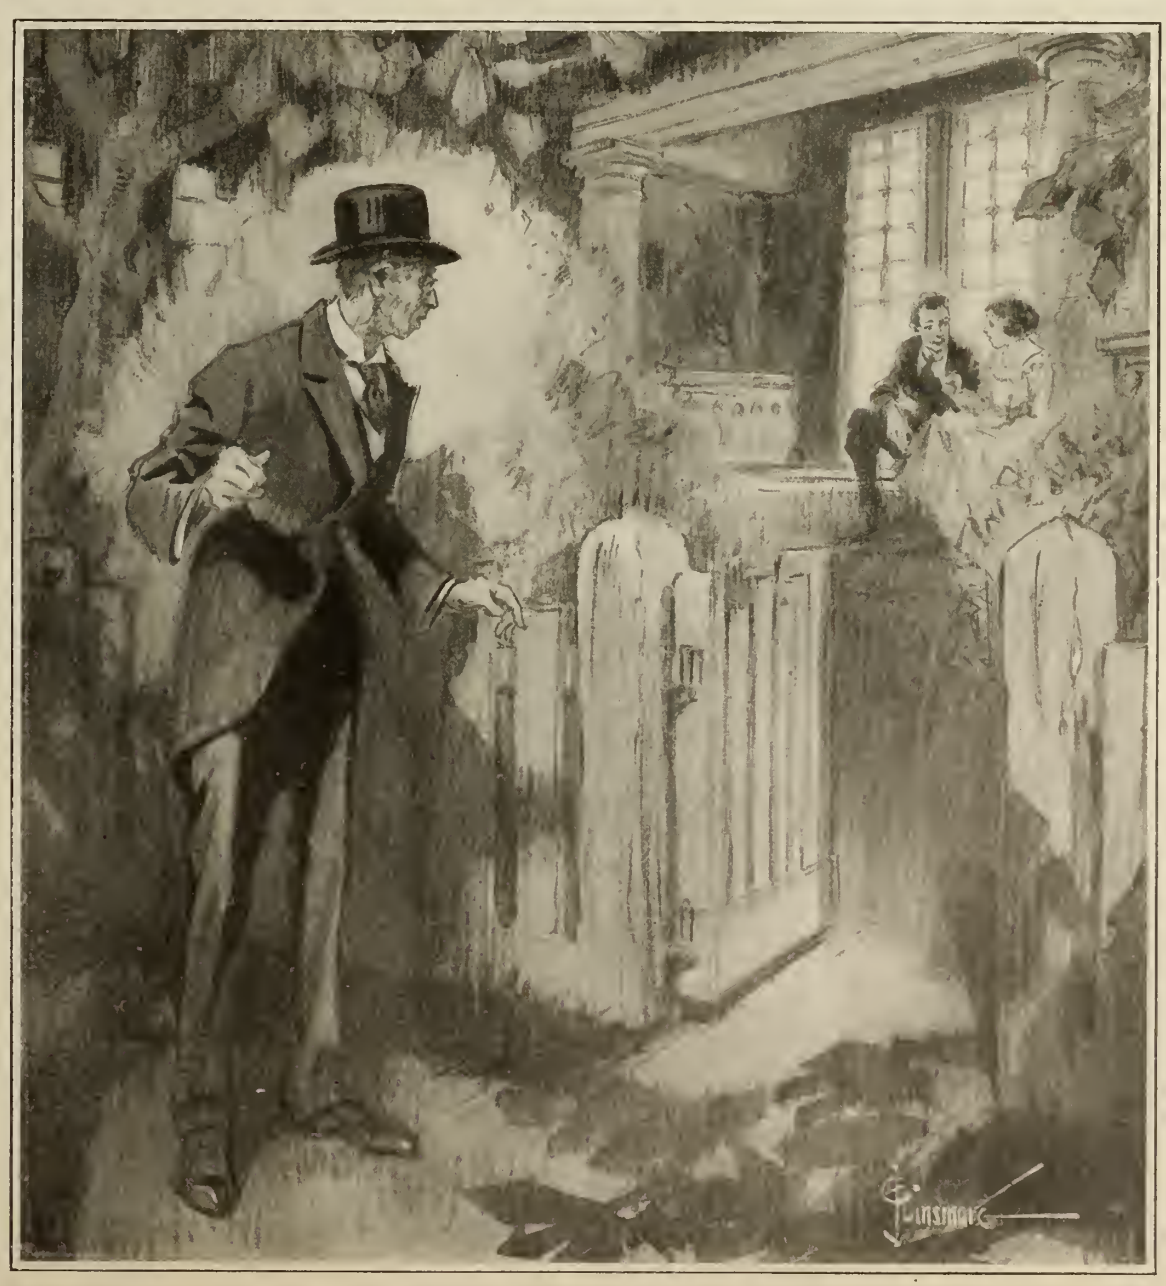
It was not that I had any doubt of her accepting me; of course, she would never get such a chance again. But I was pretty sure she did not know the pearl of great price she was being offered, and, in ignorance of its real value, she *might* cast it aside in mistake for a common bead.

OUR fire being now ready to light, the next thing to do was to get water. A short distance back I had noticed a little stream, and I volunteered to go and get a pailful while Dorine picked some wild raspberries which grew on the brow of the hill close by. These, she said would be nice for dessert.

Of course, all this was a great nuisance; I had not calculated on it. But I had always heard that, during courtship girls must be humored; things would, of course, be very different afterward.

I had just got the water and was on my way back when behind me I heard a horribly familiar sound — the deep baying of a dog. It was Ponto. He had seen me, too, and was making for me in great leaps and bounds. I knew it was Ponto's desire in life to feel my leg between his teeth, and I cannot be blamed for wishing to keep my leg to myself.

There was not a moment to be lost. With a cry of horror I dropped the pail and dashed toward Dorine.



How this dreadful race would have ended, I cannot say, for just at that moment came a scream from Dorine's direction. Good Heavens! Was there a dog after her too?

For an instant I stopped and swerved. Was I going to find myself between two fires? But this was no time for hesitation. Ponto gained on me instantly and I saw his black muzzle almost touching my leg.

In dire extremities we are given superhuman powers, and I ran as I never ran before and never will again, for Ponto is dead now. My one chance of rescue lay with Dorine.

"Dorine! Dorine!" I gasped between my panting breaths. Then, looking up, I saw her. She was

In the light of the street lamp I distinctly saw the moon-faced youth.

Amateur Nimrods Amuck in Temagami

By Harold C. Lowrey

ILLUSTRATED BY P. C. SHEPPARD

A fishing yarn for which we can vouch

THE only way to tell this story is to start at the beginning, for in reality the genesis of this fishing trip lies in the contemptuous grunt of a well-known figure on the docks at Queenston. It happened some years ago, just what year is of no consequence, that the writer and his pal betook themselves to Queenston in quest of fish. Our conversation on the way turned on the delicate shading of brown that was necessary before a fish was properly fried. By the time we got to the river our mouths were watering for "fried fish" and our pride in our judgment was just a little bit piqued. The only way to settle the score was to catch some fish and fry them. We went determinedly up to the "boat-house" where all the faithful were supplied with "poles and minnies," only to be met with the stern declaration: "No use yuh fishing, you couldn't catch a cold; hain't bin no fish bitin' fer a month." The wise boatman of the Niagara River had said there were no fish to be caught, but we had to have a fish, and would not be turned aside by such an observation—at least, not until we had made a try. So we demanded our required "poles and minnies," and proceeded to a likely looking spot, followed by our outfitter.

As we passed along the dock, a crony chirped out "Goin' fishin'!" and our adviser, thinking himself addressed and jealous of his own reputation as a fisherman, contemptuously replied: "Nuh! I ain't. I'm jest sellin' bait to 'em what thinks they's fishermen"—and then, in a stage whisper, he added, "there ain't no fish runnin'; let's kid 'em!"

Did they "kid" us? They did not, for we had no more than dropped in our lines than we had fish—nice, big, fat ones. In half an hour we had caught over three dozen nice perch, and were so jostled by our erstwhile "kidders" that we departed to prove our judgment as to the proper shade of brown. In justice, I must tell you that our boatman was kind enough to forget about the rental, though he did not offer to share his profits on the business we had created for him. We had fish and he had business, so we left, everybody satisfied. That was the beginning.

It was there that we became infected with that contagious fever peculiarly rampant in the balmy days of spring, known as "fishing fever." In the seasons that followed we fell more and more under its spell till we were annually searching railroad folders for the luring tales entitled "Where Fishing Abounds," etc., etc. It was mostly, etc., etc., for us for some time, except perhaps that the abbreviation should have read s$s., s$s.—there are so many pretty catalogues, doncherknow. Last year was no different than those previous up till the time of this particular narrative. Our ears began to long for the drone of a spinning reel and our fingers to itch for the "pull" of a "spinner" just as soon as the sun began to shine on both sides of the fence.

SO when the boss said we might have a couple of weeks off we rushed for the railway folders. We looked through them all, but there were no new ones. It mattered little; we had fished most of the places "Where Fish Abound" and our luck had been the same. This time we thought we'd try a new trick; we'd just go to the place where they "talked biggest." We had a good vacation reading all those descriptions again, but, finally Temagami won the last heat from Nipigon (Nipigon took too much cold iron, boys), and we were off to "Temagami—the unspoiled country." "Well, we will have the trip, anyway," was our comment as we turned the key in the door, gathered up our rods, tackle boxes, bags and suitcases, and hopped into the taxi.

We hit the iron trail for the North, and before we were awake the glistening blue of the northern lakes called to us from behind the fleeing trees. We made camp at noon. The twenty-mile ride in the motor launch up the "North-east Arm" from Temagami Station was indeed a wonderful trip. Islands, green to the very water's edge, sprinkled the lake so thickly only those familiar with the course could have piloted us in. Well, so far Temagami was better than the guide book chap had pictured it. We felt good over that till someone said he guessed the feller who wrote the folder hadn't been up there, or else he'd been writing war news and had used up all his adjectives. Anyway, we had an appetite. That first meal, by the way, is a sort of test; the proprietor of the camp sticks around handy, sizing up the eating powers of the new victims so that he can fix a rate for board that will show him a profit. We got off easy because a party were going out fishing and had to be given the right kind of send-off. It was tough to have to eat when fish were waiting to be caught—at least that is the way the folder read. The dinner over, a boat was secured, tackle unpacked, worms petted up to a furry fineness, and away we went in search of the big fish that were "just teeming in Temagami." I rowed while my pal operated a brand new copper wire reel (we were told it was the correct thing to use in Temagami). It was a dandy reel, all nickel and shiny, had a brake on it that worked all right when you remembered to work it, and when you didn't you worked to straighten out a "backlashed" (that's a real angler's expression) line. We were proud of that reel, with its four hundred feet of "23" copper wire; it would catch a lot of big fish. The spinner to be used was a difficult matter to decide; would it be an "otter tail," a "brass spoon," a "wiggler," a "wobbler," or a fancy "pork rind"? At last my pal (she's my wife, you know) says: "Seein' you only brought out a 'pearl wobbler,' we'll have to use that; but I know it won't be as good as an 'otter tail.'" It was no use, a "pearl wobbler" it had to be. Unfortunately, the line was nearly all reeled out before my pal remembered that she had forgotten to christen it for luck, but "it didn't matter, anyway, a pearl wobbler wouldn't catch anything."

We rowed around a pretty little island and struck out for the blue streak where the water was deep; we were after "big" fish, the kind that can't navigate in shallow places. I was just getting warmed up to my job when a shout came from the rear seat. "I just knew something would go wrong. Back up! I'm caught on bottom. That's your old wobbler for you!" Obediently I acquiesced. My pal reeled and reeled and reeled till I got tired of being idle, and commenced to row once more. The line straightened out at a delightful angle. It trembled. It quivered. It acted peculiar. I didn't say anything, but just put a little more muscle into my strokes. The way that line wiggled fascinated me, but I knew better than to hope—I'd thought that thought too many times in the years previous, only to be fooled by a water-soaked twig. It wasn't long before my pal got hep to the tango that wire was doing. Her inexperienced eye watched it for a second; her finger slid down the wire, pulling it taut across the end to get "the feel." It was enough. With a glad shout, "Hurrah! We've got a fish," my pal spun that reel so fast that when the fish's head cut water he shot straight into the boat. It was a trout—a beautiful silver salmon trout—our first Temagami trout!

THAT settled it. The fellow who wrote the folder knew what he was talking about. Hadn't we caught a fish—a big trout—as soon as our line was down? We were in the fisherman's paradise, all right. Well, we were an hour late for supper that night, but our one fish was big enough to draw an admiring crowd when we got in. (Most of the bunch arrived when we did, and hadn't gone fishing as yet.) We put it over all right for nearly an hour, till a Hamilton lady came in with a few. They were in a canoe, and had a guide. To be polite, we all asked "How many did you get, Tom?" "Only five," was the calm answer, tinctured liberally with the suggestive inflection which told quicker than words that "five" was a very poor catch "for Temagami." But, oh! what fish! When we saw the first one come slipping over the gunnel our little fish disappeared very mysteriously and suddenly. We had plenty of time to slide it around the cookhouse door while the gang were getting out the scales to "weigh in"—(by the way, this is one ordeal you cannot avoid)—the new fish. That first fish tipped an even sixteen pounds. Now, do you wonder why the cook had mine cleaned for breakfast? The other four went twelve, ten, eight and six, just to prove conclusively for the guide's sake, that you can sort out the sizes you want. If you want a bigger one than you bring in, slip the guide something; he can tell them nifty, and always gets away with it, too. That's what puzzles me.

We had a great night that first night under canvas. The fish we caught were all over "sixteen pounds," in fact, we had such good luck that it was a real relief to wake up and find it was Sunday; but, of course, there was the other side, it gave us plenty of time to tell the camp about our catch. We always had the Hamiltonians worsted until they, with ill-concealed pride (they should

"Stay with me," said Isobel, when she would have moved away.

The Bride of Chilkoot Landing

By Ethel Kirk Grayson

ILLUSTRATED BY E. J. DINSMORE

Who Found that There was Much Knowledge to be Gained Outside of Books

WHERE the Hootalinkwa slips in tranquil ease to join the gray-blue waters of the Yukon, and the hills rise frowningly above the mighty valleys, there, on a curving foreland studded with willow and satiny birch, deep in the shadow of the loftier cedars and the Sitka spruce, nestled the little mining-camp of Chilkoot Landing, a motley gathering of men—a few of them independent prospectors, others in the employ of a company. The actual dredging operations were carried on at some distance from the camp itself, one or two miles away, and in a southerly direction; nor were they upon an extensive scale. Nevertheless, it was a bit of territory that merited watching, the learned geologists had said, and so the heads of a great corporation had seen fit to place its servitors there, including a camp "boss," a skilled engineer, and a doctor in an official capacity.

Then, on a certain memorable afternoon, a tremor of excitement prevailed. The "Princess Mary" en route to Dawson City, had left two notable passengers at Antler Creek, from which point they had journeyed up the Hootalinkwa to Chilkoot, creating that friendly stir of interest among the inhabitants of the camp. It was Irving, the young physician, just returned from a trip to the "outside," bringing back with him, to the extreme delight of everybody it would seem, the newest edition in brides. After the first keen glance the engineer and the boss had unanimously decided that she was an "edition de luxe." She was wearing a dark blue taffeta suit, with a skirt short enough to display the fine silk web of the stocking that matched it in color, and decidedly Parisian boots. Her hat was broad and black, with a classic simplicity of line and a minimum of trimming. Her chin had an upward tilt, and against the faint pink in her cheeks long jet ear-rings were dangling coquettishly.

"Some girl!" the boss had ejaculated, "but she's shod for the city pavement, not for the gravel."

"She's probably got a heavier pair in her trunk," volunteered the other.

"Trunk, man! Why, she's got five trunks, and a packing-box and club bag into the bargain."

"Well, she'll need them. You can't bring too much stuff into a place like this. Anything to divert the mind."

"I suppose you're right. I'd hate awfully to run the risk of bringing a woman into these parts myself. It's different with Nettie Jackson, now—but a girl accustomed to society is apt to constitute a tougher proposition."

"I quite agree with you."

MEANWHILE, in the little brown cabin that peeped so artfully from a cluster of sombre green woods, crowning a pretty knoll as if in pardonable pride, and retreating daintily from the lower levels of sand and underbrush, Isobel Irving was becoming rapidly acquainted with her new home.

"Oh, Grant," she exclaimed with a laugh which bore a perilous resemblance to a sigh, "you should have told me, dear. Whatever am I to do with all those flimsy dresses? That, lovely mauve and white striped voile! And the stacks and stacks of French embroidery!"

"Now don't lose heart already," said the man. His tone was jesting, but there was an ill-concealed anxiety in his face. "Have you noticed the beautiful flowers I've been growing for you? Did you ever see such dahlias in your life? They will reach the top of the window in another couple of weeks."

"Yes, they are really very pretty. I believe I'll just pick those two crimson beauties and put them in that quaint blue jar Aunt Edna gave us. It's in the bottom of the largest trunk. Do you mind awfully, Grant?"

"Why, of course not. Haven't we been planning to unpack immediately?"

He took off his coat and set to work with energy. His wife took a critical survey of her surroundings, her brows knitted delicately, her lips very firmly closed. "There's not very much to work on," she murmured, "only one room—of course, I have those chintz curtains to divide it off—a stove and a bed, three chairs and a table. Help!"

Montreal A City of Domes and Dreams

By Katherine Hale

MONTREAL is a city of domes. its form in space, the "astral" body of it, is circular. Some cities seem to run on a straight, bright line. Toronto is a place like that, and so is Winnipeg. The city architects may say that I am quite wrong and that Toronto and Winnipeg are altogether on the square. But that is not the feel of it. In either of these places you get the sensation of a runner making for a goal. Things are straight-line; streets, shops, parks, people—there are no unexpected places. The atmosphere is clear cut.

But Montreal is globular and prismatic, and vastly attractive. Her spirit is cloudy rather than glowing, and she wears purple best of any color, though she began in a blaze of light.

I never come up the river from the sea, or go down the river from Toronto and so approach Montreal, without the beauty and the prevalence of her cathedral domes coming to me like the sound of a bell. When the air is misty and a fog is rising from the river, the sound is faint and mysterious. If the sun glows you catch a golden note, and then another, and another, and in spite of myriads of roof-tops, and the unfolding of a great city laid terrace-like at the foot of Mount Royal, you know that Montreal is a Round.

Remember how she began in a blaze of light. Yellow was her natal color, and it was on a May morning, a little less than three hundred years ago that Maisonneuve and his band of religious enthusiasts landed and on the very spot where they tell, alas for romance, that the Customs now stands, the saintly Dumont planted the grain of mustard seed which it was his belief was "destined to overshadow the land." Born of the Church, sprung to life out of the purely spiritual zeal—a sword-like French zeal at that—no wonder that Montreal ascends dome-like, and that her passion is purple.

The Courtyard.

THE germ of the city came out of religion, but, as she grew, her commanding situation drew commerce towards her. And from first to last Trade has always meant fighting.

She was on the outer confines of civilization and at the door of the Iroquois country. Hence the fur trade, and with it the necessity for a military garrison. Indians, priests, military men, these in their garish or sombre dress held the streets of the town at first. In another hundred years though the priests and the soldiers were both to be seen, the Indians were beginning to disappear and the fur trader was less crafty and savage. After a while he too disappeared in

Old Towers.

"A great city laid terrace-like at the foot of Mount Royal."

the conventional ilfe of a modern city.

Then we must take into account the French element which cannot be ignored, and apart from religious, political and business relationships the immense influence of the French element, or almost any other foreign element, in the making of beautiful cities, is most important. It is a well known fact that there is no Canadian city, and only one other in America, that can compare in picturesqueness with Quebec, and no seaport on the continent of more dignity and beauty than Montreal. In both cases the attraction is largely composed of that dual element of stolidity and progression allied to tradition and romance which makes the English-French combination.

I have come in and gone out of Montreal by sea and land. In winter and in summer I have known her in those vivid glimpses by which one seems to get the soul of a place more keenly than in longer sojourns. If friendship is a growth, love is intuition. And it is love even more than friendship that I feel for this strong city that holds above her head the golden cross.

If she is beautiful as you come in by the river, and she flashes upon your sight for the first time, how much more beautiful as you enter by the sea-way after long months and perhaps years abroad. Think what that first returning glimpse means in this very summer month to the soldiers coming home again; they who have wandered and endured, who have drunk so deep of life's oldest alchemy which is Pain. This is the hour when to the new they seem to bring the eternity of the old; children of a great future, returning into To-day, past her whose domes are big with promise, whose spires are still symbols of upspringing life.

A whole book might be written on the subject of the various approaches to Montreal. One may come from sea by river, or from lakes by river, but perhaps the most historic interest lies in the route by land from Quebec to Montreal over any of several ways, across narrow fields facing on the river.

The La Salle House.

A WELL known southern writer, Peter J. Hamilton, has given a most unique and interesting comparison of those ancient cities, Montreal, Que., and Mobile, Ala. He says:

"Our old St. Louis tract and Mon Louis Island were incipient manors. The end of the French rule at Mobile prevented the development of the seigneurial aspects, although even the English and Spanish continued in the Orange Grove, Favre and other tracts, the property features of the system. Lower Montreal is French, the streets narrow and recalling all the saints; and from there Bienville brought some names to Mobile and New Orleans. Our St. Emanuel was St. Charles, like Montreal's, named for Bienville's father's patron saint. Dauphin is found here at Quebec.

"This father, Charles Le Moyne, prospered with priestly Montreal, and acquired a number of manors which he named from French places, and then named his children Iberville, Bienville and the like for his manors. The oldest son, Charles, lived across the river from Montreal, at Longueuil, which gave the name to his barony, and there the obliging Irish priest of a beautiful church showed me the records so like those of the Mobile Cathedral. They begin but a few years earlier than ours.

THERE are no more of these old manors, so common on the St. Lawrence and which Louis XIV introduced in Louisiana with that famous

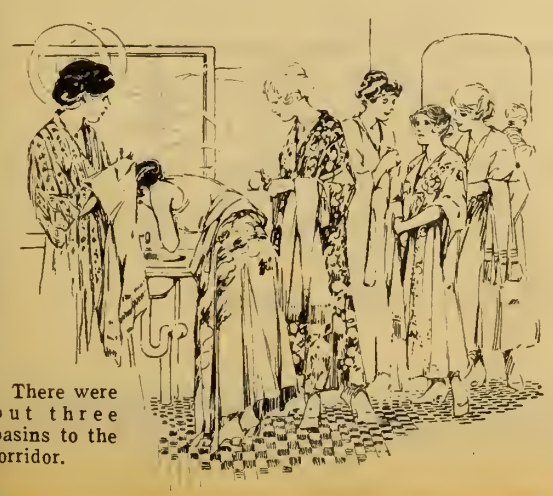
To identify bugs.

Were not the windows at the back low enough to crawl in?

FOUR hundred pedagogues gathered in from the four corners of the province and thrust into one big campus for one definite object —to learn all that was learnable in four weeks and three days of the vast, unlimited subject of Agriculture

Oh what a cram was theirs
Learned four hundred.



Some had been coaxed hither by their worthy inspectors who liked not that their counties should be poor in things agricultural; others had been enticed by the prospect of mercenary gain, a grant of fifty dollars forsooth; but the vast majority had sacrificed the best part of their hard-earned holidays in order that they might aid the nation

There are no restrictions in regard to bun feeds.

in its gigantic struggle for maximum food production, by passing on to the citizens-to-be knowledge gained by the sweat of the brow, the callus of the hand and the blister of the foot; knowledge treasured up for reference in the pages of a loose-leaf science note-book.

It was an army of "schoolmarms" with a few nuns (they were schoolmarms just like the rest of us, really, but imagine calling them that!)

There were but three basins to the corridor.

popped in here and there to give a religious atmosphere to it, and a stray man edged in at long intervals. It was an army to be billeted and right skilfully did the officer in charge of this department look after the welfare of their women.

The nuns found quiet shelter within the walls of the convent, while the men were quartered at the Y.M.C.A. and various boarding-houses in the city. The rest of us—the great rest of us—were domiciled in the two residences on the campus. Those who had had the foresight to enlist for the campaign as soon as recruits were asked for were the fortunate ones who found themselves billeted at Macdonald Hall. "Mac" Hall, as it was affectionately called. It was a beautiful residence with spacious halls, wide stairs, awe-inspiring drawing-rooms, cosy sitting-rooms and pleasant, well-lighted bedrooms. Bedrooms with actually two clothes-closets in each and a white bedspread on the single cots.

The residence with which the overflow of procrastinators had to be contented was bare and barren in comparison. It had never in the wide world been intended for the habitation of the dainty sex, and serviceability rather than beauty was its dominant feature. Long and narrow were the halls and so dimly lighted that the timid hesitated to venture into their unknown depths. The steep, winding stairs made one feel old and weary in the ascension thereof and giddy and reckless when taking the downward plunge. The bedrooms were devoid of even one clothes-closet, and thus the fair occupants were forced to expose their varied wardrobe to the speculative eye of the casual visitor. As for drawing and sitting-rooms, the very mention of these is enough to call down scorn and derision from the sex for whom the building was intended. One big gathering place with lots of chairs and a piano was all their simple wants required.

IT would naturally be expected that "the Residencers" would repent of their foolish virgin act which had shut them out of Paradise, but right loyally did they stand up for their abode. True, we at the Hall had cosy sitting-rooms to lounge in at leisure, but what better off were we for that?—they would taunt. In the time-table the Leisure Hour Period was from 10.30 p.m. to 6.30 a.m., when we were all supposed to go to dreamland. We might boast of our spacious corridors, but alas for their pretensions, they were mere, nameless halls, while Angel's Wing, Grub Alley and Lower Hunt were a few of the traditional names in which the streets of the Residence gloried.

To be sure we took pride in our grand entrance with its wide swinging doors and a white card in front, asking visitors to please ring. But should any maiden so far forget herself and time as to stray up to those same doors five minutes after the hour of ten had struck, lo! she found them locked and herself shut out in the night until her fearful ring was answered by the questioning matron. But if one belonged to the Residences, yes, to that shabby old Residence, the beauty of the moonlight evening could be enjoyed with a peaceful sense of security for ten whole minutes more.

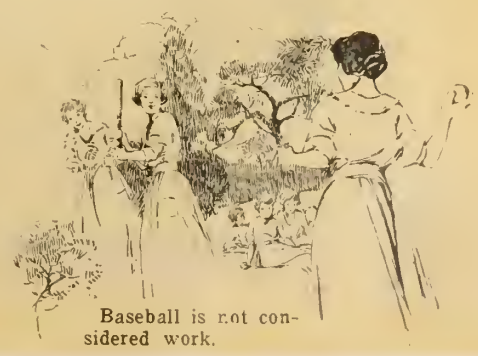
And even if one did transgress over that time, why bother ringing and disturbing tired matrons? Were not the windows at the back low enough to crawl through? Verily, these blessings must not go unnumbered. In arguments like these, would the loyal dwellers in the Residence try to persuade the wise virgins in Mac Hall that after all they were the foolish ones.

In Residences packed to the brim with girls, certain rules must be enforced to have order maintained, even if those girls are sedate teachers ranging from the ages of nineteen to fifty-nine. Night-hawking was discouraged by the doors be-

It was a process similar to draining a well with a leaky pail.

ing locked sharp at ten. Should one wish to stay out beyond that hour, late leave must be asked of the matron. Imagine a teacher who has been having her orders obeyed for ten years or more going to the matron and meekly asking, "Please, may I have late-leave? I want to go to the picture show."

We had to find weeds in our leisure hours.



"Will you be back on the last car?"
"Please, yes, ma'am."
"Yes, you may have it."

One almost expects the pat on the head which is usually bestowed on a good child when a favor is granted it.

THE last car! In every car O.A.C.-bound teachers were in superior numbers, their identity being revealed by the grim determination with which they grasped the straps. But the last car crowded to the 'nth degree, was theirs wholly and unreservedly. And yet there wasn't one among them, for every one on that car with the exception of the conductor and motorman was a giggling schoolgirl of sweet sixteen, singing jolly College songs, or discussing Mary Pickford in her latest play.

As the last car would clang around the college grounds, a forbidding wall of blackness would loom up before the eyes of the late-comers. "Lights out," would be the dismayed exclamation, and it was so. At half-past ten to the second the

Baseball is not considered work.

The Country House Minus Waste Space

Designed By Clarence Thetford, Architect

"Here the architect did not
With curious skill a pile erect
Of carved marble, touch of prophecy,
But built a house for hospitality."

THE COUNTRY—unrestricted location, unlimited space, sunshine, trees, green grass and rolling hills. Nature is profligate with luxuries for the rural builder. Yet, peculiarly, here where one would expect to see the best homes in every detail designed to accentuate the beauty of their surroundings, one usually finds the most commonplace houses and grounds.

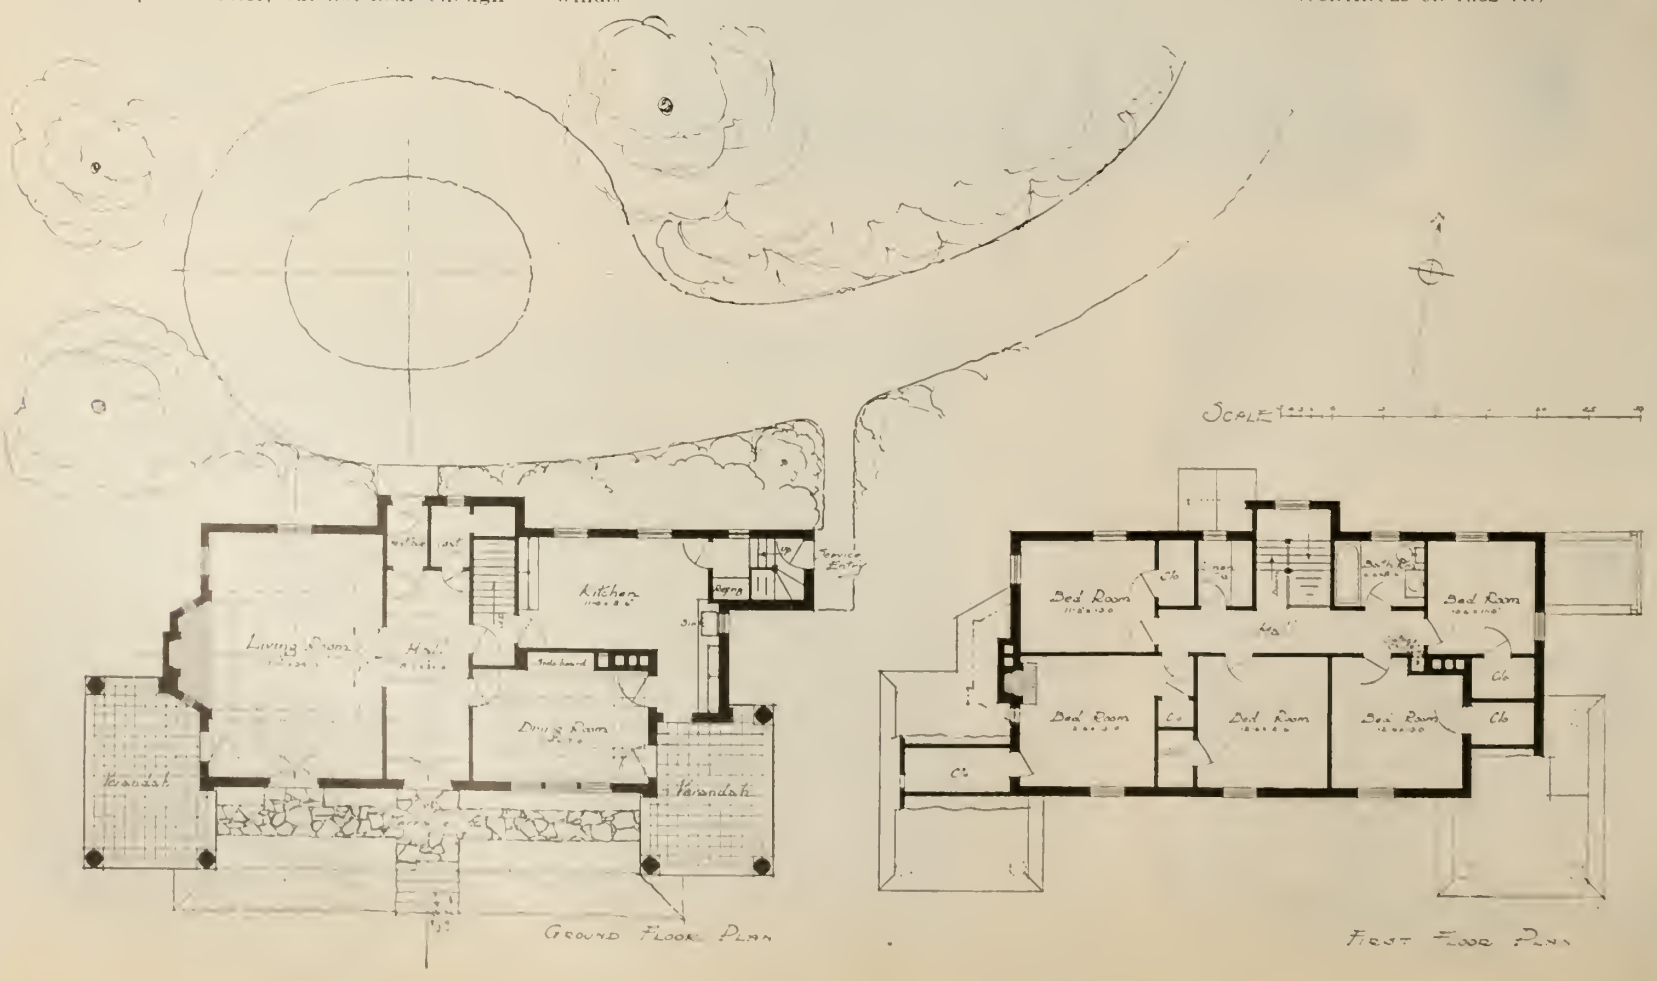
And the interior of a country house—the ordinary country house with which we are all familiar—what is the picture? At once one recalls large, poorly lighted, poorly heated and poorly ventilated rooms opening endlessly from long, dark, musty hallways. Doubtless the city builder is saved from a like condition because of the expense of every inch of land, and the added cost of maintaining and paying taxes on unused house space. Oddly the thing which he so much deplores may, in reality, be what causes him to build thoughtfully and with great care, making his home suit his immediate needs, rather than what he imagines they may be years hence. The farmer, however, is not so hampered, and he builds room after room to be closed up three-quarters of the year because of an inadequate heating system.

The remodelling of these huge, badly planned, country houses is a subject for several volumes in itself. This particular article is one of warning and advice to those who contemplate building now in the country.

The first consideration is the site for the house, and with several acres at one's hand, this should not prove a difficulty. The best situation is on the easy slope of a hill, facing south, and the nearer to the top the better, but not near enough to lose its shelter. The slope of the hill should not be an abrupt one, as this would add considerably to the expense of the foundation of the house and the formation of the garden.

The ideal site is one on the south side of a main road, fairly level up to the north side of proposed position of the house, then with a gradual slope onward and down to the south, with open country beyond and view of distant hills. On the north and northeast of the site there should be rising ground or belts of trees to protect the house from the north and northeast winds.

Unless it cannot be avoided, a house should never be placed due north and south. It is better to have a slight tilt toward the east, thus ensuring the north side of the house receiving the evening rays of the sun. In other words all sides of the house, during the greater part of the day have sunlight and every room at one period of the day receives the sun's rays. Sunshine is Nature's great cleanser—therefore house builders can ill afford to bar out this wonderful benefactor.



In moderate and large houses the entrance should be on the north side of the house, allowing the south side to be arranged for a garden. If the north entrance is impossible, east or west, preferably the latter, should be used. As drives are expensive to form, it is well to choose a site which is not too far distant from the road.

The levels of the ground and the views that may be obtained from the terrace and the house will decide the positions of the orchard and kitchen garden. Both of these should be on the slope to the south.

Well designed entrance gates add greatly to the appearance of the property, and can be obtained at reasonable prices from reliable manufacturers. Care should be taken to have the posts of substantial size and their foundations placed below the frost line.

In the design shown at the top of this page the drive, bordered with flowers, shrubs, and trees, is on the north and slightly east side of the house. A hall going directly across the house opens through French windows upon a stone terrace which has steps leading down to the garden. This spot, being secluded, is ideal for games, tea parties, etc.,—those important things which are so often omitted from country life. Two large

THE woman who appreciates beautiful old china takes pride and pleasure in washing her treasured bowls and jugs and plates. Just as she values the china too highly to entrust its care to servants, so is she particular to use for its cleansing nothing but pure, mild Ivory Soap.

Ivory Soap cannot injure either painted or gold decorations on china, because Ivory contains no free alkali nor any other injurious ingredient. Neither does Ivory contain unsaponified oil; its thick, cleansing suds rinse off easily and thoroughly, leaving no filmy streaks to cloud the polished surface.

Ivory makes dishes clean in the strictest sense. It leaves hands soft, white and smooth —an Ivory quality that is important to every woman who does her own housework and is careful of her appearance.

Without Fear

A Health Talk by Dr. Laura S. M. Hamilton

"Grow old along with me!
The best is yet to be,
The last of life, for which the first was made;
Our times are in His hand,
Who saith: 'A whole I planned,
Youth shows but half; trust God; see all, nor be afraid!'"

RECENTLY one of my neighbors said to me after the morning greeting: "Did you hear about Mr. Macdougal? Last night he was quite well, had been out with my husband, and was taken with a stroke, and cannot move or speak." The gentle Scotch voice became even more troubled as she went on, "And my cousin on the other side of you there, has been so ill, after 'the Flu,' 'tis her heart you know, and we dare not let her know of this at all. Mrs. Macdougal is such a friend of hers, too, and she'll not know why she has stopped coming. . . . she has it, too," she continued distressedly, "*This Blood Pressure.*" and there was fear in her voice as she continued, "There's my own John, he canna sit still since Mr. Macdougal was taken, they were friends you know, and besides," and her voice broke piteously, "John has it, too."

The pathos of the thing has somehow fastened itself on me, and I have been wondering ever since how many middle aged people "have it too" and both they and their loved ones are living in a condition of dread and nameless fear continually.

To me it seems so much easier and simpler as Browning says to "trust God; *see all*, nor be afraid." And so for those who feel as I do in this matter I am going to try in this paper to explain to some extent what is meant by the words so glibly and unintelligently made use of to-day, "blood pressure."

WE have all seen water passing through a rubber tube. If that water is pumped and does not flow steadily as from a tap, we know that the tube is distended at that portion through which the water is passing. We know that if that tube were to taper out at the end into one or more much smaller tubes these smaller tubes would be affected the same way as the large one, and because of their lesser calibre would feel the fluctuations of the water stream even more than the large one. We know also that if the small tubes or the ends of the tubes were blocked the rubber sides would be more distended than if the flow were unimpeded.

Now in the above simple and familiar example we have the whole story of what is called blood pressure. That is the degree to which the water presses on the sides of the tube, or the blood on the sides of the vessels containing it.

The heart is the pump. The arteries are the elastic tubes, and the capillaries are the tiny branchings into which the main vessels divide at their termination, even like the twigs of a tree. The stream is the blood.

The walls of the blood vessels actually contain what is known as "elastic tissue," which provides for their expansion and contraction with the passage of the blood stream.

This elastic tissue may harden with age, and in some cases hardens because of disease, or of poison either produced by or introduced into the body. Again "some people's arteries," to quote Sir William Osler, "are not of very good material to start out with."

The walls of the blood vessels have another and very wonderful power, that of contraction of their inner coat. This contraction is presided over by the nerves of certain centres, and can only occur when bidden by these nerves. These nerves are not voluntary nerves, that is under our control, but our general nerve health it to a large extent under our control.

WE all know how a slight cut will presently stop bleeding of itself. That is because of two things, first the blood possesses the power of "clotting" immediately on exposure to the air, and second because the nerves of sensation in the skin telegraphed to the contracting centre in the brain that certain blood vessels had been wounded and should be closed at once, which the centre does accordingly. Cold will also carry a message to this centre and these vessels at the surface of the body, otherwise the capillaries will be contracted accordingly. This is shown by the blanching of the part.

Now we saw when we spoke of the water in the rubber tube that a closing or contraction of the end of the tube would cause the water to press more strongly against the sides of it. In just the same way a closure or contraction of the capillaries or end vessels of the arterial system will cause the blood to press more strongly on the sides of the vessels. A slight local contraction will be compensated for also locally by dilatation of some nearby capillaries, but any influence that will cause a contraction of the capillaries or arterioles as a whole must necessarily affect or dam back the blood as a whole, and distend all the system of arteries, and going back further still to the heart or pump, cause that organ to work harder to overcome the resistance. And now at last we have found out what the words "increased blood pressure" mean.

Many different influences affect these end, or peripheral or cutaneous vessels, causing them to contract and throw back the blood on the heart. Cold I have mentioned, fear is another, anger or other emotional excitement will do so also; diseased conditions of the blood itself, as anaemia, poisons in the system, as influenza, etc., all these and many others.

Now as long as the elastic tissue in the walls of the vessels remains in good condition no great harm is done. Things right themselves presently. But when for any reason the elastic tissue begins to harden, then also begins the danger.

So getting to our final analysis, we ask "What will cause the elastic tissue to harden?" Of all external causes as far as has been discovered, I think I am correct in saying, "worry" is the most potent. Emotional stress has the power of altering the constituents of the fluids of the body, and worry, anger, fear or similar unhappy emotions produce poisons therein. These particular poisons are the very ones that may cause hardening of the elastic tissue in the walls of the arteries. Certain diseases have the same effect, and paramount among these is syphilis, and this "even unto the third and fourth generation." Next comes unhygienic living, notably "living high." Lastly is heredity, and certain forms of strenuous labor, by which the heart is kept continually working overtime, as it were.

NOW if you will read this list carefully you will find that a number of these "causes" are under our own control. Worry, physical indulgence and sin, as well as careless eating, drinking, and general living are all within the control of our wills, and are avoidable.

Of all these causes syphilis is the most far reaching and terrible, because it will appear after years of quietness in this form of Arterio Sclerosis, and not only that but the curse will pass from one generation to another and another of innocent sufferers, showing itself in a score of ways too numerous to mention in detail. If the youth out for a night's ungoverned "frolic (?) with the boys" realized that he was sowing seeds for the possible harvesting of a hundred years, seeds of the pain and death of innocents, even the most thoughtless young man would pause and consider and turn back afraid.

The process of arterial hardening or Arterio Sclerosis only sometimes takes place through the whole arterial system at once. More generally it occurs in patches, which come, and then frequently clear up again, till, the disease continuing, the hardening takes place again. The heart works hard, and thereby becomes more or less enlarged to overcome the resistance of the contracted arteries.

The position of this patch of hardening determines the nature of the symptoms should any of the little end vessels rupture. For instance, the much dreaded paralysis is caused by the rupture of one or more of the tiny arteries of the brain, and the destruction temporary or permanent thereby, of a portion of the brain substance, wherein lie those nerves that control the motion of certain limbs or muscles of the patient. Such a condition is not by any means hopeless and frequently clears up completely.

Now that we have studied to a limited extent the unhappy possibilities of this all too common malady, let us look on the brighter side—for there is a brighter side.

In the first place a certain rise of blood pressure appears to be normal as the years increase, and may not cause any trouble at all.

SECONDLY, if the hardening of the arteries has already begun, but the condition is discovered in time the disease may be arrested by careful adherence to the physician's advice, and by that self-control which *will not* worry, and will therefore go forward "without fear." Here then is one of those places in which it is of such immense advantage to have become acquainted, as it were, with one's Creator in the days of one's youth, of having learned that His name was Justice and Love, of being able to look back on the days of old and see "how the Lord hath led us." Of being able to say very simply and truly:

"He hath been better than all my hopes, better than all my fears,
He hath made a bridge of my broken works, and a rainbow of my tears.
The billows that guarded my onward path but carried my Lord on their crest,
When I think of the days of my pilgrimage walk, I can trust His love for the rest."

To take the opposite course to this, that is to worry and fret about what may be before one, to sit around within doors, hindering the digestive processes, and retarding the already laboring heart action is to bring about surely and rapidly the very condition that is dreaded.

Therefore, as I said before, we can see that much lies within our own power in avoiding or at all events retarding the development of this condition. In this it is no different to fifty or nearer seventy per cent. of all illness we suffer from.

But I hear someone saying, and saying it with the same pitiful catch in their voice that my Scotch neighbor had, "Even so, granting all you have said, my physician told me very gently but without possibility of alteration that this process had begun, and that I would have to give up much that has been very pleasant, or seemed necessary to me in my daily living, that I must go quietly, *for the rest of the time*, if I wanted to prolong that time. And though I have tried to show a brave front, underneath it all it is bitterness and humiliation to my soul to have to acknowledge that I have to give in and take a back seat, when I have always managed things for myself."

So says one sturdy type of spirit while another somewhat different walks trembling every day with the continual dread upon them that something they may do or leave undone, or eat or forget to eat will precipitate the climax they so much dread.

To each of these I would say in the words of a dear saint that I loved in my girlhood's days, "He giveth meekness, and meteness."

And now come around with me and take another view altogether of the question. Looked at from a different angle this may not be nearly as dreadful as it seems.

In the first place there is no hurry. Such a condition as we have been considering may go on for years with little or no increase, providing the daily life is free from worry and undue strain of any sort. So suppose, having settled this matter, and mapped out to a limited extent the plan of life, according to the instructions given by the doctor, we proceed to forget the reason why and to find out the enjoyments in this stage of the journey.

AND so in the second place let us look around at the country we have come to. I hope in those dear days when we read and lived in all we read you travelled with Bunyan's Christian all along that wonderful journey that he made from the City of Destruction clear to Beulah Land just this side of the river. I hope you have stood with him on the mountain top there with the travelled road smiling behind you, its dangers and darknesses all mellowed now in the tender distance; its beauties enhanced by the slanting rays of the sun that has passed the zenith and shines with peculiar splendour, yet with a softened light and gentle warmth across the valley on the mountain tops of Beulah Land. Because you see this is the country you have reached in your real journey now, if you can only so recognize it.

Here you may dwell and encourage other travellers along life's way. You can from actual experience show that this danger is not as great as it seems, that that lion is most surely chained. Here, too, you may gather the children about your knee and give them jewels of thought in word and look that they will treasure in all the years to come, even though at the moment they cannot know their value. And here from this vantage point you may accustom your eyes to take long views across the sun-drenched valley to the greater heights beyond. Yes, there is a little dark river at the bottom of the valley, but it grows so narrow as one gets nearer to it that one becomes convinced that the crossing of it will take but a moment when we do reach it.

And so don't you think, that perhaps after all you are almost to be envied in having a little longer than some other folks to live in the glories of Beulah Land?

In closing I want to give you two gems of poetry, that I have greatly enjoyed, the one born out of the pain of these years of war by Theda Kenyon, the other has been my favorite since my girlhood, and is by one of our far too little appreciated Canadian poets, George Frederick Cameron.

How to Cook the Queen of the Kitchen Garden

By Marion Harris Neil

The Many Uses of Asparagus

ASPARAGUS now being plentiful and fairly reasonable, a few hints on the best means of preparing it for table may, it is hoped, prove helpful to our readers. In choosing asparagus it is well to remember that it must be fresh. Stale asparagus, no matter how cheap, is dear at any price. The freshness is best ascertained by the condition of the cut ends of the stalks as well as the tops. The former should not be dried up, but fresh looking, while the latter, the tops, should be firm, and not soft, as is the case when asparagus is stale.

Until within a few years ago, the only method of cooking asparagus in ordinary households was plainly boiled—very often over cooked.

The process of serving plainly boiled asparagus still prevails, and is unquestionably a sensible way of cooking it, provided it is properly treated. But where many housewives generally fail to make a success of this dish is with its accompaniment, that is, the sauce, which should be a delicately seasoned white sauce of a cream-like consistency, and should not be a thick paste consisting of uncooked flour, butter and milk. Besides white sauce, bechamel, hollandaise or mousselaine sauce are exceedingly nice to be served with asparagus.

Oiled butter, or vinaigrette, which is a mixture of oil, vinegar, chopped parsley, chopped gherkins, and the usual seasonings, goes well with hot or cold asparagus.

Asparagus is one of the few vegetables which form a course by themselves, for either luncheons or dinners, but it is more often served as the main vegetable which accompanies the meat course. With asparagus purée quite a number of dainty savories can be made, while as a salad it forms a delicious basis, and can be well recommended at this season.

Asparagus cream soup is not difficult to make, and costs little more than a potato purée, or cream soup, and it forms a welcome change as a dinner soup.

For breakfast, too, asparagus may be served, especially in the form of purée on buttered toast, or on round or oval pieces of fried bread.

Boiled Asparagus.—Select the asparagus of even size if possible, scrape or peel thinly each shoot from the tips downwards; cut the stem ends so that they are all of equal length, and put them into a bowl of cold water. Carefully wash and strain them, and tie into bundles of fifteen in a bundle. Boil in slightly salted boiling water, containing one teaspoonful of lemon juice, until the soft parts are tender. Then drain well. The saucepan in which asparagus is cooked must be large enough to hold it, and the water must be sufficient to well cover it. Asparagus usually takes from twenty-five to one-half hour to cook.

Asparagus should be served on a folded napkin or in an asparagus dish.

Iced Asparagus.—This is a very pleasant way of serving asparagus in hot weather. After cooking the asparagus arrange it neatly on an asparagus dish, sprinkle it with a few drops of vinegar and place it in the refrigerator, or on ice until required. Serve with good cream, also iced, or with iced hollandaise sauce.

Asparagus Sandwich.—Cook asparagus tips until very tender, drain and rub them through a sieve. Put the purée thus obtained in a bowl to cool. One cupful of the cooked tips will make sufficient for two dozen sandwiches. Make a good thick mayonnaise dressing, one cupful, and melt two teaspoonfuls of gelatine in a little boiling water. Mix the gelatine with asparagus purée, and when cold stir in the mayonnaise, four tablespoonfuls of whipped cream or whipped evaporated milk, one-half teaspoonful of salt and one-fourth teaspoonful of pepper; allow to chill when it will be like jelly. Cut one day old bread, butter lightly, spread with the asparagus mixture and cut into triangles or strips, trimming off the crusts. These sandwiches are very nice to serve with salad.

Another method:—Drain and rub asparagus through a sieve, there should be one cupful of the purée, when cool add one-half cupful of mayonnaise dressing and one-half cupful of aspic jelly; this should be liquid, but on no account warm; add one-half cupful of whipped cream or whipped evaporated milk, and salt and pepper to taste. Cut some thin slices of bread, butter them lightly and spread some of the asparagus mixture on each slice, then place them together as for ordinary sandwiches and cut into rounds or squares. Arrange them on a plate, fill up the centre with crisp lettuce, and, if desired, some slices of hard-cooked eggs.

Asparagus Molded.—Clean a large bunch of asparagus, peel the stalks lightly, and throw them into cold water. Then boil and drain. Prepare a vinaigrette sauce with oil, tarragon, chopped parsley, and incorporate this with aspic jelly. Place the asparagus, when cold, into a wet flat dish with alternate layers of the prepared aspic—the first and the last layers should be of aspic. Place the mold on ice for three hours. Turn out and serve garnished with parsley or lettuce leaves.

Stewed Asparagus.—Cut off the tops of twenty sticks of cleaned asparagus. Boil them in boiling salted water for twenty minutes, and drain. Put two tablespoonfuls of butter in a saucepan, add the tips, toss over the fire for a few minutes, add one tablespoonful of thick white sauce, one tablespoonful of cream, one-half teaspoonful of salt and a grate of nutmeg. Shake continually over the fire until very hot, and serve at once.

Cream of Asparagus.—Wash one bunch of asparagus, cut off about two inches of the tips and lay them aside. Cut the remainder into one inch pieces and put them into a saucepan with four cupfuls of cold water. Add one teaspoonful of salt, and let it cook until the asparagus is very tender. Drain, reserving the liquid. Rub the asparagus through a sieve, add this to the liquid, with one cupful of milk, one slice of onion, two tablespoonfuls of butter, one sprig of parsley, one tablespoonful of cornstarch mixed with a little cold milk, one teaspoonful of salt, one-fourth teaspoonful of paprika and cook for twenty minutes, then strain, reheat and just before serving add the asparagus tips and one beaten egg mixed with one-half cupful of the hot soup. Stir quickly and pour at once into a hot tureen. Serve with toasted bread.

·· ASPARAGUS A LA CREME ··

·· ASPARAGUS SALAD ··

·· ASPARAGUS AND SHRIMPS ··

Asparagus and Walnut Aspic—Dissolve one-half box of gelatine in one-half cupful of cold water, add one and one-half cupfuls of boiling water, one-half cupful of vinegar, one-fourth cupful of sugar, strained juice of one-half lemon, and one teaspoonful of salt. When the jelly begins to firm, add two bunches of cooked asparagus cut into small pieces and one-half cupful of chopped walnut meats. When firm turn out and serve with or without mayonnaise dressing.

Asparagus Croquettes—Cook two cupfuls of asparagus points in boiling salted water until tender, then drain. Put two tablespoonfuls of thick white sauce into a saucepan, add one-half cupful of milk, and allow to get thoroughly hot, then add two yolks of eggs, the asparagus points, one-half teaspoonful of salt, one-fourth teaspoonful of pepper and a grate of nutmeg. Cook until thick, then spread on a plate and allow to cool. Shape into neat croquettes of even size, brush over with the beaten egg whites, toss in bread crumbs, and fry in smoking hot fat, or bake in a hot oven. Drain, dish and serve hot.

Baked Asparagus.—Cut one bunch of asparagus into one inch lengths and boil in boiling salted water until tender. Drain well and put a layer in a greased fireproof dish. Season with salt and white pepper; dot with bits of butter, sprinkle with bread crumbs and finely chopped hard-cooked eggs. Add more asparagus, and repeat in the order mentioned until the dish is filled. Have bread crumbs on the top and bake in the oven until brown. Serve hot.

Asparagus Salad.—Boil and drain asparagus tips. Divide into bundles, and bind with narrow strips of pimento or chili. Place them in nests of shredded lettuce leaves and chill. Pour over the following dressing and serve. To mayonnaise dressing add two tablespoonfuls of chopped gherkins, two tablespoonfuls of tomato sauce, one teaspoonful of mustard and two tablespoonfuls of chopped parsley.

Dainties for Birthday Parties

By Marion Harris Neil

AUTHOR OF "HOW TO COOK IN CASSEROLE DISHES."

Birthday Cake.—Into a saucepan pour one cupful of water, add one cupful each of seeded raisins, seedless raisins, and shredded candied lemon or lemon peel and cook slowly for ten minutes. Cream one-half cupful of butter substitute and one cupful of brown sugar together thoroughly, add two eggs, well beaten, two tablespoonfuls of maple syrup, one teaspoonful of vanilla extract, one-half cupful of sour milk or cream, two and one-half cupfuls of flour sifted with one teaspoonful of baking soda, one-fourth teaspoonful of salt, one-half teaspoonful each of powdered ginger and nutmeg, then add the fruit boiling hot. Mix well, turn into a square greased and floured cake tin and bake in a moderate oven for two hours. Cool, cover with pale yellow frosting and decorate with finely chopped nut meats and candles in tiny candlesticks.

Birthday Cake No. 2.—Beat one cupful of butter to a cream with one and three-fourths cupfuls of sugar, add the beaten yolks of four eggs, one cupful of strong, cold coffee, one cupful of grated chocolate or cocoa, two cupfuls of flour sifted with a pinch of salt and two teaspoonfuls of baking powder, then add one-half cupful of chopped cocoanut or chopped nut meats, and the whites of eggs beaten to a stiff froth. Mix carefully and bake in a moderate oven. Cover with frosting flavored with one teaspoonful of orange extract, and decorate with pink candles in red rose holders.

Jelly Cakes For Children's Parties.—Beat the yolks of two eggs with one cupful of sugar until very light, beat the whites of eggs and add them to the yolks and the sugar, then add one square of grated chocolate, one tablespoonful of lemon juice, one-half cupful of cold water, sift in one and one-fourth cupfuls of flour sifted with one teaspoonful of baking powder. Beat for three minutes, pour the batter into two greased and floured cake tins and bake in a moderate oven for twenty minutes. Spread one cake with jelly, press the other over and when cold cut in squares, circles, diamonds, hearts, etc. Dip in white frosting and decorate with cut preserved cherries.

Fig Layer Cake.—Cream one-third cupful of butter with one cupful of sugar until very light, add three eggs without separating, beating for five minutes between adding the first two eggs and ten minutes after adding the last egg; add one-half cupful of milk and one teaspoonful of lemon extract. Sift twice two cupfuls of flour with three teaspoonfuls of baking powder; add to the batter and beat until light and smooth. Divide into two greased and floured layer cake pans and bake in a quick oven for twenty-five minutes. When cool, put together with the following fig paste: Chop one pound of washed figs fine, add one cupful of boiling water, one-half cupful of grated maple sugar and the strained juice of one-half lemon; simmer until the mixture becomes a smooth paste. Cool before using.

Raisin Puffs.—Cream one-half cupful of butter with two cupfuls of sugar, add two well beaten eggs, one cupful of milk, one teaspoonful of orange extract, one cupful of chopped raisins, and two cupfuls of flour sifted with two teaspoonfuls of baking powder and a pinch of salt. Divide into greased cups or molds and steam steadily for one-half hour. Turn out and serve hot with hot milk or any preferred sweet sauce.

Marguerites.—Beat the whites of two eggs until stiff, add one cupful of sugar and beat again, then add one cupful of chopped nut meats or chopped cocoanut and one teaspoonful of vanilla extract, stirring all together. Spread the mixture on fresh crackers, and brown in the oven. Sprinkle a few chopped nut meats on the top.

Peanut Wafers.—Peanut wafers are always welcome at parties. Make ready two quarts of peanuts, shelled, the skins rubbed off, and then chop or pound the nuts. Beat to a cream one cupful of sugar with one-half cupful of butter, add three-fourths of a cupful of milk, two cupfuls of flour sifted with one-half teaspoonful of baking powder, and add one teaspoonful of vanilla extract. Grease a tin sheet, or the outside of a dripping pan, and spread the dough over it in a thin layer, using a knife or a spatula. Sprinkle thickly with the prepared peanuts and bake. As soon as removed from the oven, cut in squares and take from the tin.

Iced Cookies.—Put one-half cupful of butter into a bowl, add six tablespoonfuls of sugar, beat them with a wooden spoon until creamy and light, then drop in the yolk of one egg, beating it well in, add four tablespoonfuls of milk, one-half teaspoonful of vanilla extract, and two cupfuls of flour sifted with one teaspoonful of baking powder and a pinch of salt. Knead smooth on a baking board, then roll out thinly, cut with a cutter and lay on greased baking tins. Bake in a moderate oven for ten minutes or until yellow. Allow to cool and ice. To make the icing, sift six ounces of confectioners' sugar into the white of the egg, beat very well with a wooden spoon, then spread on the cookies. Sprinkle chopped cocoanut on the top of each.

Orange Rounds.—Beat four tablespoonfuls of butter with the grated rind of one orange until creamy, then add two-thirds cupful of sugar and beat again until light, then add the strained juice of the orange and two cupfuls of flour sifted with one-half teaspoonful of baking powder. Toss on a floured baking board, and roll to one-eighth inch in thickness. Cut out with a round cutter, first dipped in flour, put on a baking tin covered with a greased paper and bake in a moderate oven.

Fig Newtons.—Cream one-half cupful of butter with one cupful of brown sugar, add one beaten egg, one-fourth teaspoonful of salt, one-half cupful of milk, one teaspoonful of powdered nutmeg, three cupfuls of flour, sifted with three teaspoonfuls of baking powder. Roll out on a floured baking board, cut in strips four inches wide and spread with the following mixture: Chop one cupful of figs, then put them into a saucepan with one cupful of hot water, add one-half cupful of grated maple sugar mixed with three tablespoonfuls of flour, and cook for eight minutes, then cool and use. Place another strip of the dough on the top, cut into finger shaped strips and bake in a hot oven.

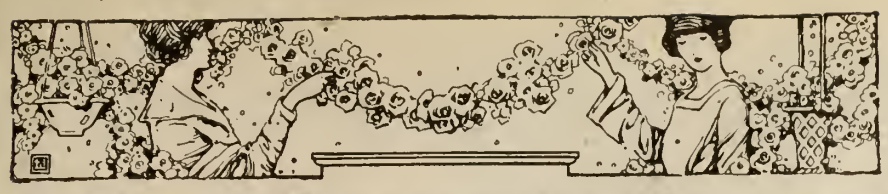
Cream Puffs.—Put one-half cupful of butter into a saucepan, add one cupful of water, bring to boiling point, add quickly one cupful of flour, a pinch of salt and one-half teaspoonful of sugar, stir well with a wooden spoon until the mixture leaves the sides of the pan, remove from the fire, allow to cool, but not to become cold, add four eggs, beating each one well and thoroughly in. Then place in a cool place for one hour. Put the mixture into a forcing bag with a plain tube and force on to a baking tin in small rounds, brush over with beaten egg and bake in a hot oven for thirty minutes. The mixture may be divided into greased gem pans. When cold split them open on one side and fill them with whipped cream sweetened and flavored to taste, or whipped evaporated milk, or the following mixture: mix three tablespoonfuls of cornstarch with one-half cupful of grated maple sugar, then add one beaten egg, one cupful of milk, two teaspoonfuls of butter and cook in a double boiler for one-half hour, stirring all the time. Cool and fill into the puffs.

Gingerbread.—Cream one-half cupful of grated maple sugar with one-fourth cupful of butter substitute, add two well beaten eggs, one-half cupful of sour milk or cream, one-half cupful of molasses, one teaspoonful of baking soda, one-half teaspoonful of salt, one teaspoonful each of powdered ginger, and cinnamon, one-half teaspoonful each of powdered mace and nutmeg, and one and one-half cupfuls of sifted flour. Bake in a moderate oven for forty minutes. Two squares of grated chocolate may be added if desired.

Another Method.—One cupful of brown sugar, two tablespoonfuls of butter, one egg, three cupfuls of flour, two teaspoonfuls of powdered cinnamon, one and one-half teaspoonfuls of powdered ginger, one-half teaspoonful of powdered nutmeg, one and one-third cupfuls of buttermilk, two teaspoonfuls of baking soda, one-fourth cupful of hot water and one cupful of maple syrup. Cream the butter and the sugar together, then add the egg well beaten. Sift the flour with the spices and the soda then add alternately with the buttermilk and the hot water, and stir in the maple syrup. Bake in a flat paper lined baking tin in a fairly hot oven.

The Happy Baby

The air of perfect happiness and contentment of babies brought up on Savory & Moore's Food is constantly a subject of remark. This is simply because it is so easily digested, so nourishing and satisfying, in fact an ideal food for babies in every way.



Get a tin of Savory & Moore's Food to-day from your Stores, and note how eagerly baby will take it, and what marked improvement and steady progress will follow its use.

MOTHER'S GUIDE FREE

Savory & Moore's little Book, "The Baby," is full of useful information on Infant Management, and contains hints on such subjects as Feeding, Teething, the Toilet, Exercise, Weight, Infant Ailments, and many others. It is just what a young mother requires, and will prove invaluable in the home. A Free Copy may be obtained on application to Savory & Moore, P.O. Box 1601, Montreal.

SAVORY & MOORE'S FOOD

Of all Druggists and Stores.

Cold and Inexpensive Summer Dishes

By Marion Harris Neil

AUTHOR OF "SALADS, SANDWICHES AND CHAFING DISH RECIPES."

Preparing Foods that Tempt the Appetite is Important in Summer

At the approach of summer one's thoughts turn naturally to cold relish dishes, which, when of the right kind, may safely count on masculine appreciation. Also, by reason of the saving of time and labor immediately before the meal, are they doubly welcome to those responsible for their preparation. And it is surprising how attractive and appetizing many cold things may be made without the aid of the numerous expensive etceteras usually associated with them, provided a little ingenuity is exercised.

Fowl and Cream Sauce.—Put the liver, gizzard, scalded feet and wing pinions into cold water, and when boiling add one onion and one carrot in quarters, one thick slice of turnip, eight whole peppers, and one-half teaspoonful of salt. Remove all the scum as it rises while cooking gently for one-half hour, then put in the bowl and cook gently for one hour, or until very tender. Strain and put the stock in a smaller pan, boil uncovered and rapidly until reduced to two and one-half cupfuls, then add one tablespoonful of gelatine dissolved in a little hot water, and pour it into a wet dish, in which it will form an inch deep layer. Pile the fowl, cut in neat pieces, on a dish, and pour over it a thick white sauce, well boiled, to make it glossy. Garnish with diamonds or other shapes of the jellied stock. Or, to produce a brilliant jelly, cool and skim the stock free from fat, add the whites of two eggs, and whisk until it boils. Allow it to stand for ten minutes, then strain through a hot, wet cloth. When the yolks of eggs are not required, add them to one tablespoonful of milk and seasoning of salt and pepper; cook until firm in a greased fireproof dish in a little hot water in a saucepan, then rub through a sieve, and sprinkle over the sauce coating the fowl.

Fish Gateau.—Mix two cupfuls of cold cooked chopped fish with four tablespoonfuls of mashed potatoes; add one onion which has been fried in one tablespoonful of hot drippings and chopped, and one tablespoonful of chopped parsley. Add the fish liquor, one beaten egg, one-half teaspoonful of salt and one-fourth teaspoonful of pepper. Pour into a greased mold, and bake in a moderately hot oven for one hour. When cool, turn out and serve with white or anchovy sauce. To make the anchovy sauce make one cupful of white sauce, season to taste, and add four teaspoonfuls of anchovy essence. Preserved anchovies may be used instead of the anchovy essence. Two will be required for the above quantity of sauce. Lift them out of the oil in which they are preserved, dip them for a minute or two in warm water; then scrape off the silver skin. Put them in a bowl with one teaspoonful of butter, and rub them through a sieve. Add this paste to the sauce just before serving and mix it well together.

A Savory Galantine.—Procure an extremely thin piece of pickled pork weighing about three pounds, and remove all the bones. Place it skin side down on a baking board, flatten it as much as possible with a rolling pin, and after seasoning well spread on one pound of sausage meat or chopped meat. Cover with thin slices of cooked tongue, or pickled beef, or raw veal; add more seasoning, and roll up compactly. Tie securely, and boil enclosed in a cloth for not less than three hours in water flavored with vegetables. When cooked tighten the cloth and leave under pressure until cold. Dissolve two tablespoonfuls of gelatine in a little hot, strong gravy, and when on the point of setting apply it to the galantine with a pastry brush. Cut in slices and garnish with cut lemon.

Boiled Salmon With Mayonnaise.—Boiled fresh salmon with mayonnaise sauce forms an appetizing change when fresh fish can be obtained. For the purpose select a thick, fleshy portion, wrap in a clean cloth and simmer in slightly salted, boiling water until thoroughly cooked, allowing twelve minutes to the pound. Then carefully drain out of the water, thoroughly chill, remove the cloth and cut the fish into large flakes or slices. Garnish with lemon and cress and serve with mayonnaise sauce.

For spiced salmon, place a large can of salmon in a pot of boiling water and boil hard for thirty minutes. Take out of the water, open and drain off the oil; turn the fish out on a platter, and remove the skin and the bones; then sprinkle the fish with salt and white pepper, cover with vinegar, add a few cloves and a few whole allspice, and set in a cold place for several hours. Then lift the fish out of the vinegar, flake it with a silver fork, and serve on crisp lettuce nests.

Parsley Cakes.—Mix one-half cupful of finely chopped cooked left-over meat with one cupful of mashed potatoes; add two tablespoonfuls of bread crumbs, two tablespoonfuls of chopped parsley, one slice of chopped onion, salt and pepper to taste, one beaten egg, and mix well together. Divide into small round cakes, and bake on a well-greased dripping tin until nicely browned, which will take about ten minutes. These cakes are particularly good served cold.

Ox Foot Brawn.—Chop one ox foot into four pieces, cover with cold water in a saucepan, and add four cloves, ten allspice, one bay leaf tied in a muslin bag. Boil for seven hours, until the meat is tender. Take out the bones and chop into small pieces. Put the meat back into the saucepan with the water in which it has been boiled. Add one-half cupful of vinegar, and salt and pepper to taste. Boil it again for one-half hour, then pour into two large molds which have been just rinsed out with cold water. Set aside to cool, turn out when required and cut in slices. If desired, the molds may first be decorated with some slices of hard-cooked egg.

Question.—Would you kindly give a recipe for a choice raisin pie in your next number? "N. M. O."

Choice Raisin Pie.—Into a bowl put two cupfuls of seeded raisins; add grated rinds of two lemons and one orange, also strained juices from lemons and orange, one and one-half cupfuls of hot water, one cupful of chopped nut meats and one cupful of sugar; mix and turn into a saucepan and bring slowly to boiling point. Then thicken with two teaspoonfuls of cornstarch mixed with a little cold water, and let cook for five minutes, then turn out and cool. Bake this mixture between two crusts, or a pie may be made with three crusts by first lining the pan with one crust, fill one-half full with raisin mixture, then add a very thin layer of crust, fill with balance of raisin mixture, add top crust, brush over with milk or beaten egg and bake in a moderate oven. One-half seedless raisins may be used.

Another Method.—Mix two cupfuls of seeded raisins with one and one-half cupfuls of sugar, two tablespoonfuls of flour, two beaten eggs, a pinch of salt and one-fourth teaspoonful of powdered nutmeg. Bake with two crusts, or omit upper crust and cover with a meringue when cooked.

One Food Cost That Stays Down

Meats Average 50c
Per 1000 Calories

Fish Averages 50c
Per 1000 Calories

Vegetables Average 50c
Per 1000 Calories

Still 5½ Cents
Per 1000 Calories

Quaker Oats—the food of foods—costs you 5½ cents per 1,000 calories—the energy measure of food value.

That is about one-tenth what meat costs—one-tenth what fish costs—on the average.

Some common foods, on this calory basis, cost from 15 to 20 times oats.

Make Quaker Oats your breakfast. Use this low cost to average up your food cost.

Two Dishes—One Cent

Two big dishes of Quaker Oats for one cent. Why, a bite of meat costs that.

Then think what a food this is. The oat is the greatest food that grows. It is almost the ideal food—nearly a complete food.

In the needed food elements, including minerals, it shows almost perfect balance.

Cost Per 1000 Calories
Based on Prices at This Writing

Quaker Oats	5½c
Round Steak	41c
Veal Cutlets	57c
Average Fish	50c
In Squash	75c

Costly foods should not be eliminated. Meats and vegetables are necessary.

But remember that Quaker Oats costs one-tenth as much. It's a wonderful food and delicious.

Make it the basis of one meal a day.

Quaker Oats

With That Luscious Flavor

Get Quaker Oats to make the meal doubly delightful. These are flaked from queen grains only—just the rich, plump, luscious oats. We get but ten pounds from a bushel.

You get all this extra flavor without extra price when you ask for Quaker Oats.

Two Sizes: 35c and 15c—Except in the Far West

Concerning Books

A Review of Current Literature

By Owen E. McGillicuddy

The Secret City, by Hugh Walpole. Published by McClelland & Stewart. Price, $1.60.

BY long odds the most important novel which has been issued since the first of the year is "The Secret City" by Hugh Walpole. Here the reader will find a realistic picture of Petrograd which will remain long after he has finished its pages.

This young novelist had the good luck to be in Petrograd during 1917, when the reign of terror was first inaugurated by the Bolsheviki. To a writer of less conscience the temptation to write "the" novel of the Russian revolution under such circumstances might easily have been too much. Mr. Walpole, however, seized on the opportunity in a quite different spirit. While he had his own views of the revolution, he still remains the kind of novelist who deals intensively with persons and places. As a result his story is not so much one of Russia and revolution, as it is a story of certain lives which are caught entangled in the whirling machinery of 1917 with all the problems which the circumstances afford. This is not to say that the revolution plays a small part, for it does not. Rather does the influence of the revolution come to these characters of his in Petrograd, English and Russian alike, and become interwoven with the life of the city itself. It was only to be expected that Mr. Walpole's intensive style would make of "The Secret City" the very vividly personal Petrograd which he has attempted in this volume.

Mr. Walpole is first of all a story teller, but he is much more than that —he is a sensitive, conscientious, interesting writer, who knows how to utilize what he observes going on about him. In "The Secret City" he shows a warmth of feeling which is seldom found in modern novels. His portrayal of the characters of Vera and Markovitch is masterly, although his feeling for Lenine is apt to make the reader think that his prejudice mars the portrayal of this Russian leader.

"The Secret City" marks a big advance in the work of the writer, who created such interesting tales as "Fortitude," "The Green Mirror," and "The Dark Forest."

The book is dedicated to Major James Annand of the 15th Battalion (48th Highlanders) C.E.F., who was formerly employed on the staff of "The Toronto Daily Star."

The Prestons, by Mary Heaton Vorse. Published by The Musson Book Co. Price, $1.50.

THIS is one of the most delightful books that have been issued during the present season, for it is one of those rare things—a successful study in humorous realism.

In "The Prestons" Miss Vorse depicts the life of an average family living in a small town, neither rich nor poor, yet owning their own house, respected by their neighbors, and performing their share of civic tasks. "The Prestons" are not particularly picturesque but they are democratic and exceedingly human. The boy, Jimmy, is constantly into mischief, while Edith, the older sister, who has not yet learned the virtues of patience and unselfish service, is portrayed in what the photographers would call "a talking likeness."

This novel is one of the big successes of the present time throughout the United States and the reason for its appeal is easy to find. The story is the best Miss Vorse has yet written because it is healthy, probable, and interesting. "Canadian Home Journal" readers can leave this book on the table without any danger of having young imaginations seriously inflamed.

Fairies and Fusiliers, by Robert Graves. Published by J. M. Dent & Sons. Price, $1.00.

THESE charming stanzas written by a Welsh soldier-poet are among the chief delights which recent books have afforded us. It was John Masefield who, in an interview in "The New York Evening Post," first brought the young poet to the attention of the American public.

"Graves was picked up for dead," said Masefield, "He heard them say he was dead, and he called out, 'I'm not dead,—I'm darned if I'll die', and he didn't. He wrote a poem about it. Graves is a gay, charming soul, buoyant and courageous. I am sure his poetry about the war will live."

The editor of this department of "The Canadian Home Journal", after perusing "Fairies and Fusiliers", is inclined to agree with Mr. Masefield that Robert Graves' poetry is of that class which will outlive the day.

The poem, "To an Ungentle Critic", will give a better understanding of his thought and style than any opinion which the reviewer might express:

The great sun sinks behind the town
Through a red mist of Volnay wine . . .
But what's the use of setting down
That glorious blaze behind the town?
You'll only skip the page, you'll look
For newer pictures in this book;
You've read of sunsets rich as mine.

A fresh wind fills the evening air
With horrid crying of night birds . . .
But what reads new or curious there
When cold winds fly across the air?
You'll only frown; you'll turn the page
But find no glimpse of your "New Age
Of Poetry" in my worn-out words.

Must winds that cut like blades of steel
And sunsets swimming in Volnay,
The holiest, cruellest pains I feel,
Die stillborn, because old men squeal
For something new: "Write something new:
We've read this poem—that one too,
And twelve more like 'em yesterday"?

No, no! my chicken, I shall scrawl
Just what I fancy as I strike it,
Fairies and Fusiliers, and all,
Old broken knock-kneed thought will crawl
Across my verse in the classic way.
And, sir, be careful what you say;
There are old-fashioned folk still like it.

The Duchess of Siona, by Ernest Goodwin. Published by Thomas Allen. Price, $1.60.

IT is a long time since the reviewer has had the pleasure of becoming interested in a historical novel, but "The Duchess of Siona" is written in such excellent English and with such a delightful medieval atmosphere that one confesses to no shame in surrendering to this work of Mr. Goodwin's imagination. The book is as different from other historical novels as chalk is from cheese and the only adequate comparison would be with Maurice Hewlett's "Richard Yea and Nay" or "The Forest Lovers."

The story is one of love, war and intrigue, during the Italian renaissance. In it one catches a glimpse of the Italy of the knightlier days when romance flourished and when the

Pale, sallow skins — *The new steam treatment for them*

A SOFT, lovely skin, radiant with color! This attraction you, too, can have. In a much shorter time than you would imagine, your skin will respond to the proper care and treatment by taking on a greater loveliness.

When your skin is colorless—"pasty"—it means that your pores are unable to throw off all the waste matter they should.

To correct this condition, try this new steam treatment. Steam penetrates the skin in a way water alone cannot do. It enables you to cleanse thoroughly the pores that have become clogged, to stimulate inactive blood vessels and give the skin new color.

To make your skin soft and colorful

One night a week fill your bowl full of hot water—almost boiling hot. Bend over the top of the bowl and cover your head and the bowl with a heavy bath towel, so that no steam can escape. This opens the pores wide, stimulates the tiny blood vessels of the face and brings the blood to the surface.

Now lather a hot cloth with Woodbury's Facial Soap. With this, wash your face thoroughly, rubbing the lather well into the skin in an upward and outward motion. Then rinse the skin well, first with warm water, then with cold, and finish by rubbing it for thirty seconds with a piece of ice. This closes the pores and makes the skin firm in texture.

The other six nights of the week, cleanse your skin thoroughly in the usual way with Woodbury's Facial Soap and warm water.

Use this steam treatment weekly until your skin no longer requires it. After the very first treatment, your skin will show more color. Before long you will notice an improvement—a promise of the greater loveliness which the steady use of Woodbury's always brings.

Get a cake of Woodbury's and begin tonight the treatment your skin needs. You will find Woodbury's Facial Soap on sale at any drug store or toilet goods counter in the United States or Canada. A 25 cent cake will last a month or six weeks.

FIRST *the steam!* THEN *the lather! You will find the steam treatment in detail in the booklet wrapped around every cake of Woodbury's Facial Soap.*

MADE IN CANADA

Booklet of famous skin treatments

You will find complete treatments, as well as scientific advice on the skin and scalp, in the booklet, "A Skin You Love to Touch." This booklet is wrapped around every cake of Woodbury's Facial Soap.

CONTENTS.

BABIES—*What physicians recommend.*
BATH—*How much it means.*
BLACKHEADS—*A confession.*
BLEMISHES—*How to get rid of them.*
CHILD OF FIVE—*How to preserve clear color of.*
CONSPICUOUS NOSE PORES—*How to reduce them.*
ENLARGED PORES—*How to make your skin fine.*
OILY SKIN AND SHINY NOSE—*How to correct them.*
SHAMPOO—*The right way.*
SLUGGISH SKIN—*To rouse it.*
TENDER SKIN—*New Treatment*

A soft, lovely skin, radiant with color! Every girl should have it! Begin to-day to use the particular Woodbury treatment your skin needs.

Sample cake of soap

Booklet of famous treatments and samples of Woodbury's Facial Powder, Facial Cream and Cold Cream for 15c.

For 6 cents we will send you a trial size cake of Woodbury's Facial Soap large enough to last for a week of any Woodbury treatment, together with the booklet, "A Skin You Love to Touch", giving the famous Woodbury skin treatments. Or for 15 cents we will send, in addition, samples of Woodbury's Facial Powder, Facial Cream and Cold Cream.

More Play In The Country

Where it is most needed---but rarely found.

By Louise Richardson Rorke

Tennis may be enjoyed by girls as well as men.

The baseball team at Manilla which has worked wonders in rural sport.

DURING the last two decades our world has seen a wonderful revival and has listened, for the most part with ready ears, to a new gospel—the revival of recreation and the gospel of play. We are learning again to become as little children, to make friends with laughter and spontaneity and the waywardness of the breeze-blown thistledown. Play is recognized to have an intrinsic value—to be not merely a preparation for better work, but of itself a part of living and a thing of worth. Could our great-great-grandfathers witness the thronged enthusiasm of the bleachers, or count the number of movie theatres in our city streets, or see sober middle-aged business men engaged in the friendly rivalry of hand-ball in the Y.M.C.A. Gymnasium, and the wisest of our wise men holding council as to supervised playgrounds, they would certainly think the world sadly deteriorated since their day. Yet the world has not deteriorated. Men work much harder and accomplish much more. They crowd more of experience, of labor, of achievement, into a lifetime than our fore-fathers ever dreamed. And the best workers and those of greatest accomplishment are the men and women who have learned to play.

For play is not only recreation, it is *re*-creation. All work and no play—even too much work and too little play—has always resulted in the proverbial dullness or worse. Isolation and monotony are deadening in their results. Lack of variety and routine unrelieved end in nerve-strain as surely as does the stress of the hurried and over-busied life.

Why the City Boy Knows Better How To Play Than the Country Boy.

IN this last particular it has been the rural populations which have suffered the most. The very nature of their employment prevents any plenitude of neighboring. There are few playmates and those that may be so styled must gather through long distances and from all points of the compass. The boy on the farm is not tempted to play by the sight of his fellows at play as is his prototype in town. He must walk a mile or more before he can join in the ball-games—until the last few years of easy telephone communication he might quite possibly walk his mile or more and find nobody else ready to play. And not only is it hard to find playfellows, but farm work in itself is exacting. There are times when it seems to require all the daylight hours, and days when it demands all the energy the farmer has at his command. There is no idle Sunday for the man with stock to feed and cows to milk, and no holiday Saturday for the farm worker, man or woman. Even if there were, too often there is nothing to do.

The city has its score of social centres, parks, theatres, clubs, churches, streets; too often the rural community has not one source of social or intellectual stimulus. Hundreds of rural families in Canada live lives of almost complete social isolation.

AND not only lack of social opportunities but the very nature of the work in which the farmer is engaged makes play a necessary part of life. This not only because the worker is for much of his time alone and is engaged in work which, no matter how interesting, must often grow monotonous in its repetition, but because, though his surroundings when rightly understood furnish scope for interest and imagination, they seldom act as a motive force—they are not consciously related to the life and actions of the individual. For example, the town boy watching a game of base-ball in imagination places himself in the heroic position of pitcher, batter or third-base man at every exciting moment of the game. In imagination he is the fireman standing on the tottering wall, the engineer with his hand on the throttle, the orator swaying vast audiences, the millionaire making and spending fortunes in a day. When life throws him into such a position—into almost any position—he has as it were rehearsed the part. He has his plan of action or at least his instinct of action ready formulated.

But the farm boy gets no such impetus from his surroundings. Growth and the marvellous carryings on of nature, sunrise and sunset, the sweep of winds and the fall of rain, the vast progression of the stars, all of these are far more sublime and wonder-working than any human intercourse—and for this very reason the wondering human atom makes no connection between these vast forces of God and his humble self. How should he? He learns of life lessons of wonder and reverence and humility, of steadfastness and perseverance and faith; but he misses the impetus to action, the imaginary rehearsal of life which comes from direct and interested intercourse with our fellow mortals. Where then is he to look for this? If his work does not offer it nor his daily environment, then it must come through play and by means of an environment with which he may at will surround himself during the hours of recreation. It is far more necessary that boys and girls and men and women meet often for social intercourse in the country than in towns and cities where their work and the closeness of habitation throws them continually together.

But to meet for social intercourse is merely a dry husk unless it possesses some vital stimulus, some reason for comradeship, some cause of common interest. "Now, you two, go to it. Talk to each other"—the victims are dumb, or for sake of courtesy speak inanely and with boredom. "You two people should enjoy each other, since you are both such enthusiastic gardeners." Here is a point of interest; conversation follows readily. So the vital stimulus of all social intercourse is play—play taken in its larger sense to mean that which we do, not because we must but for the pleasure which its doing brings.

Rural Districts Have Play Possibilities.

NOR are the rural districts so cut off from play-possibilities as at first glance we may suppose. It is the play-spirit rather than the play opportunity which is needed, and this, thank God, fills the heart of every child, and surely lives however deeply buried in the heart of every man and woman. It has come to be the recognized problem of all rural communities. How shall I keep my boys on the farm? What is there to interest our girls? Why are so many people renting their farms and moving to town? Why can't we have a really live community? What shall we do to be saved? What indeed! Too often a hasty and discouraged survey decides us that we are in the case of the ancient Israelites—we must set our hand to the making of bricks without straw. "Impossible!" we say and give up. But it's not so impossible as it looks, and there are people who don't know straw when they see it!

"I'm Crazy to Get Back to the Fun at Home."

BUT, there are also those who do. Manilla is a little Ontario village—it's barely a village indeed, having only some two hundred and fifty inhabitants—without any natural advantage of lake or river. It is the centre of a good farming district, and all is said. But Manilla has sent out its doctors, preachers and professors, its successful business men and its clever thinkers. Cities of Canada and the United States have heard the voice of this little Canadian village—nor is it unrepresented in the cross-starred Flanders Fields. But Manilla has reason to be proud not only of these sons and daughters who have gone out to fill positions in a larger world, but also of those who have come back from school or college to take their places in the life of the community. "I'll be so glad when I'm through school," says a Manilla girl at the Collegiate Institute in a nearby town. "I'm crazy to get back to the fun and the doings at home." She voices the feeling of most of the rising generation.

So far as I am aware no one in Manilla has entered into the study of rural sociology. If you ask other play-seeking districts as to the why of

Mrs. Knox Says-

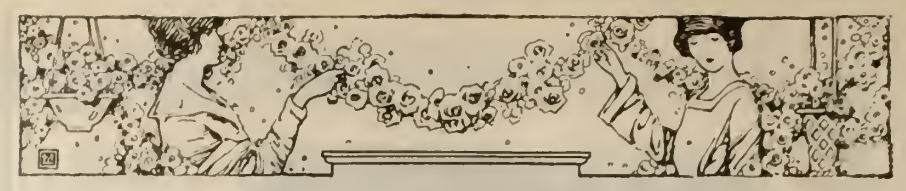
"Wherever a recipe calls for gelatine it means Knox Sparkling Gelatine." Read the recipes in all the leading publications and note the ever-increasing call for "gelatine." Its use is unlimited.

KNOX SPARKLING GELATINE

Raspberry Napoleon
(Pictured above)

Soak half an envelope of Knox's Sparkling Gelatine in half a cupful of cold water till soft, chill and whip two cupfuls of cream and put on ice. Heat one cupful of milk, one cupful of raspberry juice and pulp and half a cupful of orange juice in a double boiler; stir constantly, add the soaked gelatine, cool on ice when it begins to harden whip till light, add the whipped cream and pour into mold. When ready to serve, turn out of mold and decorate the top with plain raspberry gelatine, molded in small molds.

Plain for general use—easily prepared.



This recipe makes over a pint mold or seven to eight individual servings and uses only one-quarter of a box of Knox Sparkling Gelatine.

Including pure lemon flavor for quick use.

Of course, you must have the true gelatine and that means Knox—the "2 to 1" gelatine. One tablespoonful will make a dessert or salad ample for six people.

Write for the Knox Knowledge Books—"Dainty Desserts" and "Food Economy." They are free. If you give your grocer's name and address.

KNOX GELATINE

Daughters of the Devonshire Household

By Jean Graham

ILLUSTRATIONS FOR THIS ARTICLE APPEAR IN THE PHOTOGRAVURE SECTION

NO other Vice-Regal household in Canada has given us such a group of daughters as that of their Excellencies, the Duke and Duchess of Devonshire. Not since the days of the Minto regime, when three young girls gladdened Rideau Hall, has there been so large a proportion of the youthful element as the present Governor-General's domestic circle can show. The Duke of Devonshire, however, came to Canada in November, 1916, when the war cloud hung very heavily over the British Empire, and when even youthful spirits could not counteract its gloom. The heir of the household, the elder son, who bears the title Marquis of Hartington, has not been in Canada, as he was on military service during the early years of the war, being an officer in the Derbyshire Yeomanry. He married a daughter of the Marquis of Salisbury, and they have a little son. The younger son of the Duke of Devonshire, Lord Charles Cavendish, came to Canada in 1916, and attended Ashbury College in Ottawa, leaving for England last autumn, where he is now at school near Brighton.

However, it is the daughters of the Devonshire household whom Canada has known, and who will remember their years in the Dominion, as, indeed, an eventful period. The eldest is Lady Maud Cavendish, whose marriage to Captain Angus Mackintosh took place in the Capital on November 3rd, 1917. The bridegroom, an officer of the Royal Horse Guards, had been in Britain's first fighting force in Flanders, and had been badly wounded in an early engagement. He was invalided home, and afterwards came to Canada as A.D.C. to the Governor-General, then the Duke of Connaught. Captain Mackintosh was the only child of The Mackintosh, of Moy Hall, Inverness-shire, Scotland, Chief of Clan Chattan. On September 24th, at "Elmwood," Cartierville, Quebec, a daughter was born to Captain and Lady Maud Mackintosh; but scarcely had felicitations on this event been received when the news came of the father's illness in Washington, where the gallant young officer passed away on Sunday, October 13th. The burial took place in the historic Arlington Cemetery, near Washington, and the bereaved young widow, with her little daughter, sailed for England before the close of the year with her Excellency, the Duchess of Devonshire. A visit was paid to Moy Hall, to the parents of Captain Mackintosh, who had really given their only son in the Empire's service. Thus, to Lady Maud the Dominion will always be linked with the days of her girlhood romance, her brief, happy married months, and the sudden tragedy which brought them to a close. Captain Mackintosh will be long remembered for his courteous and gallant bearing while a member of the vice-regal household and Canada will always be interested in the future of the wee girl who belongs by birth to the land where her mother was wooed and won.

LADY BLANCHE CAVENDISH who accompanied the Duchess of Devonshire on her recent journey to England, became betrothed during the winter to a gallant young officer, Captain Ivan Cobbold, son of Mr. J. H. Cobbold and Lady Evelyn Cobbold, the marriage taking place in London, England, on April thirtieth. The bridegroom belongs to an old Suffolk family, members of which have for many years been prominent in the public life of Ipswich. To the bride, Canada sent warmest wishes for her happiness and prosperity in her new home in one of the Old Land's most picturesque counties.

Lady Dorothy Cavendish has spent the past six months in England and has been enjoying such social life as is permitted to London's younger set. Lady Rachel and Lady Anne complete the group of five daughters, who, for two years, made Government House the scene of youthful hopefulness, in spite of the sombre shadow of war. In simplicity and courtesy they have afforded an example to young Canadians and are as wholesome and happy a band of sisters as can be seen. They have the fondness for outdoor sports and pastimes, characteristic of the English girl, and are up, bright and early, to enjoy a walk or a skate before the hours in the school-room. They are eminently girlish and simple in voice, manner and attire, with none of the precocity which the ultra-modern world considers "smart."

Both Lady Blanche and Lady Rachel are decidedly musical, and have pursued their vocal studies for the past two years in Ottawa. Lady Rachel is interested in art and is studying oil-painting in Mrs. Morse's class in Ottawa. Lady Anne is ambitious to paint in water colors and is instructed by her mother, the Duchess of Devonshire, who has always been devoted to this department of art.

LADY MAUD MACKINTOSH had an extended experience of nursing (V.A.D.) in His Excellency's Naval Convalescent Home at Chatsworth, up to November, 1916, when she accompanied her parents to Canada.

The four older sisters are good horsewomen and have ridden to hounds in Derbyshire, as well as in Ireland. Lady Anne has a Welsh pony which she rides and drives in a sleigh in winter. Lady Dorothy is a good golfer and tennis player, and Lady Rachel has become quite an expert skater during her three winters in Canada, having competed in The Minto Club "events" this year. All the sisters are devoted to needlework and knitting and were busy war workers in these troubled years.

Their Excellencies are evidently believers in "God's Own Out-doors," as their share in all healthy games testifies, and the younger members of the family take the liveliest interest in the new summer home which is being built for His Excellency at Blue Sea Lake.

The youngest member of the household, Lady Anne Cavendish, is fond of the garden and was allowed to become honorary president of a horticultural society. She is also interested in the dolls and candies at the bazaars, and His Excellency proves a docile parent in his expenditure on Made-in-Canada chocolates. The daughters of this household show the prevailing interest in the movies and are allowed to attend the best performances of the "silent drama." In fact, one of the most delightful features at a children's party at Government House during the Christmas holidays was a "moving picture" show.

The Daughters of the Devonshire Household have spent some of girlhood's brightest years in our Dominion—and may their memories be as pleasant and heartfelt as the wishes they will take from Canada.

THE JOURNAL JUNIORS' CLUB

Conducted By Ethel Bain

MY Dear HOME JOURNAL Children:

It is, indeed, a pleasure to greet so many new members this month—and such interesting letters, too.

How thoroughly you all understand the value of "swatting the fly." If only we had space enough to print all your letters, but we haven't; so you must be content with the extracts as they are.

Will all members please remember to write their full address on their letters. In view of winning a prize, we must have your correct and full address, for we don't want any prize money to go astray in the mail.

Certainly, Myrrl McLellan, you become a member as soon as you write to the club page. Won't you try for a prize?

Such a pity, Dorothy Raether, that your letter was too late for the March contest. Try again, won't you? Watch the page, for there will soon be another chance to write about the birds.

Your little poem was very good, Monica O'Connor, and I hope you will enter the poetry contests.

Welcome, Vivien Connolly. Won't you ask some of your school friends to join our club?

Your letter arrived safely, Vera Stonehouse. You will see the address of the Journal, after the rules, this month.

Your horses sound so interesting, Elden Stolz. What about a snapshot of Fan, Dobbin and Jock for the photograph contest?

So sorry your snapshot was out of focus, Ernest Deanitt. Try again, for Jury is worth it.

Your sincere friend,

ETHEL BAIN.

PRIZE LIST FOR APRIL CONTESTS.

1. Members up to 9 years of age. Awarded to Willard Krauter, age 8, Louise, Ont.

2. "Why we should swat the fly." Awarded to Vivien Connolly, age 15, 265 Cassells St., North Bay, Ont.

3. Photograph Contest. Awarded to Jessie Whittle, age 15, box 699, Petrolia, Ont.

4. Best essay on Spring. Awarded to Ivy Failes, age 15, Port Colborne, Ont.

HONORABLE MENTION.

Ernest Deanitt, Velma Sanderson, Edith Knetchel, Clotilde Dinner, Winifred Wannan, James Kyle, Roy W. Graham.

PRIZE LETTER.

"Spring."—By Ivy Failes, age 15, Port Colborne, Ont.

Spring, in Canada, is to me, the most glorious season of the whole year. Then, it is that plants begin to grow and bloom, birds return to their summer home and every thing is general seems full of life and vivacity. Old Mr. Sun smiling his broadest in the blue heavens above also seems to feel the effect of Mother Nature's magic wand.

The farmer, who has been anxiously awaiting the arrival of spring, now, triumphantly marches forth to the sugar-bush with pails and all the necessary apparatus.

In the woods Mother Nature has been hard at work and a great transformation has taken place, The ground is covered with budding flowers awaiting eager fingers. The trees are in bud and will soon spread their shady leaves everywhere. The little folk that inhabit the forests are busy, some having just awakened from their long winter's sleep. Most of them are building fresh homes for the summer. Here and there a saucy squirrel darts past, chattering, or scolding its neighbors. Above, the birds are twittering and singing joyously. Nearby, a brook is rippling happily over pebbles and stones, rejoicing that it is free once more after being ice-bound all winter. In yonder pond the frogs holding their evening concert complete the harmony.

But not only in the woods do we find all these wonderful signs of spring. Mother Nature's fingers have been busy in our gardens also. Here and there, crocuses, snow-drops and other spring flowers are peeping shyly up from under the ground, afraid lest they have awakened too early, and everywhere is spread the most wonderful green carpet.

Now, when you sum up all these beautiful symbols of spring, I am sure you will agree with me in saying that spring is one of the best and brightest seasons of the year.

Prize photograph, taken by Jessie Whittle, age 15, Petrolia, Ont.

PRIZE LETTER.

Contest No. 1.—By Willard Krauter, age 8 Louise, Ont.

One of the most common wild animals on our farm is the ground hog or woodchuck. It is a brown animal and has very short legs. Its head is pointed and its teeth are very sharp.

It makes its home by burrowing in the ground in a slanting direction; this home has two entrances, one opposite the other. It prefers dry, gravelly or sandy soil for its home.

In the fall it goes to sleep for the winter. In the summer it lives on the nice clover plants and feasts in the farmer's pea fields.

Men go out with guns in the spring and summer trying to shoot as many as they can because ground hogs destroy so much foodstuff. They often dig their homes out under the stone fences and once in a while come out and give a sharp whistle.

When our collie dog hears one he makes a race for the spot and I pull away the stones and give him a chance to get at it. The dog has to be careful and catch it by the back of the neck so it can't bite him with its sharp teeth. When he gets it by the neck he shakes it until it is dead.

Some people tan the skins for shoe laces and others use the oil.

PRIZE LETTER.

Why we should "Swat the Fly."—By Vivien Connolly, age 15, 265 Cassells Street, North Bay, Ont.

The most common breeding place of house flies is in refuse and garbage. Here the female fly lays about one hundred and twenty eggs, and in a few hours these eggs hatch into tiny, white grubs. These feed upon the garbage for five or six days, growing rapidly, and molting twice in that time. Then the larvae, for that is what they are called, change into a pupa. In another five or six days the adult fly comes out of the brown pupa case. This fly begins to lay its eggs at once, and in turn they change from the larva to the pupa stage, and then emerge adult flies.

The common house fly is a frequent cause of disease. Nearly the whole body of the fly is covered with fine hairs, especially the parts around the mouth and feet. Flies feed on filth and carry germs on their feet. When they come in to the house they often infect milk and other foods, causing much disease.

The fly causes so much danger of disease, that it is a constant source of trouble. Every means should be used to kill it. Since the fly has four broods in a season, and each fly lays about one hundred and twenty eggs, it has many descendants in a single year and therefore flies should be killed at the beginning of the season.

Windows should be screened to keep the flies from the food for we never know where they have been crawling and feeding. Then all refuse and garbage should be removed before the flies have a chance to lay their eggs on it. Thus, by taking a little precaution, and "swatting the fly" at every opportunity, much disease and inconvenience may be avoided.

HONORABLE MENTION.

"Spring."—By Edith Knetchel, age 10, Hanover, Ont.

Spring has come. Everybody will be glad because they will have no more of the dreary winter. The snow has been melted by the warm rays of the sun, which is gradually climbing, higher and higher, for on March twenty-first the sun crosses the equator and this is the first day of spring.

The weather of spring varies from the winter season. The winter weather is cold and stormy, but the spring weather is sometimes very wet, and sometimes warm and dry. April is the rainy month of spring, but we must have rain to take the frost out of the ground, so that the plants will commence to grow.

The season of spring brings growth. The grass that was brown and dry turns green. The trees get leaves for shade in the summer time, and the flowers and plants begin to grow.

Everybody can tell spring is coming by the early birds. The robin is the earliest, and we are cheered by his song in our work and play.

When spring comes the ice breaks up and is carried down the rivers in large blocks. Then the floods come and the rivers are swollen, and the waters overflow to the land, but this soon goes away and then the land is ready for tilling. and the grass springs up covering the earth like a green carpet.

Extracts from members' letters (April contest, No. 2) as to why we should swat the fly.

"My reason for why we should swat the fly is, because, although it is only a small insect, it is everybody's enemy, for the fly spreads germs all over our houses and yards."—Gladys Foster.

"Just think of the germs they carry. They simply must be destroyed."—Emily Stallwood, age 14.

"Much of the spread of disease throughout the country can be attributed either directly or indirectly to the house fly. The most effective means would be to destroy all the filth and unclean places where flies breed. The fly is a great menace to humanity and the slogan of the country should be 'Swat the fly'."—Eric Patterson, age 16.

"Nine cases out of ten, people refuse to swat the fly. Flies not only carry the germs of filth but also of contagious disease. Is it any wonder that the necessity of 'Swatting the fly' should be impressed upon mankind the world over?"—Thelma Fox, age 15.

"Flies, those seemingly harmless insects are the best of germ carriers. Everybody swat the fly, not only when you see him,

(CONTINUED ON PAGE 31.)

JUNE CONTESTS

1. Boys and girls 12 to 16. Subject: "My Favorite Summer Sports." Not more than 500 words.
2. Photograph Contest, open to all members. Any subject.
3. Members up to 11 years of age. Subject: "My Garden." Not more than 300 words.

Name, age and address must be written on each contribution.

Write on one side of the paper only.

Members under 12 years, please write on ruled paper.

Closing date, the 26th of June.

Address all entries to Journal Juniors' Club, Canadian Home Journal, 71 Richmond St. West, Toronto, Canada.

By Royal Appointment

Acceptable Gifts

NOW THAT PEACE has come you will want to give something to your friends at home, abroad, or at the Front, that will give lasting pleasure—won't you?

WE SUPPLY

Lovely Cambric Handkerchiefs, Pure Linen, from $2.28 to $15.12.
Lawn Handkerchiefs, $1.14 to $2.88.
Embroidered Handkerchiefs 10c to $1.20.

Khaki Handkerchiefs, $1.20 to $1.80.
Lace Collars, $1.20, $1.32, $1.56, $2.82, $3.18, $4.80.

Table Linen, Sheets, Towels, and Linens of every description. See our Price List, sent post free.

MURPHY & ORR, BELFAST
Box 19.

EE SPEAKING FROM EXPERIENCE EE

THE DOCTOR: "Ah! yes, restless and feverish. Give him a Steedman's Powder and he will soon be all right"

EE STEEDMAN'S SOOTHING POWDERS Contain no Poison EE

Lift Corns Out With Fingers

A few drops of Freezone loosen corns or calluses so they peel off

Apply a few drops of Freezone upon a tender, aching corn or a callus. The soreness stops and shortly the entire corn or callus loosens and can be lifted off without a twinge of pain.

Freezone removes hard corns, soft corns, also corns between the toes and hardened calluses. Freezone does not irritate the surrounding skin. You feel no pain when applying it or afterward.

Women! Keep a tiny bottle of Freezone on your dresser and never let a corn ache twice.

Small bottles can be had at any drug store in the United States or Canada.

The Edward Wesley Co., Cincinnati, Ohio

Douglas Fairbanks at Home

By Carl Wilmore

ILLUSTRATIONS APPEAR IN THE PHOTOGRAVURE SECTION

LEAVING Hollywood, the streets sped like a Mack Sennett chase. Of course, being Southern California, the road is boulevard all the way, perfectly kept up. Soon the hills grow steeper, and you are in the foothills. Beverly Hills is not a town, but a series of estates, each surrounded by vast grounds. Just where the mountains begin to rise—situated, in fact, on a hill that is the beginning of one of them—the writer spied a chateau-like mansion, formal and aristocratic-looking, gray and a little forbidding.

"There, that's it," said Fairbanks.

Another whizz, and we sped up a series of terraced roads, past gardens with everything—pines, firs, palms, roses, poinsettias, willows, bay trees, cacti—all blooming at once, and we had landed atop the small mountain and drove around to the Norman-like portico.

Out came Naka—his full name is Edward Tanaka—Doug's major domo and boss around the house. He ushered us into the gray and white enamel hall, with its black and white marble lozenge pavement, and with its French windows opening upon the portico; Western scenes by W. Herbert Dunton, a fifteenth century Italian marble chest, full of twentieth century golf sticks and tennis racquets, an early Italian enamel plaque—at once you knew that the man who lived in the house must be a connoisseur by instinct, if not by training.

Naka then took us into the comfortable living-room. Here were two Remingtons—one, Pere Marquette standing upright in a canoe. "I wonder if Frederic really knew what a difficult and dangerous feat it is to do that?" commented Doug. At one side French windows open upon a stone terrace. The writer went out upon it with Doug. It overlooked the entire fifteen acres of the estate. A magnificent vista below stretched out before us. One could just catch a glimpse of the Pacific in the west. At night it is a glittering band of diamonds, the lights of the Pacific beaches—Venice, Santa Monica, Redondo, Hermosa and Long Beach.

WE came back, and while Doug dashed upstairs—he seldom walks, just dashes—we looked around his house. Back into the hall—it is a tall chateau, Doug's house—and everywhere you find the high ceilings that alone give dignity to rooms; and at the right was the drawing-room, with its marble flooring, its brocade hangings, its gilt furniture of bygone days, its great gilt Italian candelabrum, with—can you beat it?—stuck right into the middle of the whole rich ensemble a moving picture machine, and a screen at the further end of the apartment! Here, when Doug gets lonesome, they run off his favorite picture, or new pictures, for him to enjoy or to work over.

Naka dragged me upstairs; showed me the cheval-glass wardrobes—one for his eighty suits, one for his three hundred neckties, one for his formal clothes and dress suits, one for his forty hats, one for shirts alone, one for his Chinese and Japanese house coats and pajamas, of which he is excessively fond, one for his innumerable pairs of shoes, slippers, riding and hunting boots, one for his overcoats alone—dozens of them. Well, it is some collection.

Then Naka took me into Doug's bedroom, in gray and rose, with rose bronze door and window knobs; with the high bedstead like King Charles the First's—only Doug won't sleep in it, but flops in a tiny little porch leading from the bedroom, with only a cot in it, and the elements all around it; then into Doug's white-tiled bathroom, with its Fairbanks scales, for Doug to keep up to snuff by; then into another little room, with an ancient inlaid bedstead—too fragile to sleep in, but part of a perfect room of about the thirteenth century; and then we went down into the model kitchen, where Mam'selle Englar, Doug's Swedish cook-maid, was preparing our luncheon. We came upon the rest of Doug's household here and there—Walter Tsukaguchi, the butler; "Cap" Mori (he is called "Cap" because he insists on wearing a cap at all times, and, besides, he's an officer in his Imperial Nipponese Majesty's army) and Doug's gardener; Nichida, "Cap's" assistant; James Mizoguchi and James Kawamura, all important personages in the house, under the honorable supervision of Tanaka. Doug's housekeeper-valet-dresses boss.

IT seems that Tanaka has a strange fascination for dogs. No matter where he goes, some pup or other just strays into his hand, so to speak, and Tanaka brings him home. "Found him," is his explanation. Doug called up, "Come out and see my dogs!"

There they were—and Tanaka gazed on them with pride. They yelped around him—Minnie, the St. Bernard; Togo, unearthed by Naka; Shibe, purchased for one dollar; Dutchy, a Dachshund, most unpopular at present, and Rex, an Alaskan dog, and Doug's favorite. When you ask Naka where he gets the dogs, he looks at you innocently. "They just come; that's all, sir."

We went in—the dinner bell had sounded, but Naka insisted that we first see Fairbanks' Japanese cabinet full of bathing suits; his many suits of Western duds—leather, hunting, hair and burnt leather chaps, holsters, belts, revolvers—one given him by the notorious Dick Crawford, with seven notches, silent witnesses; one from Sheriff Simpson, down on the Mexican border, with eleven notches, proof of the sheriff's mettle; Doug's camping outfits, his blankets, of all sizes, weights and colors; his spurs, and a pair of silver ones given him on his thirty-fourth birthday, "as a token of our love," from his company; his harness and saddlery room, with one, among others, given him by a famous Mexican general—one of those "generals," you know; another, the gift of his company. The dinner bell rang again, and we went into the baronial-looking dining hall, with its high dark wainscotting, its black furniture, its limestone walls and roof trees, and its white alabaster basin catching the sunlight in the windows.

"DOUG," I said—oh, we had agreed that it was to be "Doug," without any "misters" for either of us. "I noticed about a dozen bottles of perfume on your dressing table. I don't want to be personal, but —"

"That's all right," smiled Doug. "I have them because I am fond of perfume. They're all different. Some days I like one, some days I prefer another. Some people wonder about this; but will you tell me why in the world we should not love a variety of beautiful odors, just as we love beautiful sounds (music), beautiful sights (scenery), pictures, sculpture (faces), soft textures (velvet, silk, smooth skin), and agreeable tastes (candy, good foods); and why should we neglect this important sense? Why not train and develop it, like the others?"

This had never occurred to me. At once I received a new impression of Douglas Fairbanks.

Of course, as Doug always preaches "Get up from the table hungry," you'll want to know what he ate. Here it is:

Two little pork chops, a few peas, a salad, and coffee—Doug likes his coffee, and insisted that I have "a big cup, like mine," he said—and a little dessert.

We chatted about Doug's music-room, his collection of books; and, before we knew it, it was philosophy, art, literature, politics, and all the rest. Doug—unlike most actors—is as good a listener as a talker, and after a few moments of our line of conversation he said, "Oh, you're a high-brow, aren't you?"

THAT began another big discussion; but anyway, it brought out that Doug would like to do a "Three Musketeers" and "Monsieur Beaucaire," if he dared; that Doug thinks that comedy is more valuable to a people than tragedy; that Doug is certain that in the olden days people actually did converse with more dignity and grandeur, although some moderns would try to tell you that Cleopatra and Elizabeth talked about as we do to-day; and Doug cannot see anything reprehensible in an author having his "hack-work" done by others, and says it's possible to produce works of art in this way, and cited Herbert Spencer and Dumas as examples. Well, even if you didn't agree with Doug, you knew that he is a thinker and has a definite viewpoint.

Luncheon passed before we knew it, as all pleasant luncheons do. Doug showed us the steel part of a pickaxe which he had penetrated with his gun—once in a while he finds time to go shooting. We strolled down, hatless, to the tennis courts. We visited the stable, where Ed Burns takes care of the horses, especially of "Poncho," his brown Mexican mustang, and "Star," his famous picture horse, on whose back he made that fourteen-foot leap in "The Man From Painted Post." "Star" has been three years a movie horse, and Doug is going to retire the old white standby. "He's twelve years old; he's earned a rest. He's going out to pasture for the rest of his days," said Doug, patting the animal's neck.

Doug's eagle eyes happened to light upon a rope—it was all off, though the rope was too heavy. It meant just about forty-five minutes of demonstration of every sort of lassoing and rope-throwing; and Doug knows the cowboy's tricks from A to Z. He roped the horses, poor Bennie, the everlasting press agent, and the writer.

We went on, strolling through the estate. We came upon garden after garden, little hills, shady nooks, and fields and steep hillsides set with pines. The Japanese gardeners, with their customary attention to detail, kept everything in perfect order.

WE finally arrived at the big swimming pool, set in a little valley, with a pergola court about it, flowers blooming everywhere. The pool, of concrete, slopes gently to a depth of ten feet. One end—Doug calls it the "beach"—is of sand. It has its own power-house for pumping the water; its air-rafts, its diving-boards. You may remember the beautiful pool in "He Comes Up Smiling"—Doug used it in the pictures. Also, remember the garden party in Doug's picture? It took place at his house.

We spent an hour wandering. Fairbanks pointed out a tree. "All trees have characters," he said. "They have personality. Some have sex. That trim little pine is a nice old New England lady—very modest, quiet, prim and soft-spoken and quite conventional. This pine here I call Von Hindenburg. Isn't it perfectly natural for me to do it?" And he indicated a short, thick-set, square-top tree.

It was time to return to the house for a chat. Doug hated to get back to his career. He stopped here and there, showing us the sights. Everything in the house was in such perfect good taste; it wasn't a jumble of things. There was a repression and an eye for color, harmony of line, and a sense of propriety.

"Doug, you've got a beautiful house," I said. "Every detail of it shows your artistic hand. I bet you had a lot of fun designing it, arranging the little fine points."

For the next few minutes I waited while Doug ran in for his cap and jacket, anxious to return to work

An Honored Canadian

By JEAN GRAHAM

YEARS before the declaration of the Great War, the Canadian nurse had made for herself an enviable reputation in the largest city of the American Continent. When a prominent New York surgeon was interviewed by a "World" reporter, concerning the reason for the success of the Canadian girl as nurse, he stated that most Canadian girls in the nursing profession seemed to have led simpler lives as children than their American cousins, and consequently were less nervous and better fitted to stand a continuous strain. Also he declared that the Canadian girl seemed to understand more readily the value of obedience and was more amenable to discipline than the daughter of the Republic. The reporter, desirous, no doubt, of placing the women of the United States in the most favorable light, gave the surgeon's views, and then suggested that the Canadian nurse was stolid and unimaginative. Whatever the cause might be, of the rare blend in the Canadian nurse of the qualities of skill and sympathy, we know that years before the August of 1914, she was acknowledged as mistress of her art and ready to respond to any call.

It is interesting to note that among our most successful nurses, we find many daughters of physicians. The inheritance of men of unusual talent has often been traced to the mother's particular taste or aptitude. In the case of women who have a "career," may we not frequently find that a paternal taste or predilection has been inherited by the daughter? Among Canadian nurses with a war record, none has a more creditable showing, both in varied experience and continuous strain than Matron Elizabeth Russell, R.R.C. (First Class), daughter of the late Dr. Russell, of Hamilton, Ontario, who has served in three wars, with the happiest results for those under her charge and with honor to herself.

MATRON ELIZABETH RUSSELL, R.R.C.

This honored Canadian nurse, a native of Hamilton, Ontario, and a graduate of the Presbyterian Hospital, New York, has known distinguished service in three wars—the Spanish-American, the South African and the Great War. This portrait is by Mr. John Russell, her brother, one of Canada's most original and finished artists.

MISS RUSSELL was a nurse-in-training at the well-known Presbyterian Hospital, New York, and, on her graduation, she volunteered for service in the Spanish-American War of twenty years ago. She embarked as military nurse on a hospital ship; and made nine voyages between Cuba and American ports and one to the Philippines. This relief ship did a wonderful work in ministering to wounded soldiers; and thus, at the outset of her career, this young Canadian nurse proved herself equal to the sternest demands of her profession.

When hostilities broke out between Great Britain and the Transvaal, Miss Russell offered her services to the Canadian Government, with an anxiety to aid her own country in its share in the struggle. She was sent to South Africa and was near the scene of the conflict for fifteen months. The service there was severe, indeed, for there were several outbreaks of fever to cope with, as well as the conditions attendant upon the wounds of warfare. For her services in this war, Miss Russell was awarded a medal which was publicly presented to her at Exhibition Park, Toronto, in October, 1901, by the Duke of Cornwall and York—now known as His Majesty King George V. There was a tour made by the Duke and Duchess in the autumn following the death of Queen Victoria, and the most notable event of their visit to Toronto was the military review at Exhibition Park.

Then, fourteen years later, came the great call, when the war which rent a continent, broke out and humanity stood, ready and undismayed, to aid in an unparalleled struggle. As the months went by and the terrible extent of the need became apparent, every nurse who was equipped for such an emergency longed to be overseas in the service of those who were risking their lives at the front. Miss Russell, who had proved most successful in the pursuit of her profession, was then on the staff of the Presbyterian Hospital, and was anxious, once again, to serve the sufferers in the army. She sailed on the "Lusitania" (just before the ill-fated voyage of that ship of undying memory) to take charge of Mrs. Whitney's hospital at Juilly, France. After a year's service in France, she applied to be transferred to the Canadian service and crossed to England, where she found more than enough for skilful hands and willing hearts to accomplish.

The service of matron at Taplow Military Hospital on which Miss Russell then entered was a task which demanded the greatest executive ability, the utmost capacity for devoted work. The testimony of some of the most celebrated surgeons of the day and of many grateful patients proved how nobly this Canadian woman served the soldiers of her own land in the time of their greatest need.

THE Matron-in-Chief among the Canadian nurses, Miss Margaret Clothilde Macdonald, a Nova Scotian by birth, had also seen service in the Spanish-American and the South African Wars and has been on the Canadian permanent force since 1906. It must be remembered, with reference to our nurses, that the Canadian sisters were the only nurses who had the rank, pay and allowance of officers.

The Royal Red Cross was bestowed on several Canadian nurses and among these was Matron Elizabeth Russell, whose work at Taplow alone merited royal recognition. When the King was about to bestow this more recent honor, he noticed the earlier decoration and recalled the former occasion in Toronto, when the South African medal had been awarded. Much water had flowed beneath the bridges, and the lifeblood of an Empire had been shed since the sunshiny October day in the year, 1901; but the bond was stronger than ever, for it had known the strain of sternest sacrifice.

Next to our men who fought in the trenches, we should hold in honor the doctors and nurses who followed unflinchingly in the face of danger and gave their strength and, in many cases, their lives, in the service of their country.

The records of the Nursing Sisters during the war are second only to those of the fighting men; indeed, it is sometimes a harder task to minister to the wounded than to face the enemy. If the Canadian man and boy have proved their courage innumerable times during the war, the Canadian woman has also shown her fortitude in every land where warfare was waged. Sometimes the work to be done was of the most trying; but the girl who crossed the seas to "help out" was worthy of the boys who sprang so readily to arms in those first days of conflict.

JUST about a year ago the Dominion was thrilled with horror at the German attacks on hospitals, which meant the death of many wounded soldiers and the killing of several Canadian nurses who, at all hazards, remained at their posts and remembered the helpless soldiers in their charge. There had been so many barbarities in that terrible four years' struggle, that a weary world wondered if there was anything worse which the Hun could achieve. The hospital attacks and the sinking of the "Llandovery Castle" showed that, to the very last, the Hun was determined to prove utterly lacking in chivalry. Let us remember in these days the nurses who were victims to this ferocity—not that we may be vindictive, but that we may realize with whom we are dealing.

The month of May, 1915, in the sinking of the "Lusitania," saw the most colossal crime Germany had committed. The month of May, 1919, saw the most remarkable burial ever given an Englishwoman—the tribute in Westminster Abbey which marked the ceremony over the body of Nurse Edith Cavell, taken from the prison grave and finally laid to rest in her own beautiful homeland in Norwich.

After the South African War, Kipling paid a tribute to those nursing sisters who had given their lives in service:

"Wherefore we they ransomed, while
the breath is in our nostrils,
Now and not hereafter, ere the meaner
years go by,
Praise with love and worship many
honorable women,
Those that gave their lives for us when
we were like to die."

Canada will pay due honor to those heroic women in the nursing service who died on war duty or were the victims of Hun attacks on hospitals. But to the living, also, our homage should be paid—and for Matron Russell, who is typical of the Canadian nursing sisterhood, her native land has heartiest thanks and warmest good-will.

The Photogravure Section of the July Canadian Home Journal

will contain a reproduction of an excellent painting of Major General Mewburn by Wyly Grier, one of our own Canadian artists.

In addition to this there will be pictures of girls holding Canadian championships in golf, tennis, swimming and diving.

A page of Fashion's latest dictates in chic bathing suits.

A picture of Mary Pickford which has never before been published.

A page showing curious rock formations in Canada.

Midsummer Fashions and Fixings

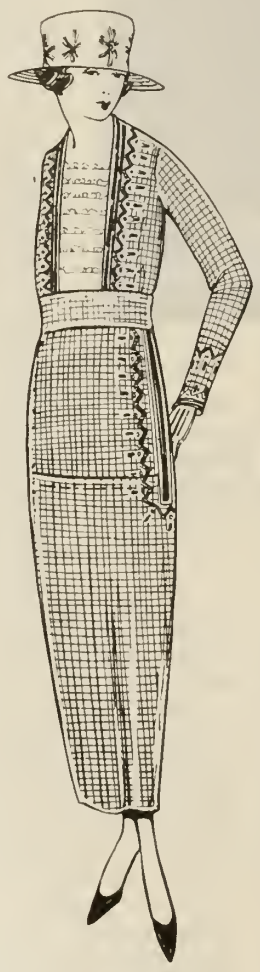
Being a Resume of What's New and Useful for Warm Weather Wearing at Home or Abroad.

By CHARLOTTE M. STOREY

The summer aptness of this white gabardine suit is enhanced by the band of open work around the bottom of the jacket.

WHEREwithal shall we be clothed this first summer and vacation time of restored peace? This is a vital question for those who are planning a vacation in Muskoka, down the St. Lawrence, somewhere among the mountains or at any of the numberless summer resorts with which our country abounds. It is even more vital for those who must stay at home, and feel that their clothes should, in a measure at least, compensate for the vacation that is denied them. For there is a compensation in clothes; the feeling of well-being that comes with the consciousness of being properly apparelled, is something that a well dressed woman cannot but appreciate, whether she stays at home or tours the world over.

Away back in those dark days of 1914-15 when we wrote and talked so voluminously and so dolorously about the "colorless age" and "fugitive dyes" and the possibility of having to go about clad in animal skins because we couldn't and *wouldn't* have German dyes any more, and couldn't get European textiles, we greatly underestimated the resoureefulness of textile manufacturers and dye companies in Great Britain and on this side of the Atlantic, who have performed almost miracles in the way of marvellous cloths and colorings. And the change in our attitude towards silk, brought about by the war, is almost as remarkable. It used to be that only the wealthy wore silk, but during the war the restrictions laid upon the use of wool and the abnormal price of cotton, fairly drove women of all classes and ages to silk, which, although higher priced than formerly, did not increase in the same ratio as wool and cotton. Besides, we were told it was patriotic to wear silk so as to conserve wool, and with such alluring weaves as the silk mills were producing, it was not hard to be patriotic in this respect.



And before we stray away from the topic of textiles, it might be advisable to describe a few of the newer silk weaves, as we shall have occasion to refer to them farther on. One of the most wonderful of these many wonderful materials is like a piece of suede, the reverse side being plain. It is all silk and is known as dovedown. It is made in dress weight and is used for light weight summer suits and wraps as well

Fan-ta-si and kumsi-kumsa are two names we hear frequently this year. They designate silk weaves that are quite similar in appearance, usually in two-tones, with a rough surface achieved by an irregular raised thread in wavy effect. Dew-kist is another silk with a loose, raised thread, regular in its occurrence, having the appearance of a raised stripe. It also comes in shot effect, the warp being one color and the woof another.

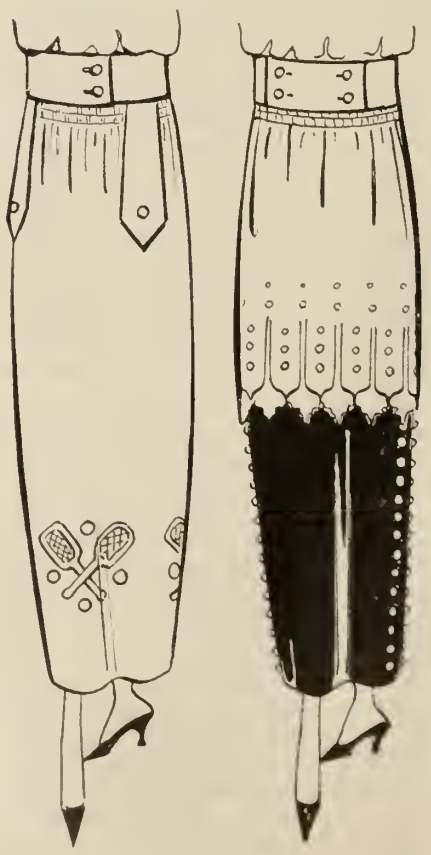
SATIN SONATA is like a silk bedford cord and whip-poor-will is an enchanting fabric that you look at one way and call it a jersey and another and you see only a cord. Dream mist aptly describes a diaphanous weave with a crepy ripple at intervals. Baronette satin is less of a stranger because we have had it with us longer in handsome skirts and wraps. It is heavier than ordinary satin with a rather loosely woven satin surface. And tricolette this is one of the most popular of all silks for suitings and for dresses. It is a knitted fabric and has a host of near relatives that look just a little different and are known by other names. But one might go on indefinitely discussing these alluring fabrics before coming to ont staunch old friends, taffeta, pussy willow, foulard and Georgette crepe, which are none the less fascinating because they are not strangers.

But in introducing these new and old silks, we do not mean to give the impression that smartly dressed femininty will not wear cotton dresses this summer. On the contrary, there will be a more varied assortment of exquisite cotton materials, from which to select a vacation frock, than we have had for a long time, and you'll be immensely interested to know that calicoes are being used for the most voguish little frocks you could imagine. Unless you've seen them, you're picturing to yourself a fine calico with a silken sheen and Pomadour or foulard pattern. Nothing of the kind. They're more like the calicoes, Mademoiselle Sixteen, of which your grandmother used to make her morning wrappers, the left-overs of which you'll find in her patchwork quilts—navy blue ground with a queer little red figure, orange with a fixed little pattern in black, white with baby pink, or vice versa, buff with black and perhaps a little grey mixed in the pattern. They're "quaint as a sunbonnet," these little calico frocks with their elbow sleeves, organdy collar, cuffs and sashes, and mayhap crisp little organdy ruffles.

For vacation time, the printed voile will be a thing of beauty and a veritable joy the whole vacation through, if you select one with a moderately dark or neutral background well covered with the pattern, because all the renewing it will require will be an occasional pressing. Batiste or organdy collars and cuffs, if the sleeves are made for cuffs, a navy or black velvet ribbon girdle, and in one of these voile dresses the maid or matron is ready for almost any occasion, whether it rains or shines. That is the charm of a summer dress that is neither light nor dark — it's right for all weathers.

The surprising possibilities that lurk in gingham were not fathomed until the artist thought of red woolen yarn embroidery—and behold the result.

Then, there's colored organdy — lavender, canary, apple green, rose and turquoise made up with white organdy; also cotton foulard and gingham, and the very newest, and certainly the most unusual, trimming for gingham is wool embroidery. See the illustration and prepare to capitulate on sight.



Deep U-shaped fronts filled in with modesty vests of organdy or net, berthas, fichus, elbow sleeves and tucked skirts, are all approved by Dame Fashion for cotton summer dresses. The large collar with the Valenciennes lace edging, shown on the yellow organdy dress illustrated, is considered very modish for this summer. Ribbon sashes, and particularly ribbon velvet, are very much in vogue for the ultra-modish dresses just now.

In passing from the subject of dresses, we might say that the softer silks, such as foulard, Georgette crepe and indestructible voile, lend themselves to draping, while taffeta is prettier made up on rather straight lines. On the latter cording is used a good deal, and also rufflings of pleated taffeta or ruching of frayed silk. Moire silk is trimmed in the same way. Wide sashes tied in the back, having long ends that reach almost to the bottom of the skirt, are rather attractive on silk dresses.

A NEW silhouette has been introduced which, if taken up, heralds a wider skirt for winter. But it is so unusual it will take us some time to become accustomed to it. This has a full upper section, gathered in to a narrow foundation that is ankle length. Then, there are Turkish trousers—at least, the skirt drapery, on a similar silhouette, is arranged in Turkish trouser effect.

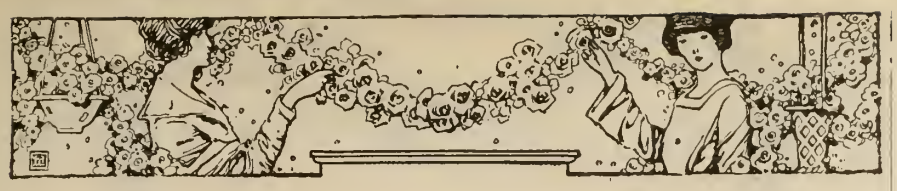
Gabardines and linens in white are enticing for midsummer wear. We have seen some extremely good-looking ones made quite like the spring cloth suits, with trimmings of open-work embroidery, like the one sketched on this page. Raw silks will also have a vogue for midsummer.

But of all the exquisite raiment Dame Fashion has to offer for the warm weather there is nothing with a more powerful allure for her who likes dainty clothes than the sheer blouses and fancy silk skirts, the latter made of fan-ta-si, baronette, kumsi-kumsa, tricolette, Georgette crepe, etc. Georgette crepe, net and voile are the materials of which the blouses are made. Also, there are the bewitching transformation (transformation because they transform a skirt and blouse into a tunicked dress in a twinkling) blouse—or, as they call it in Paris, "*La Casaque*"—of Georgette crepe, embroidered with woollen yarn, crepe de chine, or even tricolette. And, by the way, both Paris and New York are embroidering everything with woollen yarn, grey and red being favorite shades, grey on navy and red on Victory blue. They are also crocheting corsage bouquets of colored woollen yarn. Sport skirts are made up plainly but ornamented with sports motifs, drawn work or embroidered with a conventional pattern in a contrasting color. Black embroidery is used on white material. For instance, a white skirt with upper section of baronette satin and Georgette crepe for the lower had the latter appliqued to the satin with black silk embroidery.

Here are two summer skirts that would a-sporting go. One carried a tennis racquet and the other arrived late, and was admitted at the tea hour.

White gabardine wash skirts are smartly pocketed, pearl button trimmed, pin tucked, and sometimes eyelet embroidered as a further decoration. Satinette in cream color makes a pretty and serviceable wash skirt. In these days of much motoring, whether it be by land or water, a motor coat of some sort will be indispensable. One of those trig looking military trench coats of summer weight might be suggested; or perhaps an English cloth coat, one of those swagger looking garments that never grow old, and consequently never go out of style; or perhaps your fancy might run to a Canadian tweed simulating a Donegal weave. Like the English coat, they have wonderful wearing qualities, and made with a Raglan sleeve, a large collar, and quite large enough to slip on over a summer suit, if necessary, they offer endless comfort and satisfaction.

As summer-like as a butterfly is this yellow organdy frock, which is adorned with one of the new rolling collars and a dainty tucked modesty vest.



FOR dressier occasions a cape or wrap of some kind is almost a necessity. One of the newest summer capes is cut in three sections, the one overlapping the other in tiers, and has a huge collar. This was made of navy blue serge, with faille silk collar. Capes and wraps are having an immense popularity this summer. Victory red linings look well in navy gabardine or serge wraps. There's a new country club coat of covert cloth, with velvet collar and pin-tucked skirt, which has been considered worthy of a sketch for this article.

Never have hats had more individuality and becoming qualities than they have for this midsummer. They are bright without being loud; they are striking without being bizarre. They are both big and little. One of the striking contrasts is the fine and coarse straws. You may select either and still be in the mode. You may even select a chapeau composed of straw and fabric, and some of the smartest summer hats will be made entirely of Georgette crepe, in a light shade, of course. Sailors and other shapes have underfacings of some becoming shade of Georgette or taffeta. This is one of the reasons why this season's hats are becoming—so much depends upon the color next one's face. One can wear a trying shade if the underbrim is faced with exactly the right shade. There's a pretty new straw called Sebil, which is woven in basket pattern and may be used for dress or sports hats. They are gorgeously trimmed with bright colored flowers. Leghorns are always in vogue, and this season brings us beautiful big floppy ones, also flower trimmed. Here, again, we find velvet ribbon, which from time immemorial seems to have belonged to Leghorn.

One of the niftiest sailors we have seen this year was a fine notched straw with black brim and band topped with a white crown. White is to be used quite extensively on black and navy blue. White Milan straw is used for both dressy and useful hats.

Whether we vacation or not, a sweater coat will be most acceptable if we have not already provided ourselves with one—perhaps two—for these trig looking little pull-over or coat sweaters of yellow, turquoise, jade, rose, or orchid are a regular obsession, and for

(CONTINUED ON PAGE 31.)

Midsummer Fashions and Fixings

(CONTINUED FROM PAGE 30.)

those who prefer the other kind, there is the coat style. Knitted scarfs, either in wool or silk, will be found useful during the summer time, providing they are light weight and not too large.

THE matter of accessories for the summer toilet is such a comprehensive one that it can only be touched upon. Almost every spring and summer suit has been made to wear a gilet or some manner of vest with, and the diversity of styles in which we find this accessory would take a page by itself, but those made exclusively for summer wear are composed of fancy ribbon, Georgette crepe, organdy or net, prettily ruffled with narrow lace. They are usually in panel style, sometimes accompanied by collar to go across the back. Modesty vestees and little round organdy lace trimmed collars are procurable to fill in the low-cut bodice or to wear with the collarless dress when one wants a change.

Hosiery matches the shoes, as a rule, although in the case of a navy blue costume it is quite permissible to wear navy hose and tan shoes. Gloves match the costume. As low shoes are to be worn so generally this summer, it has been found advisable to provide some kind of a summer spat for cool days; therefore, we have the moire silk spat in black, white and grey, as chic as chic can be.

And the glorified sunshades! The glory of the sunshade has returned, with such decorative features as hand painting on silk, inserts of fancy ribbon, shirrings and tucks, hemstitching, etc. But what will be more to the point with most of us will be the two-purpose umbrella, that is a colored silk with a smart handle with a bracelet at the end to carry it by, that can be used in sunshine and storm alike.

Parasols with rings on the top instead of the handle are a fad of the season. The Nagasaki parasol is new, and as a rule has composition handles and bracelet rings. The parasol itself is flat, with many ribs, and Japanese in effect.

Velvet trimmings are coming into vogue again, and this little brown velvet collar chose a smart, pin-tucked covert Country Club coat to display its charms.

THE BEAST OF THE GOOD GOD.

BY ETHEL BAIN.

Really a Beetle—the Useful Ladybird is known in France as the Beast of the Good God.

THE blush rose raised her dew drenched head and greeted her companions of the flower garden. The sun had kissed the sleep from her eyes and now refreshed from her magic bath of dew she looked lovelier than ever. It was going to be another hot day, but she had gathered moisture enough to serve her until the evening. The columbines nodded their dainty heads. They were always dancing with wind fairies and the stately rose half envied them, for in her exalted position as Queen of the flowers, she could not play like the humbler blossoms, and so she sighed as they nodded and danced and bent and waved in the gentle breeze. The richly jewelled coat of a Ruby-throat flashed as he darted by on his way to the honeysuckle covered arbor, there to sip the sweet nectar from the horns of the fragrant flowers, whilst a Monarch butterfly poised over the rose for an instant,

"Bake It With ROYAL And Be Sure"

SURE of its lightness
SURE of its rightness
SURE of its wholesomeness
SURE of its economy

ROYAL
Baking Powder

Sure of its purity—first, last and always.

Here is one delightful example of Royal Baking:

Chocolate Layer Cake

A delicious one-egg cake

½ cup shortening
1 cup sugar
1 cup milk
1¾ cups flour
4 teaspoons Royal Baking Powder
¼ teaspoon salt
1 teaspoon vanilla
1 egg

Cream shortening; add sugar, gradually, beating well; add beaten egg, also one-half the milk and mix well. Add one-half the flour which has been sifted with salt and baking powder, the rest of the milk, then the rest of the flour and add flavoring; beat between each addition. Bake in greased layer cake tins in moderate oven 15 to 20 minutes.

Chocolate Filling and Icing

3 cups confectioner's sugar
boiling water
1 teaspoonful vanilla
2 oz. unsweetened chocolate (2 squares)

To the sugar add a very little at a time enough boiling water to make a smooth paste. Add vanilla and melted chocolate and beat well. Spread between layers and on top of cake.

The Royal Cook Book contains 500 selected recipes for all kinds of good baking and cookery. If you haven't a copy let us send you one Free. Address

Royal Baking Powder Co., St. Lawrence Boulevard, Montreal

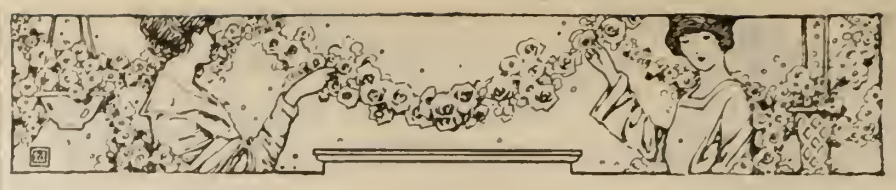
You Can Lay It Yourself If You Want To

It was easy to lay, every piece being tongued and grooved. It fitted exactly. It cost him less than carpet and saves his wife lots of work. You can lay "BEAVER BRAND" Flooring yourself if you want to, or, if you prefer it, we can arrange to have it laid for you.

"BEAVER BRAND" Finish and Floor Wax will complete the installation of a perfect, high-class and beautiful floor at a moderate cost. Write to our Service Department to-day, giving the size of floor space to be covered.

Seaman Kent Co., Limited
263 Wallace Ave. Toronto

Maxwell
"Home" Washer



—the washer that not only washes the clothes mechanically, but does it better than they can be washed by hand. There's no "skimping" by the "Home" Washer—light or heavy articles are cleaned with equal thoroughness. There's no tearing of delicate fabrics, either And it does the work in half the time! No more long-drawn-out, backbreaking washdays anywhere there's a Maxwell "Home" Washer; Just put the clothes in, and the rest is hardly work at all—because the "Home" Washer is so light, noiseless, and easy-running. Enclosed gears make it absolutely safe: "springs" make cover lift easily. Made of best quality cypress, handsomely finished. Runs by hand-power or water-motor. See it at your dealer's.

MAXWELLS LIMITED, Dept "I" St Marys, Ont. 34

Come to My Party

Helps for the June Hostess

A Musical Romance.

HAVE you ever searched in vain for a suitable contest to use at your party? The one following has never been used. So you may be the first to try it:

When the news was shouted (From the Housetops) that the world was to be plunged in war (All for a Scrap of Paper), the (Eyes of the World) turned toward France.

The day came all too soon when (The Major) said his last good-bye to (Anne of Green Gables). Her heart ached to see him go, but she knew (When a Man's a Man) he is ready to go when his country calls.

She, too, wanted to serve in the great struggle for liberty. She offered her services as a (Nurse), was accepted, and in a short time was on her way to (A Far Country).

In a hospital in France she bound up wounds and bathed the fevered brows of many of (The First Hundred Thousand). One day (Private Peat) was brought into the ward. He was just a young (Laddie), not much over (Seventeen), with a bright, boyish face, laughing eyes and little patches of (Freckles) on a nose that wrinkled up when he laughed. He had gone (Over the Top). (The Doctor) bound up his wounds, and soon had him writing letters to his (Mother) and (Dere Mable), of whom he was very fond. There was (A Minstrel in France) who used to visit the hospitals and sing for the boys. (The Sky Pilot), too, was there, and pointed the way to the brave lads who had to answer the last call. Days, weeks and months passed, then years, and no word came from her lost lover, (The Major) of Company "B." She hadn't much time to dream of (Their Yesterdays), and was thankful for the work that kept her from giving way to her fears. One day the glad news came that the war was over, and among the released prisoners was her dear, lost lover. He wasn't long in (Making Her His Wife). When she asked him to tell her of his sad experiences during their long separation, he replied: "(My Four Years in Germany) were too horrible to talk about, dear; I want you to help me to forget them."

[Leave blanks where the words are in parenthesis. Tell your guests the blanks are to be filled in with the names of popular books.]

MRS. R. W. LEADER,
Wheatley, Ont.

A Golden Wedding.

AN old-fashioned "high tea," served as a buffet supper, is likely to enable the hostess to ask all the friends of the honored couple. The whole idea is to reproduce as nearly as you can the atmosphere and customs of fifty years ago.

Lay a white tablecloth over the table, and in the middle form a square centrepiece of green moss. On the moss place an old-fashioned bride's bouquet of white camellias, or valley lilies, with a starched little frill of lace about it, tied with a big white satin bow. This, of course, is presented to grandmother at the close of the evening. Beside it are a pair of old-fashioned lace mitts, and a yellowed old lace handkerchief.

At one side are heaped tiny bags of golden brocaded silk, filled with dried rose leaves and tied with golden bows. (These bags can be made very easily by sewing two oblong strips of the silk together, ravelling the open end into fringe, and tying tightly with the ribbon.)

In one of these bags a gold ring is hidden among the sweet-smelling petals, and as each feminine guest is supposed to take a sachet home as a souvenir, one, of course, will find the luck-bringing ring in hers.

On the other side of the centrepiece are the souvenirs for the men, which take the form of dainty boxes of wedding cake. If it is possible, choose little square gilt boxes for this purpose; fill them with squares of the cake, and on the box cover paste a bundle of tiny doll-envelopes (which can be made with the aid of scissors and glue, or bought at any toy shop). These envelopes should be tied with faded blue ribbons to represent fifty-year-old love letters. Yellow wax candles in tall brass candlesticks stand at the corners of the mossy centrepiece, lighting the table in the old-time way.

At the four corners of the table small dolls (about ten inches high) stand, each dressed in the costume of fifty years past—little puffed hoop skirts of gold-colored tulle held out by crinoline, and tiny poke bonnets of leaf-green velvet lined with ruffled lace, and tied under the chin with big golden ribbons.

Twisted around each doll's arm is a narrow gold ribbon stretching to the next doll, where it is wrapped around her arm in the same manner. Swinging by this ribbon should be a chime of tiny brass bells so that there are fifty of them in all, forming a sort of ring about the table edge.

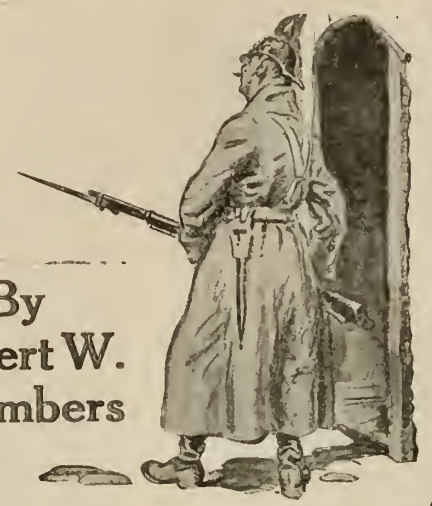
Over the doll's other arm is a small basket, as much like an old-fashioned garden basket as possible, and these baskets are filled with conserves—candied orange peel, violets and cherries.

The dishes should be all the good old-fashioned ones—cold roast ham, boned chicken, salads, hot biscuits and pies, with a big silver pot of steaming coffee.

At one end of the table there should be, of course, a huge bride-cake, with the names and dates written in orange icing; and the fifty-years bride must be the first to cut a slice for good luck.—Marguerite Aspinwall, in *Woman's Home Companion.*

The Bride's Garden.

THE room used was decorated to represent a garden. Potted plants, bay trees, ferns and palms were arranged as shrubbery, with paths between where the bride-to-be might walk and gather her "Flowers." From the chandelier hung a huge green watering-pot with many vari-colored ribbons "showering" from its nozzle to all parts of the garden and ending in their corresponding flowers—packages done up in the same color. If the packages were small enough the wrappings were so arranged as to represent flowers. If the packages were large they were decorated with paper flowers.



One huge kettle was wrapped in green tissue paper and made a realistic cabbage. Aluminum spoons were cleverly transformed into stems for huge red roses.

The Romance of a Shirtwaist.

HER lover had persuaded her to be his, and they were about to slip into the matrimonial (1). One day he reproached her for her coldness to him, and she replied: "I cannot always wear my heart on my (2)." and while her golden head rested on his (3) he forgave her and presented her with a pretty (4) for her dainty (5). Life is not always what it (6), for after he became a golfer he was on the (7) most of the time, and she began to fear that she could never win him (8) to his former devotion. Indeed, she often felt that she would like to (9) him, but she decided to (10) him instead; so she put on a bold (11), and told him she would break the (12). He began to (13) and haw, and invited her to go to a (14) concert. Then she knew that she could (15) him. Although there is much red (16) about such matters, one is apt to get the cold (17) instead of two loving arms about one's (18). They went to the concert, and came to the conclusion that their former promises were still good. Each had been on the (19), but now they are married and are (20) for life.

1 yoke	11 front
2 sleeve	12 knot
3 bosom	13 hem
4 collar	14 band
5 neck	15 bind
6 seams	16 tape
7 links	17 shoulder
8 back	18 waist
9 cuff	19 wrong side
10 cut	20 tied.

Who Goes There?

By Robert W. Chambers

CHAPTER XXI

DINNER was ended. Darrel lay on a lounge in the sitting-room, a victim against his will to romance. Beside him on a low footstool sat Valentine, reading aloud to him when she thought he ought to be read to, fussing with his pillows when she chose to fuss, taking his cigarette from his lips and inserting a thermometer at intervals, and always calmly indifferent to his protests or to her mother's laughter.

For she had heard somewhere that a wild boar's teeth poisoned like a lion's mauling; and the sudden revelation of a hero under the shattered shell of modesty and self-depreciation which so long obscured the romantic qualities in this young man determined her to make him continue to play a role which every girl adores—the role of the stricken brave.

Never again could Darrel explain to her how timidity, caution, and a native and unfeigned stupidity invariably characterized his behaviour at psychological moments.

For Guild had told her all about this young man's cool resourcefulness and almost nerveless courage during those hair-raising days in Sonora when the great Yo Espero ranch was besieged and every American prisoner taken was always reported "Shot in attempting to escape."

She had never even known that Darrel had been in Mexico until Guild told her about their joint mining enterprise and how, under a spineless Administration, disaster had wiped out their property, and had nearly done the same with them.

"Mother," said the girl, "I think I'll look at his shin again."

"Nonsense!" protested Darrel, struggling to sit up, and being checked by a soft but firm little hand flat against his chest.

"I don't want to have my shin looked at," he repeated helplessly.

"Mother, I am going to change the dressing. Will you help?"

"For the love of Mike——"

"Be quiet, Harry!"

"Then take Guild out of the room! He's laughing at me now!"

KAREN was laughing, too, and now she turned to Guild: "Come," she said, smilingly; "We are not welcome here. Also I do want you to see the rose garden by star-light." And to Mrs. Courland, naively: "May we please be excused to see your lovely garden?"

The pretty young matron smiled and nodded, busy with the box of first-aid bandages for which Valentine was now waiting.

So Karen and Guild went out together into the star-light, across the terrace and lawns and down along a dim avenue of beeches.

The night was aromatic with the clean sweet odour of the forest; a few leaves had fallen, merely a tracery of delicate burnt-gold under foot.

Karen turned to the right between tall clipped hedges.

Mossy steps of stone terminated the alley and led down into an old sunken garden with wall and pool and ghostly benches of stone, and its thousands of roses perfuming the still air.

They were all there, the heavenly company, dimly tinted in crimson, pink, and gold—Rose de Provence, Gloire de Dijon, Damask, Turkish, Cloth of Gold—exquisite ghosts of their ardent selves—immobile phantoms, mystic, celestial, under the high lustre of the stars.

Mirror-dark, the round pool's glass reflected a silvery inlay of the constellations; tall trees bordered the wall, solemn, unstirring, as though ranged there for some mid-night rite. The thin and throbbing repetition of hidden insects were the only sounds in that still and scented place.

They leaned upon the balustrade of stone and looked down into the garden for a while. She stirred first, turning a little way toward him. And together they descended the steps and walked to the pool's rim.

Once, while they stood there, she moved away from his side and strolled away among the roses, roaming at random, pausing here and there to bend and touch with her face some newly opened bud.

Slender and shadowy she lingered among the unclosing miracles of rose and gold, straying, loitering, wandering on, until again she found herself beside the pool of mirror black—and beside her lover.

"Your magic garden is all you promised," he said in a low voice—"very wonderful, very youthful in its ancient setting of trees and silvered stone. And now the young enchantress is here among her own; and the spell of her fills all the world."

"Do you mean me?"

"You, Karen, matchless enchantress, sorceress incomparable who has touched with her wand the old-familiar world and made of it a paradise."

"Because I said I loved you—a little—has it become a paradise? You know I only said '*a little.*'"

"I remember."

"Of course," she added with a slight sigh, "it has become more, now, since I first said that to you. I shouldn't call it 'a little,' now; I should call it——" She hesitated.

"Much?"

She seemed doubtful. "Yes, I think it is becoming 'much'—little by little."

"May I kiss—your hand?"

"Yes, please."

"And clasp your waist—very lightly—*this* way?"

"In sign of betrothal?"

"Yes."

She looked up at him out of the stillest, purest eyes he had ever beheld.

"You know best, Kervyn, what we may do."

"I know," he said, drawing her nearer.

After a moment she rested her cheek against his shoulder.

Standing so beside the pool, breathing the incense of the roses, she thought

A Matter of Good Taste

WALTHAM

THE WORLD'S WATCH OVER TIME

The dainty little watch that can be worn in whichever style that fashion may dictate

WALTHAM
Convertible Bracelet Watch

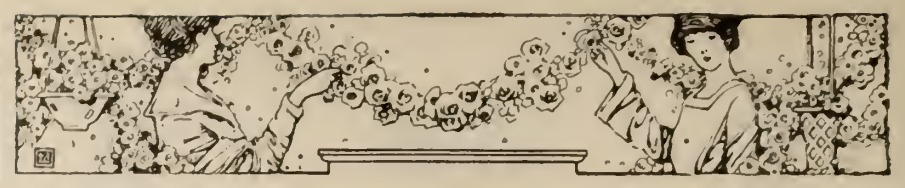
WITH all the accuracy for which Waltham has become world-famous, this dainty little watch possesses unique beauty and distinction.

It is pre-eminently the watch for women.

At the bottom of the case is a small eye to which, when open, one end of the bracelet is attached.

But if you desire to wear the watch in some other way—on a chain or brooch, or as a ribbon wrist watch, for example—a slight pressure of the finger folds the eye back flush with case, leaving no indication of its use as a Bracelet Watch.

This versality of wear is very useful because the watch can be worn in whatever manner fashion may dictate.



As a gift for a bride, or a girl graduate, or as a birthday gift or a present for any like occasion, the Waltham Convertible Bracelet Watch enjoys wonderful vogue.

Ask your jeweler to show you this popular model.

Who Goes There?

(CONTINUED FROM PAGE 33.)

of the dream, and the gay challenge, "Who goes there?" She was beginning to suspect the answer, now. It was Love who had halted her on that flower-set frontier; the password, which she had not known then, was "Love." Love had laughed at her but had granted her right of way across that border into the Land of Dreams. And now, unchallenged save by her own heart, she had come once more to the borderland of flowers.

"Halt!" said her heart, alert; "who goes there?"

"It is I, Karen, wearing the strange, new name of Love——"

She lifted her head, drew one hand swiftly across her eyes as though to clear them, then stepped free from the arm that encircled her.

"Karen——"

"Yes, I—I do love you," she stammered—"with all—all my heart——"

"*Halt!*" rang out a voice like a pistol shot from the darkness.

The girl stood rigid; Guild sprang to her side. "Qui vive!" cried the voice.

"Belgium!" said Guild coolly.

"Then who goes there!—you!—below there in that garden?"

"Friends to Belgium," replied Guild in a quiet and very grave voice. "Don't move, dearest," he whispered.

"What is happening?"

"I don't know, yet."

Presently, nearer the balustrade above them, the voice came again: "Is it Monsieur Guild?"

"Yes. Who are you?"

"Pardon. Will Monsieur come up to the terrace? I am watching the wall beyond the pool."

They ascended the stone steps; Karen moving lightly beside him. In the shadow of the clipped yews a dark form stirred.

"Pardon. I did not recognize Monsieur Guild or Mademoiselle. There is trouble."

It was Schultz the herdsman; his rifle was in his hand and he wore two cartridge-belts crossed over his smock en bandoulière.

He touched his hat to Karen, but turned immediately toward the star-lit sky-line where the dark coping of the wall cut it.

"What is the trouble?" asked Guild with a sinking heart.

"God knows how it happened, Monsieur Guild—but there was bad blood to-night and hot heads full of it. Then, very far in the forest, a shot was fired."

"I heard it. What happened?"

"Listen, Monsieur! The Moresnet man and the boy, Jean Pascal, put their heads together. I don't know how it was, but even after what you said to us, and after Michaud told us to remain prudent and calm, somehow after we heard that shot we all, one, by one, took down our guns; and after a little while we found ourselves together in the carrefour.

"AND from there we went, without saying a word, to the Calvary on the hill pasture road. It was as though each of us understood without telling each other—without even hinting at a plan.

"And by and by we went down by the rivulet at the foot of the hill pastures, and there, as we expected, were two of the Yslemont refugees. They had their guns. And one of them had a *spiked helmet*."

"Go on," said Guild, compressing his lips.

"He had taken it near Trois Fontaines, not below the hill. We all examined it. We saw red, Monsieur. Then a calf which had escaped the Grey Wolves moved in the bushes near us. The Moresnet man caught it, and he and the shepherd, little Jean Pascal, took the dumb beast and tied it to a sapling near the road. On *our* side of the boundary! But we all knew what might happen."

There was a silence; then Schultz said in a low, hoarse voice: "It was fated to be. We took both sides of the road in the long grasses of the ditches. And the calf bawled for company.

"The company came after a while—two Grey Wolves. First we heard the clink-clink of their horses' feet; then we saw their lances against the sky.

"They came on, picking their way. And of a sudden the electric breast-torch on one of them breaks out like a blinding star, plays over the road, then lights up the calf which is terrified and backs into the hedge.

"He drives his lance-butt into the sod and gets out of his saddle. His comrade sits the other horse, pistol lifted, elbow on thigh. And there comes then another Uhlan, walking and leading his horse—three of the dirty brigands, Monsieur, across the border and on our side!"

"Go on."

"Eh bien—we bled them!"

"You killed them?"

"Yes, Monsieur—two there by the hedge in the grassy ditch; the other hung to his horse for a while—but came off sideways. One spur caught and his horse took him back that way—across the border."

"Go on."

"We took their schapskas. Jean Pascal wished to go across the border after more Wolves. He was crazy. And the blood made us all a little drunk. And then we found that the Moresnet man had gone. That chilled us."

HE wiped his face with his sleeve, never taking his eyes from the wall across the garden.

"After that," he said, "we lay very still, watching. And in a little while an Uhlan crossed the hill pasture walking his horse slowly against the stars. Then there were others moving across the sky up there, and we also heard others on the road. So we have been quietly falling back into the forest where, if they follow, they shall not go back, please God!"

"Where is Michaud?"

"He was very angry, but, since the affair has really begun, he is with us, of course."

"Where is he?"

"He went to the house to find you an hour ago."

Guild bit his lip in silence. The stupidity of what had been done, the utter hopelessness of the situation sickened him.

The slow, groping peasant mind, occupied always with the moment's problems only, solving it by impulse and instinct alone—what could be done with such a mind—what could be hoped from it except under patiently inculcated military discipline?

Loosened from that, and defending its property from actual or threatened aggression, it became a furtive, fierce and quickened mind, alternately cunning and patiently ferocious. But of reason, or of logic, it reckons nothing, knows nothing.

Trouble had begun—trouble was abroad already in the starlight—moving, menacing.

"What is your word?" he asked bluntly.

"Yslemont."

He turned to Karen, who stood quietly beside him: "The ladies must leave this house to-night. There is no time at all to waste. There is going to be real trouble here by morning. And I am going to ask you if you will give these American ladies shelter to-night at Quellenheim. Will you, Karen?"

"Of course."

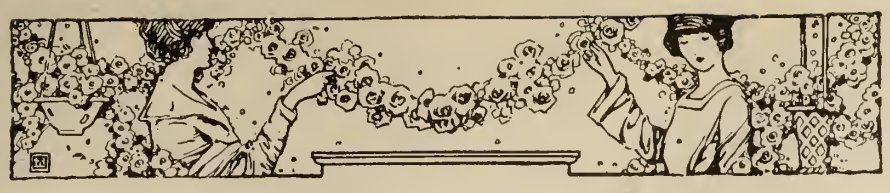
"From there they can go to the city of Luxembourg to-morrow, and so into Holland. But they ought to go now."

"And you, Kervyn?"

"I shall be very busy," he said. "Come back to the house, now."

THEY walked away together, moving quickly along the beech-woods; she with that youthful buoyant step as lithe as a young boy's; he beside her with grave, preoccupied face and ears alert for the slightest sound.

"Kervyn?"



"Yes."

"Will you come back to Quellenheim, too?"

"I can't do that, dearest."

"May I ask you what you are going to do?"

(CONTINUED ON PAGE 35.)

Who Goes There?

(CONTINUED FROM PAGE 34.)

"Dear, I don't know yet. I haven't formed any plan at all."

"Is it not very dangerous for you to remain here?"

"No, I think not. . . . That is—I shall see how this matter threatens to develop."

He felt her hand lightly on his arm, looked around, halted. She came to him, laid her cheek against his breast in silence.

"You must not be afraid for me, Karen."

"I shall try—to remember."

He lifted one of her hands. It was cold and delicately fragrant. He kissed it.

"The Bank at Diekirch is my address. I shall try to write you. I shall come back and marry you. Do you love me, Karen?"

"With all—all my—soul."

"And you will marry me?"

"Yes, Kervyn."

She looked up, her eyes brilliant as wet stars. And very gently, almost timidly, they exchanged their betrothal, lip to lip.

He drew her to him a little closer—held her so a moment scarcely in contact. Then they turned again to the grassy ride and moved swiftly forward toward the drive.

Every light in the house had been lit, apparently. The automobile stood before the door; three forest waggons with their big fine horses were in line behind; and servants were loading them with American trunks, suit-cases, and luggage of every description, under the active direction of Darrel.

WHEN he saw Guild and Karen coming he called out: "Your luggage is packed! Mrs. Courland and Valentine and their two maids are filling hampers with bed linen and knick-knacks. You've heard what's happened, of course?"

"Yes," said Guild. "I don't think you had better waste any more time packing. Let the ladies get into the car and start. Michaud and I can gather up what's left of their effects and send it to them in the last waggon! Where is Michaud?"

"Talking to Mrs. Courland inside. Here he is now!——"

The white-haired forester came out behind Mrs. Courland, caught sight of Guild, and made a slight gesture expressing infinite despair.

"I know," said Guild. "I'll talk it over with you after the household leaves." And to Mrs. Courland, who appeared calm but a trifle dazed: "Miss Girard offers Quellenheim for the night, and for longer if you desire."

"Please," said Karen, coming forward—"it would be very gracious of you to come. Will you, Mrs. Courland?"

"Thank you, dear—yes—it will be the greatest convenience. I don't know when we should arrive at Luxembourg if we started now." She took one of Karen's hands and turned to Guild: "What a terrible thing our people have done! Michaud came to tell us; Harry started everybody packing up. You will come with us, of course?"

"Perhaps later, thank you." He turned to Valentine who was coming out in hat and coat, followed by a pale-faced maid carrying both arms full of wraps.

"Please don't lose any time," said Guild, selecting wraps for Mrs. Courland and for Karen. "Are your servants ready?"

"Nobody is ready," said Valentine, "but everybody is here or in the hall, I think."

GUILD gave his arm to Mrs. Courland and helped that active young matron spring into the touring car. Karen went next. Valentine and two maids followed; Guild slammed the door.

"All right!" he said curtly to the chauffeur, then, hat in hand, he said gaily: "Au revoir! A happy re-union for us all!"

As the car rolled out into the shining path of its own lamps Karen turned and looked back at him. And as long as he could see her she was looking back.

After the car followed two of the forest waggons, one filled with servants, the other loaded with luggage. Darrel came out of the house with the last odds and ends of property belonging to the Courlands and flung it pell-mell into the last waggon.

"Come on," he said briskly to Guild.

"No, go ahead, Harry. I'm stopping to talk with Michaud——"

"Well how are you going to get to Quellenheim?"

"When I'm ready to go I'll get there."

"You're not coming?"

"Not now."

Darrel came over and said, dropping his voice: "After this murdering business it won't do for *you* to be caught here."

"I don't mean to be caught here. Don't worry—and get a move on!"

"What are you intending to do?"

"I don't know yet. Come, Harry, start that waggon!"

Darrel shrugged his shoulders, mounted the seat beside the driver, and the forest waggon rolled away into the darkness.

Guild was still looking after it, listening to Michaud's report of the sniping affair near Trois Fontaines, when he saw the figure of a man walking back from the direction the waggon had taken. The man walked with a visible limp.

"You idiot!" said Guild sharply as Darrel strolled up, his features blandly defiant.

"Go on with what you were saying to Michaud," insisted Darrel, unruffled by his reception.

"Come, Harry—this is downright foolishness. If you've let the waggon go on, you'll have to foot it to Quellenheim. You can't stay here!"

"Why?"

"Because, you infernal butter-in, you'll get mixed up in particularly nasty mess we're in, Michaud and I."

"Oh, bother!" said Darrel; "go on and talk, Michaud!"

"Are you going to poke your nose into this?" demanded Guild.

"It's in now."

"SEE here, Harry! Your sticking by me is gratuitously silly and it annoys me. You don't have to. This isn't any of your business, this mess."

Darrel lighted a cigarette and sat down on the terrace steps. Guild glared at him.

"Will you go?" he snapped out.

"No, I won't."

Michaud, perplexed, had remained silent.

"If things go wrong they'll make a clean sweep of us all, I tell you," said Guild. "Once more, Harry, will you mind your own business?"

"No," said Darrel, blandly.

Guild turned to Michaud: "What were you saying?"

The forester, controlling his anger and emotion, continued the story of the sniper near Trois Fontaines. Then he outlined the miserable affair of the hill pasture.

"There remains for us only two courses," he ended. "Either we turn franc-tireur and make our bivouac yonder in the forest, or we gather our people at The Pulpit, lie there to-night, and at daylight strike out for the Dutch frontier."

Guild nodded.

"There is a little hole in the rocks at The Pulpit—scarce large enough to be called a cave. Since the war came upon us, foreseeing necessity, my men have carried arms and provisions to The Pulpit—well hidden, Monsieur. I think, now, that it is a better refuge than this house."

The three men looked up at the house. Michaud made a hopeless gesture: "I suppose *they* will destroy it, now. God knows. But if Monsieur Paillard be truly dead as we now believe, and his poor body lies rotting under the the ruins of Wiltz-la-Vallée, then there is nobody to mourn this house excepting the old forester, Michaud. . . . And I think he has lived on earth too long."

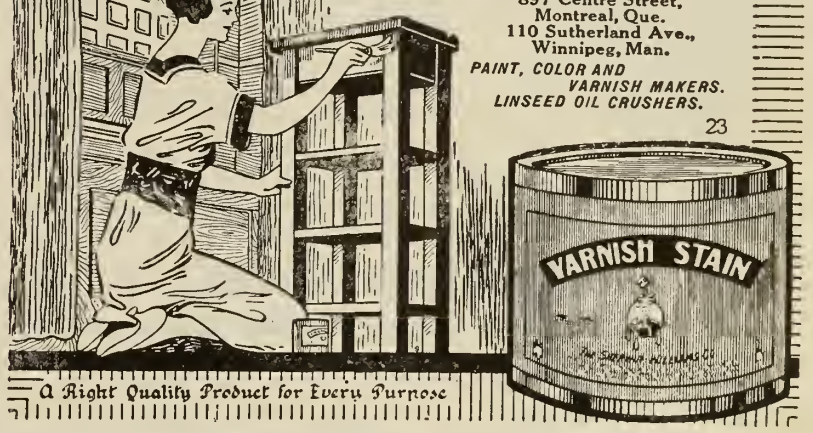
(TO BE CONTINUED.)

SHERWIN-WILLIAMS
PAINTS & VARNISHES

The Happy Economy of S-W VARNISH STAIN

FURNITURE which has grown shabby can be restored to newness overnight, at the small cost of a can of *S-W* Varnish Stain. The fine range of colors enables you to match any hard-wood effect.

Be sure you use *SHERWIN-WILLIAMS* VARNISH STAINS. This is important, not only because it will insure you the handsomest possible finish, but because *S-W* VARNISH STAINS preserve the woodwork, a most important consideration in these days when everything seems to cost so much more.



Certainly it is an economy to use any of the full range of *S-W* VARNISH STAINS, and a *happy* economy, too, when you consider how cherished articles of household furniture regain their freshness under your hand!

Remember also, the clear *S-W* Varnishes—*MAR-NOT* for Floors; *SCAR-NOT* for varnishing Furniture and Woodwork; *REXPAR* for outdoor woodwork.

Read the booklet "The A. B. C. of Home Painting". Sent free upon request.

Look around for the nearest *S-W* Agent.

SWEET CAPORAL CIGARETTES

The Puzzle for June

BY TOM WOOD.

There are six little pictures in each of the groups marked respectively (1) and (2). When each picture in No. 1 is correctly guessed and placed in proper order, the initials and finals spell the name of a pretty flowering shrub appropriate to June.

The initials and finals of the names of the pictures in No. 2, when placed in proper order, if correct, will disclose the names of two of the large rivers of British North America, one east and one west.

Can you give the correct botanical name of the well-known wild flower pictured in No. 3, which may be found in June throughout Canada?

Two prizes will be awarded:

First—One dollar and a half

Second—One dollar

for the best solutions, judged according to neatness and accuracy. All may compete.

CORRECT SOLUTION OF APRIL PUZZLE:

No. 1	No. 2	No. 3
Robin	Tulip	Maple
Eagle	Pansy	Cedar

First prize won by Miss Marion Daniels, 90 Westminster Ave., Toronto, Ont.

Second prize won by Miss Olive G. Weir, R. R. No. 5, Woodstock, Ont.

Address: Puzzle Department, "Canadian Home Journal," 71 Richmond Street West, Toronto, Canada.

My Best Idea

CONTRIBUTED BY OUR READERS

Address "My Best Idea," care of CANADIAN HOME JOURNAL.

In this Department we will publish the best original items of general interest to housekeepers which are sent in by our readers. For each of the accepted items we shall pay the one sending it fifty cents.

If the description is not clear we would suggest that the contributor send a rough sketch, making the idea plain, which can be used as a guide to the artist who will illustrate this page.

The CANADIAN HOME JOURNAL *cannot return the items submitted, therefore it is advisable to keep copies of matter sent for consideration.*

Dip Fruit Jar Tops in Wax.

When canning fruit of any kind after jar has cooled, melt white wax in a pail, and dip the top of jar four or five times in wax. Fruit in jars treated this way will keep for years.

MRS. A. E. OWEN, Allandale, Ont.

To Get the Greatest Flow of Gas.

By putting a thick quarter in the gas slot you will get gas to burn much longer than if a thin coin is used.

Perspiring Hands.

By bathing the hands in Alum water (a strong solution) the perspiration may be stopped if one wishes to do fancy work or something of the kind, in the very warm weather.

GRAYCE M. COLLINS, Winnipeg.

Fixing Bedding for Camp.

Get a strong piece of canvas, larger than any of your quilts, lay on floor first, then the quilts, sheets and any shawls or old wraps next, then the pillows and cushions, roll all neatly, —it takes two—tie well and you will find it takes less room and less work.

Weston, Ont.

Try This.

If your potatoes are the kind that cook on the edge, so to speak, leaving the heart cold and hard, try throwing a little cold water on them at the psychological moment, which is when they are partly cooked, and watch them immediately melt into tender deliciousness.

G. B.

Paint Your Carpet.

Our Axminster stair carpet having become badly worn, where the tread came, I moved it to change the tread but it still looked very shabby. I got some dye as near the general color as possible, mixed it with a little water and brushed over the worn places with the thick dye. The result has been most satisfactory, lengthening the usefulness of the carpet indefinitely.

MRS. C. A. C., Hamilton.

A Handkerchief in Every Pocket.

When ironing, iron the children's handkerchiefs and lay in a pile at the right of ironing board; then, as each blouse or pinafore is finished, place a folded handkerchief in the pocket. This insures the child's having a supply for school without running for it at the last minute. It has worked splendidly with my boys.

The Baby's Own Wardrobe.

We possessed a tall, golden oak bookcase with a large glass door, which we had discarded as out-of-taste with our modern furniture. When I began to look for a closet for baby's clothes, I decided this bookcase could be made to serve. We painted it white and enameled it. I then tacked a piece of cretonne of dainty pattern over the inside of the glass. It makes a very pretty as well as an extremely convenient wardrobe for baby.

For Cleaning Radiators.

Finding the brush sold for cleaning radiators rather too expensive for my pocketbook, I made a substitute which I find very satisfactory. It is merely a bag of outing flannel made to fit any carpet beater and finished on three sides with a narrow, full, double ruffle. It fastens with a draw string. This cleaner can be used lengthwise or crosswise between the sections of any kind of radiator.

If the Alarm-Clock is Too Loud.

If the alarm-clock rings too loudly for the peace of the household, slip an elastic band round the bell to diminish the noise; the wider the band, the stronger the suppression, and a few experiments will demonstrate just what width is most desirable. I being accustomed to rise at the same hour daily, find an inch band about right; the alarm is more in the nature of insurance against oversleeping than a necessity to early waking.

Save Old Newspapers.

Have the children on rainy days, roll the newspapers into fair sized footballs, then soak these in water and allow to dry. These mild days one does not need a fire in the reception room all the time, but if a few of these balls were kept ready, one could get a quick, sure and very not fire in a few moments.

MRS. W. G.

Remove Gloss from Seams.

To remove gloss from seams, rub the parts carefully with a soft piece of flannel which has been dipped in benzine. This is inexpensive and will not change the color.

FARMER'S GIRL.

When Cleaning Painted Walls.

Before cleaning the painted walls of my kitchen, I put a boiler of water on the stove and boiled it until the walls were covered with steam. I found the labor to be reduced one half as the dirt and grime wiped off very easily.

M. B.

When Preparing Pineapple.

In preparing a pineapple for the table or for preserving, cut both ends off, stand it flat on the table and in place of peeling and taking the eyes out, just scoop out the centre with a pointed tea spoon, or fork—it can be prepared in a few minutes, and is delicious.

FANNIE.

Ink Stains.

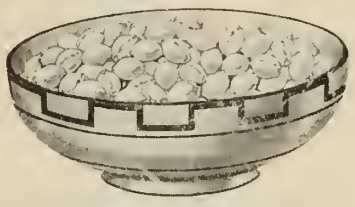
Once I was so unfortunate as to upset a bottle of ink on a good green Brussels carpet. At once I got a cloth and some sweet milk, and I washed and rubbed and scrubbed at it, getting fresh milk as often as it got black. I am glad to tell others that you cannot tell to-day where that ink was upset. I think milk will also remove the stain of shoe polish, should one be so unlucky as to upset it.

"OBSERVER."

Macaroons.

The art of having delicious, puffy macaroons is not so much in the recipe used, as in the manner of cooking them. How often you have tasted these dainties to find them pastry inside. This can be overcome in this way: Have a nice hot oven at first so that they will puff up nicely, when this is accomplished and you think they are set enough, open your oven door, and leave them to cook slowly. You will then have a light, puffy macaroon well-cooked.

"OBSERVER."



Keep This Dish Before You

When you order foods for children, keep Puffed Grains before you—these whole-grain toasted bubbles, puffed to eight times normal size.

Remember their attractions—how children's faces light up when they see them.

Remember their exquisite taste, which makes them food confections.

Think how these flavory toasted bubbles taste with cream and sugar.

And Also This

Remember, too, that Puffed Wheat and Puffed Rice are whole grains. They are rich in minerals, etc., which part-grain foods omit.

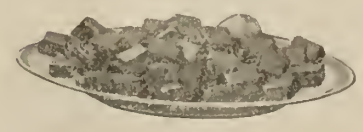
Whole grains excel flour foods for children, as every mother knows. And this form makes those whole-grain foods attractive.

Think what they add to fruit.

More than that, these grains are steam-exploded. Every food cell has been blasted so digestion is easy and complete.

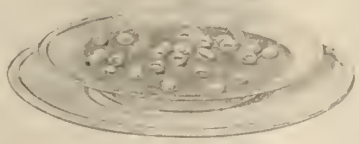
The Puffed Grains, prepared by Prof. Anderson's process, are the best-cooked cereal foods in existence.

Think how hungry children like them crisped and lightly buttered.



Consider all these things —how children love them, what perfect foods they are, and how fitted for digestion.

And there are two kinds, each with different flavor, which avoids monotony.



Puffed Wheat **Puffed Rice**

Bubble Grains—Each 15c, Except in Far West

These are more than breakfast dainties. One great way of serving is in bowls of milk. And every dish of fruit is better with these fragile grains mixed in.

Think what candy Puffed Rice makes.

Think what airy, toasted wafers for your soups.

Of Interest to the Motorist

BY F. H. SWEET

Keeping Up the Finish of a Car

MANY motorists are at a loss to understand the reason for quick deterioration of the brightly-varnished surfaces of a motor car body that has been in use for some time. The paint may be blistered or the finish spotted at various points. Bodies that were formerly black will assume a bluish tinge, and bright varnish will soon become dull. If the car is an expensive one, the motorist is justified in expecting a degree of finish that will endure, but those who purchase cheaper cars must expect to lose the bright finish after the car has been used for a time. Where cars are manufactured in large quantities the varnish is often applied before some of the under coats are thoroughly dried, and the result will be a series of blisters. Another result of hasty manufacture and of putting the car in service soon after painting is spotting. This is produced by dry mud, which extracts some of the oil or gum from the varnish, and may often be caused by actual chemical action of alkaline mud.

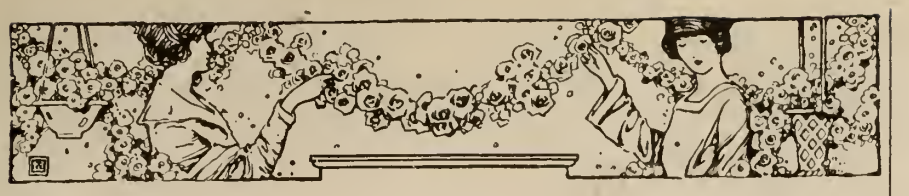
The mud of city streets, especially at points where there is a great deal of animal traffic, is highly charged with ammonia, and in certain clay or lime districts the mud is very destructive to the varnish lustre.

Even when a car has been properly varnished and finished, there are many conditions for which the motorist is directly or indirectly to blame, which will ruin even the highest grade of paint and varnish. For instance, when cars are cleaned at garages various soaps and washing compounds are usually used which contain alkaline materials to assist in removing dirt and oil, but which are very destructive to the highly-finished, varnished surfaces. Most of the soaps upon the market contain ingredients which have a chemical action on the oils of paint and cause it to deteriorate. There are soaps which do not damage painted surfaces, but these are usually more costly and require more care and labor to remove the dirt accumulation, so they are not apt to be generally used. The grades of soap that act the quickest in cutting grease are those that will more quickly dull the surfaces of the body.

SOME very good carriage painters go so far as advising that no soap be used on finely-varnished surfaces. Some painters advise against dusting off a car, and claim that accumulations of this substance should be removed from the surface by washing. It is contended that wiping off the dust will have the effect of scratching the varnished surfaces, and that the best method of removing either dust, mud or dirt is to flush the surfaces with water from a hose. After as much of the dirt has been removed by this method as possible, a sponge may be used, but great care should be taken that no grit is permitted to collect beneath the sponge, and that the stream of water from the hose be always kept at work ahead of the sponge.

If any grease is present on the running gear, it should be removed with gasoline or benzine, and while these substances may deaden the varnished surfaces temporarily, the blemish will not remain if the dull varnish is polished with a clean soft cloth wet with linseed oil. The finish of many automobiles is ruined by allowing accumulations of oil or asphalt from freshly tarred or oiled roads to remain on the body work. These substances should not be allowed to remain any longer than necessary, and if the oil or asphalt has become hardened, it may be dissolved by using naphtha, vaseline, or even butter. After the oily accumulations have been dissolved, the car should be very carefully washed to remove all traces of the oily mud or the solvents.

Of course, there are portions of the car where it is difficult to have the paint stay in good condition. The paint is often burned off that part of the hood on a gasoline machine adjacent the exhaust pipe or on those portions of the hood of a steam car which cover the boiler or burner. Any part of the hood subjected to considerable heat will become discolored after a time, and if the heat is intense the paint will burn and blister.



If care is taken to keep the body properly washed by using only the best grade of carriage soap obtainable and only clean water, sponges and chamois skins, the body finish will be preserved for a much longer time than if washing is neglected and all the mud or dirt allowed to dry on the varnished surfaces. The use of quick-acting soaps should be avoided as much as possible, and tar or oil accumulations should be removed as soon as conditions will permit.

IF a car is kept in a barn or shed housing horses or cattle, or adjacent to a stable, the fumes of ammonia will soon cause deterioration of the paint and varnish. One should never touch dusty surfaces with the hands or attempt to remove the dust by brushing off with a cloth. As a general rule, the automobile body will need to be gone over every season. The first year that the car is in use the paint should be in good condition, if proper attention has been paid to washing, so that a coat of varnish will suffice to restore the body to its pristine brilliancy. A car that has been used more than one season will need both painting and varnishing to make a good job.

The matter of cleaning and caring for tops and upholstery is also one that should be considered to some extent. Mohair tops are usually fitted to medium grade cars, leather to high-priced cars, and imitation leather or pantasote on the cheaper cars. In cleaning mohair tops, it is necessary to remove not only dust and dirt, but particles of grease or oily matter thrown up against it by the wheels from either the road surface or portions of the mechanism. Dust should be removed with a moist sponge, while grease or oil stains can be taken off by a sponge and a good soapsuds. Leather and imitation leather tops should be treated with some form of preservative. Some dressings may be purchased all ready mixed, and may be applied by the motorist himself. Others may be prepared at very little expense. Shabby leather may be made to look brighter by rubbing over the surface with either linseed oil or the well-beaten white of an egg mixed with a little black ink. Before applying any type of dressing it is advisable to go over the surface with neatsfoot oil until it has been properly softened, and often the oil treatment will be sufficient for all practical purposes.

The following recipe is given as a good preservative for leather. It is composed of six parts of spermaceti, eighteen parts of beeswax, five parts of asphalt varnish, five parts black vine twig, two parts Prussian blue, one part nitrobenzol, one part powdered borax, and sixty-six parts oil of turpentine. The wax is melted and the borax is added, after which the mixture is stirred until a jelly-like mass is formed. In another pan the spermaceti is melted; the varnish, which has been previously mixed with turpentine, is added, and the mass stirred well and added to the wax mixture in the other vessel. The color is the last ingredient added, this having been previously rubbed smooth with a little of the mixture. The material is applied with a brush about once a week, in small quantities, and is wiped well with a soft cloth to polish after application.

What Shall We Give Our June Graduates?

Suggestions for the Perplexed

JUNE is the one month of all the year on which hundreds of our students have their eyes fixed, because that month spells either success or failure to them. In other words, June spells graduation—or—well, we will not mention the harrowing side of the subject.

To the nurse who will go out into the world to combat sickness and death; to the young high school girl, just closing perhaps the most carefree days of her life, and to the college girl starting out into the world fired with hopes and ambitions, June spells both the end and the beginning of things.

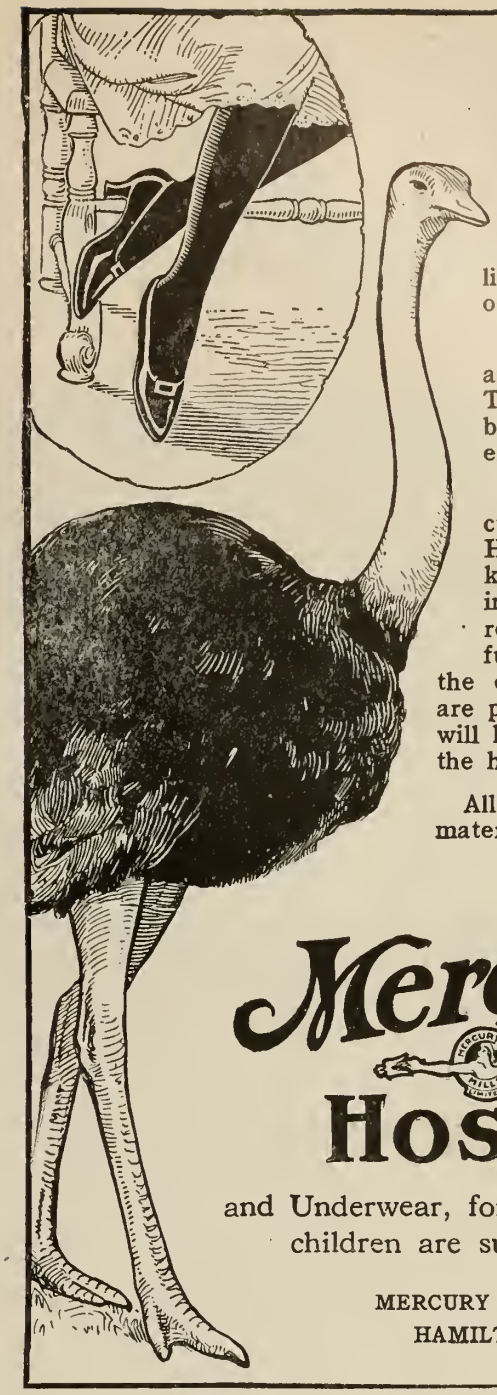
It has long been the custom to mark this day of all days for the people who are to carry off the coveted diplomas and honors. This is the one great day in many of their lives, and, along with birthdays and such celebrated events, must not go unmarked. There are a variety of very suitable gifts which help make the day a happy one.

HOW pleased the nurse would be with a leather satchel fitted with all the queer but precious instruments which are so important in her profession? Any leather store, or any large city departmental store, will have them in stock for $15 to $35. Again, a watch is a most essential and acceptable gift. Not the wrist watch so commonly worn, because a nurse has to plunge her hands into water many times a day, and no watch could stand that treatment. But there is a splendid little gold one made especially for nurses which can be worn with a plain gold fob. Any jewellery store will keep them, and they can be bought for $18. A plain, but very good-looking, gold set of cuffs and apron studs are very acceptable, too. Most nurses go through their training with very ordinary pearl ones, and are very proud to know that their brand new white graduate's uniform will be securely fastened with gold studs. These may be bought from 75c to $5.00.

Now, what shall we give our high school graduate? There are many things we might present her with if she is going to university or college. How about a bookcase, to hold the many books which she will need there? It is always wise to buy a sectional one, which can have shelves added to it as necessity demands. Two or more sections may be bought as a start. Any large departmental store or furniture store will carry a full line of them. A fountain pen, too, will come in handy to copy lecture notes. A very nice one, self-filling, may be bought for about five dollars. How about a leather-bound, loose-leaf notebook, that will be one of her first needs at college? Nothing is more helpful to her in her study hours than an inexpensive reading lamp, with a cord attached so that it may be placed anywhere she desires. This will bring her untold comfort, and can be bought for about $7 in any store where electrical supplies are sold. Perhaps now that our girl is a full-fledged graduate she may own her first gold watch and be able to bequeath to her small sister that old gunmetal one. A very pretty little gold watch with extension bracelet may be bought for about $25 or $35, which will give splendid service.

THE university girl is our last care. She, like the nurse, is going out to find her place in the world and become a lifelong student in the school of experience. There are many beautiful and useful remembrances for her. Perhaps the most desired and likely to be forgotten is that magic degree hood. It is made of black corded silk and lined along the edges with rabbit skin. It can be bought for about $20, and the giver may rest assured that he or she has given the most coveted gift of all. The degree hood is a decided luxury, and most college girls have learned to do without such things. Next in importance is her college pin, a real good one to replace the inexpensive one she bought in her first year. If her college pin is already a good one, I am sure the proverbial blue bird of happiness will be appreciated. There are many inexpensive jewellery gifts, such as lingerie pins and odd little pieces of platinum jewellery. Then this year we have beads—beads everywhere—rivalling every color of the rainbow. There is not a girl who has not coveted, and secretly vowed to have, a string of those beads.

Someone has said that of the making of books there is no end, and the same quotation seems to apply with regard to a Varsity girl's desire for the procuring of books. Books have become a part of her nature. Full sets of books are splendid, and reference books on various subjects will be helpful, too. There is an edition of "The Encyclopaedia Britannica" which is handy for daily use, and the separate volumes are small enough to fit the ordinary bookcase. Any book publisher can get the edition for you.



PROBABLY someone will think I am going to forget the daintiest and most useful of gifts—I refer to lingerie, in all its fussiness and beribboned glory. Do not buy those lovely camisoles and Italian silk "undies," but make them yourself. Your own originality will often result in much prettier designs than those of which our French stores boast, and things that are made by the giver have added charm for the receiver. Little "bits and bobs" of lace and ribbon are always dear to any girl's heart, and happy is the girl who has a plentiful supply of "fussiness" in her graduating trousseau.

Now for the most graceful gift of all. I refer to flowers. Sometimes these are allowed to be carried in a graduating procession, and then every girl loves to be almost converted into a veritable flower garden. She is a happy girl, indeed, if on that day of days she wakens up in the morning to find her dressing table covered with flowers. Can't you just picture the happy expression of delight on her face when she sees them for the first time? But, in spite of the fact that flowers are so beautiful, they fade so soon, and something that could be kept, from intimate friends at least, seems to us almost more appropriate.

LAST of all—the familiar and "all powerful" gift of "Dad" is his "personal cheque." During graduation week there is one round of social functions, luncheons, teas, dinner parties and dances, which make a serious hole in the finances of any college girl. Dad's cheque is, indeed, a most welcome sight; in fact, most of it is spent before it is really received.

Almost every girl has the desire to take post-graduate work in some university other than her alma mater, and it would be almost "too wonderful" if Dad included those college fees in that same "personal cheque." Probably our graduate does not intend doing post-graduate work, but instead has dreams of a trip abroad. In that case a vacation cheque would make those dreams a reality, and help considerably towards seeing our girl safely on her way to Europe.

These are only a few suggestions which have occurred to us. There are doubtless many more, but we hope these may be helpful to many of our readers.

EVERY woman knows how soft, silky and lustrous an ostrich plume is.

The quality of Mercury Hosiery has been likened to that of an ostrich plume.

The yarns used are soft and silky to the touch. They have a lustre and beauty that denotes their excellence.

More than that, Mercury Seamless Fashioned Hosiery for women is knitted, not stretched, into shape. The new narrow ankle, the shapely, full fashioned calf and the extra wide roomy top are permanent features that will last as long as you wear the hose.

All fashionable shades and materials.

Mercury

$100 will be Awarded To Canadian Home Journal Readers

FOR PHOTOGRAPHS

Will you be one of the fortunate prize winners?

Now is an excellent time to photograph your pets. Try it and send us your pictures. They may be the finest received.

Canadian Home Journal will conduct Five Photograph Contests beginning June First and concluding November First, 1919.

These contests are open to all readers of this magazine.

Contest Number One.

PHOTOGRAPHS OF DOGS.

For the best photograph of a dog or group of dogs sent to us, we shall pay as follows:

First Prize $10.00
Second Prize $5.00

For all other photographs accepted we shall pay $1.00 each.
Photographs of dogs must be in our possession by June 30th.

Contest Number Two.

PHOTOGRAPHS OF CATS.

For the best photograph of a cat or a group of cats sent to us, we shall pay as follows:

First Prize $10.00
Second Prize $5.00

For all other photographs accepted we shall pay $1.00 each.
Photographs of cats must be in our possession by July 30th.

Contest Number Three.

PHOTOGRAPHS OF HORSES.

For the most interesting photograph of a horse or a group of horses we shall pay as follows:

First Prize $10.00
Second Prize $5.00

For all other photographs accepted we shall pay $1.00 each.
Photographs of horses must be in our possession by August 30th.

Contest Number Four.

PHOTOGRAPHS OF PETS.

For the most interesting photograph of your pet or several pets, we shall pay as follows:

First Prize $10.00
Second Prize $5.00

For all other photographs accepted we shall pay $1.00 each.
Photographs of pets must be in our possession by September 30th

Contest Number Five.

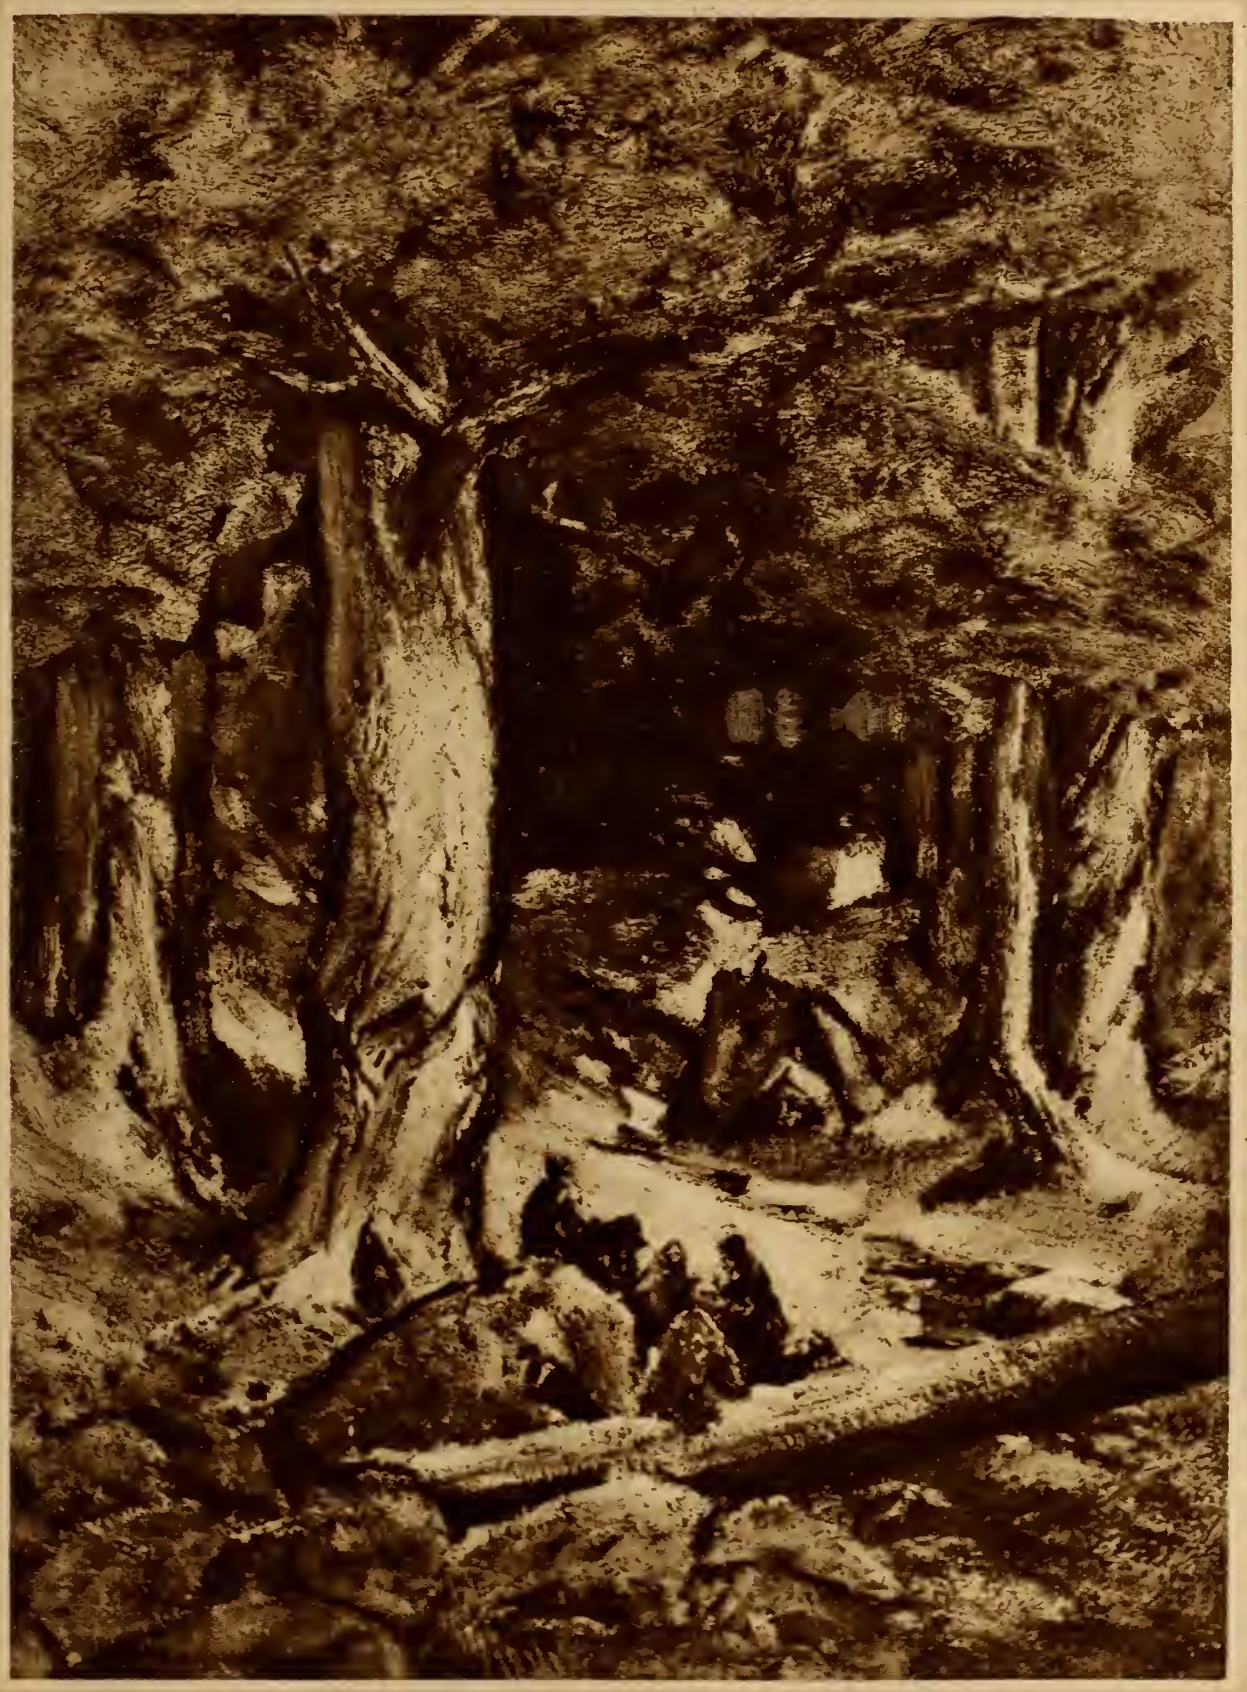
PHOTOGRAPHS OF LANDSCAPES.

For the most interesting photograph of an unusual out-door scene in Canada; such as, a peculiar tree; a curious land formation; a beautiful waterfall; or anything unique in nature, we shall pay as follows:

First Prize $10.00
Second Prize $5.00

For all other photographs accepted we shall pay $1.00 each.
Photographs of landscapes must be in our possession by October 30th

Write full name and address on the back of each photograph.



Unless return postage is enclosed with the photographs, we cannot promise to return them.

Masterpieces of Canadian Art

"THE TRUANTS"

BY HOMER WATSON, F.R.C.A.

Homer Watson is the most thoroughly Canadian of all our Canadian painters. He was born at Doon, Ont., in 1855, where his parents and grandparents were well known among the early pioneers of that district.

In 1887, at the age of 32, he made his first pilgrimage to Europe, where he spent several years, his main object being to see the Galleries and study the works of the Old Masters.

In Europe his work was well received, and from 1888 until about 1905 he was a frequent contributor to the following exhibitions in England: The Royal Academy, the New English Art Club, the Society of British Artists, and the Royal Institute, Glasgow.

This artist, whose works adorn the walls of many of the best homes in Canada, enjoys the distinction (accorded to but few Canadians) of being represented in the Royal Collection at Windsor Castle.

Mr. Watson was for some years a member of the Ontario Society of Artists, a founder member of the Royal Canadian Academy, and of the Canadian Art Club, becoming its first President. For some years he was Vice-President of the Academy, and in 1918 was elected President.

Can You Catch This Fairbanks Smile?

"Naka" with the Fairbanks dogs, large and small. At the right is the favorite "Rex," an Alaskan dog.

Which Will You Choose For Your Home

Keeping pace with the demand for the small bungalow, these designs are shown as suggestions for those who contemplate building artistic homes.

Larger type of house, with shingle roof laid to give a thatching appearance.

Two charming one-story bungalows built at moderate cost.

House of Dutch Colonial design, with spacious verandah across the entire front.

Bungalow showing Japanese features, with walls of field stone.

You can safely use Pond's Vanishing Cream just before going out. It vanishes immediately.

Pond's Cold Cream has exactly the consistency demanded by the best masseurs

Daily Exposure coarsens the texture of your skin

DAY after day of exposure to sun, wind and dust is what makes your skin fade, dry out and wrinkle. You will realize that this is true when you consider that the skin on your body, which is not exposed to these influences, does not become coarsened and wrinkled.

To counteract the damaging influences of everyday exposure, your skin needs the proper care and protection.

Learn how easily you can keep your skin soft and smooth throughout the trying summer weather.

Every skin needs two creams

To keep your skin supplied with just the softening property it needs to help it withstand the roughening effect of warm dusty weather, rub a little Pond's Vanishing Cream with the tips of your fingers over your face. Your skin takes it up as parched sand absorbs water. At once it vanishes—never to reappear in an embarrassing shine.

Then look closely at your face in a hand mirror and see what a difference *your first application* makes. You will find your complexion smoother, fresher, lovelier than ever in coloring.

During the day, especially before you go out of doors, protect your face by applying Pond's Vanishing Cream.

At night when your pores have plenty of time to absorb its healing, soothing properties, the use of a *cleansing* cream—a cream with an oily base—is of the utmost importance. Pond's Cold Cream is especially liked for its smooth, easy-to-work-in consistency. Its formula is such that this cream supplies just what the tiny cells of the skin require.

Faithfully use these two creams and you will find that instead of being afflicted with a rough, harsh skin, with redness and irritation, your skin will retain its softness and freshness throughout the most trying weather. Neither cream will cause the growth of hair or down.

Free sample tubes—send for them today

Tear out this coupon and mail it today for free sample tubes of Pond's Vanishing Cream and Pond's Cold Cream. Or send 10c and we will send you tubes of each cream large enough to last two weeks. Send for them today. Address Pond's Extract Co., 77 Brock Ave., Toronto, Canada.

How to Cook the Queen of the Kitchen Garden

(CONTINUED FROM PAGE 19.)

Another method:—Cut cold cooked asparagus in one inch pieces and arrange in nests of lettuce leaves. Sprinkle with chopped whites of hard-cooked eggs and the yolks of eggs rubbed through a sieve. Serve with the following salad dressing. Beat the yolks of four eggs for five minutes, add four tablespoonfuls of oil, gradually, beating constantly, then add four tablespoonfuls of vinegar and one tablespoonful of lemon juice. Cook in a double boiler, stirring until the mixture thickens, do not allow it to boil. Chill and add gradually, stirring all the time, four tablespoonfuls of oil, two teaspoonfuls of sugar, and one teaspoonful of salt. Just before serving add two cupfuls of whipped cream or whipped evaporated milk.

Asparagus with Shrimp.—Boil and drain two bunches of asparagus tips. Place the asparagus tips on a bed of lettuce leaves. Open and drain one can of shrimp and put in the center of the asparagus and pour over the following sauce. Mix two cupfuls of mayonnaise dressing with one-half cupful of thick cream, add two tablespoonfuls of tomato catchup, one tablespoonful of chopped parsley, salt and pepper to taste and three hard-cooked eggs, chopped. Serve cold. This makes an excellent luncheon or supper dish for warm days.

Asparagus a la Creme.—Take one bunch of nice fresh asparagus, cleanse it, and trim all the stalks evenly; then tie them up and put into boiling water with a little salt, and let it boil for ten minutes; take it up and put the asparagus into a saucepan with two cupfuls of milk, one chopped onion, one bunch of herbs, one washed lettuce, and a dust of paprika. Cook for twenty minutes, then skim out the asparagus. To the mixture in the saucepan add four tablespoonfuls of butter substitute, eight tablespoonfuls of flour which have been blended together, stir until the mixture boils, then add one-half cupful of milk, three raw yolks of eggs and the strained juice of one lemon, stir this over the fire until the mixture thickens, but do not allow it to boil. Place the asparagus on a crouton of lightly fried bread or on a slice of buttered toast, and pour the prepared sauce all over it and serve at once. Garnish with stars of pickled beets.

Asparagus Ragout.—Clean four dozen sticks of asparagus, cut off the tops, and keep in cold water until required, then boil for twenty minutes, strain them and pour two tablespoonfus of melted butter over them. Take one lettuce and one head of endive, and let them remain in cold water until quite crisp, wash and dry them well by shaking them in a clean cloth, put them in a saucepan with four tablespoonfuls of butter substitute, one bunch of herbs, one chopped onion, a dust of paprika, and the stalks of the asparagus. Cover the pan and cook slowly for twenty minutes, then add one-half cupful of cornstarch mixed with one cupful of tomato sauce and cook for twenty-five minutes, occasionally stirring it. Rub it through a sieve and put it into a saucepan to get hot. Serve hot garnished with poached eggs and the points of asparagus.

Of Interest to the Motorist

(CONTINUED FROM PAGE 38.)

ANOTHER formula for giving new life to leather tops or upholstery is given as follows: Ground ruby shellac, 2.25 parts; dark resin, .91 parts; sandarac, .115 parts; gum resin, .115 parts; analine black (spirit soluble), .115 parts; lamp black, .115 parts; wood alcohol, 22.50 parts. The first step in preparing this mixture is to dissolve the sandarac, dark resin, gum resin and shellac in alcohol; next the analine black is added, and finally the lamp black, which has been ground to a paste with a little of the liquid, is mixed in. After the whole has been thoroughly mixed, it is filtered. This is applied to the top or upholstery with a brush, and is polished with a soft cloth or brush.

On genuine leather tops, upholstery and for the leather straps holding a top, a good grade of harness oil is often sufficient. The following will be found an effective mixture: Oil of turpentine, 2 ounces; lamp black, ½ ounce; neatsfoot oil, 10 ounces; vaseline, 4 ounces. The lamp black is mixed with the turpentine and the neatsfoot oil, and the vaseline is thinned by heating it, and the ingredients are mixed by shaking together. When the mixture cools it will be in the form of a grease or paste, which is rubbed well into the leather to be preserved or softened.

If the car has been used on a wet or stormy day, the top should be kept up until it is thoroughly dry, as if it is inserted in the top case, or folded while wet, the lining might mildew or rot. In folding tops, care should be taken to have the folds even and to have as few wrinkles as possible. The various bows comprising the framework of the top should be separated by small rubber pads, and the whole firmly strapped together by leather bands applied at each side of the folded top frame to prevent rattle.

Upholstery is usually preserved by slip covers of various grades of cloth applied to the cushions and to the backs of the seats. As most cushions and seat backs are upholstered with leather or the various fabrics imitating it, the same dressings that have been recommended for tops may be used to advantage in treating the cushions and seat backs. In some of the higher-priced cars, especially of the closed body forms, various grades of broadcloth, Bedford cord, or other textile fabrics are used. When these become dirty they must be treated very carefully and by an experienced cleaner, because ordinary methods of removing grease spots will cause unsightly discolorations of the fine fabrics. Where high-grade upholstering materials are used, slip covers are really necessary. These should be kept in place at all times that the passengers are in ordinary street or business dress, but may be removed and the clean upholstering used at such times that it is desirable not to dirty the clothing, as when evening clothes are worn. If the cushions or seat backs are torn, or otherwise damaged, restoration can only be made by an upholsterer or carriage trimmer. Whenever any of the preservative dressings are applied to the upholstery, it is well to wipe off all traces of the dressing very carefully in order that it will not soil the clothing.

Motorists—a Warning.

ATTENTION has more than once been directed to the real and comparatively little known danger arising from the unburned gases in the exhaust from an automobile engine. This time we hear of the death of a man who permitted his motor to run after the car had been driven into the garage. The weather was cold, and he closed the door for a few minutes. His body was found later.

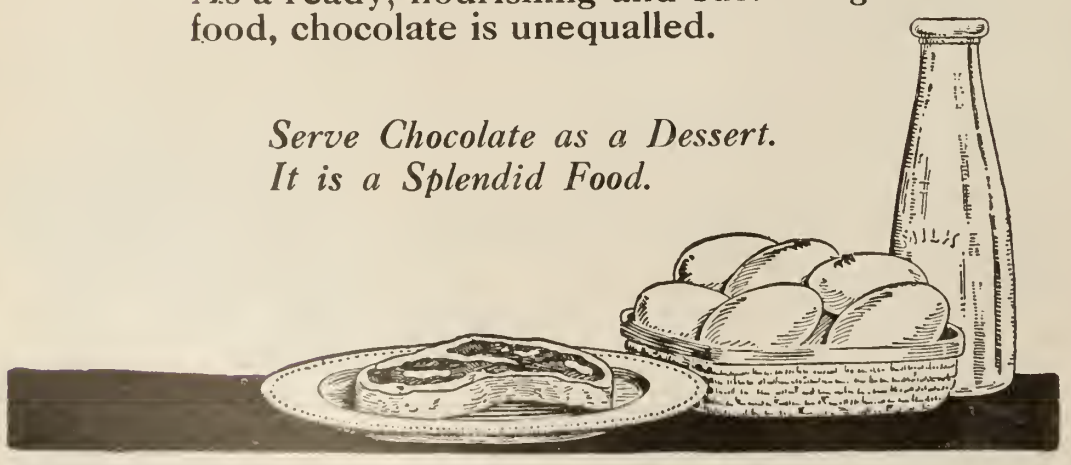
Chocolate-a food

IT is now universally admitted that chocolate is a food—a sustaining food.

During the war millions of tons of chocolate were sent to the Front.

Our Canadian soldiers early found that eating chocolate was not only pleasing to the taste, but restored vitality and gave renewed energy.



Brigadier-General L. W. Waller of the U.S. Marines, referring to the food value of chocolate, said—

"I never went into a campaign without chocolate. I always have a few cakes in my haversack when I go into action. Men fight like the devil on chocolate. Seasoned soldiers take it on the march with them."

It is a matter of actual scientific demonstration that one pound of chocolate produces the same amount of body-building nutriment as six eggs, a pint of milk and one pound of steak.

As a ready, nourishing and sustaining food, chocolate is unequalled.

Serve Chocolate as a Dessert.
It is a Splendid Food.

Concerning Books

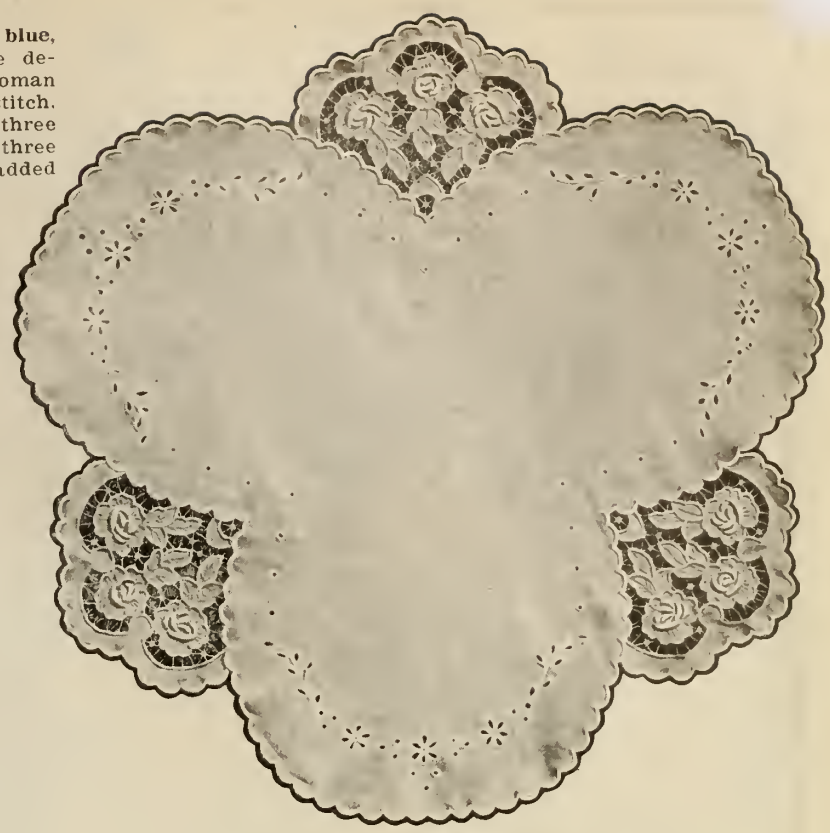
(CONTINUED FROM PAGE 22.)

good knight and strong was finally rewarded with the heart and hand of his lady.

The story is a clean one and as there is considerable dialogue, would prove particularly adaptable to family reading; in fact, it is doubtful if many books of the season could equal it in this respect. The illustrations, which are by Mr. W. T. Benda, are beautifully executed and the whole volume is one which is heartily commended to the readers of "The Canadian Home Journal."

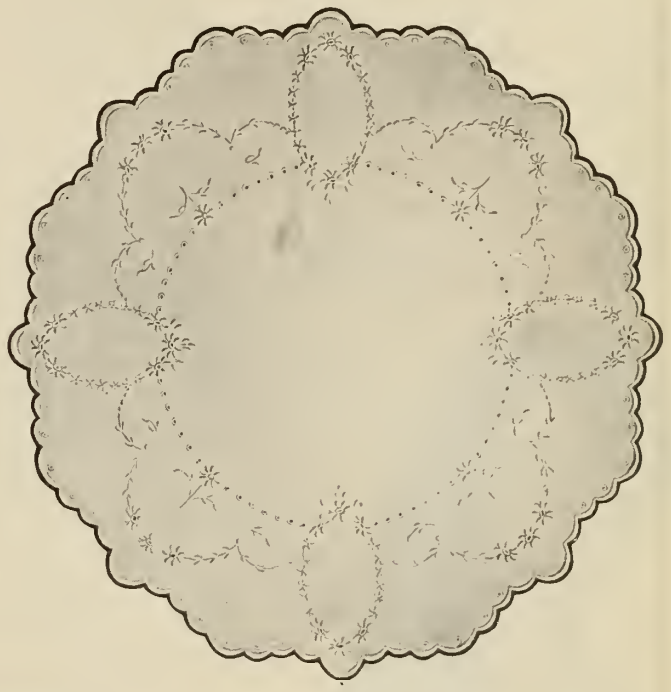
(CONTINUED ON PAGE 56.)

12187—Carriage Pillow Matching Robe 12188

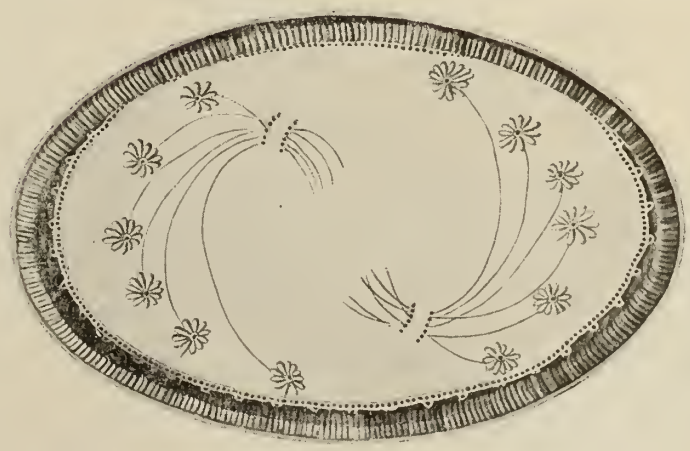


12188—Carriage Robe Matching Pillow 12187.

Transfer pattern 12187, blue, 15 cents. Embroidery design for pillow 16 by 19¾ inches corresponding with that on carriage robe **12188** shown above. This charming and simple baby pillow of linen lawn is unique. The square eyeleted scallop is quickly worked and the rose and leaf designs in raised satin stitch filled in with seeding are equally as easily carried out.



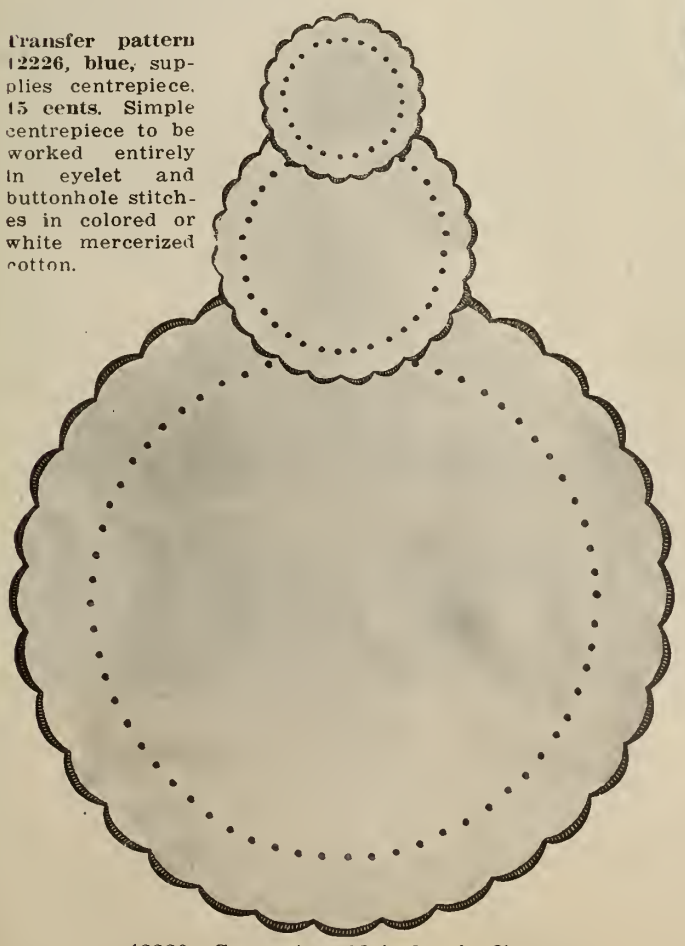
Transfer pattern 12188, blue, 20 cents. The square scallop on this set of pillow and robe is a change from the rounded ones so generally used. To distinguish the front from the back of the flowers in the spray the petals of the former are filled in with seed stitches. The outer edges are worked in raised satin stitch, stems in French stemming and scallops buttonhole stitched.



12252—Centrepiece 34 inches in diameter.

Transfer pattern 12252, blue, 30 cents. This handsome design is a combination of Roman cut-work and eyelet stitch. Each cut-work section has three full blown roses and three leaves worked in heavy padded satin stitch.

Work for the Odd Minutes at Holiday Time



12157—Tray Doily 14¼ by 17¾ inches.

Transfer pattern, 12157, blue, 10 cents. This design charming as a doily for a tea tray, is 14¼ by 17¾ inches. The stems are worked in outline stitch, the flower petals are in raised satin stitch, while the centres of the flowers and the dots are in eyelet stitch. A pretty finish is a narrow edging of either tatting, crochet or Cluny lace

Transfer pattern 12196, blue, 30 cents. A design of wreaths and garlands of daisies to be worked in eyelet and raised satin stitches.

Transfer pattern 12226, blue, supplies centrepiece. **15 cents.** Simple centrepiece to be worked entirely in eyelet and buttonhole stitches in colored or white mercerized cotton.

12226—Centrepiece 22 inches in diameter
12227—Plate and Tumbler Doilies 6 and 10 inches in diameter.

If your local dealer cannot supply these patterns, send direct to the Pictorial Review Company, 263 Adelaide St., W., Toronto.

12214—Four Huckaback Hand Towels

Transfer pattern 12214, blue, 20 cents. Designs for four towels, 15 inches wide, are given in this pattern with scalloping for both ends though the design is at one end only, also color diagram for the cross-stitch rose design. Two of these towels are for cross-stitch worked with colors, while the other two are for white work. The latter are in raised satin and eyelet stitches. With the wreath design an initial 2 inches high may be used and with the other, two or three letters are pretty but they can't be more than 1 inch high

CONNOR
"CANADA FIRST"

Just think of being forever rid of Wash-day drudgery and doing the big washing in a few hours which formerly took all day. The Connor "Canada First" Washing Machine runs so smoothly and easily that wash-day is now wash hour, and the hard work has vanished.

Ask your dealer to demonstrate this machine to you. It will surely solve your wash-day problems. Beautifully illustrated booklet on request.

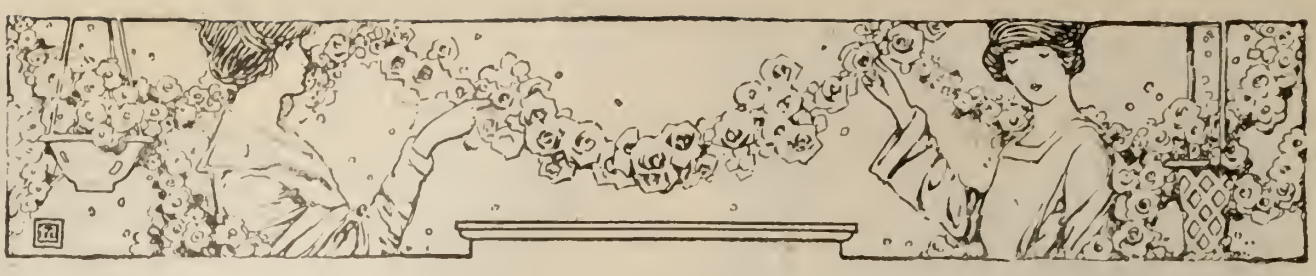
Girls! Lots of Beautiful Hair

35 cent bottle of "Danderine" makes hair thick, glossy and wavy

Removes all dandruff, stops itching scalp and falling hair



To be possessed of a head of heavy beautiful hair; soft, lustrous, fluffy, wavy and free from dandruff is merely a matter of using a little Danderine.

It is easy and inexpensive to have nice soft hair and lots of it. Just get a 35 cent bottle of Knowlton's Danderine now—all drug stores recommend it—apply a little as directed and within ten minutes there will be an appearance of abundance, freshness, fluffiness, and an incomparable gloss and luster, and try as you will you cannot find a trace of dandruff or falling hair.

If you want to prove how pretty and soft your hair really is, moisten a cloth with a little Danderine and carefully draw it through your hair—taking one small strand at a time. Your hair will be soft, glossy and beautiful in just a few moments—a delightful surprise awaits every one who tries this.

Try a 35 cent bottle at drug stores or toilet counters.

Courage in the Dark

By Josephine Story

IF you are a tender mother—and tenderness and motherhood are indissolubly connected in the average mind—you have sympathetically comforted and argued and explained away the bogies the dark has conjured in the minds of your children. Perhaps you have laughed at them. "What! A great big boy like you afraid of the dark?"

Well, that's all quite as it should be, but how about yourself? Oh, of course, you aren't afraid of the darkness of night or a room, but the dictionary supplies another definition of the word dark: "Dark—obscure, not easily perceived or understood." Perhaps that is the sort of darkness you are afraid of. Afraid to make decisions because the results are hidden in the shadowy future; afraid of what the next day may bring; afraid of what others may say; afraid of making friends. All that is being afraid of the dark, because before you take your next step you want the spotlight of consequences to illuminate it.

SUPPOSE the next time you are tempted to fear your own judgment, to vacillate, you square your shoulders and say to yourself: "What! A grown-up like you afraid of the dark?" It may help you to step serenely forward into uncertainty. The very effort will crystallize your indecision into determination. Suppose you do make a mistake? Some of the world's greatest discoveries have been born of mistakes. The very fact that you have had the courage to fare forth on your little adventure in self-confidence will prove a tonic. Your head will be a bit higher; your backbone will stiffen and lose the jellyfish consistency that has kept you wobbly, and the next time it's up to you to make a decision you won't regard the necessity as a tragedy, but as an opportunity.

Courage! What a word that is. And there are so many kinds. There is the common or garden variety, of which we take no notice; the courage which keeps men cheery and hopeful at home when business anxieties are gnawing at their vitals. There is the courage that keeps a woman carrying on at her household tasks, comforting and inspiring the family, when inside she is consumed with desire to pitch every cooking utensil out of the window.

COURAGE! Think what it accomplished in the great war. When you are afraid to step forward, think of the men who have seized upon an infinitesimal chance to escape from prison, to rescue a fallen comrade, to silence a gun, to bring comfort to the dying! Think of them, and how nine times out of ten they won out. There's no truer saying than "Fortune favors the brave."

Then, there's moral courage, and it takes heaps of it in this world if you mean to make good, to stand for what you know to be right. But what pleasure or gain can there be in the life of the person with no individuality; and to have individuality one must have the courage to refuse to be stampeded along with the multitude.

Take a chance! Suppose Demosthenes, with his defective speech, had slunk at the relentless heels of the giant "I Can't"! We would never have known him as the greatest orator of his time. How he fought his infirmity! Think of W. H. Prescott, almost blind, working, enduring, achieving, until he became one of our foremost historians! Think of the courage of the man who could write "Pilgrim's Progress" in a prison!

IF you feel that you are handicapped spiritually, mentally, physically or financially, simply refuse to remain so—that's easy. If you have courage to persevere you are almost certain to accomplish anything upon which you are determined—any good thing. We have just had a world-shaking illustration of the strength of Right to conquer. Set out deliberately to cultivate resourcefulness, knowledge, kindliness, a sense of humor and vision—oh, by all means, vision—for that will illuminate the shadowy places which seem to menace.

When you feel afraid to go on, grip your courage tight and remember how you have comforted and reassured your children until they have laughed and run forward into the dark with you. Remember also that One is saying to you softly:

"O, thou of little faith, wherefore didst thou doubt?"

Why Not a Time Budget?

By Josephine Story

"WE live each day as though it were a thousand years," wrote someone, and might have added: "And the universal wail is, 'If I only had time!'"

You have all the time there is. Your friends may have bigger incomes, but they are no richer in time than you are; you have just as much of that commodity to spend as they. Sixty minutes in each hour, twenty-four hours in each day, seven days in each week, fifty-two weeks in each year, and presumably any number of years. What wealth! What a challenge to make every moment of it count!

IF you are an up-to-date person you have worked out a budget for your finances; now get busy on one for time expenditure—that's really the more important of the two. If you waste time, you waste money in these vital times. Suppose you are just the common or garden variety of home-maker, try setting down a time budget in black and white. It will bring you to a realization of what you are doing with that precious twenty-four hours, if it does nothing else. Doubtless the other members of the family will jeer at you, but if you make good you will find them surreptitiously studying your time-table.

Allow a certain amount of time for the preparation of "eats," for the care of the house, for mending and needle work, for social service, for incidentals—you always find a column devoted to those foundlings in an expense book; for recreation, and, above all, for refreshing and stimulating heart-to-hearts with the members of the family. You'll have to experiment to determine the amount of time to be devoted to each item, but when you've decided on it, stick to it. Resist the temptation to overrun your cooking appropriation to make an extra dish for dinner, let a room remain undusted rather than rob your recreation period, and comfort yourself with the thought that a writer once called dust the bloom of time. If you have been spending three afternoons a week on cards and complaining that you had no time for reading or lectures, cut the cards down to one afternoon, and take one for lectures and one for reading, and don't be swerved from your determination because someone will be "hurt" if you don't accept her invitation. If you respect your time budget your friends will. Just remember that the home-maker, more than anyone else, must develop a sense of values.

AFTER you have made your budget tackle your duties promptly. Don't hesitate; don't vacillate. Hesitation and vacillation are gourmands; they fairly gobble up time. If you expect to achieve results, you can't wait till you feel like doing a certain thing; you must begin doing, and keep on till you feel like it. Get things behind you. There is nothing so stimulating and inspiring as the consciousness of work accomplished and the prospect of uncrowded hours ahead. If you follow this plan you will push your duties; they can never get behind and push you.

Planning one's time assures one of an untired mind with which to do constructive thinking. Try the time budget. You will find that you have time for everything you want to do. Perhaps, to your amazement, you will discover that you have left no time, no, even a moment, for "blindness of heart, for pride, vain-glory and hypocrisy, for hatred, malice and all uncharitableness."

The Question of Who Shall Vote

(CONTINUED FROM EDITORIAL PAGE.)

If they want to vote, advise men to acquire "stamina" and "domestic virtues," and, above all, they must acquire "charm."

But here I am forgetting that this is an editorial, and that it is out of order to say "I" at all. "We" is the proper pronoun editorially. It's use is intended to convey to the people that the editor does not speak as a lone, unsupported person, but that he or she has the backing of the editorial staff, if not of the whole Government itself.

Having, therefore, assumed this attitude, let us forget our frivol on the franchise, and ask the intellectuals—male and female—to consider whether the time and effort spent in disqualifying our unlettered citizens would not be infinitely better expended in educating them and imbuing them with our most cherished national ideals.

Make no mistake about it, we shall pay a heavy price if we alienate, segregate, or kick under any very considerable proportion of our population as unfit for the franchise. We may think they are only a body of death, but we shall find they still possess qualities that are remarkably lifelike in nature.

In our national life, it must inevitably happen that we "march to fate abreast"—that is, we must, unless we wish to emulate Russia and other countries who tried out this scurvy game of keeping the peasantry under.

The Canadian coat-of-arms may have many colors but it must be a seamless garment. Or, if you would put it differently, Canada is a theme, or a song, and it must be sung together. (CONTINUED ON PAGE 63.)

The Bride of Chilkoot Landing

(CONTINUED FROM PAGE 13.)

She sank in a dejected heap upon her steamer trunk. Outside she could hear the doctor energetically wielding a hammer. "It's terrible," she said to herself, "it's the most desolate, hopelessly down-at-the-heels place I could ever have imagined. Of course Grant was very frank about everything. Still—I didn't know—I didn't just realize—" A tear splashed upon her cheek.

"HOW'S it going, girlie?" called the cheery voice of her husband through the doorway. "I'm coming in to make biscuits for supper presently. Wait till you taste them."

She laughed back uncertainly, "Oh, very well, do hurry. I'm dying to sample one. And, Grant—I'm just planning where to put things. The bookcase over there, with that brown copy of the 'Song of the Lark' just above, or do you think it is too dark? And that lovely little water-color of the fishing-boats on this wall. But oh dear! So many things will be utterly impossible. The cut-glass salad bowl and the Crown Derby cups, and the pearl handled fruit knives—could you imagine anything more ridiculous, Grant? I don't believe we'll take them out of their wrappings at all."

"Yes, we will," said the doctor decidedly, "though I'll confess they don't exactly harmonize with company supplies of beans and bacon and cornmeal and syrup. Still, it is just the bits of superfluous luxury that will keep you from missing too much everything else you've left behind."

"And the books!" she exclaimed with a touch of rapture, "and they have promised to send ever so many magazines from home. Thank heaven we know how to read, Grant!"

"But you must learn how to live, Isobel. You can't shut yourself up like a hermit, child."

"I hope you don't want me to cultivate the society of that awful girl, Grant." She feigned a shudder. "I had built up all sorts of illusions concerning her. I had imagined an elfish creature clad in deerskin, all fringed and beaded, with wonderful blue-black hair and liquid dark eyes, the sort of thing that always occurs in stories. And when I saw her down at the wharf—Shades of Broadway!"

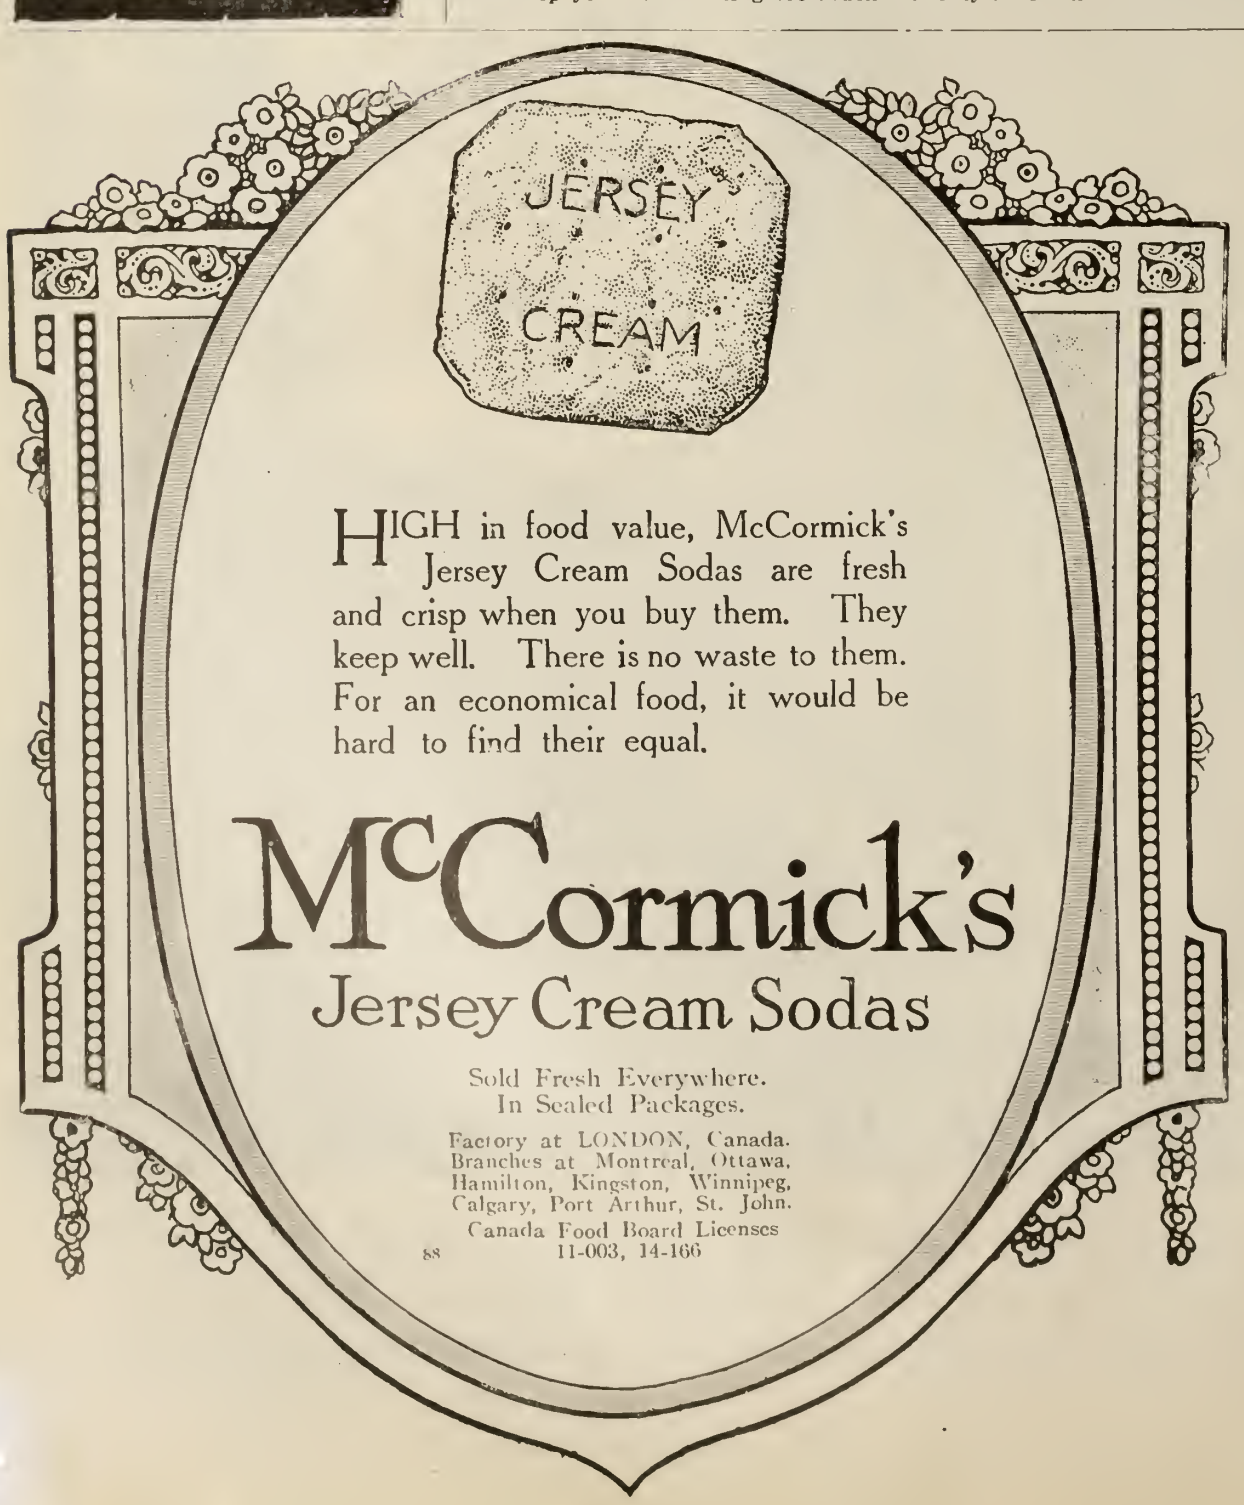
"I think your whole viewpoint is wrong," he answered slowly, "I've told you something of Nettie before. She is the only child of an old miner, a diamond in the rough if ever there was one. She is shy, silent, intense, filled with dreams and desires. I fancy that she is as sensitive as a white moth. As for her clothes, she has practically never known a woman. She has only had blind instinct to guide her."

"You seem to have found her an interesting study," remarked Isobel with a touch of hauteur, "she would no doubt make an ideal experiment in psychology. But her hair, Grant! And that awful cream serge skirt (I'll venture to say it has been washed twenty times and there isn't any hang left to it one way or the other) and that pink silk waist with the cheap Valenciennes, and the tawdry, glittering stuff she thinks is jewellery! What on earth could I ever have in common with her?"

"I don't suppose she ever read Browning's 'Guardian Angel,' and has probably never been initiated into the mysteries of afternoon tea or golf or bridge or the need of social reform. But don't forget that she has been burning up to hear of all these things, Isobel, and has probably thought of you as the very person who would teach her."

"Oh, I'll be polite to her, of course," said Isobel easily, "but you can scarcely expect me to rave over our mutual tastes and sympathies, can you?"

"You might learn a very great deal from her. I doubt if there is a single fact of wood-lore that has escaped her. If you could see her swim or dive or hunt—well, she might appeal to you more strongly. And if you won't make the most of this chance of companionship, dear, there are apt to be some terribly lonely hours."



"I should be less bored with a novel," she answered loftily, "and there is always sewing and my housework. I'm really quite a self-sufficient young person, Grant. Where do you think we should put that Jacobean cabinet? It's going to be somewhat of a nuisance, I'm afraid."

HE followed her movements with a glance that was puzzled, meagrely hopeful, infinitely caressing. After all, he meditated, this attitude was only natural. She had been the indulged and joyous daughter of the physician with whom he had practised in the year following his graduation. A vision of the sleepy, provincial old town rose before him, with its elm-shaded streets, its murmuring river, the gray facade of its one sternly denominational college, and all the narrowness and conservatism that it had engendered. He recalled her pleasantly eventful life, the boating and tennis, the dances at the exclusive Country Club, the visit every other Friday to the nearest large city. In the latter metropolis she had done a great deal of shopping, with luncheon in the Palm Gardens, followed by a matinee at the "Bohemia." Or, in a more serious mood, she would visit a settlement house or an Old Ladies' Home, "that she might get in touch with the problems of the day," or she would attend a lecture on Ibsen, or a violin recital by an erratic looking Polish gentleman in whose name the letter "z" occurred with almost alarming frequency.

He was musing upon these days as they strolled out into the gloaming after the evening meal—"one could scarcely call it dinner," she had remarked a little ruefully. The tall pines received them like a legion of dusky green warriors; through the perfumed spaces they gazed down into the darkling valley, with the cabins whence issued tiny spear-points of light, and the reticent waters bearing a dull cornelian glow upon their surface. And while they watched, silently, she within the circle of his arm, the houses became one soft blot upon the gathering night, etched round with pointed firs. The girl looked up at the mountains looming vastly behind them. Serrated crag and jutting peak faded insensibly to a black, velvety shadow. Stars flashed out in crystal flame, as if kindled by some invisible lamplighter.

"I never knew the coming of the dark could be so beautiful," said the girl in an awed voice, "memories of other nights seem suddenly trivial. Not a single bird to break the quiet! Oh, Grant, surely the first man and the first woman knew something of this feeling, this splendid awe and terror that is here with us, when the first night enfolded the first day!"

The Bride of Chilkoot Landing

(CONTINUED FROM PAGE 54.)

The man's spirit leaped in gladness. This was that deeper heart of her speaking, which he had first learned to love. Yes, the north would teach her out of the abundant stores of its wisdom. It was already whispering earnestly, casting upon the woman who was his, the spell of its Herculean primal loneliness, hinting, with bated breath, of the human secrets that it cherished. He drew her closer to him. Momentarily, every trace of doubt or distrustfulness had vanished.

The next morning, pausing in their work to take appreciative survey of young Mrs. Irving, old "Dutch" Gleason and Bill Brownleigh held a fragmentary conversation. Said the former: "There she goes on a tower of inspection, Bill. I ain't seen anything prettier in an age."

"Oh, I don't know 'bout that," answered Bill. He was prone to be deliberate. "Reckon Nettie Jackson wouldn't show up so badly if she had half a chance. Same with an actress. You can't never tell just how good a looker she is on account of the scenery and footlights."

"Mebbe. Wouldn't strike me she cared over much for our little town though."

"Or us highly respected citizens," amended Bill with a chuckle.

"And I don't fancy she takes to Net."

"That so? Well, well! I've heard say as how them Chinese fellers have a real smart symbol for discord. It's two women, Dutch, just that. And by cracky! I believe they've got it to a science, old man."

"Law, but she sure is graceful-like!"

DUTCH followed her retreating figure with a whole mine of admiration in his round blue eyes. Isobel, heedless of praise or blame, was walking in leisurely fashion up the mountain-side. She had come out from her cabin with a sudden new delight in that regal gold and emerald morning. There were a million tiny flowers between the chinks of the little log-house, and as she boldly followed the ascending path cry after cry of ecstasy rose to her lips. Never had she dreamed of such vivid, spongy depths of green, such intricate play of frond and leaf and tassel, with rich brown cones in profusion, the gleam of placid water, the beckoning tall trees, the half-hidden velvety recesses. Great rocks appeared in her path, mantled with moss or mottled with orange and garnet lichens. Salmon-berries glowed rosily from the interlacing verdure, raspberry and huckleberry bushes bowed to the ground with their luscious spoils—that glancing silver far below her meant the leap of a grayling, that rustling sound could only be a wood partridge.

"Mrs. Irving," called a peremptory voice.

Isobel turned in surprise. "Did you wish to speak to me?" she asked coldly.

"Not to any extent," came the half flippant, wholly defiant reply, "but I don't mind warning you not to go any farther. You ain't got a gun handy y' see, so it would be just as well to keep within bounds."

"What am I apt to meet with?"

"Most anything"

THE two women regarded each other for an instant, one tall, erect, patrician, with an innate disdain and a supercilious good breeding struggling for mastery; the other small, supple, somewhat pitiful in her threadbare skirt and soiled white middy, with a red cotton handkerchief, like a flag of arrogance, knotted in the semblance of a tie. Yet there was something of command in her face, and an undeniable power in her challenging grey eyes. Isobel Irving did a foolish thing. "Thank you, Miss Jackson," she said haughtily, "I think I shall go on."

"All right. Don't say I didn't warn you, that's all."

She had disappeared in an instant. Isobel stood still a moment, a little angry, very much ashamed indeed, though she would not readily have acknowledged it. "I couldn't possibly go back now. She would surely see me and imagine she had won." So with her head a trifle higher, though not without compunction for her own weakness, she followed the path a long distance, plunging more deeply into the gloom and solitude of the forest. The upward grade wearied her, too, and she was on the verge of retracing her steps when a sudden opening revealed another unimagined beauty, and she stood lost in wonderment.

She was standing upon the brow of an overhanging rock. Just beneath her gaze, the rugged mountains clasping it like giant agates, blue as that sky which some great glacier holds imprisoned, with never a ripple upon its surface or the shadow of a hovering wing above it, lay a beautiful tarn, solitary, pellucid, eternal. Then she was conscious of a stealthy tread behind her, an awful sensation of chill, and the sharp crack of a revolver.

"You ain't hurt," said Nettie Jackson, "only scared a little. I decided when you'd left I'd better follow after all. Just as well, I guess."

A long shudder came over the other girl. There, prostrate in the bright sedges lay a tawny, feline creature, dead.

"What is it?" she asked tremblingly.

"Only a lynx. Usually harmless, only I didn't like the way it was coming up. You mustn't forget you're out o' civilization here, and if you want to do much promenadin' you'd better learn to handle a revolver." She turned away abruptly.

"Wait!" called Isobel.

"Well," said Nettie in a non-committal manner.

THE STANDARD OF EXCELLENCE

Gum decay causes tooth decay

HEALTHY teeth need healthy gums to hug them. Else they will loosen in Pyorrhea. Tiny openings will come in the gums to act as the gateways of disease germs, which infect the joints or tonsils, or cause other ailments.

Forhan's prevents Pyorrhea, if used in time and used consistently. No mere toothpaste does. Are *your* gums tender gums? Are they bleeding gums? If so, you are certain to have Pyorrhea (Riggs' Disease). Four out of five people who are over forty have it.

To you we earnestly recommend Forhan's. It preserves the gums, which hold the teeth secure.

Brush your teeth with it. Forhan's cleans the teeth scientifically—keeps them white and clean.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

Concerning Books

(CONTINUED FROM PAGE 50.)

Beyond Life, by James Branch Cabell. Published by J. M. Dent & Sons. Price, $1.50.

THIS is a book which is meant distinctly for mature literary minds. To others the book will not receive its fullest appreciation because of Mr. Cabell's style of writing. It is really a series of essays on different themes as related by a novelist, one John Charteris. Mr. Cabell has Charteris discourse on "Authors at Their Best," on "Witch Women of Old and Modern Times," on "The Values of a Candie," on "Contemporary Writers," and on "The Arbiters of Present Fashions and Morals in Literature."

Mr. Cabell is one of the cleverest of living stylists, although time and again in his recent book he is little else than paradoxical. Speaking of the contemporary writer he puts in Charteris' mouth the following:

"All in all, there is really no disputing that these two great optimists succeeded in writing delightfully about their contemporaries by the simple device of not telling the truth . . . Probably few men of striking literary talent have ever been so constituted as to be capable of actually noticing what contemporary life was like. The absent-mindedness of gifted writers is, indeed, notorious: and it would seem to be this habit of not closely observing their fellow creatures which enables men of genius to write about them so charmingly. At all events, once the writing is adopted as a profession, the author has definitely cut adrift from normal life; and before long will forget its ordinary course so completely that he may very well come to misrepresent it in a masterpiece. . . . Balzac, who was more profoundly painstaking than most of us, adopted the plan of sleeping by day, and writing throughout the night hours, and of thus living for considerable periods without seeing anyone save the domestic, who fetched the sustaining coffee: and Balzac's masterworks remain to prove this an excellent way of writing really profound studies of contemporary life. It secures, to begin with, an abnormal viewpoint, concerning the need of which I have spoken at sufficient length. And besides, it is undeniable that a person who steadily persisted in this ordering of his existence, as Balzac did through some twenty odd years, will not be creatively wind-bound by his knowledge of actualities and human nature as displayed therein: nor need I point out that the later volumes of the "Comedie Humaine" are concededly the best, improving as they did in ratio to Balzac's increasing forgetfulness of the truth about his subject. . . . Given the requisite genius anyone of us may do well to follow his example. But the programme is arduous, and, first of all, you must be quite sure about the genius."

For all those who have a liking for chaste literary workmanship, Mr. Cabell's new book—whether one agrees with him or not in many of his opinions—will prove to be one of the delights of the present season. He is an original writer who merits a better appreciation than has so far been accorded him.

Nights in Town, by Thomas Burke. Published by J. M. Dent & Sons. Price, $1.35.

THESE essays on the city of old London are decidedly the best of their kind which have been written in recent years, and Mr. Burke is to be congratulated on the way in which he has managed to extract the flavor of various sections of the great metropolis, for whether he be writing of Clapham Common, Whitechapel, Hoxton, Stepney, Chelsea, Blackwell, or Clerkenwell, he depicts these communities in words of such color that one almost fancies a London near at hand.

Mr. Burke is, in the opinion of the editor of this column, a far better essayist and abler descriptive writer, than a novelist. His novels savor too much of unhealthy appetites and corrosive morals, but "Nights in Town" are full of relish, color, and warm humanity, that deep beauty and mystery which has for years lingered round the city on the Thames.

The Avalanche, by Gertrude Atherton. Published by McClelland & Stewart. Price, $1.35.

IN all her novels Mrs. Atherton manages to keep a high literary quality and this new tale of hers is another demonstration of how well she can weave a story and expound a problem in good English.

"The Avalanche" is a story of San Francisco immediately after the earthquake and is a plea for fuller confidence between wife and husband. The plot is one which is common enough to all society plots—that of a young wife with nothing to do and doing it poorly—but in the hands of Mrs. Atherton it achieves a novelty of form and expression which becomes intensely interesting.

Possibly one might criticize Mrs. Atherton for handling without gloves some characters and localities of San Francisco which are more often discussed in men's clubs than in the open pages of a widely circulated book. Nevertheless, while this book is one which may only pique the curiosity of immature minds, it does demonstrate that idleness and too much money only lead to all kinds of trouble and confusion.

It seems somewhat unjust to classify "The Avalanche" as a detective story, and yet as in "Mrs. Balfame," her previous book, Mrs. Atherton features in her new novel a professional detective as one of the unfolding figures in the scheme of the well constructed plot. The book will prove an interesting and instructive one, whether travelling on a train or resting in a hammock.

The Vision for Which We Fought, by A. M. Simons. Published by The Macmillan Co., of Canada, Limited. Price, $1.25.

THIS volume can be whole heartedly recommended to all readers of THE CANADIAN HOME JOURNAL as one of the best books of social inspiration that have been published in any country since the armistice was signed. In a brief preface Prof. Simons states that the book was written because he believed the problems of peace called for a greater crusade than the one that rallied millions to the battlefield to crush autocracy. "In so far as they are suitable," he writes, "all the enthusiasm, institutions, material, and persons mobilized to win the war should now be mobilized to fight ignorance, poverty, disease, and social injustice.

"This book does not so much advocate the programme as postulate problems which the war has created and indicate the means involved during the war for their solution. The writer's social theories have been kept in the background and only those changes have been suggested that grow naturally out of the methods of fighting the war."

Prof. Simons has performed a very real service in giving this volume to the public for there is no doubt that the processes of war have wrought a social transformation. This has been brought about because of the methods of fighting the war which caused a deep social solidarity and formed the instruments by which to apply social force to the accomplishment of common ends. Such a development forecasts great democratic advances which are even now making this manifest in the planning of an industrial partnership between capital and labor. This little volume calls attention to the unity in this development. Its theme is that in

The Church Orchestra

A Suggestion That Might Stimulate Musical and Religious Interest

BY HECTOR CHARLESWORTH

IN a recent article dealing with the importance of music in connection with public school education, I made a casual mention of the fact that in certain parts of the United States orchestras had been developed in High Schools with fine results. I believe that in certain large British centres like London, Birmingham and Glasgow, there are certain large schools which have bands and orchestras. Moreover "The Choir," a London (Eng.) publication devoted chiefly to church music, stated recently that a movement was on foot for the establishment, or rather revival, (for the system is by no means new) of church orchestras. Such schemes are a sign of the times,—an indication that the impulse for the diffusion of music in the community at large is taking practical form. Singularly enough the only large school I know of in the province of Ontario which makes a serious attempt to develop individual musical effort is the Mimico Industrial School for incorrigible lads who have been convicted of crime. This institution has for years possessed a very good band, and it seems to me that if such abilities can be utilized among boys, who in many instances are defective mentally, it ought to be equally possible and excellent for normal well-behaved young people, in schools and churches.

THE subject I had chiefly in mind in commencing this article, however, was the church orchestra, which is almost unknown in this country, yet which seems to me a very excellent idea not only for cities and large towns, but for rural communities. I am satisfied that it might prove a solution of a problem of which we annually hear much in the month of June, when the various religious bodies are holding their annual parliament—the falling off in church attendance. It would assuredly help to make the church service more interesting, if intelligently applied, and would, of course, stimulate interest in music, the purest and most devotional of arts.

There may be some who think that the use of flutes, horns and violins in connection with religious services would produce a worldly atmosphere; but really there is nothing more fleshly in the tones of these instruments than in those of the organ. In fact, certain Anglican and Roman Catholic churches in Toronto, and I believe in other cities, enlist the orchestral talent of members of their congregations at Christmas and Easter. The question naturally arises whether there is enough talent in most parishes or church districts to make the effort possible. It is, of course, the hope of those of us who are interested in securing a wider diffusion of musical education, that in a few years time there will be plenty of youthful talent available to furnish orchestras from the congregations of most churches. But I am also convinced that there is enough floating musical ability in most of our communities to make a beginning now. My calling as a newspaper writer has taken me to a good many odd corners of this country; and I have been quite astonished to discover that in some of what might be called the "wilder" districts, the violin is even more in use than the piano. Like begets like, and in certain townships one will find that the ability of a single family to play the various instruments of an orchestra has produced a host of imitators.

"THE CHOIR," the English paper that I have mentioned in alluding to the movement, says it is not confined to the established church but to the "chapels" as the non-conformist places of worship are called in the motherland—where the word "Church" has political significance. It points out that the change that is taking place in public opinion as to what is seemly in church worship points to a certain demand that the chief features in the ritual shall be shared by as many people as may be consistent with the dignity of worship. Thus we may discern an affinity between the agitation for church orchestras and the theory of democracy which is now on everybody's lips. Such institutions will bring more individuals into a position of actual responsibility for the conduct of the services, and thus tend to stimulate interest.

Those who have read Thomas Hardy's delightful little novel, "Under the Greenwood Tree," will have learned that in the middle of the nineteenth century parish orchestras were common in the remote villages of the West counties of England. But it is said that they have died out and in the opinion of some have gone forever. "The Choir" while admitting that institutions under the old regime described by Hardy, have permanently disappeared, holds that there is no reason why a new order of things, embracing music, should not be evolved. It adds: "There are to be found in nearly every centre where men do congregate enthusiasts who are proficient on at least one musical instrument, and who would be ready to become members of a church orchestra—small or large—which might form an attractive feature in church services. We have moved a long way in these matters since the disbandment of the musicians as told by Hardy in "Under the Greenwood Tree" and a new race of instrumentalists has sprung up, from whose ranks combinations might be formed that would make a striking contrast to the village band of sixty or seventy years ago."

IT might be argued that what is true of, Great Britain is not true of Canada, where we lack the traditional and well established village life that has existed for centuries; but as I have already intimated the amount of scattered musical talent in our own rural districts is greater than most people, especially those who live in cities, are aware. The main point for those who are pressing the movement both in episcopal and non-conformist circles in the motherland is the stimulation of interest. It is argued that if people who can play orchestral instruments are given active work in connection with the church and made to feel that they are serving a useful

Health Work in Public Schools

By MISS E. HARCOURT, R. N.

THE "follow up" in the health development work with our school children is one well worth serious consideration, for few parents or teachers fully realize the interdependence of body, mind and spirit, and the interaction of one upon the other. For a child with one or more defects is handicapped, both bodily and mentally and is deteriorating rather than advancing in growth.

The following will illustrate the condition of many a child in our schools to-day:

This child entered our school from another city about the middle of the spring term. He was found to have adenoids and the teacher reported his mentality as poor, conduct as poor, and power of concentration as poor. The home was visited and the nurse found both parents working and the home being cared for by a maid, who, the mother had been realizing, was not competent.

The obstruction and resultant malnutrition of body and mind were explained; the child received the necessary treatment; diet was improved; hours of sleep increased; more air given at night and here is the school record for the following terms:

1st term in school (before operation performed)

Mentality	Conduct	Effort
poor	poor	poor

2nd term (1st after operation)

Mentality	Conduct	Effort
medium	medium	medium

3rd term

Mentality	Conduct	Effort
good	good.	good

It took over one year to reach the highest credit, that of Good, and the increase in weight and height ran parallel.

These conditions many times may cause a normal child to become incorrigible or immoral. The home environment and care can cause incorrigibility, such as a drunken father, or a scolding, nagging mother, combined with insufficient food, sleep and oxygen.

I know of boys made truants and backward in studies as a result of home environment.

The nurse needs knowledge of:

The many physical defects found, and their influence upon the child life; knowledge of the changes in the physical growth from babyhood up and the relative care necessary, so as to be able to give instruction in school, and to be able to guide the mother in her daily efforts for her children's future.

The relation of mind and body and methods of handling mentally backward children.

She should know her reasons for the hygienic principles of digestion, elimination, breathing of fresh air, sleep, play, exercise and correct posture in the care of the skin, teeth, feet, dress and its effects upon nutrition and morals—moral questions are constantly being put up to the nurse for solution. Also she needs sound knowledge in:

Food values, cleanliness, sanitation, ventilation, heating, lighting, seating, plumbing and even in architecture.

She must be capable of detecting the early symptoms of disease.

Many times the mother is ill-nourished, overworked, discouraged and under such conditions must be aided, and "held up" by infinite tact until physical and mental strength is restored and through these she gains a courage and spirit capable of doing for her children. This all takes courage on the part of the nurse and a love of work, with a desire to aid mankind.

To "Follow-up" the condition of each child successfully, the nurse requires an educational spirit, executive ability, initiative and resourcefulness.

A doctor in England says "A school nurse should be mature in years, ripe in experience, and possessing tact and patience, and be in love with her work. If endowed with these qualities she will find her profession to be one from which she derives the greatest satisfaction, but if not so endowed, she would better choose some other avenue of work."

The work could be summed up thus:

1. Knowledge of physical condition of the child, as found by examination of either physician or herself, and of being capable of interpretating same to parents, and to "hold on" until the desired results are obtained.

2. To give health instruction in school.

3. Gain co-operation:

(a) Between home and school,

(b) Between home, Boards of Health and public clinics, out patient departments, doctors capable and willing to do necessary operations or give treatments, specialists of all kinds,

(c) Between home and school and dentists.

(d) To obtain financial assistance from individuals or benevolent organizations whenever necessary.

4. To utilize opportunities for health instruction in the home.

5. To teach the child the principle of the rights of others, from standpoint of contagious diseases, sanitation, etc.

6. To so impress all laws of health that they are carried out in the daily life of every child, thus to build up a defence against the invasion of disease, through corrective and constructive health education, and resulting in an improved physical, mental, and moral citizenship.

MRS. ALFRED WATT, M.B.E., M.A.

Mrs. Watt has conducted for the Board of Agriculture, Schools of Instruction for training Women's Institute organizers for England. The demand for trained organizers has been constant, and it was found necessary to train more women for this work.

Schools have been held in Sussex, Bangor University (North Wales), London and Winchester, and in the near future further schools are being arranged and planned for at Wye Agricultural College (Kent), Cambridge University (Essex), and in West Sussex. Mrs. Watt, the originator of these schools, has herself arranged the curriculums, has taken the chair at each school and given most of the lessons herself in Women's Institute work and methods.

CLINICS.

Following Medical Inspection of Schools and Under the Auspices of Ontario Women's Institutes.

A most gratifying result of medical inspection in a number of sections is the holding of clinics. During the month of April, clinics were held as follows:

Dryden	64	operations.
Kenora	130	"
Waubaushene	53	"
Mount Hamilton	28	"
Bartonville	19	"
Total	294	"

Fairfield and Mount Hope, in Wentworth county, are also planning to hold clinics in the very near future.

At these clinics, the operations have been performed by most capable specialists, and the charge to indivlduals has been from $7.00 to $12.00. The results have been most gratifying indeed, especially in the northern sections of the province.

MY VISIT TO A ROYAL VILLAGE.

By MRS. ALFRED WATT, M.B.E., M.A.

THERE is surely no Canadian girl who has not dreamed of the day she should "go to London to see the Queen," and if her dreams were of glittering courts, of gracious majesty, of beauty and splendour, of the pomp and ceremony of kings—and the girl herself moving with wonderful calm and beautifully apparelled through the greatest court in the world—what else would her vision be? No girl ever dreamed more than I, and the years thank God, have made no difference. It was still the dream of all dreams, altering with the march of time but always alluring.

How could one think that the dream would suddenly come true and in so changed a guise?

The command of Her Majesty to speak on Women's Institutes at Sandringham, England, was as unexpected as welcome, to the Women's Institute Department at the Board of Agriculture. But when it was decided I should go, my first thought was sorrow for the cherished and vanished dream. Whatever the experience might be, the glory of pageantry would never now be realized. I knew that at Sandringham there was a mother Queen mourning her little son, a quiet village sharing her grief, and that alas, whatever else I might take there, although perhaps of deeper significance, would be tinged with the sadness of the war years and undertaken with the sense of responsibility very different from that "fine careless rapture" of the girls with the dreams.

The drive from the gay little station of Wolverton, the King's own, was wonderful,—heath and pines, salt stretches and salt breezes, and a nip in the air to make even a Canadian sit up and take notice. But even there the war shadow fell as a sad little cortege passed, an ambulance taking a terribly hurt young airman whose machine has crashed within the royal precincts, but a few moments before.

My kindly hosts at the Estate House, Mr. and Mrs. Beck, soon heartened me up. They warmed me and fed me with equal enthusiasm and in any other surroundings, I should have become soporific. But it was all too thrilling for that. Within a stone's throw was York Cottage and through the trees I saw the storied pile of old Sandringham Church. I fear I stood shivering long after I should have been asleep, at my bedroom window looking out on the beautiful park, wondering if the Royal children fished in the slow winding river and scouted in the woods darkly outlined on the night sky, thinking of the famous house parties and of the statesmen from all the chancelleries of Europe, who must have walked along these pleasant footpaths with that wise old King, Edward the Peacemaker, and at last hoping that I might be led to give the right message to the women in the little village beyond, and at the very last with a sleepy laugh all to myself, at the queer turn of fate which brought a Canadian from a far outpost of Empire to its very heart, to tell a Queen what should be done for the village of her home.

THE next morning I was taken over the Estate by the Agent, who spared no pains to show me everything to best advantage. I had expressed a wish to see the King's famous South Downs as my sheep in British Columbia came originally from the Sandringham flock, so we chased up these sheep through enclosures and fields and woods, by motor, by trap and on foot. All the pure-bred stock was fine, especially Queen Alexandra's jerseys, but I suppose the majority of people would have found the greatest interest in the beautiful race-horses, and it was certainly a revelation to see their well planned stables and the care bestowed upon them—fortunate beings, they have no housing problems!

The whole morning jaunt was all like a moving picture. There flashed into view stately Sandringham, "The House," as it is affectionately called on the Estate, the huge wood yard with its steam saws, the electric plant, the water supply, buildings of all sorts, trim well-kept enclosures, the great iron Norwich gates, dear little cottages with neat gardens and all with a charming background of wood and heath and parkland.

We went to the dairy, famous not only for its products but for the family tearoom with its wonderful array of china and its very long-tail

(CONTINUED ON PAGE 59.)

Canadian Women's Institutes

(CONTINUED FROM PAGE 58.)

bird, and then to the beautiful kitchen gardens, where one especially admired the pruning of the espalier and wall fruit. I could only guess at the glory of the greenhouses as evidently only needs of the war had been considered, but I got glimpses of brilliant scarlet poinsettias with mauve salvias in a riot of color, and in another house there was still a wonderful arched roof of rich rose begonias reflected enchantingly through many mirrors, a rare delight on a grey day.

Across the way was the little old grey church with its pure silver altar, the gift of the Philadelphia Wanamaker, in memory of King Edward, in admiration of his work for the peace of the world, and next it Queen Alexandra's cross in memory of those from Sandringham who had fallen in the great war—what irony of fate! And out in the little church-yard the wreaths still fresh on the grave of poor little Prince John, a community of mother grief.

YORK COTTAGE, the simple country house of the First Gentleman of Europe, might have been any house in any county in England, unpretentious, typically English, pleasantly set in a scene of homely beauty, in the foreground smooth lawns bordered with golden osiers and white Canadian birches and the red of the dogwood, and moving in and out the gentle dappled deer—a living picture of great charm. Even the policemen stationed at the gates looked as if they were in no way necessary but obliging "supers" in the panorama.

One heard that the King was spending the day shooting as is usual when he is at Sandringham, and that the Queen and Princess Mary were usually walking, quite unattended, through the woods and heath beyond. Later in the day one of the gentleman told me that the King, who as the world knows is a wonderful shot, had taken as he stood beside His Majesty, five most difficult shots in a very few minutes.

The meeting was in the village hall. Every village on the Estate has its hall, pretty and suitable for social gatherings.

We were all to be in place when Her Majesty should arrive, but the saying on our Women's Institute programmes, "Punctuality is the politeness of Kings," was never better exemplified. We were ready but only just. Her Majesty came at once to me and shook hands, saying, "We have met at the Exhibition. Do you remember?" Princess Mary also remembered meeting me and was very civil about my recent illness. Lady Mary Trefusis was in attendance. I was introduced and with what I can only trust was a satisfactory courtesy, began to speak.

My chairwoman was panic stricken over her speech and there was a general air of suppressed anxiety about the meeting, and I was told a good many things I could not say or do. But it was a simple, pleasant little meeting, nevertheless. The Queen and Princess Mary were delightfully interested and I was determined that it should all be simple and natural and exactly like any other village meeting even to my most homely little stories. I am frequently asked what I said in my speech, but it was in no way different from usual. I spoke of the simplicity and democracy and friendliness of our movement, of the independence of our Women's Institutes, their being self governing and self supporting, and of the sense of responsibility of every member to the Institute, of how it has to do with the little homely things of the every day life.

I saw only two faces in the audience. The dear little responsive face of Princess Mary, who saw a joke coming and was ready to greet it with the prettiest little laugh, and that of a poor little woman whose lusty boy baby was entering vigorous protest. What did he care for majesty or the right of a speaker to be heard? Nothing. bless him!

MEMBERS of Women's Institutes will want to know what Institutes I talked about. So far as I can remember I read parts of programmes from Malling, Moreton, Epping, Branston, Llanbedr, Scaynes Hill and Balcombe, and extracts

Overland
TRADE MARK REG.

Oh Boy!

The owner of an Overland owns all out of doors. To him even more important than *where* he drives is *how* he rides. In his model 90 he goes in comfort, and with an enjoyment possible only because of the high quality and fine appearance of his car. He probably was first attracted to it by the praise of owners. Now he makes new friends for Overland by his own enthusiasm over the exceptional economy and the faithful performance of his car. This kind of appreciation among the thousands of Overland owners is a safer buying guide for you than specifications. It explains why so many people are buying Model 90 right now.

WILLYS-OVERLAND LIMITED

Canadian Women's Institutes

(CONTINUED FROM PAGE 59.)

from reports of Madron, Minstead, Ipsden, and of Chilliwack and Nelson in British Columbia. As is usual also I told some absurd little stories against myself which never fail to please, and made some fun of antiquated notions of house-work.

After my address which seemed to be enjoyed, the Queen asked me to come back and talk about the exhibits and the meeting became quite informal, everyone crowding about the exhibits and discussing them. I had taken with me to the meeting an exhibition of soft toys and needle work from Sussex, and the Queen had sent the articles she purchased at the Women's Institute Exhibition. There were dried marigold petals from Denton, canned fruit from Cooksbridge, bottled gooseberries, potato starch by Mrs. Clowes' recipe, dried vegetables, "cuthberts" from Burgess Hill, a French doll from Lindfield, ducks and kittens from Wivelsfield, rabbit skin mitts from Northaw, a Canadian rug made from odd bits of wool and a kettle-holder from a bit of cloth, and a parson made from a merry-thought!

Her Majesty remained for over an hour after her carriage was ordered, then the lady-in-waiting suggested departure, but it was some time again before the Queen and Princess Mary obviously reluctantly betook themselves away. While they remained, they talked and asked questions and I think learned a good deal of our work.

Owing to Her Majesty's interest and the informal way in which she moved about among us all and the many questions she asked me, I was able to make points I thought would particularly appeal to her concerning our movement. The last point I made, which was the impression I thought might remain with her was that to have a Women's Institute at Sandringham would make an enormous difference to the Institutes of the Empire. To have Her Majesty as a Women's Institute member of an Institute in one of her own villages would strike the imagination of every Women's Institute member in the most remote district. Her Majesty seemed greatly impressed with this aspect of the matter.

From Scotland comes the following Report of Women's Institute Work.

In 1912 a report to the English Board of Education urged that country women should organize themselves into Institutes to increase the comfort and prosperity of the home and to stem the tide of rural depopulation. Such Institutes have been organized and carried on with great success by Canadian women since 1897, and in the past three years, English women, in co-operation with Canadian, have initiated a movement which has resulted up to the present time in the formation of between 600 and 700 Institutes in England. Owing to the outbreak of war and the pressure of urgent work, no action in regard to organization in Scotland was taken till the Spring of 1917, when Mrs. Blair, Hoprig Mains, Gladsmuir, and Mrs. Gooch, Torcastle, Banavie, approached the Board of Agriculture for Scotland, independently of one another, to inquire whether they would give favorable consideration to the formation of Women's Institutes. Moreover, in April, 1917, the Scottish Council of Agriculture passed a resolution:—

"That the Council, realizing the importance of social life in the development of agriculture and other rural industries, and the importance of home life in rural economy, recommend the Board of Agriculture to support the establishment of Women's Institutes throughout Scotland on the lines of those already existing in Canada, Belgium, and elsewhere."

The Directors of the Highland and Agricultural Society of Scotland informed the Board that they had considered and unanimously approved of this resolution on the part of the Council of Agriculture.

A deputation to the Secretary for Scotland met with a favorable hearing. Mrs. Watt, O.B.E., Chief English Organizer, was invited to visit Scotland. An inaugural meeting, organized by the country women and representative of all Scottish organizations, was held in Edinburgh in June, 1917. The Chairman of the Board of Agriculture for Scotland presided, and resolutions to the effect that Women's Rural Institutes should be formed and an Advisory Committee to the Board appointed were unanimously agreed to. A meeting was also held at Fort William.

Several Institutes were organized by voluntary effort prior to the appointment of an official organizer. In June, 1918, a Conference was convened by the Board of Agriculture for Scotland, and the Constitution for 1918-1919 determined on.

There are now thirty-five Institutes in Scotland, and it is interesting to notice how variously they have begun. In several cases, members of Women's County Agricultural Committees have undertaken to get together a meeting of the women in their district; in others, members of the Farm Servants' Union or Smallholders' Organization have taken the initial steps; again war work parties have widened the scope of their activity and decided to form an Institute. The organizer has been written to, and has gone down sometimes to meet five or six women and girls, sometimes to find a well-organized meeting who knew about Institutes beforehand, and were eager to begin. In some places, the newly-formed Institute has been strong from the outset, because they have learned to pull together already, and, in the words of one secretary: "We are used to doing things." In other districts, even the war has not yet brought home the knowledge that unity is strength, but, as one member expressed it: "*What's an Institute for if it's not to teach you to work wi' those ye dinna like?*"

One condition has been insisted upon in the formation of an Institute, viz., that the meeting at which it is formed should be thoroughly representative, so that the Committee elected at that meeting should include a fair proportion of all sections of the community.

Already Women's Institutes are counting for something in rural Scotland. They have brought to the notice of the Board cases where orders in connection with food control would press heavily upon their members, and in each case the Board have thus been enabled to make representations in the right quarter. Their help is being asked in the many activities which absorb us just now, and in the solution of the problems which will face us in the future. The response which they are making is best shown by their reports. Hundreds of pounds have been raised for war funds, fruit has been saved, sphagnum moss gathered and picked, knitting competitions held, children have been encouraged by prizes offered to them for the best grown vegetables, and interest in food conservation has been fostered by shows and exhibits. In addition to valuable practical work for the moment, the Institutes have included in their programmes questions which must loom large in the work of reconstruction, and there have been lectures and discussions on such subjects as child welfare, education, and housing.

The Report of the Agricultural Policy Sub-Committee urges the formation of Institutes, and quotes Canadian precedent: "The experience of Canada is very suggestive. There, as we were informed, the Women's Institutes have made the whole difference to agricultural and domestic education. When the instructor comes to a village, where there is a Women's Institute, he is no longer met with coolness or indifference; he finds a receptive audience and an organization which carries on his work after he has gone away. The Women's Institutes are regarded as an essential link between the instruments and the objects of rural economic instruction and between the different departments of government and the country folk."

For the student of rural economics, however, the greatest value in this movement consists in the fact that it brings all women and girls in the district to meet together in that fellowship which is at the root of social well-being. "What will it dae for us?" asked a woman lately of an Association her husband had recently joined, and the answer came promptly, "It will do just what you make it do."

The following reports show the close connection between the work done by the Scottish Institutes and Canadian.

In December, 1917, Miss Campbell came to Arisaig, and enrolled forty-five members for the Institute. The Committee consists of twelve members, and four hostesses each month arrange for tea. Since 22nd January, the monthly meetings have been held regularly. There have been talks on "Jerusalem and Venice," on "Gardening and Bee-keeping," demonstrations on Fruit Bottling and War Cookery, exhibits of needlework, the best patched garments, and a model hive. In June the Institute arranged for a visit from the Child Welfare Exhibition. The Exhibition was open for three days, from 3 to 8 p.m., and in spite of wet weather was well attended and much appreciated.

This Institute held its first regular meeting in December, when Miss Campbell spoke on "Woman's Part in the War." The district is a very scattered one, some members coming five or six miles to the meeting. There have been Cookery demonstrations, including a very interesting one on "What to do with Scraps," talks on "What to do in the Garden," exhibits of Comforts for the Soldiers, Roll Calls, and Competitions; a Fruit Bottling, Jam and Jelly Exhibition, a visit from "the Pudding Lady," and a talk on "The School and the Home."

The Institute was formed in December, 1917, and meets on the last Saturday afternoon of the month. As we have no hall at present we are obliged to use the schoolhouse. Our membership has steadily increased from forty to sixty-four. At each meeting we have had a demonstration and a short lecture or address with an interval for music and tea—a china shower provided the cups—and members act as hostesses in turns in groups of three or four. Upon occasion we have introduced a roll-call or competition by way of variety. For a start the members were rather shy of taking part, but are now more ready to compete. Our demonstrations have been War-time Cookery, Blanket-making, Rug-making, Potato Cookery, How to take out Stains, Butter-making and salting.

Then we have had addresses on "Salonika," "Women in Agriculture," "Work in Canteens in France," "Russia," "How the War Stands now," "The Church's Duty to Returning Soldiers," "Beekeeping," and "The Red Cross." All the demonstrations have been given by members of the Institute, but we have had to go farther afield for the addresses. Every meeting has been thoroughly enjoyable and has been much appreciated, as is shown by the rising membership.

Miss Guest, Assistant Organizer of Women's Institutes in England, Women's Branch, Food Production Department, spoke at the First Convention as follows:

Mr. Chairman and Fellow Members of the Women's Institutes—It is a very great pleasure to me to be here to-day, coming from both England and Canada as a guest at this your first Conference of the Women's Institutes of Scotland. I come in particular with England's greetings—with the greetings and good wishes of the 557 Institutes of England and Wales, and if my own Canadian people knew this, I should be bearing also a little sheaf of cablegrams with birthday greetings and good wishes from eight different provinces across the Atlantic.

Canadians have a special little leaning towards Scotland. For one thing it is comforting to know there is at least one other nation as dour as we are ourselves! Secondly, we greatly admire your intellectual ability and deep religious feeling.

I have been an immensely interested listener to-day. Coming early, I stayed closely to hear just what idea you were forming of Women's Institutes. Already it is clear you have an amazingly thorough grasp of their scope and meaning. It has been delightful to find that you have done more than we thought even Scotswomen would do in the short time you have been at work.

It has just been said that this is an historical occasion. It is indeed. Our motto, as you know, is, "For Home and Country," but which of us could have foreseen, when it was chosen, that "For Country" would ever come to mean to us what it has for the last four years? Our dreams were all of upbuilding, of constructive nation-building, through good home-making, not of destruction, and the awful waste of war. We have found ourselves to be part of our country's great second line of defence, however, the food and supply line, and now we must face also our share of the reconstruction of our nation, on what we hope and intend shall be a better and happier basis.

The first Women's Institute began in a very simple, natural way as a sister society of the Farmers' Institutes. In these by co-operation with each other, the colleges, and the Department of Agriculture, the men of rural Canada were able to search the world over for the best seed, best stock, best ideas, and best methods in farming; to begin, in short, to attain to the high standard of scientific agriculture which was their aim. So do not, in your planning, entirely leave out the men, but arrange at least one meeting a year at which they shall be your guests and fellow-workers for community uplift.

A little Canadian woman one day voiced the unspoken thought of many other home-makers when in a casual conversation she put the question to her husband: "Is the product of the country home of as much value as that of the farm and the field?"

Her astonished husband's emphatic reply came: "Why, of course it is. That is what everything else on the farm exists for. Why do you ask?"

"Well, you see, I was just thinking," she said. "We women don't find our problems of managing our homes and bringing up our children a bit more easy than you men find yours, but we have no Institutes nor college professors nor Government to help us as you do."

"Why don't you women get together then and see about it?" he laughingly rejoined.

The little idea took root, and grew. The get-together habit was formed, with the result we see to-day co-operation of the most effective kind between home-makers, colleges, and Government.

In recent years the movement is becoming not only provincial but national, not only national, but international. We see that the home is the unit of the State—that while home-building we are also empire-building.

What then do we mean, exactly, when we talk of home-building in this sense? Summed up briefly, our aims are—better homes, better people, a better community, a better and happier social life, and a better and more prosperous agriculture. Where do we begin? What is the first essential in home-making? You married women will tell us quickly. I see by the twinkle in your eye you can tell us very quickly! It begins with that mysterious illogical process we call "falling in love!"

Very puzzling indeed it often is to our bewildered friends.

Do you ever hear in Scotland such remarks as this made: "What could he ever have seen in her?"

Or, "Why did she throw herself away on him?"

You laugh. But old Mother Nature knows what she is about. She is securing the finest kind of co-operation, for it is on this beautiful basis of love, admiration, and trust that the foundations of the new home are laid The success of the home depends on the perfect understanding and co-operation of the man and the woman, hence it demands the strong fibre of character and ability interwoven with the welding power of love.

When the first little child arrives in the home, it means a new and diviner kind of co-operation—co-operation between the man, the woman, and God.

Has it occurred to you that all the united power of those gigantic warring forces across the Channel is not great enough to create one of the millions of lives it is destroying?

A few years ago men thought they had achieved the miraculous at last—it produced an egg chemically exactly just like the one the hen lays. But when it came to be tested, it would not hatch! There was one little detail omitted—the germ of life. There is no new life created without the touch of the finger of God. The finer the man and the woman who

(CONTINUED ON PAGE 61.)

Canadian Women's Institutes

(CONTINUED FROM PAGE 60.)

have set up the new home are, the more deeply they realize this in looking at their first-born child.

The child brings the home, too, into a larger co-operation with other homes. Is this a healthful neighborhood? Is the water supply, the drainage, good? Will epidemics, dangerous to this precious little one, break out? Are the other children well-brought up, good companions for it?

Is the school a good one, properly heated and lighted? Have we the most skilled men and women of the nation in it to teach and develop our little ones? To bring our own child to the highest, we must help to bring all children to their highest too. The best schools are a result of this co-operation of homes.

Home-building falls roughly into two divisions—first, the material requirements of human beings, secondly, their mental and spiritual needs.

Under the first division comes the house, its furnishings, food, clothes, heating, and cleaning.

Under the second, literature, art, music, social life, education, religion.

We are thinking much of housing to-day, and indeed we need to! A Women's Institute lecturer says: "If Julius Caesar were to come back to earth to-day, he would have to undergo a long and severe training before he could resume his place as General, such enormous advances have been made in modern methods of making war. But if Mrs. Julius Caesar were to come back with him, she could step into the kitchen, tie on an apron, and proceed to get the dinner almost without asking a question, so little have we advanced in our domestic arrangements."

Our housing must be different. It must be planned for the family, because this is a very essential detail in nation-building. No longer must it be possible for a woman to say, as was said at an Institute meeting in England: "I brought up six children in a two-roomed house."

Then there is the question of food. Ever since the day when Eve gave Adam that apple to eat, we women have had trouble with the food question. Americans say you can feed a man to be anything you want! What an opportunity!

The scientific study of foods and feeding is most important, and as yet almost untouched here. People of different ages and occupation should not be fed the same. It is our duty as homemakers to do this as efficiently as we can. And this is one of the many places where the value of co-operation comes in. I avail myself of your experience, you of mine. Working together in our Institutes and with our Government, we can both avail ourselves of that of the greatest experts in the nation.

Furnishing also requires reconsideration. I used to be hard on jerry-built houses. Now I am not so sure that a house should not fall to pieces or burn down every fifty years. It has acquired a quite large enough stock of disease germs and household idols in the shape of heirlooms in that time. After the first shock of our loss was over, we should be just as happy, probably happier. Clear out things that are not necessary, and which only make work taking care of them.

All the material side of life needs to be carefully studied to get efficiency and comfort for the human being, not to clog and to impede the mind and soul, but to clear the way for the freest and highest living, for better people, for a better and happier social life.

Out of these inevitably arises a better community, but it too requires co-operative and careful consideration. As rural home-makers, we naturally aim at a better and more prosperous agriculture, and where necessary and desirable the development of local village industries.

Home-makers in co-operation can forge ahead and achieve great results for themselves, their homes and the country, that no other combination can. Do not be afraid either to spend money. I mean the Government's money!

Never forget that solemn inaugural fact of creation, "Eve became the mother of all living."

Eve's granddaughters have left too much of the national housekeeping to Adam. And he never was much of a housekeeper! Take your share in the whole grand work of homemaking—as an individual homemaker, in the community, and in the Empire. Has it ever struck you that the British Empire is like a hand—Britain, the palm of the hand, and the thumb and fingers the Overseas Dominions—all starting off from the palm to go their own way, working out their own destiny — until danger strikes some part of that hand? Then, presto! swift as thought, it shuts in on itself, and strikes, a clenched fist, at a common foe.

There is something more than the Navy that holds this Empire together, something against which the submarine is helpless—it is the family feeling, strong and deep. While the Motherland is true to her own highest ideals, the unity is impregnable. Does the solemnity of your responsibility in the Women's Institutes overwhelm you?

Then listen to what our chief of Women's Institutes in England writes to-day: "I think the movement in Scotland may be an even finer thing than in England. Their love of education and deep religious character make a good bed-rock for a nation." And then this: "I had an interesting talk yesterday with a late official in the Russian Government, who declares Women's Institutes would be one of the best forces to aid in the reconstruction of Russia."

My sisters, are we great enough women for the national and international opportunities and responsibilities opening up before us?

SUMMER SERIES OF WOMEN'S INSTITUTE MEETINGS IN ONTARIO.

In the May issue we gave a list of Women's Institute meetings to be held from May 19 to June 7, inclusive.

The following list covers meetings announced for June 9 to end of series:

DIVISION 1.

Welland.—Bethel, June 9; Fenwick, June 10; Winger, June 11; Humberstone, June 12; Stevensville, June 13; Quaker Road, June 14; Fonthill, June 16.

Haldimand.—Attercliffe Station (afternoon) June 17; Diltz and Moulton, (evening) June 17; Canfield, June 18; Grand River, June 19; Dunnville, June 20; Rainham Centre, June 21; Nanticoke, June 23; Varency, June 24; Cheapside, June 25; Clanbrassil, June 26; Erie, June 27; Sandusk, June 28.

DIVISION 2.

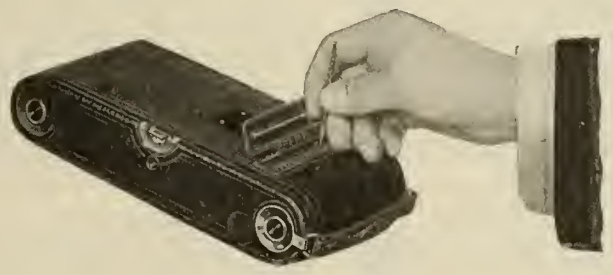
North Brant.—Langford, June 9; Middleport, June 10; Onondaga, June 11. **South Wentworth.**—Carluke, June 12; Glanford, June 13; Mount Hamilton, June 16; Binbrook, June 17; Blackheath, June 18. **Lincoln.**—Abingdon, June 19; Caistorville, June 20; Wellandport, June 21; Rosedene, June 23; Smithville, June 24; Crassie, June 25; Grimsby, June 26; Beamsville, June 27.

DIVISION 3.

North Norfolk.—Bealton, June 9; Windham Centre, June 10; Kelvin, June 11; Simcoe, June 12; Goshen, June 20; Delhi, June 21. **South Norfolk.**—Woodhouse, June 13; Port Dover, June 14; Walsh, June 16; Forestville, June 17; St. Williams, June 18; Port Rowan, June 19; Lynedoch, June 23; Carholme, June 24; Langton, June 25; Fairgrove, June 26. **North Wentworth.**—Freelton, June 27; Waterdown, June 28.

DIVISION 4.

West Elgin.—Iona, June 9; Shedden, June 10; Fingal, June 11; Middlemarch, June 12. **East Elgin.**—Kingsmill and Mapleton, June 13; Lyons, June 14; Springfield, June 16; Aylmer, June 17; Bayham, June 18; Straffordville, June 19. **South Oxford.** — Tillsonburg, June 20; Maple Park, June 23; Mount Elgin, June 24; Springford, June 25; Norwich, June 26; Beaconsfield, June 27; Burgessville, June 28; Otterville, July 2; Rosanna, July 3.



DIVISION 5.

West Lambton. — Becher, June 9; Wilkesport, June 10; Sombra, June 11; Corunna, June 12; Colinsville, June 13; Lucasville, June 14; Blackwell, June 16; Union, June 17; Maple Leaf, June 18; Providence, June 19; Bentpath, June 20. **East Lambton.**—Florence, June 21; Shetland, June 23; Aughrim, June 24; Alvinston, June 25; Uttoxeter, June 26; Watford, June 27; Warwick, June 28; Brooke, June 30; Thedford, July 2; Jericho, July 3.

DIVISION 6.

East Middlesex.—Harrietsville, June 9; Belmont, June 10. **North Middlesex.**—Lobo, June 11; Komoka, June 12; Coldstream, June 13; Beechwood, June 14; Keyser, June 16; Sylvan, June 17; Park-

(CONTINUED ON PAGE 62.)

The date on the Film

In just a few years you will ask:

This picture of John, was it made before or after the war? And this of little Mary taking her first toddling steps—how old was she then?

How those snap-shots, made on our trip to the Yellowstone, bring it all back to us, except the date,—when *did* we go?

Grandmother before the fireplace with her knitting, growing old gently and gracefully—how old was she? It is so annoying not to remember.

Time plays the mischief with memory—but with the *date on the film* you may laugh at his tricks. All folding Kodaks and folding Brownies are now *autographic* and, with autographic film, provide the means for dating and titling each negative as you make it. It is all done in a few seconds, is as simple as "pressing the button" and though it may not seem so at the moment, *a date is always worth while.*

And there is no extra charge for autographic film.

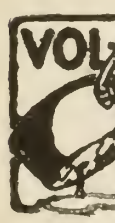
FRECKLES

Now Is the Time to Get Rid of These Ugly Spots

There's no longer the slightest need of feeling ashamed of your freckles, as Othine—double strength—is guaranteed to remove these homely spots.

Simply get an ounce of Othine—double strength, from your druggist, and apply a little of it night and morning, and you should soon see that even the worst freckles have begun to disappear, while the lighter ones have vanished entirely. It is seldom that more than one ounce is needed to completely clear the skin and gain a beautiful clear complexion.

Be sure to ask for the double strength Othine, as this is sold under guarantee of money back if it fails to remove freckles.



The Beauty of The Lily

can be yours. Its wonderfully pure, soft, pearly white appearance, free from all blemishes, will be comparable to the perfect beauty of your skin and complexion if you will use

Temiskaming.—Meetings will be arranged and announced later in the season.

SENTENCE REPORTS OF WOMEN'S INSTITUTES.

The members of the Rodney Institute, through the secretary, have sent a letter of appreciation to each returning man. They recently forwarded a bale of clothing for the Belgian refugees, records for the convalescent men at London, and twenty dollars to Serbian relief. This society is interested in local improvements, and is already planning for the fall fair. The president is Mrs. Bisnett.

Mrs. L. Watson, president of Bartonville Institute, states that this Institute is interested in child welfare. Medical inspection of the school took place in March, under the supervision of Dr. Mary McKenzie-Smith. Two months later a most successful clinic was held, when nineteen children were operated on. This Institute is at present sewing for the military hospitals.

The secretary of Port Elgin Institute writes that a very successful sewing class, conducted by Miss E. McKay was held, during the progress of which about thirty gowns were completed. The Institute contemplates having a similar class later on in the year.

The Dunehurch Institute, under the leadership of the president, Mrs. W. J. Markham, has supplied clothing to motherless children who had lost all by fire, a donation of ten dollars was given to a sick woman, and prizes promised for women and girls at the fall fair. Taking an idea from the Institute page of the February Journal, folders have been given out for collection of money for patriotic purposes. This Institute wishes to thank other Institutes, notably River Valley, Camilla, Drayton and Rutland, for particulars given in the February issue.

The report of the Priceville Institute for 1918 shows the total receipts for that year to be $1,013.70; the total number of pairs of socks sent overseas was 238; also 16 sweaters, 271 towels, 90 vermin suits and 238 boxes to the soldiers. Mrs. D. Campbell is the president.

The West Ops Institute, with Mrs. G. W. Darke as president, is interested in relief work. A class of ninety-seven women and girls was gotten up by this branch, in conjunction with the Lindsay Institute, who took advantage of a course in home nursing, which proved highly satisfactory. The teacher, Dr. Grey, at the close was presented with a gold-headed umbrella. The West Ops Institute also furnished a room in the Isolation Hospital, Lindsay, which was much appreciated by the Board of Health.

As well as caring for the returned men, the Clachan Institute shipped a box of clothing to the value of $185 for the relief of the Serbians. This Institute also looks after medical inspection for the rural school. Mrs J. L Wright is the president.

The members of Ravensclife Institute, with Mrs. James Richards as president, are endeavoring to secure a rest room in Huntsville, their town. At the same time, they are still doing patriotic work, and sewing and mending for orphan children.

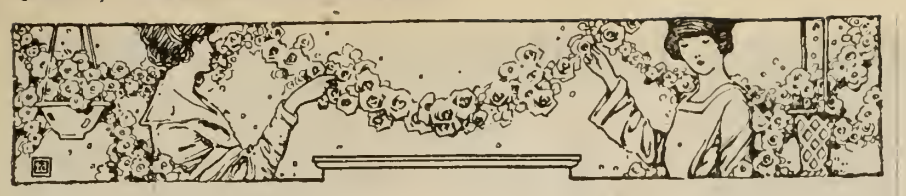
The McIntyre Institute, with Mrs. R. Hyndman as president, is working for the betterment of home and family. Parcels and necessaries have been sent to the soldiers by the members who also are taking up child welfare, rural school inspection, first aid and domestic science.

The members of the Wyndham Centre Institute are helping the poor in the school, but on account of local sickness have not made as much headway as they desired. The president is Mrs. B. Gray.

"A hearty welcome is being given each returning soldier to the village and community," reports Mrs. W. H. Page, president of Horning's Mills Institute. The members are still working at relief work and finishing up Red Cross work. This Institute is organizing to do its part in carrying out the work planned in the report of the Women's Institute Convention.

The members of the Warsaw Institute, with Mrs. David Miller as president, are looking forward to having a splendid school fair this fall. They are also much interested in the young girl problem.

The best means of organizing for work is occupying the attention of the members of Seymour West Institute, the president of which is Mrs. C. Macoun. This society is seeking the betterment of schools and playgrounds. Schools have been visited, and pictures, buttons and flags given as prizes to children obtaining the highest standing. The teachers and pupils entertained the Institute members, and mutual good feeling and interest were aroused.



The Alford Park, Governor's Road Institute, since last sending in a report, has sent to the refugees goods to the value of $275; 61 pairs of socks to Belgium, 57 pairs to the Serbians, and 40 pounds of yarn and knitting needles. The socks and yarn were not included in the bale of goods valued at $275. At the February meeting $75 was voted the Belgian, Serbian and French relief societies, $25 to each. Mrs. Warren Turnbull is the president.

The members of Ripley Institute, with Mrs. Bowers as president, are helping the children, and are assisting the Council to enlarge the Township Hall. They are trying to have women as well as men trustees on the School Board.

Mrs. A. Cooke, president of the Devlin Institute, reports that the members have succeeded in having school inspection adopted.

Mrs. G. Potts, president of the Haliburton Institute, reports that her society had a very successful social and dance, at which songs, readings and recitations were given. Refreshments were served at a trifling cost, and $52.20 was realized. This money is to be used for the purpose of giving a general picnic or a banquet in the early summer for the entertainment of returned soldiers, their wives and families. Mrs. Potts states that they find this the best way of making money, if every member helps in the work.

The Question of Who Shall Vote

(CONTINUED FROM PAGE 52.)

That the intellectuals, at this enormously tragic crisis of the world's history, when as never before the unlettered laborer has sensed the grievous wrongs inflicted upon him by society generally, and has further sensed the power that is his for the taking, should lightly consider the process of disfranchising him, is a thing almost beyond comprehension. It must have been something like this the philosopher meant when he said "Whom the gods would destroy they first make mad."

Marie Antoinette of France, writing to her friend, the Queen of Russia, said that sovereigns should pursue their way undisturbed by the rude mouthings of the uneducated populace in the same manner that the moon passes on her peaceful course, undeterred by the howlings of dogs. This was a fearless statement, and well-expressed, but one day the uneducated populace of France edited it to their entire satisfaction by cutting her head off.

The uneducated man has come to find out that he is uneducated because he has been neglected and exploited from his birth, and that the intellectuals and capitalists would now be rid of the results of their neglect by taking his vote away. It has taken him a long time to find this out, but he is seeing it now with a clarity and a celerity concerning which there can be no mistake whatsoever.

Yes, this would be as good a conclusion as any. You will remember, it occurs on the pedestals of Pompeii: "Cave Canem—Beware, the dog!"

* * *

IT is spring on the prairie! Never a need to look at the calendar; look to the earth, listen the sky. It may be we'll be catching a troll, you and I, from the birds and from the flowers.

Spring has a baton of wizard green. He is the concert-master who halts the feathered migrants on their way from wintry skies. With a gentle stroke he loosens the wing of the homing wavey so that she rests on the air and waits to preen her feathers. Watch how he sends the keen-winged hawk loud whistling through the air like an upshot arrow! See the dip and dart of the martins; have an ear to the barking crows, and the clip of their wings. The crow is not really a thief—he is only an egotist.

You'd think to watch these blackbirds step sedately across the ploughlands they were Daniels come to judgment. See the black-blue of their throats, and how they primp about to show their scarlet epaulettes. Roving bachelors every one, but hesitating—hesitating.

Lilt of meadow-thrush, honk of geese, call of prairie pullet, and hark you to the mellow gong of the robin. He wasn't killed at all. It is very demurely spoken that the fly who saw him die was bonused by the lark. He is the uniformed scout of spring, this swashbuckling fellow, with his scarlet surcoat, and would make believe to be lordlier than his fellows.

Spring on the prairie, with soft grass for the early w[illegible]nlings! Spring on the prairie, and the herbage quivers into flowers! Some day a young-hearted boy who has been playing among the stars will come a-near and fill a book about the plains. It will be a large, large book—there is so much to write about.

Maybe he will see the prairie as sleepy and satisfied. Maybe he will notice the roll of the land that seems to be activity in immobility. Maybe it will be a parchment that God has unrolled to his reading. But, mind you, boy, to tell the homely things. How a man on the prairie is lonely for the boughs of trees and for the sound of falling waters; how he draws sap from the primal soil as the willows draw sap from slough mires, and that he is a guiltless pagan, bowing to the moon and singing to the sun instead of Christ, our Lord, who lives in the blue of the skies.

* * *

Permanent Peace.

WILL the League of Nations now being formed in Europe ensure a permanent peace? The question is uppermost in every mind. He is a dullard who does not think now.

Men who write books about the treaties of Europe say that in thirty centuries the balance of power has been put level eight thousand times, and that its average poise is for two years.

If a soldier die, shall he live? Everyone knows the answer. Our soldier-sons can only live again when the permanent peace for which they died has been accomplished, otherwise we have betrayed them with a lie.

Whether this permanent peace shall come from more armament, or none at all, we cannot tell, in that the latter method is yet untried. That the establishment of an arbitral court, and of a world police, should, after eight thousand failures in treaties, be given a fair and proper test can hardly be gainsaid. It should be tested for a century or so. It seems a pity that the human race should have to go on being crucified on the same cross and in the same way forever. We ought, at least, to try some other shape of a cross.

Yes, we should reconsider our methods, for it is plainly evident that, in allowing each nation to be the plaintiff, judge and executioner in its own case, the result must be injustice, and a consequent violence to the conscience of men. Among the many evils of warfare, this is the greatest.

It is not reasonable to expect that the litigants, being interested parties, can pass judgment upon their own cause. Indeed, they make no attempt to judge it on merits. It is determined by the greatest destruction of life and wealth. This is why we sometimes tell the truth with inadvertence and speak of the result as "the fortune of war," meaning thereby that a force which is sightless conquers.

Only this we can say about the master-men in the League of Nations—they seem to have grasped the inutility of the old methods as no master-men have ever done before.

Concerning Books

(CONTINUED FROM PAGE 56.)

mobilizing and organizing society for war, social force and institutions were given a common direction and that action consciously in agreement with that trend renders great progress possible with a minimum of friction. The facts upon which Prof. Simons bases his conclusions are drawn almost exclusively from official reports of war activities in the countries involved. This was supplemented by extensive personal consultations with the leaders of war activities in England, France, Belgium, and Italy. "The Vision for Which We Fought" is a book excellently written and is one which should be read by all those who have faith in humanity to make still further progress toward the goal of common brotherhood.

Industry and Humanity, by W. L. Mackenzie King. Published By Thomas Allen. Price, $2.00.

ONCE in a long while the reviewer receives a book for which he feels the space at his disposal forbids adequate treatment. Such a book is "Industry and Humanity" by Hon. W. L. Mackenzie King, in which the

The Bride of Chilkoot Landing

(CONTINUED FROM PAGE 55.)

"I can't let you go like that. You — perhaps you saved my life."

"Oh don't mention it. I'd do a little thing like that for most anybody." She plunged into the underbrush and was gone. Mrs. Irving stood irresolute, a deep flush upon her face. The girl had scored valiantly, of that she was painfully conscious.

"But the audacity of her! To speak as if I counted for nothing! Oh, how I am going to hate this place!" She sped homewards, making no effort to control the indignant tears.

"By the bye, little girl," said the doctor on his return from the camp, "I forgot to warn you about wandering off alone. Quite a few wild animals in the vicinity. What did you do with yourself this morning?"

"Oh—busy," she returned vaguely.

She decided that the conduct of Nettie, subsequent to her act of bravery, had so completely eliminated its virtue as to render it quite unworthy of repetition. Hence, though still with that shamed feeling of unrest she did not mention the escapade.

From that day she held herself proudly, delicately aloof. The miners shrugged occasionally, and intimated that it was a great pity young Irving had married a woman so lacking in congeniality. Nettie Jackson professed utter indifference. The brief, gorgeously colored summer vanished.

"ARE you beginning to like it, Isobel?"

It was an afternoon in late autumn, and the young wife sat sewing in the cabin doorway. "I never imagined anything so lovely in my life," she returned with enthusiasm; "the trees are literally on fire. Look at the river, Grant. It is like melted topaz. I think there must be miles and miles of that purplish pink flower. Oh, if I were a goddess of this far country, how I would resent the onward march of civilization, and the disturbance of my calm and serenity!"

"You should have been one," he returned half laughing, half serious, "you are so utterly detached from the hum-drum facts of life. I could scarcely have imagined that you would ever be so sublimely satisfied."

"Oh, you are still worrying because I have never evinced any fondness for Nettie Jackson, I suppose. What an unearthly quiet there is in the air today!"

"It probably heralds the first snow. Would you like to go for a tramp?"

"No, thanks. I'm crazy to finish this towel."

"Cross-stitched in Delft-blue, for the benefit of the first grimy miner who happens along in search of our hospitality," he answered gaily; "well then I believe I'll go off myself for an hour. You won't mind me leaving you that long, will you?"

"Oh, no. Don't forget the gun, though."

"Just possible I may bring you a couple of ducks for Sunday dinner," he returned.

Left alone, she continued to ply her needle busily, though once or twice the work slipped to the ground, and she lost herself in a spell of dreamy contemplation. Soon would the winter bring its own white glory. The hour passed—a second hour. From within the house the little clock chimed musically. Then she awoke from her long reverie with a start, and became sensible of that tang of chill in the air, and the level rays of the sinking sun.

"Grant not back yet!" she exclaimed with a thrill of fear.

She stood up, looking anxiously around her. He was not accustomed to stay away like this, and yet—why should she be alarmed? It would distract her mind to get the supper ready, and he would undoubtedly be home by the time that task was completed. Acting upon the resolve, she set resolutely to work, but for some inexplicable reason her usually practical attitude of mind had entirely deserted her. "If anything should have happened! If he had fallen upon his gun!" The cold fear clutching at her heart could no longer be shaken lightly away. She threw down the knife with which she had been cutting bread and rushed wildly down to the camp.

"Mr. Gleason," she called clearly, "Mr. Peters," and after a second's pause, "Mr. Peters—Mr. Gleason!"

There was no reply.

"Oh, where are you? Isn't there someone here?"

THEN the door of the Jackson cabin was pushed hastily open. "What's the matter?" asked Nettie, "didn't you know that all the men went off to Antler this morning? They won't any of them be back till tomorrow, and there isn't a soul about the place but me."

"Not anyone!" echoed Isobel blankly.

"What's the trouble? Are you scared or sick?"

"It's not that. It's my husband. He went off over two hours ago and he hasn't come back yet. It is getting horribly dark too, and so cold. What do you think can have happened? He promised to be back in an hour."

"Like enough it's all right," returned Nettie slowly, "but we'd best go up and take a look at the trail. Wait till I get my gun. It's just the same to me as another woman's powder-puff is to her, y' know—I never travel without it."

Isobel smiled wanly. When the two reached the little home on the tree-crowned knoll the shadows were already dark and sinister. The sun had vanished, leaving behind it only a sea of angry red, and the air had a steel-like edge. Mrs. Irving shivered perceptibly.

"Get on a warm coat," said the Jackson girl, "and find me some matches and a drop of brandy. I'm not fond of anticipating trouble, but it's only a fool that wouldn't take precautions in the north."

"What do you think——"

"I don't never waste time trying to imagine things, ain't born that way. And rustle a blanket while you're at it. Are you ready? All right, then come on."

Mrs. Irving followed her somewhat in the manner of an eager explorer, trusting to the instinct of an untutored savage. "Were you actually going to stay alone all night?" she asked as they climbed hardily up the mountain-path.

"Mercy, yes. No one to steal me in these parts, far as I knows of. The folks knew y'ud be within reach anyway."

"Yes," said Isobel guiltily.

Night was descending like a pall. The firs began to show inky black against the phantom grey of the sky, the branches cracked beneath their feet. Then Nettie uttered a sharp exclamation.

"Oh, what is it?" cried Isobel.

"Snowflake on my cheek," answered the other grimly.

After what seemed an intolerable space of time, the road curved towards the brink of a tremendous "draw." It was narrow, but excessively steep, its sides covered with pine and cedar that sloped in graduated rows to the uttermost depth of it. "There!" said Nettie.

A dark object was faintly visible, far down, dimly described in a bit of clear space between the sentinel spruce. The next moment Isobel Irving's voice rose in a clarion call of mingled relief and terror. "Grant oh, Grant, are you there? It's Isobel. Grant! Grant!"

Very faintly the call came back to them.

"THANK God!" said Nettie Jackson. "Keep close behind me, Mrs. Irving," she shouted, and plunged downward into the pines like a fleet young deer. The other girl followed, breathless. She tore a great rent in her skirt, and her hands were soon cruelly scratched and bleeding, but she was only conscious of that prostrate figure awaiting her, hearing over and over again the echo of that call for help.

"Let me go first," said Nettie. She pushed the other woman aside almost roughly, and then was revealed to the horrified wife the great tree that pinned him to the ground like a vise.

"It fell—got me in the leg," he murmured, "did you call? I had a dream. Isobel, I thought you called me——."

"Blamed lucky we got here when we did, Mrs. Irving. In another moment we might have raved till midnight for all he'd have been able to answer us. Hand over the flask."

Isobel gave it to her with trembling fingers. "Don't lose your head, now. It's just a faint."

"But his leg——."

"Well," said Nettie cheerfully, "I reckon it's broken. Maybe crushed a little bit, too. However, 'tain't near time for the post-mortem yet. Just be thankful it wasn't his head, and help me prove what two women are

(CONTINUED ON PAGE 72.)

Concerning Books

(CONTINUED FROM PAGE 63.)

Inter-relation of war and the present industrial unrest are set forth in ringing sentences which cannot help but clarify the muddied waters of dissension and distrust.

In his timely and thoughful book Mr. King sums up the results of his life experience as a student of labor problems. His paramount thought as expressed through the pages of his book is that Labor and Capital, as well as the various nations of the earth, must come in closer touch and seek to understand one another's view-points so that a fairer apportionment can be made of the surplus wealth of the world.

"The war, momentous in every way," he writes, "has helped to demonstrate the unity underlying human relationships. Its world scale but reflects the expansion in industry and international politics. It is essential to recognize the cosmopolitan trend in order to view the problem of labor and capital in true perspective. It is no longer a local or even a national problem, as often assumed, but an international problem of the first magnitude. Industrial and international relations are the warp and woof of modern world intercourse. They constitute the obverse and reverse of a world problem of human relations in which political and industrial consideration are inseparably intertwined. It is the scale of intimacy of this relationship that distinguishes the labor problem of to-day from the problem as it has existed at any previous time."

In connection with the industrial unrest engendered by the war, Mr. King points out that legacies of hatred and ill-will, whether inherited from industrial or international strife, together with distress and debt—whether incurred by any one or the other—differ in degree only and not in kind.

"What of it all finally?" he asks. "Sooner or later peace must be restored, for war cannot go on forever, whether it be industrial or international. Capital and Labor, as well as nation and nation, must come to terms of settlement or all alike be ruined. Common, as contrasted with opposed interests, must be recognized. But where has there been settlement of any great conflict which has not meant much of loss to each of the parties? And where are the gains which have come through conflict that would not have been the greater if otherwise obtained?

"For industry and nationality alike the last word then lies in the supremacy of humanity. Of more worth than all else man can achieve is the well-being of humanity. The national or industrial economy based on a lesser vision, in the final analysis, is anti-social, and lacks the essentials of definite expansion and durability. The failure to look beyond the state and beyond industry as a revenue producing process has brought chaos instead of order. To glorify institutions, regardless of the men, women, and children whose individual existences they were meant to serve, is to negative, not to promote progress.

"The sacredness of human personality is more important than all other considerations. Without infinite regard for individual life, however obscure or deformed, expressions of social values are meaningless. Estimates of national power, pride in industrial growth, forecasts of world expansion: any, and all of these which reckon material gains apart from the human losses they involve, mistake for life itself the coarse texture of but a part of the garment of life.

"Because the peoples of the world are affected more generally and more continuously and intimately by industrial relations than by International relations it may well be that some solution of internat onal problems will come about only with the solution of the problems of industry. Nations have failed through conflict to widen the circle of international goodwill. In the co-operation of the parties to industry along intelligent lines they may yet be led to an application of principles that will best promote the well-being of mankind."

In other chapters of his book Mr. King proceeds to elaborate his theme by emphasizing the necessity for labor having a more adequate share in the proceeds of industry, as well as active representation in its conduction. He points out the need for a wider understanding and sympathy of those who work, toil without hope, and he touches on the fact that it was the working man on the battlefield, as well as in the factory, who won the war against autocracy. Coming at this time of general reconstruction Mr. King's book will undoubtedly exercise a considerable influence with all those who are giving careful thought to our industrial problems. In fact, this is already evidenced in the recent appointment by the government of a special committee to investigate industrial relations, who are to report their findings and recommendations before the present Parliament rises.

"Industry and Humanity" is one of the ablest contributions that have been made to the industrial problem in recent years and is by all odds the strongest and most original book written by a Canadian author this season.

Of Interest to the Motorist

(CONTINUED FROM PAGE 49.)

The writer of this has repeatedly warned his friends and acquaintances of this danger which is ever present and which gives absolutely no warning. The peculiar poison in this unburned exhaust gas is all the more deadly because it has no recognizable odor and cannot be detected by any other means available to the layman.

The point, however, is this: Why worry about finding some means to detect the gas? Instead, take precaution never to permit your motor, or any other internal combustion engine, for that matter, to run a minute inside a closed room without adequate provision for the instant removal of the exhaust gases.

This goes also for the garageman. Who has not seen a crowd around a car inside a garage when a motor is being tested out? The operator may "race" the engine for reasons best known to himself. At some portion of the time when the spark is being advanced and the throttle opened, there will be literally gallons of deadly poison in gaseous form thrown into the atmosphere, for such is the inherent principle of the machine. Should anyone be standing directly in the path of the exhaust, nothing but an act of Providence could prevent his inhaling a few breaths of this subtle poison. Fortunately, the exhaust in its normal condition is so foul that few are sufficiently hardy to withstand it. This probably accounts for the comparatively few deaths from this cause.

Lemonade

—Delicious and Efficient

What Other Drink Compares?

WHEN thirsty, hot or tired, make a lemonade and note how you're refreshed. It's like an ocean breeze. There's nothing else like it. And nothing will ever take its place.

The Reasons

Plain lemonade is the standby of millions, but that's not due solely to its flavor. No beverage so far outstrips all others because of taste alone.

A drink that becomes universal invariably has a peculiar efficiency that others cannot match. In lemonade, it is due to natural salts and acids, which benefit the blood.

It is due to these elements that this drink is so refreshing, cooling and delicious.

Nature says, "Lemonade, especially in summer." And Nature is the maker. Where is another maker with such knowledge or with equal skill?

* * *

These are the reasons why no other drink will ever equal lemonade.

They are the reasons why you should drink it and serve it to your friends.

In entertaining, the serving of lemonade is a sign of enlightenment, thoughtfulness and care.

You can make your own lemonade at home from California lemons. The pure lemon juice comes to you in nature's germ-proof package—the lemon skin. Lemonade is easy to make, and your grocer has the lemons.

Sunkist Lemonade

Juice 1 Sunkist Lemon
2 tablespoons sugar
¾ cup water

Put sugar in cup; add ice water; stir until sugar is dissolved; add Sunkist lemon juice, and serve immediately. Soda or charged water may be used if desired.

SEND FOR
"New-Day Drinks"

Our new free book, "Sunkist New-Day Drinks," explains six different ways to make lemonade.

It also describes many other drinks like those illustrated above made with lemon and orange juice in the form of non-alcoholic cocktails, fizzes, punches, etc.

The recipes are by Alice Bradley, principal of Miss Farmer's School of Cookery, Boston. You'll find it a valuable help in entertaining.

Just mail us a post card and we'll send a copy free.

FLEET FOOT for Summer

FLEET FOOT this summer. Wear these dressy, stylish WHITE SHOES yourself. Put the children in FLEET FOOT Tell the men about FLEET FOOT. Let the whole family be cool and comfortable—enjoy foot ease—and save money.

There's a FLEET FOOT style for every foot; for men, women and children; for every-day and business wear; for evening and dress occasions; for all sports and outings; for holiday time; for the country, seashore and mountains.

Have several pairs—a pair of high Boots, a pair of Oxfords and one of Pumps. These three different styles, for instance, will lend pleasing variety to your summer costumes; and give you the proper White Footwear for all summer or outing occassions.

FLEET FOOT Shoes cost so little that you can well afford several pairs.

Be sure to get the genuine FLEET FOOT Shoes. Look for the name on the sole.

Carhartt's Allovers

They not only save your suit, but they protect the car from scratches. Made of tough denim, they are cut to retain their shape, and reinforced where the strain comes. Every seam is double stitched; every button is *concealed*. Handy swing pockets for tools and extra roomy seat. Readily identified by the car-heart button.

Hair under the arms is a needless annoyance. You can remove it in the most agreeable, "womanly" way by using El-Rado, a sanitary, colorless lotion.

El-Rado is easily applied to the face, neck or arms with a piece of absorbent cotton. It is entirely harmless, and does not stimulate or coarsen later hair growth. Users of powdered hair removers and blades will find an occasional use of El-Rado liquid is good for the skin.

Ask for El-Rado at any toilet goods counter. Two sizes, 60c and $1.00. Money-back guarantee.

The Bride of Chilkoot Landing

(CONTINUED FROM PAGE 64.)

capable of when it comes to shunting a forest monarch out of the way."

Her rough words were like a tonic. With a laugh and a sob Isobel bent her whole energy to the task. It would have been beyond their united strength in a calmer moment, but love and fear and indomitable courage lent their compelling force, and the weight was at last removed.

"Never was so near to being exhausted in my life, 'specially after the run down that bank. There's a big night ahead of us yet, though. Had you noticed it's been snowing the last few minutes?"

"So it is," said Isobel wonderingly.

"We've got to pitch some kind of a camp. That brandy's doin' its work, Mrs. Irving. Haven't a white underskirt you could spare, I suppose?"

Isobel sighed over her grey satin petticoat with its pleated frills.

"Ain't hardly the right color, is it? However, I've got it in my power to remedy the deficiency myself. Help me split it, will you? Say, if I don't evolve the dandiest bandage that was ever tied——."

She did not complete the sentence, but her bandage was almost as good as her word. "Now, we've got to put it on," she said, "and then we've got to carry him to higher land. We can't stay here all night, that's a cinch."

"Why not?" asked Isobel timidly.

"Because when it once begins to snow here it snows like anything. Don't want to be buried alive, do you? That's why. Easy, my man, easy. You are among friends," she finished with a low laugh.

ISOBEL Irving was as clay in the hands of the potter. Chagrined, grateful, ready to weep, she obeyed every command of this girl of the mining-camp like a docile child. "That lid o' yours looks as if it might hold water real well," said the latter suddenly, "and I hear a little stream tricklin' somewheres near. You'd best go and fill it. We'll have to wet the bandage and keep it wet, so as to stop his leg from swellin'. Then, in the morning Dutch Gleason can take charge, with maybe a few pointers from the doctor himself. He's sure a wonder on bones, Dutch is."

The work of carrying the man to the summit again was infinitely laborious, and he suffered greatly during the process. The perspiration stood out upon his brow, and sometimes a moan escaped him. The darkness added a touch of the impossible to their task, and once or twice Isobel unwittingly stumbled over an obtrusive root or branch. Nettie, on the contrary, was sure-footed as an Alpine guide. When they reached the top she sought out a suitable recess mid a group of jack-pines, and gently placed Irving on the ground and moistened his lips with brandy once more.

"Take a drink yourself, Mrs. Irving. You're shot to pieces, I'm not afraid to bet."

Isobel sank down beside her husband and resisted an hysterical desire to sob aloud.

"I'm goin' to collect stuff for a bed for the doctor," said Nettie, "and then I'll build a fire. Now, don't be foolish, Mrs. Irving. You're not going to stir a step. This kind of thing is like play to me, but I reckon you never slept out a night in your life."

Isobel submitted helplessly. In that instant, too, her husband called her name and she momentarily forgot all else. She passed a caressing hand over his forehead. The world was white and misty now, and by the pale, eerie light of a few faint stars she could see Nettie Jackson moving swiftly about, filling her arms with dry cones and boughs. There on the caribou moss she made a downy woodman's couch, dauntless and unwearied, elastic grace and strength in every gesture. She was like a Breton peasant with all that superabundant vitality, but she had the fresh mystery of a new land as well. She knelt down to strike a match, and immediately a blue flame shot into the air.

"Who is with us, Isobel?"

"Didn't you know, dear? It's Nettie. All the men were away. And oh! if it hadn't been for her! She has been wonderful, Grant."

His hand closed over hers protectingly.

THE snow fell in big white flakes. Soon the firs were no longer black on the landscape, but living miracles of immaculate purity, covered as with lily petals. Nettie, with that keen foresight of hers, had made the fire in a comparatively sheltered nook, between a huge boulder and the thicket of pines. The injured man lay close to it, and the delicious warmth seemed to render him drowsy. Isobel realized it with a deep sense of gratitude. At some distance, leaning against a tree, her eyes wide and intent upon the silvery brightness all around her, her attitude at once alert and brooding, the girl of the mining-camp kept guard over their little circle.

Isobel Irving watched her with an unspeakable yearning in her heart. While she pondered over the words that might possibly convey some very slight, inadequate idea of the emotions thrilling in her soul she saw, remote, yet like some vivid, horrible dream, gray shapes that loomed upon the snow like spectres, and eyes that glittered weirdly.

"Nettie!" she breathed.

"Wolves," said the girl in a low voice, "but that's a roaring good fire I made and we're perfectly safe. You can go to sleep if you like—snug as a baby in a cradle."

Isobel shook her head. Then the dazzling green eyes faded into obscurity, and Nettie came over to where the doctor lay and freshened the bandages.

"Stay with me," said Isobel when she would have moved away again.

"Bit nervous? All right, I don't mind."

There was a pause. "I can never express in words what I feel, Nettie. If it had not been for you——."

"Oh, don't bother flinging any bouquets," said Miss Jackson bashfully, "it's just the way I was raised, that's all. Why, Mrs. Irving, I'm a real native if ever there was one. You can't tell me anything about adventure." She leaned forward to throw another great bough on the fire, and the scarlet sparks rose like an illuminated cascade, and scattered themselves far and wide over the shining snow.

"About the first thing I can remember is being alone in the house with my mother, and seeing a bear come out of the woods up to the very door, and my mother standing there alone, fighting for me with her life. Yes, she did that thing too, Mrs. Irving. When Big Jim Dawson came along and fired a shot at the beast, she was just about all in. She died three hours afterwards."

The woman who listened drew a deep breath.

"I had an awful time once goin' up the river to Antler one spring. The ice was just breaking, and there are rapids that are dangerous at the best of times. Dad was sick with fever and we simply had to get a doctor. There was no camp here, then, only one man who was too old to go and another one who hadn't enough sand. Well, I went. I thought I'd never get through it alive. The huge blocks of ice snapped at me like steel traps, and there was once or twice I just let go, and the most merciful chance under heaven guided me through. Wish you could have saw my hands that time."

"OH, Nettie," began Isobel Irving. Then the tears choked her.

"Now, don't you worry," said the other awkwardly. "And once when Dad and old Sylvester and I were comin' down in a boat an outlaw shot at us from the bank and wounded Sylvester pretty bad. The notorious O'Brien that was. He was after our poke, of course, but we was one too many for him. And another time I was lost in the woods for three days I thought I'd come to my finish then all right, and I was pretty nigh fed up on water and blue-berries. I seen some wonderful things, though creeks full of wild celery higher'n your head, Mrs. Irving, wavin' its pale yellow hair in the breeze, pretty as you could imagine, and other ponds just about choked with purple flags, and mink and rabbits, and I don't know what all, friskin' like lambs among red columbines and wild lupine."

"I must have seemed the most insignificant creature on earth to you Nettie."

"Oh, I don't know. I must have looked a fright to you that first day I guess, so honors is probably even I didn't know, yuh see, but since I've had a chance to watch you I've got some new ideas in my head. Why" with a little catch in her voice, "I've even slipped out nights to have a look at the clothes you sometimes left hanging on the line. I wanted to get onto the make o' them, yuh see, so I took a lantern"—she stopped confusedly.

"Don't, don't," said Mrs. Irving "I've been a contemptible fool, Nettie Jackson, but everything is going to be different when we go home again The human heart must be like a house of many, many rooms. Oh, when we go down the mountain in the morning we are going to start all over. We are going to be friends, Nettie—that is, if you'll have me for a friend."

"Won't I just!"

They clasped hands, while far away in the Eastern sky the clouds grew pink and tender, and only the giant gulches showed blackly against the powdered uplands. After a very long silence there came a far sound of voices, and below them, on the pearl tinted river, they caught the dip and flash of a moving boat. Nettie sprang up and greeted the day royally. "Say, it's the men coming back again, sure as you live. You'll be all right here now with the doctor's gun, Mrs. Irving, and I'm goin' to run right down and have a couple of stalwarts and a stretcher up here inside of two jiffs. And say! You and your husband are both invited to breakfast at our place We'll have the biggest layout of pancakes you ever seen, and beans and bacon and the best coffee you ever tasted. I don't care if we starve for the rest of the winter. Hooray!"

She disappeared into a copse of fir trees like a fleet-winged arrow, and in another moment Isobel Irving saw her issue from their darkness and go gaily down the intricate, winding path, singing as the snow fled before the sunlight, as one who belongs within a circle of good fellowship, and hies forth on an errand of goodwill.

THE END.

Through the Looking Glass

Factors in the Regime of Keeping Fit

THE daily papers have been taken up with such a diversity of things of world-wide importance lately, such as strikes, prohibition, the fuss Italy has been kicking up, Bolshevism, and the trans-Atlantic air flight, that perhaps some of you, dear ladies, failed to notice a cabled despatch from Versailles which was published in one of the early days of May, telling about the arrival there of Germany's peace delegates. There were women in the party, it seems, as well as men, and, to tell the truth, it was the description of their behaviour which caused me to read the item with special interest.

They arrived in the rain—a cold, windy day, which the township is noted for—but that didn't deter any of them from going forth on a shopping expedition in search of things they wanted. And what do you suppose these were? The first was soap. They say the stock of soap in the shops in the neighborhood of the hotels where the Germans were quartered was exhausted before noon on the day of their arrival. How they must have wanted it! I don't suppose they had had enough soap for years! Think of having to make a cake of soap last for months, with no prospect of more when that was exhausted, as it is likely was the case with these women! And they were of the prosperous class, which means that the poor people simply must have gone without any. Just what the hardship meant was proved by the eagerness with which they availed themselves of the first opportunity to luxuriate in the possession of it, even before they satisfied their excessive appetite for long-denied food luxuries; for the very second thing they did was buy quantities of candy cakes and pastries, which they tell us they "devoured with gurgles of glee." Apparently, they didn't mind the hisses and hoots of the citizens, who recognized their origin by their long skirts and the flat heels of their boots; but with that entire lack of sensitiveness which might be expected of them, proceeded to enjoy themselves in the face of the disgusted onlookers. It's a pity the little French shopkeepers had to sell them their goods. I do hope it wasn't the best soap they sold them—just some old stuff that had been in stock for a long time that they were anxious to get rid of; but I suppose we may trust to French perspicacity that they got no bargains.

HAVEN'T you noticed it that almost anywhere these days you are likely to run into an odour of moth balls? Furs, great coats, flannels, and all the warm winter coverings are being wrapped away by careful mothers of households against the ravages of the merry little moth, and the air is redolent with the nice clean smell of camphor which heralds this event. Now is the time when we have shed our clumsier garments and the curves of the figure become more visible, to take stock of the set of our shoulders and the line of our back, and see what the past season has done for us. This stock-taking is really important. Perhaps for months past we have been daily bending over a desk, or a piece of sewing, or a dish-pan which is too low for our stature, and unconsciously acquiring a droop to our shoulders, so that the spine has rounded to an unnatural curve. Just pay a little attention to your body and see how seldom you stand erectly or sit with the graceful posture which is your birthright. Notice that when you do, by an act of will, carry yourself erect, there is a tension and a strain about the attitude which shows it is unnatural.

This is all wrong, of course, and the longer we neglect the matter the more difficult it will be to correct. The spine so readily follows the line of least resistance that if you show carelessness in your younger days, when middle age creeps on you will have acquired an ungainly stoop. This is the season of correction, when you must say to yourself: "I am not going to let my back do as it likes with me. I am going to bring it to 'Attention' every time I catch it bending."

And, just as all things that are worth working for are difficult to do, so is this business of forcing your spine to a sturdy, upright pose, which is important from the standpoint of beauty as well as its relation to general fitness and health.

This latter should be a matter of vanity with every woman. Our great-grandmothers may have prided themselves on their ability to faint with ease and perfection on the slightest provocation, but the girl of to-day is often heard to boast that life is too short to spend even a few minutes of it in unconsciousness. That is the spirit of the times. Besides, beauty depends upon health, and, vice-versa, the first and greatest sign of health in woman is beauty. And, next to character, someone tells us beauty of form and feature is woman's greatest asset. Therefore, you see, there is a great and important reason for keeping ourselves in perfect health, for without it we cannot attain that perfect development of every part of the body which enables it to best perform its functions and produce a perfection of bodily organization, intellectual power, social activity and moral power.

INDOLENCE, perhaps, is one of the most vital causes of ill-health. "Nature knows no pause," says Goethe, "and attaches a curse upon stagnation." Sloth, like rust, consumes faster than labor wears. The body must be exercised, and in the right direction. Walking is one of the most beneficial means of accomplishing this, because it is a natural method. This is an advantage which the country woman has over the city woman, who is surrounded by motors and street cars and temptations of all kinds to prevent this healthful exercise. An excellent idea is to embody in your "keep fit" resolution—(you have already made one, haven't you?)—a promise to walk a certain distance every day, say, a dozen city blocks, if you are a city woman, or to the post office and back, if you live in a town. Swimming, golf, basketball, tennis, skating and all outdoor exercises are also invaluable factors in the regime of "keeping fit."

A VERY good exercise for reducing hips which have acquired excessive flesh—a tragic acquisition in these days of the straight and slender silhouette—is to take the first position with the towel in front, then raise the arms forward and bend the knees, keeping the back erect, until the hips almost touch the heels. This is a difficult position to attain at first, but with practice it can readily be accomplished.

Body-twisting is another very good means of keeping the muscles flexible and strengthening and invigorating the spine. This should be done with the feet placed well apart to give a broad base for effective action. Standing thus, with hands firmly on the hips, bend the body first to one side and then the other, with a swing, taking care not to drop the head. Circle the body from left to right and then from right to left with a free movement. Next, with one foot placed well forward, bend the body backward as far as possible, and then forward over the knee, repeating the action until you feel that the strain is tiring you.

Your own good sense will allow you to enlarge on these somewhat sketchy hints which I have given you, dear ladies, and I am certain that if I can once persuade you of the great benefit to both health and appearance which a few intelligently-taken exercises will result in, they will become as much a part of your daily routine as saying your prayers or reading the paper—two sterling habits, which even a Vain Jane such as I cannot afford not to cultivate.

Cured His Rheumatism at 75 Years
WITH A
BRANSTON
VIOLET RAY
GENERATOR

A prominent business man whose letter we have on file in our office, writes as follows:

"Nearly two years ago I purchased a Branston Violet Ray Generator, for my father, who had been a martyr to rheumatism for eighteen years. He was crippled and suffered agonies, and had been told by the doctors that as he was over seventy-five years of age, they could not cure him.

"After using one of your Generators for about five months he could walk miles, and was completely cured. We have found the Generator invaluable in the home for other sickness and would not part with it for anything."

Yours truly, C. B.....

The Branston Generator successfully treats any disease of the blood or nerves, and can be used by anyone—right in your own home.

Branston Generator agents in every large city will give free demonstration —or write

Please send me your free book, "Health Rays."

Once upon a time there was an advertiser who got his copy in ahead of closing dates; he gave the publisher time for careful composition; making cuts was never left until the "last gun," with the printer holding the presses and running up the publisher's bill. The advertiser always had plenty of time to make corrections and get exactly what he wanted in set-ups. There were no disputes about typographical errors and inadvertent insertions. When he O.K.'d a final proof it was final. And the advertiser was always pleased with the attention and service the publisher gave him.

Moral: No publisher can give an advertiser proper service unless copy is received early!

The GIRLS' "CARRY ON" COLUMN

By Betty O'Hara

If You Would Become a Newspaper Reporter

THERE are very few girls, who at one time or another, have not had a burning desire to take up newspaper work. It ranks with those ambitions through which all have passed, when a dark and handsome prince of fairy land fame was forever before us, and whom we one day would marry, but also like those dreams gone by, most of these hopes have never been realized.

Few understand the vast difference between magazine writing and the broad field of newspaper work, but the barrier between the two and the difference in outlook for the girl in each case is tremendous.

The girl who would have her name on the pages of a monthly magazine must know her subject through and through, she must have a definite idea, and be able to express it in convincing language; or if becoming a short story writer is her goal she must give a sob and a laugh to her readers and make her story overflow with human interest. But a girl who wishes to become part of the staff of a city daily must be the reflector of the day's happenings. She must not try to convert her public to this or that opinion, she should merely write what she hears and sees without frills or embellishment.

"What is necessary?" said a bright little girl to me, when discussing her vocation in life, which she thought was a little too narrow for her abundant energies. First and foremost I should say is a bright and happy smile—queer, you think, isn't it?—but let me whisper to you that a girl's pleasant smile can get a scoop for a paper when many of the indefatigable energies of man have failed. Although a university education may be a help, the necessity of it is seldom felt, but a quick intelligence is necessary, and above all requirements I would put a healthy body and a clear mind.

WHEN at last you have run the gauntlet of a family's disapproval and overcome your own temerity, and you stand before that awe-inspiring personage, the city editor, with shaking knees; his first question will invariably be "What experience have you had? Have you ever had anything published?" Happy then is the girl who can produce various clippings of her own composition, for, as many editors contend, it is the only safe way to judge a girl for newspaper work. If, however, you have not had the forethought to try your wings as an occasional contributor, the best you can hope for is a chance to take the place of one of the staff if they happen to be ill; and for this opportunity you may wait six weeks or six months, it is for fate alone to determine; and let me say again they are a rather healthy crowd, and you will likely have to be content with a long wait.

And then when at last the happy applicant has her chance, she still finds something to accomplish. On city papers girl reporters are given some certain department, as society notes, meetings of various kinds, or a column on military work as the case may be. The girl reporter must keep up to date with the doings of her department, and not let a single item escape her. She will know when the leader of society comes to town, she will obtain an interview from the president of an international movement or a famous platform idol, and be on hand before the other papers have heard about it; for it is a well known fact that people with a fame which reaches from coast to coast, or from one country to another, become weary of newspaper interviews and in this case it is the first reporter who gets the interesting human facts which count so much in a newspaper story, who achieves success in the work. Then you may be given an assignment; it is a large name for the slip of paper the editor hands you with the brief comment to find out what you can about the new plan for grappling with this or that problem of science or public welfare.

IT is the clarion call of duty and the one command from which there is no turning. After an hour's ride on the car, you find that this dreaded personage is entirely out of your reach; he is not in his place of business. You have then to collect a few minor facts perhaps for to-morrow's story, while in that district; and back again you must go to the battleground, and hope for better luck. "Nothing for the newspapers" may be his answer to your first enquiry. But you must not let this worry you, or turn you from your purpose. You must change your method of attack and take a human interest in his enterprise and admire this or that part of his plan, and before he is aware of the trend of conversation you have obtained all the information you desire. You know his plans for success, his fears for failure, and when your unconscious informer wakes up to the fact that he has given you the very information you so coveted, the remarks dwindle, and you know the interview is ended. Of the next reporter he will be more wary, but you have a scoop for your paper that will bring the praise from your editor, which if you are interested in the daily for which you work is the highest reward you could wish.

SOMETIMES, however, it it not necessary to hunt around for all the material you must put in your column. Each newspaper has what corresponds to a reference library, sometimes dubbed "the morgue" where accounts are filed of all famous people and interesting events which take place. The reporters often, if they have an assignment, go there and look for the information they need, and with a short interview with the person in whom they are interested, a column or two of very interesting material is often concocted.

Then, too, large cities are often divided into districts and each reporter is given charge of one of these, having to report all the news items, or any happenings of interest from a debutante dance to a mistaken fire alarm, inclusive. This, however, is a little more strenuous than the other method of news getting as it is much harder to hunt news than to have it meted out to you in the form of an assignment, and it is here that a girl shows her ability in news getting, for should the watchful eye of the editor see that another paper has obtained news, especially if it is important, that one of his staff has failed to unearth, the unfortunate one never fails to hear about it.

Nor should a girl expect regular hours when doing this work; she may be asked to attend and report an evening meeting or meet a six a.m. train to get material for her story.

BUT she must never waver, and if the editor sees that she is really interested in the success of the paper for which she is working, she may depend upon it that her interest and welfare will never be forgotten when he is planning the day's work.

But the half hour before the paper goes to press is the most exciting of the whole day. Sometimes you come in with a fund of information, and having been delayed by cars or something equally provoking, you have exactly fifteen minutes to write what would at a steady pace take you three-quarters of an hour. It is then the girl whose brain is active and whose memory never plays her false can gain time, and come out with flying colors, for no matter what the mishap there is no excuse for laxity on a newspaper. No amount of arguing can take the place of a failure to obey orders, or unfinished copy.

But newspaper work whatever its drawbacks is lavish in its compensations. It keeps a girl bright, keen and up to the minute, she has a constant panorama of moving humanity before her and although she may at times feel physically weary, mentally she can never be bored; and few of us who are looking for a life's work can find any vocation which is so all absorbing.

The Journal Juniors' Club

(CONTINUED FROM PAGE 31.)

then lightly caressing her, fluttered on his way.

As the hours passed by, the sun's rays grew more intense and the rose drooped a little. There was a strange pain at her heart that was making her faint. She moaned softly and a passing Mourning Cloak butterfly that heard her, paused and asked what ailed her.

"There is something gnawing the very life from my stem," answered the rose.

The butterfly flew down and under the beautiful flower. Soon it returned. "Those nasty aphides are attacking you," it cried in an excited voice. "The only one that can help you is the Beast of the Good God."

"Do go and find her," begged the rose.

SO the butterfly flew away and of every flower it came to, it asked, "Have you seen the Beast of the Good God?" But they all answered, "No." "I must find her," the butterfly cried. "The rose queen is dying." He looked into every corner of the garden, but his search was in vain. Almost in despair, he was fluttering along when he saw a goldfinch. The Mourning Cloak stopped and to the topaz coated songster he told his quest.

"I saw her not many minutes ago, in the lower garden. If you hasten you may still find her on the hop vines."

The butterfly thanked him and spread his purplish brown wings on which the pale yellow border and turquoise blue spots glowed bright as he flew away. Over the tops of the hedges he went and down towards the vegetable garden. At last he came to the hop vines and, joy of joys, there was the Beast of the Good God herself. She was very busy and the visitor made many efforts before he attracted her attention. At last she listened to his story, then said, "The rose queen must die, but I will save her children. You see," she went on, "these days are very busy ones for me. The hops must be saved and so I have had but little time to visit the flowers, but come, I will do my best."

The butterfly and the lady-bird flew back to the rose bush. As soon as the beetle saw the aphides or green flies clustered on the rose's stem she became quite fierce and flung herself bodily upon the nearest one. Grasping it firmly with her two front legs she bit it on the wings with her sharp jaws and so prevented it from escaping. Tearing it to pieces she devoured some of her victims only, leaving the remains for another. Many she killed, but some escaped and then she started to lay little clusters of eggs on the underside of the leaves, fifty eggs in each cluster and so tiny they were, that a passer-by would never have noticed them. When she had finished, she flew upward and settled on the drooping head of the queen, who greeted her kindly. "Your enemies have gone," said the lady-bird. "They will return, but I have prepared for their coming. In a few days the eggs that I have laid, will hatch and my children will then protect your majesty."

The rose thanked her and then the lady-bird's pretty coral colored back with its jet black spots seemed to crack in half and her delicate transparent brown wings popped out and spread in flight. "Goodbye," she cried and soon she had disappeared. The rose continued to droop until the sun had set and the air became cooler, then in the twilight, millions of little gardeners, the dew fairies, unseen by mankind, carefully watered the weary plants. Tenderly they bathed the pink petals of the rose queen, soothing her until, as the moon arose and cast her silvery light over the earth, the queen of the flowers slept and dreamt about her butterfly lover.

A WEEK had passed and new flowers were blooming in the garden. The rose had died and a new queen reigned in her stead. On the leaves of the rose bush there were some strange visitors. Curious tiny lead colored grubs they were with red spotted backs. Each had six fairly long jointed legs and all seemed to be very sleepy. These were the children of the lady-bird, who had not bothered to return to look after them. There was no need, for as soon as the eggs had hatched, the new born grubs set out in search of food. Hungry—they were always hungry and yet they pretended to be sleepy. This made the enemy bold and once more the rose bush was covered with green-fly. The passing birds stopped to watch the lazy looking grubs as they silently approached the enemy. Too surprised to know what had happened, the green-fly was disabled before it realized it was being attacked. Instinctively each grub followed its mother, the lady-bird, in killing the aphides. Each had the same way of holding the fly's body and each bit its prey severely just where the wings joined the body. Over and over again the process was repeated until in sixty minutes each grub had killed forty to fifty aphides.

"Isn't it strange," said the goldfinch to a green vireo bird as they watched the grubs at work, "that they do their most useful work when they are in the larvae stage?"

"It is," replied the vireo. "And what's more, no bird will touch them or their mother. I'd as soon eat a poisonous mushroom as a lady-bird. Why, even the ichneumon fly refuses to eat them."

"It is that unpleasant smell they have that protects them."

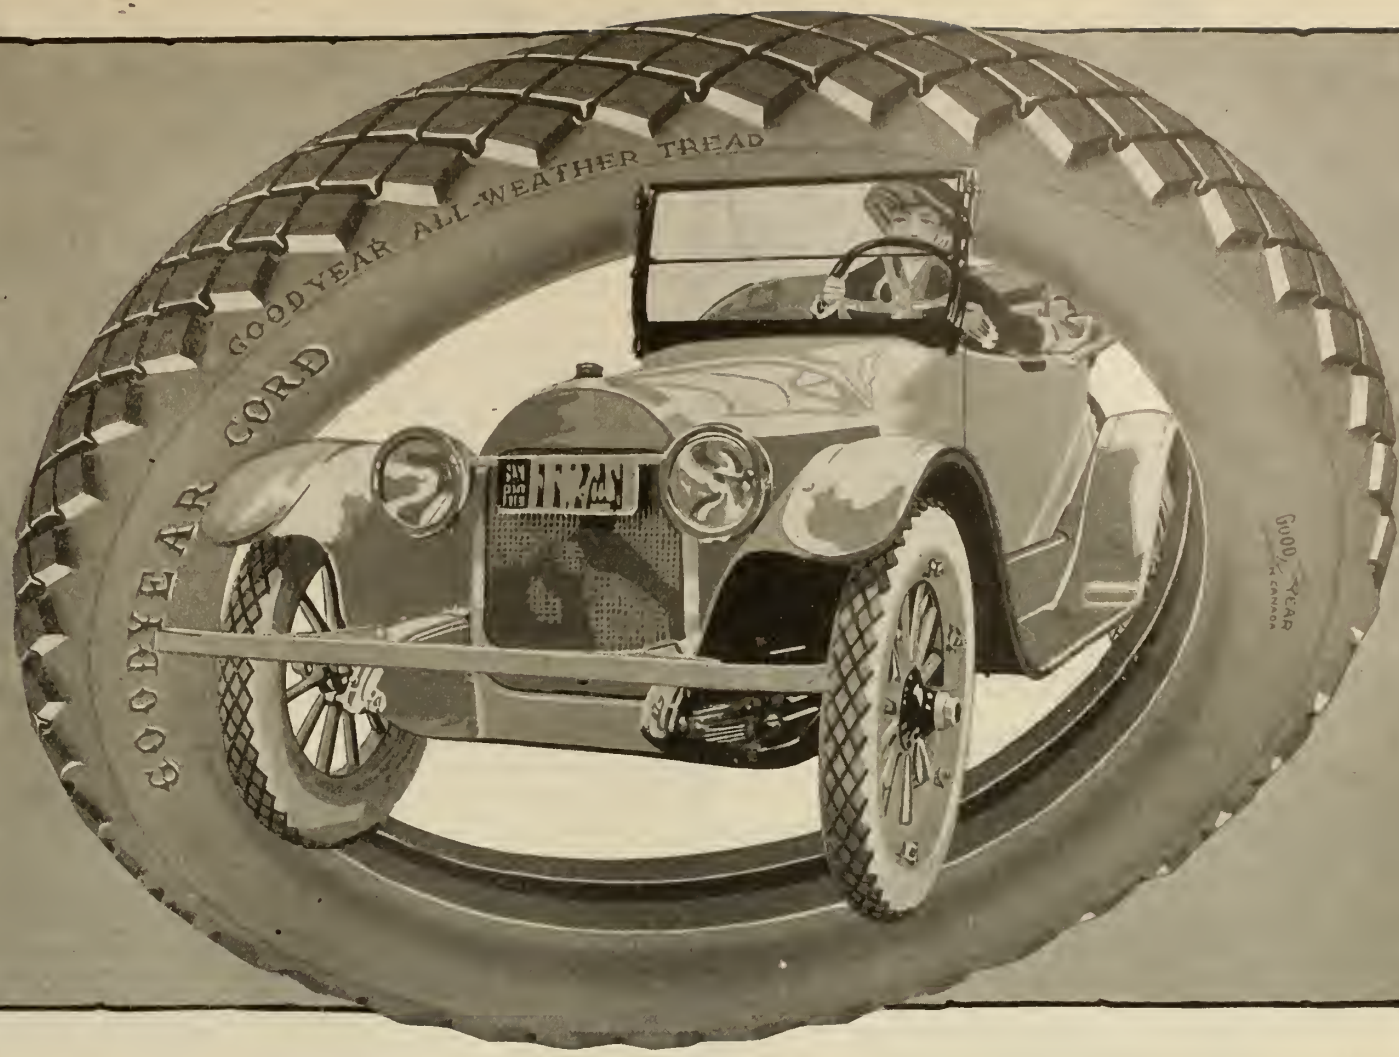
"You're right," replied the vireo. "A kind of yellow blood, and when a lady-bird is handled, the yellow liquid comes out of her leg joints."

"How long before they enter the chrysalis stage?"

"From four to five weeks, and then they hang themselves to the underside of a leaf, by their tails. The time is not long and soon the transformation takes place and the coral backed lady-bird emerges. Her wings quickly develop and she flies away, to lay her eggs on a plant or vine that needs her services."

"Did you overhear the gardener talking to the master to-day?"

"No."



"He was saying that a supply of lady-birds were being shipped to France from California."

"Whatever for?"

"Because the orchards in France are nearly ruined by the meal bug, and the California lady-birds are the fiercest of their kind; the officials think that the lady-birds can drive the pest out of existence."

"If they do, they will deserve a service stripe, or a medal."

"Both," cried the vireo as he flew away.

Trustworthy Tires

STRONG and SUPPLE

ALWAYS you will motor on Goodyear Cord Tires with a sense of security. Their strong and supple quality will carry you for thousands of miles of untroubled motoring. Yet they give you a lower tire-cost-per-mile.

The peculiar construction of Goodyear Cord Tires is interesting in connection with the satisfaction they will give you. Built up of thousands of strong, supple cords, each individually embedded in fine rubber. As a result your car rides more easily and economically—saving on depreciation and gasoline. You have even greater protection against blow-outs and punctures. Your car acquires the distinctive appearance that the Goodyear All-Weather Tread brings.

Yet it really costs you less to have all this satisfaction. The price of Goodyear Cord Tires *is* higher. But they give such great mileage, so reduce gasoline consumption, and cushion your car, that in the end they cost less than cheaper tires.

¶ The Goodyear Service Station Dealer will verify these facts for you or for your husband.

More Play in the Country

(CONTINUED FROM PAGE 25.)

their success you are almost sure to hear, "Well, our minister is great on rural sociology," or "Our teacher is just back from Guelph." But Manilla says, "Why, we all do it. We wanted it so we all turned in and worked for it." Which points either to a wonderfully alert and live community or to some dark horse leader with surely enough skill and wisdom to govern the affairs of nations. At first glance the laurels of leadership seem to be divided between the base-ball team and the Association Library; but this is only a matter of nomenclature. "Everybody did it. Why it belongs to everybody!" So when we take our hats off to the base-ball team or the bowling club, or the library or the Dramatic Association, let's remember that it's really hats off to Manilla, and that Manilla means also the surrounding agricultural district.

Play at Manilla Started with Its Library.

PROBABLY the Library was the first in point of time. At any rate Manilla has had an association Library for a long, long time—not a free library—not yet— but fifty cents a year with the privilege of taking five books at a time, comes mighty close to being free! It began its existence in the back of a boot and shoe store—at least if it dates to a period before this the writer does not know—now the Library Board hold in trust for the community two adjoining village lots on one of which is a dwelling, garden and stable. This dwelling is the Library Building. Certain rooms of it are used as Library and Reading Room, the rest as a home for the Librarian. The adjoining lot it is intended to plant with suitable trees, flowers, and shrubs forming a pretty little park, yet not in such a way as to interfere with the bowling green which at present occupies a part of its space. For Manilla has a Bowlers' Club, and the vacant lot attached to the Library looked good to the men and boys who were the club in embryo. The Library Association were more than willing to lease the lot in such a good cause: the Bowlers' Club became a reality, and its members set to work to level and make otherwise perfect their new green.

There was no roller of sufficient size and weight in the community so one was manufactured of cement. Everybody was ready to give time and work, and before long the green was an accomplished fact. Before wartime, any summer evening was sure to find groups of enthusiastic bowlers playing rink against rink, and almost every summer afternoon saw white-clad girls and women also enjoying the bowls. For the men were not selfish, their bowls and the green were handed over to "the girls" for the afternoons, and Manilla can boast a ladies' rink whose playing would not disgrace a much larger city nor a sterner race.

But we are forgetting that very important base-ball team and this isn't fair at all for the writer isn't quite sure that it wasn't the pluck and iniative of that base-ball team, which started all the other doings in Manilla. At any rate here is their story. They were a fairly good team but their practicing was done here and there, on the village street, in vacant lots, often under conditions far from ideal, and they began to hanker for a home. So they rented a field "ten or twelve acres," my informant guessed, "it might be more." Around the outside of this field they built a race-course on which the farmers of the community might train their horses for exhibition and racing. In the middle was their base-ball diamond. They had to pay a hundred dollars a year for their field and, as every ball-player knows, there were other expenses for the team to meet. But they risked it and succeeded. Manilla's annual Base-ball Tournament, with five or six teams playing and with a good supper served on the grounds, draws crowds from far and near. The boys have taken in over two hundred dollars at one tournament. But the ball team is not working alone. It's all the community. The women and girls are glad to help with the supper. The team buys bread, butter and meat. Everything else is contributed. Everybody wants to help. Similarly the Library Association plans to give at least one big

(CONTINUED ON PAGE 79.)

Without Fear

(CONTINUED FROM PAGE 18.)

THE SONG OF A TOY WINDMILL.

The wind blows wild, the wind blows free,
But what is the whirl o' the wind to me?
I move to the breath of butterflies,
To the glint of a song in children's eyes,
To the gleam of red in the sunset skies—
To the kiss of fate,
Early and late—
To the sigh of the fool, and the laugh of the wise.

For he who made me and shaped my wings,
And painted my windows green and white,
Had heard the song that a swift shell sings,
In the bleak black night,
He had lost an eye and a leg, but he knew
The secrets trusted to very few;
And soft in the dusk, as he fashioned me
He sang this song exultantly:

"Let the hurricane pass you by,
The whirlwind's scream and tornado's cry;
Move to the touch of the truer things—
The gentle plaint that the ring dove sings,
To the sun-bright edge of air-plane's wings.
For it matters not though the whole world die,
If a rainbow spans the storm-swept sky."
So—what is the whirl of the wind to me?
I move to the dream of Eternity'

AN ANSWER.

I have a faith—that life and death are one,
That each depends upon the selfsame thread,
And that when the seen and unseen rivers run
To one calm sea from one clear fountain-head,

I have a faith—that man's most potent mind
May cross the willow-shaded stream nor sink;
I have a faith—when he has left behind
His earthly vesture on the river's brink,
When all his little fears are torn away,
His soul may beat a pathway through the tide,
And, disencumbered of its coward-clay,
Emerge immortal on the sunnier side.

So, say:—It must be good to die, my friend
It must be good and more than good I ween,
It must be good or reason is a cheat,
It must be good or life is all a lie,
It must be good and more than living sweet,
It must be good—*or man would never die.*

The Country House Minus Waste Space

(CONTINUED FROM PAGE 16.)

verandahs, one at each end of house (east and west), add materially to the appearance and comfort of the home.

Entering the house from the north one passes through a vestibule which in width measures half the width of the large hall, the remaining 4 feet being used for the ever useful clothes closet. At the right of the large hall, double doors open into a living room 17 x 24 feet generously proportioned, well lighted and lending itself to charming decoration. Along the west wall is a huge, recessed fireplace, with walls built of brick and having a small colored leaded glass window at each side. This arrangement allows the hearth of the fireplace to be well removed from rugs, etc., as well as giving unusually pleasing effect to the room. Quaint seats or benches are the appropriate accompaniment of an open fireplace built in this manner. The glow of the afternoon sun will give this room a yellow note which should be made the most of when planning the decoration and furnishings.

Directly across the hall from the living room two doors open, one into a smaller hall from which the stairs ascend, the other into the dining room. Refer to the plan and note the artistic window arrangement in this room, also the door leading to the verandah which if screened could be used as a dining verandah. A door from the kitchen makes it possible to go directly from the kitchen, thus simplifying the matter of serving, to both verandah and dining room. A recess built for the sideboard, leaves an even space around the table, an important feature in a country dining room, where a very large number of persons have to be served.

The problem of the farm kitchen is cleverly overcome in this design. The room is large without being cumbersome. There is an abundance of cupboard space and shelves, and ample window space. The refrigerator placed just outside the kitchen door in the service entry can be filled without entering the kitchen, a window in this entry allows the light to fall directly into the refrigerator when the door is open. Steps leading to the basement start in this vestibule, an advantage which will be realized when coal, wood and the winter's supply of vegetables are being stored away.

Five large bedrooms meet the needs of the ordinary country family. Each of these shown on the plan is well lighted, ventilated and all but one have clothes closets. Note the huge closet at the left of the First Floor plan, and think what an excellent place for trunks, bandboxes, boxes for furs, winter clothing and bedding this would make. On this floor there is also bathroom and linen closet, and a clothes chute running to the laundry in the basement.

The material recommended for a house built according to this design is red brick with white mortar joists, green shutters and red slate roof.

Next month's CANADIAN HOME JOURNAL will reproduce designs for a small inexpensive house.

Canadian Women's Institutes

(CONTINUED FROM PAGE 62.)

The Waupoos Institute has made a donation of $150 to the Picton Hospital, for purchasing screens.

The members of the Smithville Institute gave a reception recently to an English bride from overseas.

The Marmora Institute has fitted up club rooms for the Marmora Branch of the G.W.V.A., and are being congratulated upon the convenience and coziness of the place.

A gift of twenty-three night shirts, forty-four handkerchiefs, twenty-five bags and one hundred and twenty-four pairs of socks went from the Roseneath Institute to the Ontario Military Hospital.

A new Women's Institute and community hall has recently been opened at South Gillies, and stands as an example of what even a small community can do.

The Bishop Mills Branch is planning for the purchase of street lamps.

At the first meeting of the Phillipsville Branch a "Quiz" was conducted, in which puzzling domestic problems were discussed and solved. Four new members were added to the membership at this meeting.

The Grand Valley Institute gave a tea in aid of the local fund for disabled soldiers, and were pleased to hand about $130 to the treasurer.

A banquet in honor of the returned men was given recently by the Sundridge Institute, when each soldier was presented with a signet ring, engraved "S. W. I., 1919."

The historic collection of the Penetang Women's Institute has received an addition of several valuable pieces from Mrs. T. Perkins, of Wyebridge—a rare volume and a fine bit of the famous Wedgwood ware.

At the April meeting of the Rodney Institute committees were appointed to decide on exhibits for the Agricultural Fair, to petition for the lighting of the M.C.R. Park, to arrange for public flower beds, and for the care of the local cemetery.

REPORT OF THE RAINY RIVER WOMEN'S INSTITUTES CONVENTION.

On April 30th the Women's Institutes of Rainy River District met in convention. A large crowd of interested representatives and visitors were in attendance.

Mrs. George A. Locking occupied the chair, and the afternoon session began promptly at 2.30, with the singing of the opening ode. After a brief review of the year's work, given by the secretary and a few items of business were disposed of, Mrs. Allen addressed the audience, and an excellent paper on "The Woman Trustee," supplied by Hon. Dr. Cody and endorsed by the O.E.A., was read by Mrs. Sleeman.

Mrs. Locking's report of the Toronto convention was very complete and interesting, making a splendid impression, and everyone voted in favor of sending a delegate every year.

A memorial hospital was well discussed and almost unanimously approved of. Activities are being put in motion at once concerning it. A resolution was also passed petitioning for the appointment of a woman district representative for the Rainy River District.

An excellent programme, with a few suitable remarks by Mrs. Allen, Mrs. Locking and Mrs. Sullivan, filled the evening.

MISS HAYES CHOSEN AS SUPERINTENDENT FOR B.C.

Institute members in Ontario will be interested in the appointment of Miss Olive Hayes to the superintendency of the Women's Institutes in British Columbia. Miss Hayes was for a short time a demonstrator and lecturer with the Ontario Women's Institutes.

Montreal
A City of Domes and Dreams

(CONTINUED FROM PAGE 14.)

law book, the Coutume de Paris,—the common law of France and predecessor of the Code of Napoleon. There are few traces of these seigneurial rights in the South, and in Canada the British Government bought them from the seigneurs in order to simplify the law system. What elsewhere is called a 'porch' we of the Southwest call 'gallery.' It is Creole, but I see that it goes back earlier yet—it is a good Canadian-French term, 'galerie.' I find it universal here, and I think I have found the link connecting it with the projecting inside gallery, as of a church. Here the galerie proper does not rest on the ground, but is formed by a projection of the floor joists. This protects the cellar windows, but allows them air and light. We, however, having no cellars close in under the gallery and rest it on pillars. The typical Canadian house, like the Creole—and I suppose the Norman—has the long sloping roof to the street, with the eaves slightly curved up, and this forms a partial cover for the gallery. We again have varied this by building the cover further out, because we need more shade. This is an interesting instance of evolution in domestic architecture—a variation to meet climatic environment."

MONTREAL possesses a rare personality which comes upon one as a new vision with each passing visit. I remember a snowy night when we stopped at the great doors of Notre Dame and slipped in where a thousand candles were burning, and somewhere out of the dim distance came the vibrant sing-song chant of the French priest. I see it as a place of steep streets and wide distances, of noble churches and great squares, of the river way and the mountain summit, and yet, with all its eternal solidity, a city of gay surprises. I hear a church bell ringing, a sandalled monk may pass me, a priest hurries on book in hand. I am surrounded by the old, old atmosphere of the church. Then I hear a laugh in the air. I look up, and a party of Canadian school girls pass me humming an English air or chattering a thousand things that "she said" or "I said."

You stop at one of the great Banks or Railroad Offices whose headquarters are stationed here and medievalism is lost in substantial commerce. But in another moment you have rounded a corner and a narrow street receives you, whose inhabitants deal, one should fancy, in absolutely nothing higher than copper currency.

These gay, conflicting glimpses of Montreal make me glad that I do not know it "thoroughly." I would far rather retain flashes that are painted in colors so vivid that they can never be effaced. The city in the cold blue light of early morning, the streets piled high with snow, a red sleigh and a coon-coated cocher, the city burning at noon day under an August glare, the gold domes gleaming, the drip, drip from the fountain in the square insisting upon itself intermittently, between the onrush of traffic; the city of twilight from the mountain with starry lights beginning to twinkle below, a great ship coming lazily in from the sea, the busy docks a faint blur in the distance, and the indescribable panorama of streets and squares and towers and steeples and all mixed in the magic haze of colored light: the city at night with a midsummer moon floating above the serene street of palatial residences, the lighter silhouettes of great buildings, the blind high walls that guard the churches' possessions, the shrill laughter of the French town, the old city, this is to meet the past and the present in a wonderful way.

Because she is a city of an old soul and has come out of a "long incarnation" it would seem that her literary tradition should be rich and varied. But, as a matter of fact, this is hardly the case, though certain outstanding figures and voices are indubitably connected with it through their literary work.

A CERTAIN romance rests upon the name of Charles Heavysege, who came to Montreal from Liverpool in 1853. He was a wood-carver by profession and a poet by birth. His drama "Saul," shows his intimacy with two great sources, the Bible and Shakespeare, but it contains original creative power as well. Of it the North British Review said in 1858: "Undoubtedly one of the most remarkable English poems ever written outside of Great Britain."

A little later came George Murray, an Oxford man who did much literary work in his new home, Montreal. He will perhaps be most widely remembered because of one poem, "How Canada was Saved," which commemorated the valor of that band of French Canadians who, in May 1660, died in a struggle with the Iroquois for the possession of the land. Two lines of the poem have become a heritage of Canadian literature:

"What though beside the foaming flood
untombed their ashes lie,
All earth becomes the monument of
men who nobly die."

John Reade arrived in Canada in 1837 from Belfast, and joined the Montreal Gazette, with which journal he was connected to the time of his death in the present year. Not only on account of his fine poetry in "The Phophecy of Merlin" and other poems, but because for years he established a literary tradition in his columns on the Gazette that was both helpful and inspiring, his work has been, and will be, influential in the city which he loved so well.

William D. Lighthall is a Canadian and an author of note. "Thoughts, Moods and Ideals" was published in 1887, followed in 1889 by an Anthology, "Songs of the Great Dominion," and in 1891 by "Canadian Poems and Lays." There are also two novels: "The Young Seigneur" and "The False Cavalier."

DR. WILLIAM H. DRUMMOND has forever left his impress upon the literature of Canada in his habitant verse which has immortalized the songs of the French-Canadian farmer, the voyageur, and the coureur-de bois. These verses, unique in their humor, pathos and picturesqueness are inherently native, so that Dr. Drummond takes the same place in the family of modern poets that would be accorded in the family of artists to a master of genre. That is to say, he depicts with fidelity and affection a certain type, makes it completely his own, and then presents us with the finished picture. Probably no other Canadian poet has been more loved and more deeply mourned at his death than Dr. Drummond.

In a different way, Mrs. J. W. F. Harrison's "Seranus," has pictured the very essence of the life along the St. Lawrence in her exquisite Villanelles, many of them written in or near Montreal.

Among present day writers, the names and personalities of two women stand out. Mrs. J. W. C. Taylor, whose exquisite lyrics, under the name Gertrude Bartlett, have appeared in many American and Canadian journals, are notable. There is here a sense of fulfilment, of beauty born and garnered and stored from spiritual sources. The "Ballade of Barren Roses" is perhaps a deathless flower.

The work of Mrs. William Redpath, Beatrice Redpath, comes also within the category of what one is not afraid to venture is authentic and permanent poetry. It is poetry which has touched and is touched by life; life vivid and flaming. Mrs. Redpath also writes short stories. But the only woman novelist I can recall in Montreal is Mrs. Muckleston, "Edith Wherry," whose novel, "The Wanderer on a

(CONTINUED ON PAGE 79.)

Montreal: a City of Domes and Dreams

(CONTINUED FROM PAGE 78.)

Thousand Hills" is very good fiction indeed.

THESE writers, of the Montreal group seem to be most closely associated and tinged with the atmosphere and the mystery of this city of domes and dreams.

Montreal has come out of a long past. Once I came upon an ardent prophet of the future dwelling in her midst; a world-man from Everywhere, who loves this city. What I remember of our conversation is vague, yet through the distance I can almost hear him crying: "Arise Thee! Arise Thee! But don't shake off the dust of your beautiful garments, Montreal!"

It was he, Horace Traubel, who, writing of Montreal, said: "I know no American city like it. What we get in New York from our east side Montreal gets from the French—a Latin and sometimes an Oriental touch. Our distinctly English cities, whether on this or the other side of the unnatural 'Border,' are passionless prose. They need fire. They need color. Take Toronto for instance. Toronto would be helped by the interjection of fifty thousand southern-eastern aliens. They would wake it up. It is too respectable to be decent. Montreal is alive, Sundays and week-days. The French section is so much like itself. The English section is so much like everything else. Old Montreal is unique. Westmount is made. Old Montreal—its quaint, archaic architecture—is a joy to the eye. I suppose the little houses all through its back streets are horrible to live in. They are old and dirty. But they are a feast to look at. Westmount is comfortable but not beautiful. I have got so that I love your city and yet I could wish it different. To my mind a city of rich and poor is no city at all. A real city has no rich and no poor. Cardinal Manning said it was a priest's business to die without money and without debts. That would be as good a gospel for a city as for priests. I once wrote of my own city, 'I am proud of Philadelphia because it took so many people to make it, and I am ashamed of Philadelphia because so few people own it. I might say I am proud and ashamed of Montreal for the same reasons."

More Play in the Country

(CONTINUED FROM PAGE 76.)

concert or entertainment during the year. They procure the best of talent, often bringing it from the city, and the fame of the Library Concert makes it a treat to be planned for and counted on for miles around.

THIS leads as one might guess to a Dramatic Club, and a dramatic club is one of the very best play-facilities in the world. Even shy and self-conscious people forget themselves in this delightful play, and, once forgotten, self is never likely to be so insistent for recognition again. It is a happy experience, joyous and cultural, to see new ways and meet new people—much more, if only for the instant—to be new people and to make new ways our own. Imaginative and understanding people find this experience in conversation and in all fellowship—they are for the once the other person, his thought, his emotion, his predicament, are as real to them as their own. More people find it in the reading of stories or as spectators at a play. It is only the actors who consciously undertake to lay aside themselves; and they have their reward. No one can, assume, however imperfectly, the position, thought and emotion of some totally distinct being without forever escaping from at least part of the thralldom of self-consciousness and of the self-depreciation which is its twin.

So Manilla's Dramatic Club is quite one of the happiest and most worth while of its play interests. The community wanted money, also it wanted entertainment; there were boys and girls and men and women in it who were interested in the play (everybody is; it's as natural as breathing—witness the "pretend games" of all children!) Presto, there was a Dramatic Club—a means to an end, the means being quite as valuable in themselves and quite as pleasure-giving, so that in carrying out the plan means comes to be end and we have real play.

IN passing we might also notice that Manilla has a Girls' Basket-ball team, and her Junior boys can put up some mighty good hockey.

She has also another advantage which her citizens have procured for her, and it is not the least factor in the success of her achievements. She has a community hall. Manilla, of course, does not call it so, nor is it so except in spirit. It once was a disused church building; now it belongs to the Oddfellows, and is at the service of the community for concerts, entertainments and all mass-meetings of general interest.

Nor is Manilla the only community which has proven that the country may be as interesting, as recreative, as broad in its play interests as that of town or city. Up and down the country there are hundreds of others who have found unique and original means of working out the play problem of the day. And there are thousands more already looking for "straw" in the way of opportunities to begin the manufacture of the bricks of play without which the structure of life is not only ungraceful and without ornamentation, but illy constructed and lacking durability and strength.

Children on Farms Have a Sorry Chance for Comradeship.

LET us for a moment or two consider these opportunities. And let us begin with the children. Children on farms have a sorry chance for comradeship compared with those in town. It's all right for big ten or twelve member families perhaps, but consider the solitary child on the farm. To be sure he has the loveliest of play-grounds, the most interesting of toys, the greatest variety of pets, but he has no playmates. Even in the little country school there are not enough children of the same age to play games really well. These are disadvantages which father, mother and teacher must try to offset. As often as possible the lonely child on the farm should be provided with a playmate. Don't say "He's quite content." He probably is, but we should not be content for him. Play is a getting ready for life—it is life and it is our responsibility to provide it for him quite as much as to provide clothes and food. Consolidated schools give much greater advantages in the line of play, both for junior and senior pupils. There are enough children of the same ages to form good and well-matched play-teams, to stimulate emulation without discouragement, and to create that self-confidence and power of initiative which are so often lacking in country-bred boys and girls.

But it is in the play of the older people that we are most greatly interested, the re-creation of the country community. Summer which is the city man's holiday time is the busiest season for the farmer. Winter brings him more of leisure and less of opportunity to use it. This latter, perhaps, mainly because he hasn't studied how. Farmers' Clubs and Women's Institutes have done much to help in providing social enjoyment in the country communities, but too often their efforts are limited to their own membership and the people most needing help are thus left out. Clarkson, a little village between Hamilton and Toronto, has solved this difficulty excellently well with its community parties to which everyone in the district is invited. They are held in the school-house. Sometimes the required "eats" have been supplied by the Ladies' Aid of the Church, sometimes by the guests themselves. There is absolutely no charge, and there is a night of such genuine good time as makes it almost a necessity to repeat the dose. Sometimes these gatherings have taken the form of a fancy dress party, sometimes they have been guessing contests, or a musical programme or sing-song. Always, thanks to the very best of leaders, it has been rightdown good fun. Clarkson has a community church and a choir to be proud of.

Pelmanism More Than Mere Memory Course

Valuable as the Pelman System is in improving the memory, its service does not end there—it gives you keener powers of observation, concentration, initiative and self-confidence. Four hundred thousand students have proved its efficacy.

BIGGEST MEN IN EMPIRE COMMEND IT

The Pelman system is a real "system," and not a haphazard collection of educational tricks and notions. It is a "live," organic invention, which means that it is a growing one. Its basal principles are sound, well-tried and "scientific."—Sir Arthur Quiller-Couch, M.A. (Oxon.). M.A. (Cantab.), Litt.D. (Bristol).

I have read many letters written by students, men in every profession and trade, and in every rank of them. . . . It is remarkable that almost without exception these documents affirm the benefit received by the writers from the Pelman course of study. — Admiral Lord Beresford, G.C.B., G.C.V.O.

YOUR OPPORTUNITY NOW

Your duty to yourself—if you desire to advance socially, intellectually or in a business way—is to investigate. TRUTH, the great English weekly, investigated Pelmanism thoroughly. We will send you its report and a booklet, "Mind and Memory," together with a special offer of reduced summer rate if you will clip this ad and mail to

Amateur Nimrods Amuck in Temagami

(CONTINUED FROM PAGE 12.)

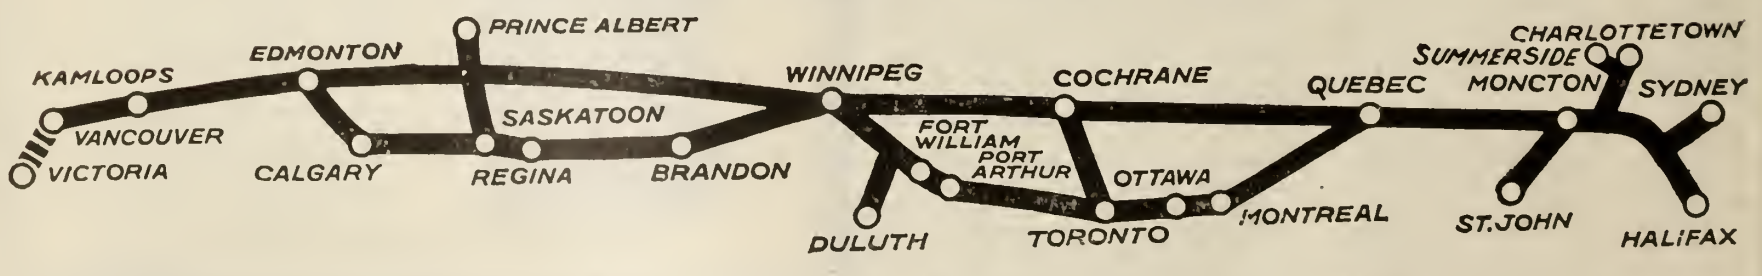
have been more thoughtful of others, would journey to the ice-house and drag out for re-weighing those five small fishes they had managed to catch. Of course, everybody admitted it was the guide. He knew where to go for them, though that wasn't the reason for the rush to Bear Island for guides. We got one, but that was so I could fish instead of being the motive power.

The guide we got was quite a talkative chap, as Indian guides go. They told us afterwards that he had been born in a canoe, and had gone three weeks to an English school to a teacher named Hogg. What he learned there they didn't say, but his conversation was limited to a peculiar grunting sound, "U-u-gh-A." This chap was much sought after by those who have been initiated, for he was a very capable guide who knew all the haunts of the fish of those lakes. It was just by luck we were able to get him. He had been engaged by a wealthy American who had come up on the same train with us from Toronto and had been met at Temagami Station by our guide. This American intended to stay several weeks in Temagami, and as he would be alone with his guide the greater part of the time, he decided it would be a great idea to get on good terms with his Indian. On the way in he proceeded to draw his guide into conversation. The weather soon was exhausted, the scenery elicited only a few grunts; so he tried telling about himself and life in his home town. The burden of the conversation, of course, devolved upon the willing American. He was succeeding famously till he reached "Bear Island," where, after reporting to the Hudson Bay Company factor, his guide said, "Humph! you get 'nother guide; too much argument." The Indian was obdurate, and stubbornly refused to guide the American any further—and that's how we came to get him.

WE'D been cautioned about talking, but Pal and I had another scheme. We named him "Chief." That tickled him immensely. He just grinned, but it was enough to tell us we had scored. We all piled in the canoe and started out. Chief asked us, "Where?" We planned our answer to that: "Where the bass are, Chief. We don't care where, so long as we catch them. Big Chief knows." He grinned again, looked carefully round the lake, squinted at the sun, looked down into the water, and then, with a powerful stroke which sent our bark in a new direction, he remarked, "We get 'em." And we did—at least, I did. Pal had no luck at all. She hooked them all right, and got them nearly into the boat, but they "flipped" and were off. Big Chief was peeved, and Pal's Irish was getting close to the collar. I didn't say anything, my singing reel was the best answer of all, except, perhaps, the lively beauties I kept on hauling in. Pal's luck didn't change. Three beautiful small-mouth black bass—four pounders, mark you—she lost within the half hour. Big Chief would look at her and then look meaningly at the deep blue streaks way out in the lake. Then Pal's reel whistled, she'd hooked a "big 'un"; carefully she reeled it in. It fought a great fight; broke water once, twice, three times. The last was within arm's length of the canoe. It was a double flip, and successful. Pal's Irish found satisfying expression in one vehement, forceful, explosive "D-a-m-n." From the end of the canoe came a meek, mild, but none the less expressive echo, "damn," too, followed a minute later by the swing of the bow toward the deep water and the official announcement from Big Chief, "Cateh heap more trout." Poor Pal, she did so want to land a bass, but it had to be trout. We caught a heap more; they came two at a time, never less than three pounds, rarely more than eight. We had a couple dozen by dinner time. My, but they tasted good. The crowd cleaned up most of the morning's catch; the rest went into the camp larder.

Next day Big Chief limped quite badly. We were immediately sympathetic in our inquiry. "Rheumatism" was the single rejoinder. We had visions of a fishless day. That brought a new thought; we would have to get this idea of rheumatism out of the old chap's head or we'd be without a guide—we'd noticed the wet moon the night before. So we jocularly replied: "Why, that's not rheumatism, Chief; that's old age working on you." Big Chief felt first one knee and then the other, regarding each meditatively in turn, and slowly shaking his head, then straightening up, gave his decision: "Old age? Humph! heap rheumatism!" Again we remonstrated with him for this theory, protesting that it was old age—a few drops were falling now. Again he looked at the two knees; then in a tone rich with contempt, said: "This knee is as old as this one, and it ain't stiff an' sore. No old age, heap rheumatism!"

WE went fishing, even though it did rain a little. Big Chief said, "Pickerel bite heap good in rain," so we went away to Pickerel Bay. It was great sport teasing them with a "tango," then hauling in the glistening yellow-bellied fellows. Once in a while a "pike" was caught by one of the other canoes, but Chief kept us clear from these. (The Indians detest the sight of a pike, and refused to have anything to do with the fish they call the "snake of the lakes".) We were trolling in close to shore, and had to keep constant watch of our lines so as not to get caught on the bottom. Big Chief would warn us with a curt "Damned deep" or "Damned shallow," as the case warranted. At last it was time to turn back. As we neared camp I "got a strike." It was a whopper. It bent my steel rod almost double. The strain on it whipped it mercilessly over the Chief's head. He was all smiles, for it helps a guide's reputation to bring in big fish, and so far we had not erred in this respect; we had had quantity, but not quality (weight). Here was where we were going to redeem ourselves. The way that fish pulled was a joy divine. Even Izaak Walton himself would have gone into ecstasy over it. It turned this way; it twisted the other way. It dived; it rose, fighting every inch of the way in. Big Chief leaned over the stern and lovingly fingered the taut line. He did it more than onee, till at last he was satisfied to smile. I practised all my inexperience on that gamy fish, but still he hung on and came ever nearer the canoe. Big Chief kept a keen watch on that throbbing line, till a dark shape showed dimly beneath the water some distance from the canoe. It was enough for Big Chief. He crumpled, a dark, savage look swept over his face as he drove his paddle into the water, exclaiming "Damned big p-i-k-e." A minute later I hauled him in—a big eight-pound pike. It was too much for Big Chief, so we made camp.



FOR two weeks we roamed among the emerald islands of Temagami. We hunted the wily bass, and caught them—mostly big ones, too. We matched wits with the deep-running lake trout; caught many, lost more—of course, they were the bigger ones. We climbed "High Rock" to see one of the grandest landscapes ever man laid eyes upon; one hundred and seven brilliantly blue lakes, half-hidden in the solid setting of emerald green and sparkling in the glorious sunlight like precious jewels, can be seen with the naked eye. The panorama that stretches out before one upon this pinnacle of Temagami Forest Reserve—"High Rock"—is not surpassed by the better-known vistas of the "spoiled countries." Temagami is still the "unspoiled country," in fact as well as in fancy. It is a paradise of forest and stream primeval. Its wild bird life is ever present, and the fishes are bigger than the railway folder man says. We, the amateur nimrods, have been there, and we know.

Forty Love

(CONTINUED FROM PAGE 11.)

running toward me, and after her lumbered a great black cow!

"Oh, Mr. Morgan, save me!" she cried, then tripped, falling face downward almost at my feet.

The impetus of my race was so great that I found it impossible to stop. I ran almost headlong into the cow, who, doubly terrified by my sudden appearance and the loud barking of the dog behind her, turned tail and lumbered off with remarkable speed into the woods.

NOW that he was in the presence of his mistress, Ponto was soothed. He no longer seemed to want my life blood. Fawning upon her, he licked her hand with his great soft tongue. But for once Dorine paid no attention to him. She had eyes only for me.

Staggering to her feet, she turned to me a face of seraphic adoration.

"Oh, Mr. Morgan," she cooed, "you have saved my life! If you hadn't dashed to my rescue that terrible bull would have caught me. He would have torn me to pieces!"

I gave a little gasp. The cow had perhaps been a trifle bad tempered. But a bull! On the point of bursting into a fit of laughter I suddenly checked myself. In this very ridiculous incident I now saw my salvation. I was no longer a nervous man running away from a horrible dog with murderous fangs. I was a hero, rushing at the first cry of distress to rescue my lady-love. Why, the whole thing fitted in beautifully. I chuckled with delight.

Dorine raised her eyes inquiringly.

"What are you laughing at?" she asked.

I came to myself with a start.

"I was thinking, dear lady," I began, "that I am the happiest man in the world to have had the chance of rescuing the prettiest girl in Springfield."

I drew nearer to her, intending to put my arm around her. She must have perceived my intentions, and I am sure my voice had carried with it that unmistakable lover's thrill.

But Dorine was not a flirt; she had that sweet innocence that is so adorable in the young and so deplorable in the old.

Modestly she now shrank away from me.

"Oh, Mr. Morgan," she murmured, "please! You mustn't do that. I don't know you half well enough!"

THIS was just as it should be. I was well pleased that in the first stages of our courtship she should be coy and reserved. It was for me to make the advances. So again I drew near, this time intending to imprint a tentative kiss on the soft down of that pretty cheek.

But even as I bent my head, I drew back suddenly, alarmed. She had pressed her handkerchief to her eyes and seemed to be weeping bitterly. Greatly taken aback, I stopped short. Was this the way in which girls receive their lovers' importunities? Or was it merely a sign of maidenly embarrassment?

Once more my arm stole around her waist and my lips were very near her cheek when I was startled by a deep and vicious growl. It was, of course, that detestable dog again. slowly he rose to his feet and stood looking at me, his horrible lips drawn back to reveal two rows of murderous white teeth.

To say I was frightened is to put it very mildly; I was terrified. My teeth chattered and my knees knocked together.

"D-Dorine!" I cried, "Dorine!"

Threatened as I was by a severe injury, if not death, for the dog was the size of a wolf and quite as fierce, I was too far gone to care whether she thought I was afraid of the brute or not. My one thought was to escape as soon as possible. But how could I with that growling beast standing above me, ready, I knew, on my first movement, to bury his fangs in my leg?

Desperately I turned my eyes again to Dorine, but she was still crying. Truly is a woman called a broken reed! Doubtless she was terrified for my safety, but in this dire extremity she might have checked her grief sufficiently to save me. The perspiration stood on my brow in great beads. I began to feel a horrible weakness creeping over me. There is a limit to every human being's endurance—particularly to one so nervous and high-strung as myself—and I had certainly reached it.

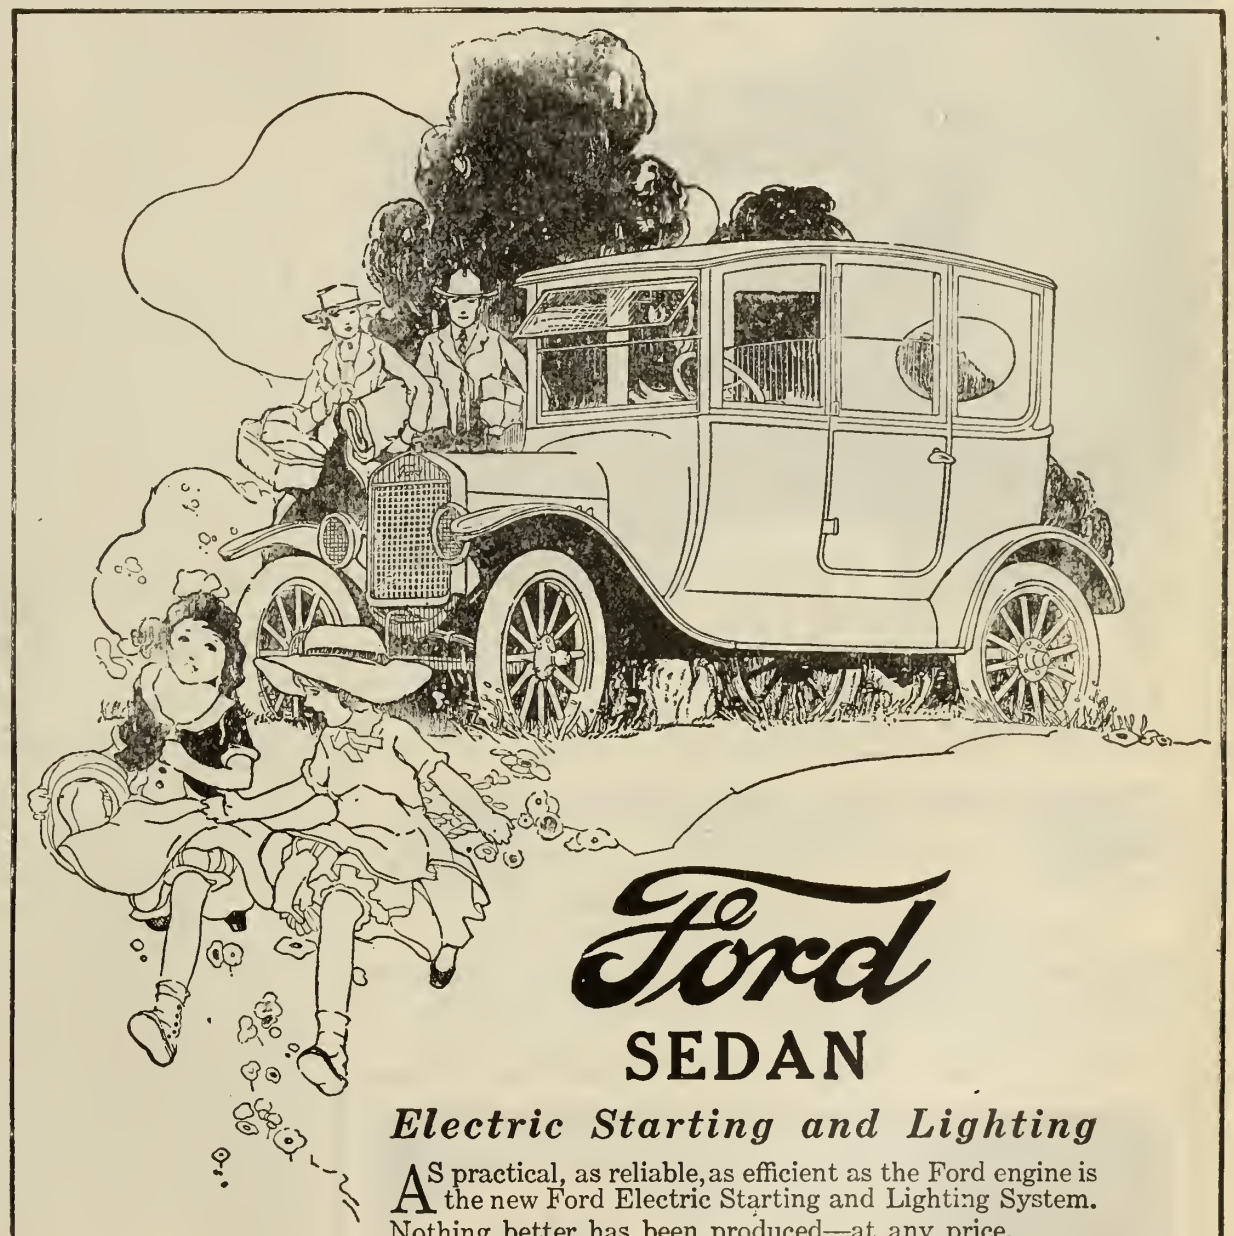
"Dorine!" I cried once more, and this time despair gave to my voice a sharp intensity that might almost be called shrill.

Dorine sprang to her feet. At least I had aroused her from her agitation.

"Come, Ponto!" she cried, and without a word—without even a look at me who, through her had endured so much, she fled, Ponto at her heels, across the field, over the fence and down the road; fled, indeed at such a speed that, in an incredibly short space of time she had vanished from my sight.

As for me; powerless to move—powerless even to call—I remained rooted to the spot, my eyes nearly starting out from my head in amazement. What could be the meaning of it?

Feeling too weak at the moment to try to comprehend this new and remarkable idiosyncrasy, I leaned back against a tree, absolutely limp, endeavoring to recover myself.



For some minutes I remained thus. Then, in a flash I saw the whole thing. Overcome by her fear for me in my very imminent danger, Dorine had realized that my only chance of safety lay in her immediate departure, for in no other way could the dog be persuaded to leave her. Then also she was doubtless overwhelmed by the unexpected honor of being made love to by a man of my age and position. Her natural modesty and perhaps some slight degree of coquetry had also prompted her to run away. Indeed, now I come to think of it, it would have been bold and unmaidenly had she stayed—to say nothing of her consideration in relieving me of the horrible brute.

YES; that was undoubtedly the solution of the mystery. As for me, I would rest awhile, then pursue my way homeward. Chivalrously I would leave her to recover from her afternoon's excitement until the following day when I would again call, now more than ever confident of a favorable reception.

Having thus settled everything to my own satisfaction, I leaned back against a tree, prepared to rest and enjoy the coolness of this pretty spot before returning when, for the first time I became disagreeably aware of the fact that one foot was soaking wet. Doubtless in my headlong escape from Ponto I had, without knowing it, slipped into some puddle or marshy place. This was very provoking. I must now hurry home as fast as possible for, in my delicate state of health any kind of exposure might easily bring on a bad cold, if not worse.

At dinner that night I coughed several times, much to Mrs. Kornigan's dismay—she always waits on me herself—and she implored me to go straight to bed. Unfortunately, however, I was due that night at an

Ford

SEDAN

Electric Starting and Lighting

AS practical, as reliable, as efficient as the Ford engine is the new Ford Electric Starting and Lighting System. Nothing better has been produced—at any price.

The Ford Electric Equipment consists of Generator, Starting Motor and Storage Battery.

It is a Ford product—designed for the Ford car—made in the Ford plant.

Built into the motor, which has been re-designed for the purpose, it becomes an integral part of the power plant—

—a positive starter of proven efficiency:

—a powerful lighting system uniform at every engine speed.

A complete instrument board on the cowl controls the system.

The Ford Car is also equipped with the Standard Magneto to provide ignition independent of the batteries.

All Ford closed cars now have Electric Starting and Lighting System as Standard Equipment.

Come in and see it. If you have never driven a Ford Sedan you have something to learn about motoring.

PRICES—including Electric Starting and Lighting, Ford Sedan $1175. Ford Coupe $975, f. o. b. Ford, Ont. (War tax extra) 105

Ford Motor Company of Canada, Limited, Ford, Ont.

Always have a Daylo on the Clock Shelf

For the dozen uses that bob up every day

"That bread's most done."
"Take the Daylo and bring up a jar of raspberries."
"Go up to the garret and look—don't take matches—use the Daylo."
"It's among that pile of papers in the cubbyhole."
"Look way back in the ice box."

Important

Styles 4706, 2639, 6962 and 2659 are especially suited for household use. No. 2631 is an ideal style to keep under your pillow. Select yours.

For your protection the registered name, Eveready Daylo, is stamped on the end cap. Accept no substitutes.

EVERY night at some hour or other there is the unexpected or unusual call for Daylo, to "look and see." Have a regular place to keep one—the Clock Shelf, your Dressing Table or under the Pillow. Don't forget to carry a pocket size in your Handbag when you go out at night.

(CONTINUED FROM PAGE 15.)

lights were dashed out. One might be comparing weed-seeds, or writing a love letter or consulting Ouija as to the future, when in the twinkling of an eye, one was plunged into darkness. The seeds became scattered, the endearing word half written, the future but half revealed. What a chapter of incompleteness when the lights went out! The rule was as the laws of the Medes and Persians and nothing could change it. A fair maiden might be in the midst of a most delightful dance in the Mac gym, a dance to which she was allowed to invite a gentleman friend, and gazing soulfully up into eyes that were looking moonfully down into hers, when suddenly her partner vanished and she was gazing into—blackness. Lights out!

Surprising as it may seem, there were no restrictions in regard to bun-feeds, so digestions could be joyfully ruined without fear of interruption from headquarters. The little store on the corner did a thriving business in soda biscuits, cheese, fancy cakes and other luxuries of the bun-feed variety. It was at the corner store where we became enlightened as to the real reason for our coming to the O.A.C. We came for a change and a rest.

"A change and a rest!" was the indignant response as visions of miles of tramping floated through the mind. "We'd like to know where we get it."

"You don't," was the chuckling answer; "for the street cars get the change and we get the rest."

TRULY was it spoken. When invited to a bun-feed, manners were left at home, but tumblers and butter spreaders were taken along. Butter or cheese spreaders by the way, may be of several varieties; a jack knife, a nail file, a shoe horn or even a marker swiped from the tool-house will all nicely serve the purpose. Dishes were unnecessary and their absence saved washing. To the uninitiated the rudeness displayed by young ladies who had taken a special course in etiquette at their various Normals, was utterly shocking. One of the most flagrant breaches of etiquette, we were taught, is to take leave of your hostess immediately after dining. But if one were the hostess in Angel's Wing, the Residence, and the guests were from Mac Hall, it was no uncommon occurrence to have one's guests jump up before the feast was half over, grab two or three of the choicest cakes and rush out of the room to race pell-mell down the two flights of stairs as though the Kaiser were at their heels.

For a moment one would gaze in bewilderment at the deserted spread and forgotten tumblers, wondering if fear of an air-raid had caused the panic, but a casual glance at the little clock on the dresser, and all was explained—one minute to ten!

It was a wise and upright judge that ordained perfect quietness after eleven o'clock, for long hours of refreshing sleep were needful in order to meet the strenuous work of the day. The first morning of my career at the O.A.C. I was awakened early, early, by the most insistent buzzing of an electric bell. I jumped up and rushing over to my room mate's cot, grabbed her by the shoulder. "Wake up," I cried, "don't you hear the fire-alarm?"

"Oh, go back to bed," she grunted sleepily, wise with a previous year's experience, "that's the half-past six bell to get you up. Breakfast's at half-past seven."

Imagine a whole hour's warning to get dressed for breakfast. Why, any ordinary person should be able to do it in thirty minutes, so back to bed I went for half an hour more of blissful slumber. Sleepily I listened to the whistles blowing for seven o'clock before it dawned upon me that it was time to arise and begin the day. Hurriedly donning my brand-new rose kimona with bedroom slippers to match, I hied me to the lavatory with towel and soap and washcloth to appease the god of cleanliness.

THEN did I discover the wisdom of the hour's warning, for there were but three basins for the corridor and over twenty girls to use them. The early girl got the basin and the others stood in line while the clock ticked hurriedly on. On account of having to wait several precious minutes it was necessary to speed up in the dressing department in order to get over to the dining-hall before the doors opened. To be late for breakfast on one's first morning is disgrace indeed. Hundreds of girls were continually streaming over to the dining hall. As the doors swung open a vista of many tables and innumerable chairs was before us. As our vision narrowed to a small section we saw that each table was round and had places set for eight hungry individuals. With a frantic clutch we grabbed hold of a friend or an acquaintance and hurried to the first table we could see, and with relief at finding ourselves safely anchored in the wild scramble around us, we firmly held on to the backs of our chairs in proud possession as we stood behind them.

A bell rang, grace was said, tongues were loosened and we all dropped into our places.

The kindly officers in charge were very anxious that all should get acquainted as speedily as possible and make one big family. To carry out this plan we were asked to change tables and partners twice a week. The motive for changing was highly commendable but alas for rules of sociability, we failed to live up to them. For, as time went on each girl took unto herself bosom friends and these also found other bosom friends until there were eight. And with a clannishness that would do credit to the Scotch themselves, did these eight stick to each other and their favorite table. Thus it came about that each week there were two meals for which everyone endeavored to be on time, for which one would even wait many minutes for the door to open in order to procure the desired table and be with the seven kindred spirits.

If one were late, then like the wandering Jew of old she must go hither and thither, seeking a place where she might devour. Devour may seem a strong term to use, but I am forced to admit that it is the correct one; for the work we did and the tramps we took created such enormous appetites that we not only speedily got away with all the food upon the table, but even requested more. Ours was not to Fletcherize. From an economical standpoint, a big mistake was made by the planners of the summer course when they ordained that much tramping and gardening must be done before a certificate would be granted. Verily, as a maiden worketh so shall she eat.

THE work part of the course is uncovered at last! And it had been so carefully lowered to the very bottom of my brain, while on top were piled memories of good times and pleasant acquaintances until there seemed no chance of it ever coming to light again. But constant digging has worn away the layers and work is once more exposed. Time has given to it a kindlier aspect than it had when it was buried and its humourous qualities, once invisible, are now revealed.

Every morning at five minutes to nine, the campus was alive with hundreds of soldiers of Agriculture moving hither and thither, lengthwise and crosswise, singly or in groups in search of the particular hall of learning to which they must hie themselves to report for duty. The first week, it would be no unusual thing to be stopped every other minute, while someone asked the anxious question, "Where do you go for live-stock?" or "Where's the bug-building?" or "Where do you find the weather?" and so on *ad infinitum*.

Occasionally a thrilling description of the life-history of a potato bug or a lengthy discussion on the hoof of a horse would be interrupted by some bewildered looking person rising and hurriedly walking out of the room. Was she bored to death? Was she disgusted? No, she had just found out that she was in the wrong battalion.

The mornings were generally devoted to lectures, when we listened assiduously to the voice of the lecturer and frantically endeavored to preserve all the words of wisdom, until our fingers ached and our fountain pens ran dry. Often the greatest difficulty was experienced in garnering these pearls as they fell from the lips of the speaker, for the pig and the sheep, the cow and the rooster, each, in its own peculiar voice, protested long and

(CONTINUED ON PAGE 84.)

More Play in the Country

(CONTINUED FROM PAGE 79.)

In fact, inside its own precincts, Clarkson has found some mighty good "straw."

SKATING, snowshoeing and ski-ing seem ideal country sports, but they need a somewhat different setting than in town. Take for instance, the snowshoe party. It must meet where horses can be stabled and where those who drive from some distance can leave wraps and warm up before starting on the snowshoe tramp. It must end where such wraps can be resumed and people may start for their homes in comfort. There is no reason why a snowshoe tramp including everyone in the district who can snowshoe should not start from church or school-house, somebody remaining in charge to look after wraps, to keep fires going, above all to have good hot coffee and delicious eats ready for the returning party.

Where the snow is deep, covered rinks are a necessity, and these take some expense to build and some work to clear and flood. But I have known country rinks which the boys who skated faithfully scraped and flooded after their night's skating, and where the ridiculously low charge was imposed only to cover overhead expenses. Where it may be indulged in, out-of-door skating is much jollier than indoor, and if the snow is not too deep an open air rink can easily be kept in good condition for at least two months of the year. Every country school can have its miniature rink and its hockey team.

Sleigh-rides are perhaps not quite so interesting to country folk as to their less fortunate city neighbors, but a whole merry sleigh-load of laughing, singing boys and girls and men and women can hardly help having a downright good time.

Winter too is the time for the community party, for the sing-song or play given by the dramatic association. There is a chance for ingenuity in the planning and for executive ability of the highest in the carrying out of these meetings. Committees must be appointed to arrange for refreshments, to plan games or other modes of entertainment, to see to the procuring of dishes and the serving of refreshments, to arrange for taking care of the children and other important details too often left to the working out of the moment. Every community will have its own special interests and causes, and its social life is apt to follow the bent and interest of its social leaders. It is surprising to find what interesting things one may find to put through. Why not have a glee club or community choir, which meets weekly or semi-weekly for practice, and closes the season with a good concert? Why not have a debating society or a Literature Club? Clarkson has an Athletic Association which is unique in several ways. Its members range in age from ten to fifty-five and it includes both men and women. Clarkson is lucky in its school, for the second floor is as yet unused for school purposes and forms a splendid auditorium or playroom, and here the Athletic Association meets weekly. They have engaged an instructor who gives them physical drill and they are provided with wands, dumb-bells, Indian clubs, etc. The first half of the evening is given to athletics, the latter half to group-games played under the instruction of a leader; or such games as checkers, chess, crokinole, ping-pong and puzzles of various kinds, in fact any interesting and innocent pursuit which may occur to those present. During the summer months the club does field work, playing base-ball, volley-ball and tennis, and having very interesting sports days to which the whole community are invited, the sports being open to all.

FOR the last fifteen years Clarksburg, a small police village of perhaps four hundred inhabitants, has boasted one of the best men's clubs in the province in the shape of its Literary and Scientific Association. This club meets weekly. Its membership varies, averaging perhaps thirty members with an average attendance of two-thirds of this number. Each member is expected to give a talk or address on whatever topic of general interest he may find himself most able to present. Discussion—a hearty, live discussion — follows. Topics range from reforesting and fruit growing to theosophy and the probabilities of life after death; and from the differential calculus to the Shakespearean drama. Occasionally there is an open meeting to which the ladies are invited and these are always well attended.

Quite apart from their value as a war auxiliary country Red Cross Societies served their communities well as centres of social interest, and it is to be hoped that the increased sense of comradeship and the greater neighborliness which they brought about, will not cease with the termination of the war.

Solving the Transportation Problem.

THE chief difficulty with winter sports and parties in country districts is the trouble in reaching the place of meeting, the harnessing of teams, and their stabling. But this might be overcome with a little planning, especially in districts where the telephone is in general use. One team and one sleigh may carry a goodly number of people, and it is easy to notify everybody along a certain road that Mr. Jones' sleigh will call to take them to the hockey match or masquerade. Next time Frank Jones takes life easy and his neighbor, Phil Smith, has the responsibility of conveying his neighbors to the fun. Thus only a few teams need be taken out to convey a fair-sized audience, and in a whole winter of good times the one man has only two or three nights of responsibility. And think of the fun of this concerted travelling!

EXCEPT that the farming community is busier at that season, summer sports are easier to plan. The matter of conveyance is more simple. Many farmers are possessed of automobiles, which are much less trouble than to harness a team. One may walk fairly long distances with enjoyment, or the bicycle may be pressed into service. Summer is pre-eminently the time for sport, but the country community, having all out-of-doors for playground, is too often far behind the town or city because it possesses no really suitable and well-equipped place for play. It has no supervised playgrounds, no parks, no public squares. The boys must obtain a hard-won permission to use the corner of a meadow, and have no incentive toward making it really fit for play, since they may not be sure of being in possession of it from month to month.

But this is not an insurmountable obstacle. A really good ball team can readily make enough money to lease or buy a field, and a really live community will see that its boys have some place to play and will turn in somehow or other to help them procure it.

Once the ground is procured there is no reason why a country community might not have quite as good a team as a town or city, save that the boys have less time for practice. But many city boys do not quit work till six o'clock, and the most successful farmers I have known were never those who toiled from sunrise to sunset. Many a boy has pitched hay all day and played base-ball all evening, and risen next morning to go blithely back to the pitching of hay—yes, and accomplished far more that next day than if he had gone morosely to bed, dissatisfied and impatient, with a life that had nothing but work to fill its waking hours.

Base-ball and lacrosse, bowling and tennis are all good re-creative sports. Golf is not nearly so good for the rural communities. It takes too much time and too much money and it is played singly or in small groups. Tennis and bowling are enjoyed by women quite as well as by men, and are games which women and men play well together, and I have seen very creditable hockey played by ladies' teams. Girls sometimes play base-ball also, but are seldom able to compete with the stronger sex. Hand ball is a good game which may be played out-of-doors against the side of a barn or any wall which is without windows.

BUT such games are not the only available recreation for the rural community in the summer, though they are the best because the most continued. The community picnic is quite as enjoyable as the community party, but be warned!—it takes quite as much planning. A private picnic may be undertaken on the spur of the moment and may be thoroughly enjoyed minus any definite plan for en-

(CONTINUED ON PAGE 86.)

Will D. D. McKenzie be the Next Liberal Leader?

The temporary leader of the Liberal party in the House, D. D. McKenzie, is settling into his new job better than his nominators expected or hoped, declares J. K. Munro, in June MACLEAN'S. Will he be confirmed in the leadership at the coming Liberal Convention? "If anyone is making a book this summer, take a small ticket on Daniel Duncan McKenzie," writes Mr. Munro.

"The Undercurrents" is a pithy and impartial article, giving a great deal of inside information backed up by shrewd forecasts. It is the clearest and most readable review of political events published anywhere in Canada. For instance, did you know—

That a regular old-time Conservative party was reorganized recently at the behest of Hon. Bob Rogers?

That Hon. T. A. Crerar is at present the most potential man in the House?

That D. D. McKenzie is becoming acceptable as a leader to many in the Liberal party?

That Union Government through force of circumstances is safely settled in power for some time more?

These are just a few of the points that the inimitable Munro touches upon. Read "The Undercurrents"—it is entertaining and enlightening.

THE BEST ARTICLES FOR A CANADIAN AUDIENCE.

Here are a few of the other outstanding features of June MACLEAN'S:

"Victory Stuff." By Robert W. Service.
The first of a new series of magnificent war poems by this famous young Canadian.

"The Gold Wolf." By W. A. Fraser.
A remarkable Western story by this well-known Canadian author.

"Solving the Problem of the Arctic." By Vilhjalmur Stefansson.
The third instalment of his official story of his five years' explorations for the Canadian Government, appearing exclusively in MACLEAN'S.

"The Menace in the South." By Agnes C. Laut.
A sensational article on the growth of Bolshevism.

THE BEST FROM ALL OTHER MAGAZINES.

In the Review of Reviews Department is found in condensed form the best articles selected from all magazines published the world over. Here are a few of the best in the June issue:

Would Armies Have Been Wiped Out?
Muzzling the Truth at Paris.
A Close Picture of Foch.
The Reds in New York.
A Mysterious City of Rhodesia.
Life Beyond the Grave.
Will Mohammedanism Disappear?
How Poland Was Saved.
When Eisner Was Shot.
Who Will Succeed Wilson?
What Future Wars Would Be Like.
The Man Who is Fighting Bolshevism.
Roosevelt Tells of American Mistakes.

Over 65,000 Canadian Families Buy

MACLEAN'S

"CANADA'S NATIONAL MAGAZINE"

20c PER COPY. $2.00 PER YEAR.

A Trial—6 Months for $1.00

MACLEAN'S sells for $2 a year—should be more. We want you to get acquainted with MACLEAN'S, for we know that after we once introduce you to "Canada's National Magazine" you two are going to be friends for life. So, to make you known to each other, we will accept your subscription now for only six months to start off with. In other words, we want you to "try out" MACLEAN'S and see for yourself just how good it is!

Don't miss this unusual opportunity. Simply sign the coupon, pin a postal note to it, and mail it to us

TO-DAY

Tear off here and mail.

The MacLean Publishing Company,
143 University Ave.,
Toronto, Ontario.

I accept your offer. I am enclosing $1.00 to pay for MACLEAN'S MAGAZINE for six full months. Please start me off with the big June issue.

Lines and Sidelines of a Summer Course at the O. A. C.

(CONTINUED FROM PAGE 82.)

loudly against the privilege that was theirs of being demonstrated and lectured upon. Little they cared for honor and praise; all they wanted was to root and graze.

Each lecture lasted an hour and then as one unit we marched to the next dispensary of knowledge. Then if we got lost, as occasionally happened, and wandered into the wrong building, one already occupied by its rightful battalion, we didn't mind it a bit for we had the consolation of knowing that the lecture couldn't begin without us and that ten minutes of it would be spent in God's wide out-of-doors instead of in a drowsy, close class room. To stay awake and keep one's faculties alert during those terribly warm July mornings was exquisite torture. Never in all my life have I heard a sound so sweet as that of the little electric bell as it tingled out the dinner hour!

AND if the mornings were hot, take your minds back to those awful afternoons when the intense heat made living almost unbearable! Why we had the tramping and digging in the afternoons when old Sol was most unmerciful, we could never understand, unless it was to save on the dinner rations.

The very first afternoon the course began, we were taken off on a hike to the woods to find and identify the bugs we had learned about that morning. As most of our trunks were not unpacked we had to go garbed as we were, in Sunday best suits or dresses of silk, while high-heeled boots and fancy pumps were the general footwear of the trampers.

About the only person who was suitably attired for the venture was our captain, the instructor. The speed at which he strode along proved that there was at least one in the crowd who did not wear high-heeled boots. He would walk ahead at the most terrific speed, while we hobbled after him the best way we could. Suddenly we would see him bend, give a mysterious sweep of the arm then straighten himself and stand perfectly still. Had he gone insane? No, he had found a bug!

Patiently would he wait until we all clustered around him, that he might expound on the life-history of the captive, which he generously passed around that all might see, handle and scream. Then we hunted bugs. Wherever a shriek was heard, there a bug was found. At once the fortunate discoverer was surrounded by a crowd of admirers who hung in her train as she hurried up to the bugologist to find out to what family her special victim belonged.

Most of the hikes we took were conducted in a similar manner, the only difference being the absence of Sunday best attire and high-heeled shoes, and when we went on the weed hunt, the dear little feminine shrieks.

THE second afternoon; ah me, that awful second afternoon! Never in the history of the whole month of July had it been hotter. The battalion to which I belonged, was marched to the tool house where we were ordered to provide ourselves with a garden fork and rake. Thus equipped we made our way to a large garden that was broken up into many mounds, which gave the appearance of a small cemetery.

These were not graves, however, although before the afternoon was over we were wishing they were that we might lie down and be at rest. They were garden plots, each twenty feet long and nine feet wide. Two privates were assigned to each of these plots, one to dig while the other raked. Officers went to and fro, giving advice, and better still, lending a hand while occasionally they let fall mild threats to discourage any slackers.

It was no ordinary digging that was required of us. In digging the first trench, every forkful had to be carried the whole length of the plot and deposited at the bottom to be all ready for filling in the last trench—when we should come to it! It was a process similar to draining a well with a leaky pail, for no matter how carefully we held that fork, nor how fast we hurried, by the time we got to the end of those twenty feet, only a little sprinkling of dirt was on the fork—it had all leaked through.

Never had I envied a farmer-girl as I did that afternoon. My partner was of this fortunate class. It was wonderful the way she could put that fork its full length into the ground and with one forceful twist, turn over great clouds of earth. Even by standing on it with both feet, I could only shove it halfway in and my most earnest efforts resulted in a gentle shower of dirt. That was at the beginning, however, for experience is a quick teacher and with persistent practice, I made that fork go right down to the handle and was rewarded by the amount of dirt I was able to turn.

All afternoon under the pitiless sun we dug and raked, and raked and dug, while the perspiration rained down our faces and reduced our clothes to a wet, clinging shroud. But all things have an end, and the time came when we could turn our backs on the neat little family plots we had made and drag our blistered feet back to the Hall. Oh, the joys of a good bath and refreshing sleep! The anticipation of these quickened our steps and made us forget our weariness. One glance at the clock and our hopes were dispelled. Half-past five and supper at six. And this is only a little bit of what our soldier boys had to endure day after day, week in and week out, month upon month.

IF I should attempt to tell of all we accomplished in those four weeks and three days, I would be in danger of being accused of attempting to wrest the championship from Ananias. Honorable mention should be made, however, of the planting of the garden we so laboriously prepared, every row so many inches apart and all nicely labelled; of the tramps we took through the orchards learning of the insects attacking trees and the means of exterminating them; of the afternoons spent in covering miles of campus, learning the names of the trees thereon; of the walk through the farm, stopping ten minutes or so in the blazing sun at every field to hear a short lecture upon the crop it contained; of the practical demonstration in the vineyards on pruning the bushes, demonstrations staved off until all the fruit had been safely picked; of the Friday afternoons devoted to strenuous games in order that we might teach the school children how to play, and of the weeds we had to collect, mount and then rightly name.

These are the outstanding features of the work that have a vivid place in my memory. If we didn't find the twenty weeds we were required to have in the one tramp we took for them, we had to find them in our leisure hours. Incidentally we planted, watered and hoed in our leisure hours; likewise we prepared for exams in our leisure hours. Those mythical leisure hours!

Lest anyone should imagine that our evenings could be devoted to these leisure hours, I make haste to tell them that far, far from that was the case. For our evenings were generally arranged for in the wonderfully planned time-table that so won our admiration, if not our hearts. Right after tea we were scheduled for a baseball game.

Now, baseball is not considered work by the great majority of people, nor is it work if you can suit yourself about playing, but as soon as it is put on a time-table, at that moment it becomes work. After the game was over (if we played), we sometimes gathered together and had a "singing." Some of us devoted part of our evenings to swimming lessons, while the great majority attended the lectures given by some famous person brought all the way from a great city to address the Rural leaders and Pedagogues.

AFTER all's said and done, though we grouched and groused, we had a pretty good time taking that summer course. No effort was spared by the faculty to make it as enjoyable as possible. It wasn't anybody's fault that the weather was so hot—the weather man was the meekest looking man imaginable! The lecturers couldn't have been kinder or more considerate. The poor dears were far worse off than we, for they had to lecture in a room at ninety while we just had to listen, and they had to talk as well as walk those sultry afternoons.

And then the picnics and excursions we had! They will stand out as bright spots in our lives. Everybody enjoyed them; everybody got acquainted. That to me is one of the best features of the summer-course, to come in contact with so many delightful people; among these congenial spirits are sure to be found and life-long friendships are formed.

Now I'm home. Every bug I see I try to capture; every walk I take I'm in the ditch; every bottle I have, I fill with seeds. All the neighbors are collecting caterpillars. Preparedness is the motto, and I'm getting ready for the second part of the course, which I shall take at Ontario Agricultural College next year—that is if I'm not hunting bugs, pressing weeds or collecting their seeds in one of Ontario's insane asylums.

Forty Love

(CONTINUED FROM PAGE 81.)

important club meeting. So, I sallied forth, thankful that at least the night was warm, and fortified by some cough lozenges which the ever-faithful Mrs. Kornigan hastened to procure for me.

And now comes the tragedy of this whole affair, proving that seemingly the most exemplary maidens are sometimes the most false.

Returning home that night, I heard as I passed Dorine's house a burst of laughter. There was no mistaking that light, rippling peal; it was Dorine. Naturally I stopped. She must, I thought, have very effectually recovered from her hysteria of the afternoon. Then came another laugh. This time it was a man's loud ha-ha, quickly followed by Dorine's voice.

"Oh, Nick!" she exclaimed, "It was too funny! He stood there, his knees shaking and his teeth chattering like the villain in the play, and there was poor old Ponto, bound to protect me, standing over him, growling and showing his teeth.

"I didn't know what to do. I sat there till I felt I could not stand it another minute. I knew I should burst out laughing in his face, and then Father would have been so angry for I'm sure that dreadful man would have told him. So I took to my heels and flew with Ponto after me; I never once looked behind."

This time peals of laughter rang out from the both of them, and, in the light of the street lamp I distinctly saw the moon-faced youth whom I had so frequently met at the house.

"It's 'forty, love' all right for him, eh?" suggested the odious youngster, and they again burst out laughing.

For a moment I was overcome with anger. So that minx Dorine had been taking me off behind my back, had she? But I was not surprised. Anyone who could be so heartless and perfidious would be incapable of appreciating genuine worth anywhere. Well, if she was that kind, let her go; she was not worth a moment's regret. With a shrug of disgust I turned on my heel.

ON reaching the house I let myself in and went straight to my room. As usual my bed was turned down; my pajamas placed ready to my hand. On a small table lay a graham wafer and a glass of buttermilk, for, after a slight repast I always sleep better. Beside these were three memorandum slips containing notes of telephone calls received during my absence.

For the first time I realized the absolutely invaluable qualities of Mrs. Kornigan. Nowhere again would I ever meet her equal. And now she was leaving me! The thought was appalling! I could not live without her. Accustomed as I was to her daily ministrations I knew that, deprived of them, I should be reduced to a state of helpless misery. The thought was unbearable—yet seemingly there was no alternative.

Absorbed in these grim reflections, I was startled by a knock at the door.

"Come in," I called, but there was no response. Rather irritably, for, as I have already said, I hate indecision, I strode to the door and flung it open. There on the threshold, bending awkwardly over some object on the floor was Mrs. Kornigan.

With a face redder than usual, her breath coming in short pants—something between a gasp and a snort—she stood upright, clutching in both hands a large pail of hot water. Mechanically I made way for her as she boldly entered my room, setting down her burden with great care upon the carpet.

"Please, Sir," she began, "I am rather alarmed about your cough so I took the liberty of heating this water for you. There is mustard in it, and if you will soak your feet and then get right into bed, I am sure you will feel much better to-morrow."

With these words she turned to leave the room. Silently I watched the dumpy figure as it disappeared through the doorway, and as I looked, all my visions of a wife possessing youth, beauty and refinement vanished into the intangible dream from which they had come. For the first time I realized that, nowhere in this world can we get perfection. Rather must we choose between the gold and dross, the real and imitation. Dorine and all her kind were alloy through and through; false, insincere and heartless. Mrs. Kornigan was pure gold. And to think that I was on the verge of losing her, perhaps for ever! But no; after all there was a way out.

I am not usually a man of impulse—I am accustomed, indeed, to weigh with the utmost care every word and action. But for once I broke my rule. Flinging open the door, I strode down the hall, guided by the shuffling sound of Mrs. Kornigan's feet as she slowly climbed the stairs to her own room.

Springing forward I seized her by the skirt.

"Mrs. Kornigan," I cried.

With a little scream she started back.

"Oh, Sir, is it you?" she exclaimed with an air of relief, "I saw that dog of Miss Crabtree's outside the house just now and I really thought he had got hold of my dress. He is an awful dog, Sir."

Then, as she slowly climbed down the stairs again, "Is there anything else I can do for you, Sir?"

"Yes, there is," I said in firm, decided tones, "you can marry me. Mrs. Kornigan," as the good woman stared at me in a very natural amazement, "the fact is, I find I cannot live without you; also I esteem you very highly in many ways. You undersand me perfectly, so I have decided to overlook the little inequalities between us and to make you my wife. Also," I added quickly, "I think you would like a dogskin for a rug. I know a very large and fine one. You shall have it by to-morrow night."

Leaving her to recover from her very natural embarrassment, I returned to my apartment. Going to a drawer, I took out a revolver which I oiled and then loaded with great care.

"An eye for an eye; a tooth for a tooth," I remarked grimly. I had decided that, incidentally, Dorine should provide Mrs. Kornigan with a wedding present.

Ten minutes later I was seated in an easy chair, my feet in Mrs. Kornigan's mustard and water and munching my graham wafer with relish; now that all anxiety for my future was so effectively removed, I felt the awakening of a good appetite, and was musing happily when I heard an odd little rustling sound outside.

Looking round quickly, I saw, projecting under the crack of my door, a small piece of paper. In some curiosity I picked it up. It was a sheet, evidently hurriedly torn from a writing pad, and, written lengthwise across it in Mrs. Kornigan's well-known handwriting were these words: Dear Sir:—

I wish to thank you for the great honor you did me to-night—that is, if I understood you right. But I am very sorry to say that I cannot accept it as I am going to be married this day week to William Potts, the Grocer. Thanking you again for your very kind offer,

I am

Yours respectfully,

Mrs. Kornigan.

THE END.

The Family Name

(CONTINUED FROM PAGE 8.)

want to feel like a working-man."

She sat for a long time after he had gone out, smiling to herself. This was not at all the honeymoon she had expected when David had proposed to her the day before. She knew that J. Randolph Crockett-Crockett was sinfully wealthy, and she had accepted joyfully.

They had been married at a road-house, and then gone directly to David's home, and as rapidly away from there. Her life with a musical comedy road company had been far from easy, and David was really a good fellow. After all, *he* had gotten the worst of the bargain.

Stick around a while! She fingered the shiny wedding ring with an odd feeling of having been promoted to a better job. Sure, she would stick!

It was an hour later and getting dark when David knocked at the door and was admitted by a rosy young woman with damp hair.

"Been having a shower-bath," she said; "I hated to turn it off."

David wiped the perspiration from his brow. "Well, I am going to have one now," he remarked. "Get your hat on and run out and buy what you need to dress for dinner. I got a hundred on the watch and chain; but I had to walk all the way over to Third Avenue."

She looked doubtfully at the handful of bills that he held out to her. "Do you think I ought to spend it?" she asked.

"Spend it? What else would you do? Aren't you my wife? Hurry up or the stores will be closed."

"What about the hotel bill?"

David was by this time the storm centre of a maelstrom of flying clothes, which he was peeling off and throwing in every direction. He did not stop as he answered: "We don't have to pay until we leave, and I am not ready to leave."

"GET a light gown, slippers, silk stockings, and anything else you can think of."

"Say," he called as she went out. "Don't waste any money on tooth-paste. I've got oodles of it."

The dining-rooms of the St. Gorgeous were crowded, and the orchestra was jerking its way through the latest fox-trot, when a low, clear whistle sounded through the rooms. The music continued, but every waiter and bus-boy laid whatever happened to be in his hand at the moment quietly down, and walked out of the room.

It was very well done, and the diners looked about expecting some new and amusing surprise from the management. The surprise came when the manager mounted the orchestra stand and spoke:

"Ladies and gentlemen, we are sorry to put you to any inconvenience, but a strike has been declared, and we will have to ask your indulgence for a few moments. Fortunately, we have a new corps of waiters ready, and we will serve you with as little delay as possible."

The orchestra took up its chase after the illusive fox, the new waiters filed in and were assigned to tables by the captains, the buzz of conversation resumed, and all seemed serene.

A certain florid, rather portly gentleman, not much on the wrong side of forty, and of most distinguished appearance, happened to be dining alone at a tete-a-tete table in the palm-room.

The head waiter approached him, bowing and smiling, "Would Monsieur consider having a lady at his table? A guest of the hotel, who had been waiting some time? Monsieur would pardon the request, hut the strike had delayed and upset. Ah, mercie, Monsieur!"

"Monsieur" had risen to his feet at the first glance. The lady was close behind the head waiter.

"Certainly; delighted, I am sure."

"Thank you."

She seated herself, in a swirl of gossamer drapery and a subtle perfume, very tantalizing to the nostrils, stole across the table and enveloped him.

SHE ordered her consomme, and the new waiter departed.

Her vis-a-vis had gotten as far as the entree, and she tried not to watch him as she sat and waited. He was a handsome man, with powerful features, a trifle flabby from city life and motors, but still virile and thoroughly masculine.

Glancing up suddenly from his plate he caught her eye, and dropped his own hastily to her wedding ring. There was an awkward pause, which he finally broke after clearing his throat several times. "You will pardon my speaking, I hope, but it seems so foolish to sit here without saying anything."

She laughed a gurgling young laugh, and he noticed how much prettier she was than he had at first imagined.

"Go right on and talk," she said; "I have not the faintest objection."

He gasped, inwardly—a most difficult feat, only accomplished by the most blasé, and they drifted easily into small talk as her consomme arrived.

"Are you staying here alone?" he found himself asking, in spite of himself. "Pardon, but it seems odd that you should be dining alone."

"My husband was called away on business this afternoon. I expected to dine with him. We only came to town to-day."

"Ah, you have been travelling?"

"Yes," a slight smile crossed the lady's features; "through the West and South."

"Shall you be in town to-morrow?"

"I think so."

"If you are disengaged in the afternoon, we might motor down to Whistling Rock. It's a fine run, and the car is in splendid shape."

"I would be delighted."

"Splendid! Jove, I am glad I was delayed to-night. Blessings on that head-waiter."

She laughed gaily at his enthusiasm and chatted vivaciously through her dinner. At its conclusion he insisted upon paying her cheque and tipped the astonished waiter enormously.

"In the writing-room at three sharp," he said as he left her at the elevator.

"Three sharp," she replied. "Thank you for a pleasant evening," and with a bewitching smile she patted his hand and vanished.

DAVID CROCKETT - CROCKETT was sitting up in bed reading the paper when she entered, and kicked off her new slippers with a sigh of relief.

"You look great," he commented. "How did it work out?"

"Perfectly. I made a date with him for three o'clock to-morrow afternoon. Whistling Rock for dinner."

"Whistling Rock? I didn't know he was a member. And don't say 'dinner' to me," groaned David. "I dined on 'beef and' at the Cafe de Childs. How did he behave?"

"Like a gentleman, of course."

"Humph!"

"You needn't snort. If you are real good I'll take you down to-morrow afternoon and introduce you."

"Well, it's lucky I saw him come in to-night. He almost saw me, but I ducked behind the news-stand. I had to slip the head-waiter five dollars to seat you; but he's a pretty good actor for a Greek."

She laughed as she arranged her new toilet articles on the dresser. "Your dad seems to be a pretty good actor, too. He is a fine-looking man."

David yawned and threw down his paper. "Opinions differ. I never thought so. I inherit my beauty from mother. Anyway, we will surprise the pater to-morrow. Oh, joy!"

AT exactly three o'clock the following afternoon a handsome runabout rolled up to the St. Gorgeous, and a tall florid man climbed out and entered the hotel.

After a few minutes search he found her, in a deep leather chair in a quiet corner, and greeted her cordially. "And it's a wonderful day for a spin," he concluded.

Mrs. David Crockett-Crockett was plainly very nervous. She responded to his greetings, hesitated, and then made a signal to one who lounged idly by the desk at the far end of the room. David came quickly to her and faced the astounded victim of their very practical joke. As he did so, she laughingly introduced him: "Father-in-law, I want to introduce my husband."

The two men faced each other, and David burst into a fit of uncontrollable merriment. The older man clenched his fists and glared at the merry pair, saying not a word.

The girl placed her hand on his arm and began in her most coaxing tone:

HAMILTON WINNIPEG

What do your Neighbors say?

NEAR neighbors are excellent judges of a phonograph. The unpleasant twang of the ordinary instrument is particularly thin and noticeable at a distance.

But the neighbors will tell you it is a real pleasure to live next door to a Sonora. Its golden tone—full, rich, sweet and clear—won for it highest honors for tone quality at the Panama-Pacific Exposition.

Others make the records—the Sonora plays them all, and plays them better.

It is better not to buy a phonograph until you hear the Sonora—lest you hear it after and regret your purchase.

Prices $74 *to* $1,500.

Sonora Dealers in All Large Towns.

THE INSTRUMENT OF QUALITY

Sonora

CLEAR AS A BELL

35c

For Package of 5 Semi-Permanent Needles

Ask your dealer for a package of these wonderful new needles. They play from 50 to 100 times without being changed. They eliminate scratching and mellow the tone of the record. These new, semi-permanent, silvered needles increase the life of records, because the record-engaging point, being of the same diameter throughout, does not enlarge as it wears down.

Three grades—loud, medium, soft.

Save yourself constant needle changing. If your dealer does not carry these new needles, send 35c to the address below.

The Family Name

(CONTINUED FROM PAGE 85.)

"Come, dad-in-law, be a dear, good man, and forgive him."

David made inarticulate noises, wagging his hands and generally acting like a man in a fit. He finally managed to blurt, "Hold up, Dickie. This is the limit!"

"What is the matter with you?" she gasped.

"MATTER? Oh, nothing much, except that I never saw this gentleman before in my life!" and David leaned against a pillar and indulged in another spasm of mirth.

She stared at him, and then at the older man, in utter bewilderment.

"D-do you mean to tell me that this man is not your father? Stop that giggling and answer me! This is a serious matter!"

Her tone sobered the hysterical David in an instant. He turned to the third member of the triangle, who was on the verge of apoplexy.

"Would you mind coming up to our rooms, sir? We have an explanation to offer for this ridiculous affair. It is really more serious than it appears."

The man's face hardened. His demeanor had been extremely uncompromising, but now he snarled: "Go up to your rooms? Not much! You *have* got a nerve! I can't make out what your game it, but I am going to the management and have you thrown out!"

"On what basis?" asked David, softly. "There is no ground for any such move, and you know it. If you will not come upstairs, will you sit down here for a moment? My wife has placed herself in a most embarrassing position to help me out of a difficulty."

Their companion glanced at her, and noted that she was trembling, on the verge of tears.

He ungraciously led the way to a group of chairs. "Let's hear it," he said briefly; "it may be good, after all. I must say, you don't *look* like crooks."

David rapidly outlined the situation after introducing himself. He ended with: "I don't see how on earth that head-waiter made the mistake. I saw dad come in and pointed him out to the man. He must have changed his seat."

"Humph!" the man glanced again at Mrs. David, and his face was still grim in spite of a dawning twinkle in his eye. "I suppose this is *my* fault, eh?"

"Well I certainly would not have allowed you to talk to me if I had not been sure you were David's father," she paused for an instant and added with emphasis, "I must say you *look* like a gentleman."

He rose to his feet and bowed elaborately, "We are even on that score Madame, with a point in your favor," he said, and addressed David who had also risen to his feet.

"I accept your explanation Mr. David Crockett-Crockett. Both the head-waiter and myself made a mistake. Good day sir."

He bowed to Mrs. David, turned sharply on his heel and left the hotel without introducing himself.

DAVID sat down again and looked helplessly at his wife, "Gee, Dickie wouldn't that jar you? I couldn't help laughing to save my life, he looked so funny."

"Well, I don't blame you," she smiled, "only you frightened me half to death. I couldn't imagine what was the matter. Now we are a little worse off than we were last night, and a day wasted."

David was sitting up in bed reading "Help Wanted" ads, when the telephone rang. He bounded out and grabbed the receiver, "Hello, yes, this is Dave. Oh, hello, dad! What? Who? He did? In the morning? Great! I know you'll like her. Good-bye."

He hung up the receiver, and executed a pirouette. "That was dad, Dickie, telephoning from New Haven. He said that his old playmate, Dan Sheldon, came racing up in his runabout a couple of hours ago and talked him flat up against the wall. Told him the only way he could retain his friendship was to promise never to tell the horrible details and to come right down after us. Dad is coming down in the morning."

THE END.

The Church Orchestra

(CONTINUED FROM PAGE 57.)

purpose in the prosecution of their inclination for music, the public at large would hear less about empty pews and neglected services.

Ministers and religious leaders if they will take time to consider the matter will see the advisability of doing everything possible for the encouragement of those who love music. It is generally admitted that nothing has a more refining and ennobling influence, and there is good reason to think that anything that is done to broaden and develop the scope of church music, even in the most humble conventicles will be blessed with good results.

IN saying that in this country a movement for church orchestras would be a revival of an old idea I am not speaking without warrant. In the early days of Toronto, for instance, when the population was but a tenth or a twentieth of that of to-day, such institutions were not uncommon. More than forty years ago, Mr. E. R. Parkhurst, the veteran Canadian musical critic, looked up the facts about musical conditions in the thirties and forties, when Toronto was not so large as many secondary towns in all parts of Canada at present.

In those days the monster organs which are now common were unknown, and the ministers were glad to avail themselves of amateur orchestral performers to eke out the interest of the services. That the results may sometimes have been ludicrous does not detract from the excellence of the plan. For instance, in the old Church of St. James, the predecessor of the beautiful edifice now known as St. James Cathedral, the clerk, a Mr. Hetherington, was a performer on the bassoon, and, according to old members of the congregation who have long since passed away, his method was to announce the psalm or hymn, and give out the tune on this instrument. When the singing commenced he would accompany the choristers with blasts on this rather grotesque instrument. This was pure eccentricity and I hope no one would be inspired to do likewise to-day; for almost the only sustained melody that can be played on the bassoon is the old tune "Lucy Lee" or measures like it. It is only serviceable in giving added color to a band or orchestra. Some time about 1840, however, a choir was formed at St. James with a bass viol, clarinet and bassoon as accompanying instruments and this same Mr. Hetherinton was given a stipend for instructing members of the orchestra which became gradually augmented. The Methodist Church was responsible for an even greater development of music in Toronto, not only in connection with church orchestras but in choral singing. It is said that the first singing class ever formed in Toronto dated from 1831 and was organized by a Mr. James Baxter in connection with a Methodist Church that stood near the corner of King and Yonge streets, Toronto, which, as those familiar with that city know, is now the heart of the financial district. The Methodist churches of the budding city in the forties boasted orchestras consisting usually of a few violins and flutes, with a violoncello and trombone added to give body to the tone. Long after the introduction of organs of the more modest type such instruments were used to augment the music. That even to-day churches are necessarily wedded to the organ, and lacking one must do without music, was proven a few years ago in Toronto. One of the ten largest organs in the world is that installed in St. Paul's Anglican Church in Toronto. The time taken to install it covered several months and as it was deemed necessary to have music, a grand piano was installed, and for several months was used with fine effect. Had there not been a prospect of the organ being ready for use within a reasonable time an orchestra would probably have been formed.

I GIVE these bits of local information to show that by the devout the organ is not regarded as exclusively the religious instrument, and to prove that the attempt to form church orchestras has been made and has succeeded in this country in times past. But the main point which I wish to emphasize is that, even if the system had never been tried, it would be a welcome stimulus to interest not merely in church life, but music in general.

More Play in the Country

(CONTINUED FROM PAGE 83.)

tertainment. But a big public picnic must have zest and "go" from the very start. A Master of Sports may be appointed and every moment of time should be filled with something of interest. Or a more formal Field Day may be held with contests in racing, jumping, vaulting, throwing quoits or hammer, and other such tests of strength or skill. Base-ball or tennis tournaments may be arranged with teams from nearby communities; the choir may arrange an out-of-door sing-song in connection with a strawberry festival or garden-party. In fact there are a hundred ways in which the members of a rural community may find their play. Fishing and hunting are good sports open to most country people in Canada, but these are indulged in in smaller groups and are not so open to community play.

NO, straw is not so rare as our first look led us to imagine, nor is there such a total disinclination to the manufacture of the brick. What is most needed is leadership. Yet I believe that the ability for leadership is quite as present in the rural district as is the opportunity for recreation. Much of the work already done along this line has been carried on by the country church. Women's Institutes and Farmers' Clubs have done great work along social lines also and many other places besides Manilla have to thank a ball team or a Dramatic Club for much of their good time. But too often, as has been before suggested, the good times arranged by these organizations have extended to their members only, or being chiefly of money-making intent have placed too high a tax on the recreation offered—too high that is for the average uninterested hard-working grind. Yet he is just the person who most needs play. I have sometimes thought that one of the great things our boys returning from overseas will bring to us will be a love of good clean sport and the very leadership which rural districts need for their development along these lines. For a few ardent spirits are not enough. They may be the leaven that finally leavens the whole lump, but the whole lump must be leavened. That leadership is best which shows least, which sets everybody working—or rather playing—which makes everybody keen and interested, so that it is nobody's pet project but everybody is in it with everybody else.

LUX

FOR washing dainty and delicate blouses of Georgette, Crepe or Silk, use Lux. It will clean them beautifully, and after washing and ironing, they will look even better than when new. Lux will not harm any garment, however delicate or dainty, that pure water itself will not hurt.

Lux is a concentrated form of pure soap essence.

Lux is manufactured in a very special manner, and is absolutely pure; in fact, no form of soap essence can be made in a purer form.

There is nothing like Lux. **There is no substitute for Lux.** Lux is in a class by itself.

You can wash any garment with Lux without fear of having it spoiled. The whole secret lies in the matchless purity of the little satiny Lux flakes. Delicate silks, lingerie — underwear — stockings — anything dainty that one wears or keeps about the house, can be washed beautifully with Lux. Thousands of ladies really "do their own washing" —it becomes a pleasure—thanks to Lux.

Directions for Washing Georgette, Crepe or Silk Blouses

Whisk a tablespoon of Lux into a thick lather in half a basinful of boiling or very hot water. Add cold water till lukewarm. Dip your blouse through the foamy lather several times. Squeeze the suds through it—do not rub. Rinse in three waters at the same temperature as the water in which you washed it. Squeeze the water out —do not wring. When damp, fold the blouse in a towel, leave for a few minutes, then press with a warm iron—never a hot one.

Georgette Crepe blouses should be gently pulled into shape while ironing.

A handy little recipe booklet entitled, "The Care of Dainty Clothes" will be gladly sent free on request.

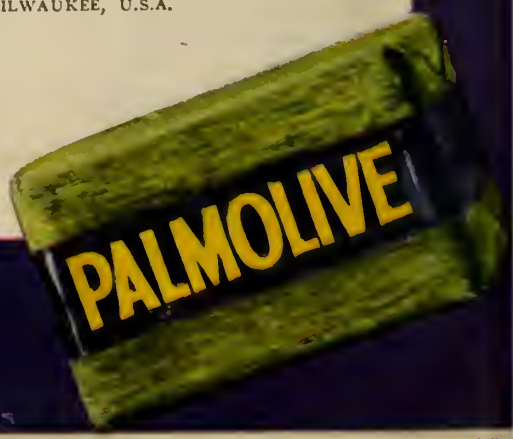
LEVER BROTHERS LIMITED, TORONTO

PALMOLIVE

The Oldest of Toilet Requisites

THE beautiful women of Ancient Egypt were well versed in toilet arts, but they knew that radiant cleanliness was the crowning art of all.

They chose Palm and Olive Oils their most important toilet requirements.



Modern women, equally fastidious, also are lavish in the daily use of these great natural cleansers.

Their combination in famous Palmolive produces the most popular toilet soap measured by sales volume.

Palmolive Soap is sold by dealers everywhere and supplied by popular hotels in guest-room size.
